LITTLE, BROWN AND COMPANY

Law School Casebook Series

The Employment Relation and the Law. Edited by BENJAMIN AARON, Professor of Law and Director, Institute of Industrial Relations, University of California at Los Angeles

Antitrust Analysis: Problems, Text, Cases. PHILLIP AREEDA, Professor of Law, Harvard University

Land Ownership and Use: Cases, Statutes, and Other Materials. CURTIS J. BERGER, Professor of Law, Columbia University

International Law: Cases and Materials. Second Edition. WILLIAM W. BISHOP, JR., Professor of Law, University of Michigan

Federal Income, Estate and Gift Taxation. Third Edition. BORIS I. BITTKER, Southmayd Professor of Law, Yale University

Materials on Reorganization, Recapitalization and Insolvency. WALTER S. BLUM, Professor of Law, University of Chicago, and STANLEY A. KAPLAN, Professor of Law, University of Chicago

Jurisdiction and Judgments: Cases and Statutes. WILLIAM WIRT BLUME, Professor of Law, University of California, Hastings College of Law, and Dean CHARLES W. JOINER, Wayne State University, School of Law

Pleading and Joinder: Cases and Statutes. WILLIAM WIRT BLUME, Professor of Law, University of California, Hastings College of Law, and JOHN W. REED, Professor of Law, University of Michigan

Civil Procedure: Cases and Comments on the Process of Adjudication. PAUL D. CARRINGTON, Professor of Law, University of Michigan

Estate Planning. Third Edition. A. JAMES CASNER, Weld Professor of Law, Harvard University

Cases and Text on Property. Second Edition. A. JAMES CASNER, Weld Professor of Law, Harvard University, and W. BARTON LEACH, Story Professor of Law, Harvard University

International Legal Process. ABRAM CHAYES, Professor of Law, Harvard University, THOMAS EHRLICH, Professor of Law, Stanford University, and ANDREAS F. LOWENFELD, Professor of Law, New York University

Cases and Materials on Debtor and Creditor. VERN COUNTRYMAN, Professor of Law, Harvard University

The Lawyer in Modern Society. VERN COUNTRYMAN, Professor of Law, Harvard University, and TED FINMAN, Professor of Law, University of Wisconsin

Law and Medicine: Text and Source Materials on Medico-Legal Problems. WILLIAM J. CURRAN, Frances Glessner Lee Professor of Legal Medicine at Harvard Medical School, Harvard School of Public Health

Trade Regulation: Cases and Materials. FRANK ELKOURI, Professor of Law, University of Oklahoma

Political and Civil Rights in the United States. Third Edition. THOMAS I. EMERSON, Lines Professor of Law, Yale University, DAVID HABER, Professor of Law, Rutgers University, and NORMAN DORSEN, Professor of Law and Director of the Arthur Garfield Hays Civil Liberties Program, New York University

Cases and Materials on Family Law. CALEB FOOTE, Professor of Law and Criminology, University of California at Berkeley, ROBERT J. LEVY, Professor of Law, University of Minnesota, and FRANK E. A. SANDER, Professor of Law, Harvard University

Oil and Gas Taxation: Cases and Materials. SIMON M. FRANK, formerly Professor of Law, University of Houston, C. W. WELLEN, formerly Lecturer in Law, University of Houston, and OWEN LIPSCOMB of the Texas Bar

Constitutional Law: Cases and Other Problems. Third Edition. PAUL A. FREUND, Carl M. Loeb University Professor, Harvard University, ARTHUR E. SUTHERLAND, Bussey Professor of Law, Harvard University, MARK DE WOLFE HOWE, late Charles Warren Professor of American Legal History, Harvard University, and ERNEST J. BROWN, Professor of Law, Harvard University

Cases and Materials on Corporations. ALEXANDER H. FREY, Algernon Sidney Biddle Professor of Law, Emeritus, University of Pennsylvania, C. ROBERT MORRIS, Professor of Law, University of Minnesota, and JESSE CHOPER, Professor of Law, University of California at Berkeley

Cases and Materials on Torts. Second Edition. CHARLES O. GREGORY, John B. Minor Professor of Law, Emeritus, University of Virginia, and HARRY KALVEN, JR., Professor of Law, University of Chicago

Land-use Planning: A Casebook on the Use, Misuse, and Re-use of Urban Land. CHARLES M. HAAR, Professor of Law, Harvard University

Administrative Law: Cases and Materials. Third Edition. LOUIS L. JAFFE, Byrne Professor of Administrative Law, Harvard University, and NATHANIEL L. NATHANSON, Professor of Law, Northwestern University

Constitutional Law: Cases and Materials. Third Edition. PAUL G. KAUPER, Professor of Law, University of Michigan

Contracts: Cases and Materials. FRIEDRICH KESSLER, Sterling Professor of Law, Yale University, and MALCOLM PITMAN SHARP, Professor of Law, Emeritus, University of Chicago

Basic Business Associations: Cases, Text and Problems. ELVIN R. LATTY, William R. Perkins Professor of Law, Duke University, and GEORGE T. FRAMPTON, Professor of Law, University of Illinois

Cases and Text on the Law of Wills. Second Edition, 1960 Revision. W. BARTON LEACH, Story Professor of Law, Harvard University

Legislation: Cases and Materials. FRANK C. NEWMAN, Professor of Law, University of California at Berkeley, and STANLEY S. SURREY, formerly Jeremiah Smith, Jr., Professor of Law, Harvard University

Criminal Law and Its Processes: Cases and Materials. Second Edition. Dean MONRAD G. PAULSEN, University of Virginia Law School, and SANFORD H. KADISH, Professor of Law, University of California at Berkeley

Family Law: Cases and Materials. MORRIS PLOSCOWE, Adjunct Associate Professor of Law, New York University, and DORIS JONAS FREED, of the New York and Maryland Bars

Problems and Materials on Decedents' Estates and Trusts. Dean EUGENE F. SCOLES, University of Oregon, School of Law, and EDWARD C. HALBACH, JR., Dean and Professor of Law, University of California at Berkeley.

Cases and Other Materials on Civil Procedure. AUSTIN W. SCOTT, Dane Professor of Law, Emeritus, Harvard University, and ROBERT B. KENT, Professor of Law, Boston University

Select Cases and Other Authorities on the Law of Trusts. AUSTIN W. SCOTT, Dane Professor of Law, Emeritus, Harvard University, and AUSTIN W. SCOTT, JR., late Professor of Law, University of Colorado

An Introduction to Criminal Justice: Text and Cases. ORVILL C. SNYDER, Professor of Law, Emeritus, Brooklyn Law School

The Civil Law System: Cases and Materials for the Comparative Study of Law. ARTHUR TAYLOR VON MEHREN, Professor of Law, Harvard University

The Law of Multistate Problems: Cases and Materials on Conflict of Laws. ARTHUR TAYLOR VON MEHREN, Professor of Law, Harvard University, and DONALD THEODORE TRAUTMAN, Professor of Law, Harvard University

Labor Relations and the Law. Third Edition. Edited by JERRE WILLIAMS, Rex G. and Edna Heflin Baker Professor of Constitutional Law, University of Texas, and BENJAMIN AARON, Professor of Law and Director, Institute of Industrial Relations, University of California at Los Angeles

Cases on Contracts. SAMUEL WILLISTON, late Dane Professor of Law, Harvard University, Revised Sixth Edition by WILLIAM T. LAUBE, A. F. and May T. Morrison Professor of Law, University of California at Berkeley

Law School Textbook Series

American Civil Procedure. WILLIAM WIRT BLUME, Professor of Law, University of California, Hastings College of Law

Readings in Jurisprudence and Legal Philosophy. MORRIS R. COHEN, late Professor of Law, City College of New York, and FELIX S. COHEN, late Visiting Professor of Law, City College of New York, and Visiting Lecturer, Yale University

The Elements of Law. THOMAS E. DAVITT, S.J., Professor of Jurisprudence, Marquette University

Handbook of Modern Equity. Second Edition. WILLIAM Q. DE FUNIAK, Professor of Law, McGeorge School of Law

Judicial Control of Administrative Action. Abridged Student Edition. LOUIS L. JAFFE, Byrne Professor of Administrative Law, Harvard University

Civil Procedure. FLEMING JAMES, JR., Lafayette S. Foster Professor of Law, Yale University

Trial Tactics and Methods. ROBERT E. KEETON, Professor of Law, Harvard University

Securities Regulation. Student Edition. LOUIS LOSS, William Nelson Cromwell Professor of Law, Harvard University

Effective Legal Research. Third Edition. MILES O. PRICE, late Professor of Law and Law Librarian, Columbia University, and HARRY BITNER, Professor of Law and Law Librarian, Cornell University

Scott's Abridgment of the Law of Trusts. AUSTIN W. SCOTT, Dane Professor of Law, Emeritus, Harvard University

Handbook of Law Study. FERDINAND FAIRFAX STONE, W. R. Irby Professor of Law and Director of Institute of Comparative Law, Tulane University

Materials on the Lawyer's Professional Responsibility. WILLIAM M. TRUMBULL, Professor of Law, Emeritus, Northwestern University

FEDERAL INCOME ESTATE AND GIFT TAXATION

WESLEY A. STURGES

Preface

This volume is the third edition of my *Federal Income, Estate and Gift Taxation*, published in 1955 as a revision and consolidation of earlier volumes, and revised in 1958. Because my pedagogical purposes have not changed, I take the liberty of repeating substantially what I said in the Preface to the 1955 volume.

* * * * *

As to Part I (Federal Income Taxation):

This part of the casebook was planned for a federal income tax course, preferably in the second year and after the student has had some work in corporations, trusts, and partnerships, of three or four semester hours. In that time, I believe that the bulk of the material can be adequately covered, at least if some portions are assigned for collateral reading without class discussion, though some sections (*e.g.*, corporate liquidations and reorganizations, non-family partnership problems, and accounting) might be reserved for more intensive study in an advanced course or seminar. If less time is to be devoted to federal income taxation, more drastic surgery would be called for, and I would be uncertain of the outcome. No doubt, a good deal of useful information can be passed along in a two hour course or the equivalent, or even in less time, but it would certainly be an unusual student who would gain, so rapidly, a proper appreciation of the pervasive effect of income tax on the rest of our law.

I do not mean to suggest that my intended audience is the prospective tax "expert." Quite the contrary. I have tried to address myself to the student who has no premature vocational interest in taxation, because federal income taxation today has the same credentials for a place in the law school curriculum as sales or trade regulation or trusts: it is an essential part of the well-educated lawyer's professional background, whether he ultimately makes vocational use of it or not.

I have tried to avoid burying the student in minutiae (with which the Internal Revenue Code is always overstocked), and this book is not a reference work, but the subjects covered are dealt with in some detail, because a "survey" would convey nothing of the spirit of income tax law. I have had to omit many subjects that would reward study, in order to concentrate on those fundamental problems (*e.g.*, income-splitting, capital gains and losses, business expenses as contrasted with capital outlays and personal expenses, the characteristics of income, the concept of annual accounting, etc.) that every student should grapple with.

With a "comprehensive revision" of the Internal Revenue Code* before us, the instructor may be tempted to close the books and study only the new statute. But pre-1954 law continues to be of great importance under the new Code. For while there is much in the law of federal income taxation that is "evanescent" (Coughlin v. Commissioner, infra, page 258), there is also much that is, if not permanent, at least tenacious. It is noteworthy that even in the "comprehensive revision" of

* So the Senate Finance Committee described the 1954 Code. S. Rept. No. 1622, 83d Cong., 2d Sess. 1 (1954).

1954, Congress drew back from proposals to alter the fundamental nature of the law at important points.*

Many provisions of the 1939 Code were re-enacted in haec verba or with only very minor changes. In some circumstances, the old law continues to govern in general, with restricted modifications for some taxpayers — for example, the expenses of child care are still non-deductible as a rule, though a limited class of taxpayers may deduct them to a degree. In some areas (*e.g.*, much of the partnership and short-term trust material), the new Code codifies a good deal of case law and administrative regulations. Other areas have been drastically altered, but we almost never start with a clean slate. Even the hotly debated credit for dividends received by individuals merely alters, without overturning, familiar comparisons between the corporation and the partnership or individual proprietorship as alternative means of carrying on the closely-held or one-man enterprise. Much old law will continue to be relevant in litigated cases for many years, and some will affect future transactions because, for example, it governs the basis of property acquired before 1954 or the calculation of corporate earnings and profits. At still other points, old cases, though overruled by the new Code, are excellent springboards for class discussion; and others, like Commissioner v. Court Holding Co. (infra, page 675) and Bazley v. Commissioner (infra, page 699), generated principles that will govern in foreign territory even though largely displaced in the area of their birth by the new statute. In my opinion, the study of pre-1954 statutes, cases, and regulations in conjunction with the 1954 Code is not just a temporary expedient. It is, rather, essential to an understanding of the new statute and, moreover, it offers an unusual pedagogical opportunity to inspire the student to examine the new statute, as statutes should be examined, relentlessly.

* * * * *

As to Part II (Federal Estate and Gift Taxation):

This subject has become of increasing importance to the practicing lawyer. But even those addicted to the theory that there is a corpus of law to which every law student must be exposed would probably not say that a curriculum is fatally defective because it slights estate and gift taxation. The subject's claim for attention rather rests, in the author's opinion, in its power to stimulate and

* In the field of corporate distributions and adjustments, for example, the House version of the 1954 Code made drastic changes that the Senate Finance Committee successfully opposed: "The House bill in this area is, in substance, an entirely new statute, using few of the terms or concepts with which the courts or the bar have become familiar over the years. Your committee has sought a less extreme approach. Rather than to replace the existing statute, it has sought to revise it so as to preserve the terms and concepts of existing law wherever possible. . . . The House bill departs from existing law by introducing the new terms, 'participating stock' (corresponding in general to common stock) and 'nonparticipating stock' (corresponding in general to preferred stock). It not only defines these terms but also contains a definition of the term 'security.' . . . Your committee believes that any attempt to write into the statute precise definitions which will classify for tax purposes the many types of corporate stocks and securities will be frustrated by the numerous characteristics of an interchangeable nature which can be given to these instruments. Accordingly, your committee has returned to the use of the terms 'stock,' 'common stock,' 'securities,' etc., and, as in the case under existing law, has not attempted to define them in the statute." Id. at 42.

Commenting on the 1954 Code in J. C. Penney Co. v. Commissioner, 312 F.2d 65 (2d Cir. 1962), Judge Friendly said:

"The Internal Revenue Code of 1954 was the culmination of a long history; the Chairman of the Ways and Means Committee said in introducing it, "This bill represents a complete overhaul of all our revenue laws, the first since the enactment of the income tax." 100 Cong. Rev. 3420 (March 17, 1954). Even when the words of the Code may seem clear, courts applying it must look to what had gone before, to what was left intact, to what was altered and why."

challenge the student. The interplay of legislative, administrative, and judicial action: the attempt to steer a course true to the statute's purpose through the ever-changing and involuted channels cut by reluctant taxpayers; the search for a better tax program — these offer a limitless opportunity to the instructor.

A word about the structure of this part of the book. The gift tax is mainly a backstop to the estate tax; without the one, the other could achieve neither its social function of checking the undue concentration of wealth nor its incidental fiscal function of raising revenue. Chapter 11 gathers together a brief collection of gift tax materials to give a bird's-eye view of the main outlines of this tax; then the student passes on, in Chapters 12-14, to consider the competing claims of the estate and gift taxes in specific situations. In these chapters, the impact of the estate tax on various property arrangements is examined and compared with the gift tax's claim on the same arrangements. The remaining chapters deal with the valuation of property; the estate tax exemptions and deductions; computation of the federal estate tax and the credits applicable to it; federal estate and gift tax procedure; and apportionment of the federal estate tax among those interested in the gross estate. . . .

Although the material in Part II can be adapted for use in a course on estate planning, the structure has not been oriented in that direction. This reflects the author's conviction that an estate plan that heavily stresses tax advantages, without giving at least as much attention to the law and practice of fiduciary administration, insurance, wills, and other relevant fields, is an inexcusable disservice to the client. And, despite a few notable exceptions, much of the writing on estate planning betrays a willingness to sacrifice everything else to a dramatic showing of tax savings, though to be sure there is usually a pious warning that an estate plan cannot be valued solely by the number of dollars that is diverted from the Treasury to the heirs. The exaltation of this kind of estate planning ought not to be fostered by law schools.

The author has another reason for not moving toward what at the moment may seem to be the frontier of the future. Estate and gift taxes are the instruments of an important social policy. The practicing attorney, unless he happens to be on a public payroll, can hardly help but regard these levies as burdens to be avoided, if it is legally possible to do so. But the student has the time and the independence to reflect on their appropriate status in our public policy. If he can do so later on, when the problems of clients press themselves on him, so much the better. In any event, he will be a better citizen, and probably a better lawyer as well, if he has looked at these taxes at least once in the role of a legislator who is formulating a tax program. He will hardly do this in a course where he is playing estate planner; in the more orthdox tax course, at least the conditions are more suitable for such deliberation.

* * * * *

In editing the cases, rulings and other materials that follow, I have freely omitted footnotes and renumbered those that were left. In general, the appropriate sections of the 1954 Code have been substituted for citations of the 1939 Code and the revenue acts that preceded it, and I have frequently inserted references to the current Treasury Regulations in place of older citations. In some instances, however, I have either retained or supplied a reference to the 1939 Code or to the pre-1954 Regulations. My aim in modernizing citations has been pedagogical convenience, rather than rigid adherence to a set of formal principles, and the practice is accordingly not entirely consistent. At the beginning of most sections of the book, I have commented briefly on the relation between the 1954

Code and the 1939 law, so that in reading the cases and other materials the student may weigh the importance of any changes in the statute. In this connection, the table of Parallel Statutory References (page xxiii), which converts 1939 Code references to the appropriate sections of the 1954 Code, should be helpful. There are frequent references to "S. Rept."; this is S. Rept. No. 1622, 83d Cong., 2d Sess., recommending the enactment of H.R. 8300, which became the Internal Revenue Code of 1954.

I am very grateful to the authors and publishers who have consented to my use of extracts from their copyrighted works. I am also deeply indebted to Anne S. Bittker, my wife, for editorial assistance, to a number of students who over the years have served as research or editorial assistants, and to countless other students who have knowingly or unknowingly aided and abetted in my education.

FEDERAL INCOME, ESTATE AND GIFT TAXATION

PART I

Federal Income Taxation

Introduction

A Bird's Eye View of American Tax History

The Sixteenth Amendment, empowering Congress "to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration," became effective on February 25, 1913. In the fiscal year 1913, the federal income tax on individuals and corporations produced $35 million of revenue, less than 5 per cent of total federal receipts, a modest amount when compared to the yield of about $320 million from the tariff. For the fiscal year 1962, however, the federal income tax produced $66.1 billion, about 72 per cent of total federal general revenue and more than 1½ times the total taxes collected by all state and local governments in the United States. For the year 1913, a married couple with two children paid a federal income tax of $10 on a net income of $5000, of $260 on a net income of $25,000, and of $25,010 on a net income of $500,000; for the year 1964, the tax bills for these incomes were $325, $5280, and $346,062.[1]

These facts are of great significance to the lawyer, as to other citizens. But of even more professional interest to him is the manner in which the federal income tax has come, during the last three decades, to affect every branch of the law. Leases, conveyances, and mortgages; wills, trusts, and deeds; employment contracts, collective bargaining agreements, and pension arrangements; corporate security issues, liquidations, and mergers — every one of these legal events is today permeated with, if not dominated by, tax problems. The traditional comparison of the partnership and the corporation as methods of carrying on business enterprise (limited liability, perpetual existence, etc.) is hopelessly inadequate if the federal income tax is disregarded; an alimony agreement that is drafted without one eye on the Internal Revenue Code will probably be badly drafted; and a sale of anything more valuable than a lame horse requires at least brief attention to the tax "angle." Taxes were once the exclusive province of accountants,[2] but today even the general practitioner of law must know his way around this area. Nor is it only the practitioner who is affected by the Internal Revenue Code. The legal scholar who seeks to understand the rise of the sale and lease-back method of financing industrial and commercial property, or the growth of the family-controlled charitable foundation, or the use of multiple corporations to conduct a single enterprise must give due weight to the federal income tax. In

[1] The figures for 1913 and 1964 are not precisely comparable, because of differences in exemptions, deductions, etc., but the direction and degree of change are indisputable.

[2] On the respective jurisdictions of the attorney and accountant, see infra pages 983-985.

its impact on our law for good or for ill, the federal income tax must be set down as one of the creative forces in legal history, like the invention of the trust, the corporation, or the doctrine of respondeat superior.

No other tax has had such an effect on the practice or structure of the law, at least not in our time. Many attorneys encounter the real property tax, which in 1962 produced more than $18.4 billion for local governments, only at real estate closings, where its importance is minor; they may be acquainted with sales, use, and gross receipts ($12 billion in 1962 for state governments) and with the federal taxes on alcohol and tobacco ($5.3 billion in 1962) only as consumers; and no one will impugn the lawyer's professional competence if he goes through his career in ignorance of the customs duties. The federal income tax is something else again; the lawyer might better be ignorant of the rule against perpetuities, the parol evidence rule, or the requisites of negotiability.

How has this come about?

Until the Civil War, customs receipts were the backbone of the federal tax system; the only other important source of federal income was the sale of public lands, except for a miscellany of excise taxes imposed when customs receipts declined and expenditures increased during the War of 1812 and repealed shortly thereafter. During the Civil War, customs receipts were once again unable to carry the load, and it became necessary for Congress to seek other sources of federal revenue. Among the "war taxes" that it levied was an income tax. The measure was amended several times; the 1864 version imposed a tax of 5 per cent on incomes from $600 to $5000, of 7½ per cent on income from $5000 to $10,000, and of 10 per cent on income above $10,000. The Confederacy also employed an income tax, whose rates were steeper than the Union's, but its yield was much lower.

After the Civil War, the federal income tax was repealed and customs receipts once again became the basic source of federal revenue; but they were never again to be the only source. Federal excises on tobacco and liquor together produced almost as much as, and sometimes even more than, the tariff during the years between the Civil War and World War I. Throughout the seventies and eighties, moreover, agrarian and labor groups called for reductions in the tariff and for a revival of the federal income tax. To Eastern business interests, on the other hand, the income tax meant "confiscation," "spoliation," and "communism," and throughout this period the Republican Party held the fort against its assaults. The task became harder as the Democratic Party gradually emerged from its handicap as the party of secession, and it finally became impossible when the Populist movement gained strength from the panic of 1893.

In 1894, during Cleveland's second administration, a federal income tax, based largely on the Civil War statute, was passed by Congress after a bitter struggle, a notable feature of which was the oratory of William Jennings Bryan. A tax of 2 per cent was imposed on individual income over $4000 and a flat 2 per cent tax was imposed on the income of business corporations. Congress thus went far beyond Cleveland's modest recommendation, in his 1893 message to Congress, of a "small tax upon incomes derived from certain corporate investments." The income tax was carried by Democratic and Populist votes, but it must be viewed primarily as a regional victory of the South and Middle West over the Northeast, part of the same sectional movement that produced the Interstate Commerce Act in 1887, the Sherman Antitrust Act in 1890, and the unsuccessful campaign for bi-metallism. It is worth noting, however, that the Populist effort to obtain a progressive tax on individual income was defeated, though the $4000 exemption introduced a measure of graduation.

The tax became law on August 28, 1894, to take effect as of January 1, 1895, and by January 29, 1895, the Supreme Court had agreed to hear Pollock v. Farmers' Loan & Trust Co. (and a companion case), in which the Circuit Court for the Southern District of New York had refused to grant an injunction in an action that attacked the tax as unconstitutional.[3] Immense public interest was aroused by the five days of argument before the Supreme Court, in which notable attorneys and orators were engaged on both sides. The *Pollock* action was a suit by a stockholder to enjoin his corporation from paying the tax, a legal form that has been much criticized and is seldom encountered today.[4] Consequently, the tax was defended not only by the Attorney General but also by counsel for the corporation.

One ground of attack was that the income tax was a "direct" tax, and that it was not apportioned among the several states in proportion to population, as required by Article I, Section 9, Clause 4 of the Constitution:

> No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.

A "capitation" tax clearly meant a poll tax, and there was general agreement that a tax on real estate, the kind that produces the bulk of municipal revenue today, was also a "direct tax" as that term was used in the Constitution. But was the income tax a "direct" tax because it included rents received by the owner of real property, along with all other types of income? If an income tax on rents derived from real property was a "direct" tax, was the inclusion of income from personal property (i.e., bonds, stock, etc.) equally invalid? Finally, if the inclusion of rentals or dividends and interest made the tax "direct," were these provisions separable from the rest of the tax, or was the statute invalid in toto?

Whatever may have been the purpose of the constitutional requirement that direct taxes be apportioned among the several states in relation to their population,[5] it was jeopardized by the lack of a consensus on what, besides a poll tax and a tax on real property, was included in the term "direct tax." Chief Justice Fuller was surely mistaken when he said in the *Pollock* case (157 U.S. at 573) that "the distinction between direct and indirect taxation was well understood by the

[3] Without President Cleveland's approval. The tax was a rider to the Wilson tariff bill, and Cleveland opposed its imposition of a tariff on sugar and other commodities. But since a veto would have kept alive the McKinley tariff schedules, Cleveland allowed the act to become law without his approval.

[4] Infra page 934.

[5] In the *Pollock* case, Chief Justice Fuller explained the provision's purpose as follows: "Nothing can be clearer than that what the Constitution intended to guard against was the exercise by the general government of the power of directly taxing persons and property within any State through a majority made up from the other States." 157 U.S. at 582. Seligman, on the other hand, concluded that the restriction was concerned only with the slavery question and was intended to induce the slave states to accept representation in the House of Representatives based on the number of free persons in the state plus only three fifths of the slaves, by promising that direct taxes would be similarly apportioned. This link between representation and direct taxation is clearly seen in Article I, Section 2, Clause 3 of the Constitution: "Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons . . . three fifths of all other Persons." In keeping with this relationship between the direct tax clause and the treatment of slaves, Article V provided that until 1808, no amendment to the Constitution could be made changing either the direct tax clause or the clause permitting free migration into the country of such persons as any existing state might permit. Seligman comments: "The direct-tax clause was inserted into the constitution simply and solely as a concession to slavery, and with the disappearance of slavery and the adoption of the fourteenth amendment the very reason of its existence passed away." Seligman, The Income Tax (1911) 559.

framers of the Constitution and those who adopted it." More descriptive of the prevailing uncertainty is this extract from Madison's Notes: "Mr. King asked what was the precise meaning of *direct* taxation. No one answered." [6]

The term "direct tax" had caused difficulty at the very outset of the Republic. In 1794, Congress levied a tax on carriages, after a debate in which Madison argued that the tax was a direct one, while Fisher Ames, drawing on Massachusetts experience, asserted that it was indirect. The Supreme Court, in a case in which ex-Secretary of the Treasury Hamilton participated in the argument, held that the tax was constitutional.[7] Mr. Justice Chase was "inclined to think" that the only taxes that were "direct" within the meaning of the Constitution were the poll tax and taxes on land. Expressing doubt that a tax on personal property was "direct," he found that it was not necessary to decide, because "a tax on expense is an indirect tax; and I think, an annual tax on a carriage for the conveyance of persons, is of that kind. . . ." (3 Dall. 171, 174, (1796.) Mr. Justice Paterson and Mr. Justice Iredell, who wrote separate opinions, were equally unable to suggest any examples of a direct tax except the poll tax and taxes on land.

So far as federal income taxation was concerned, the Supreme Court's most important foray into the morass before the *Pollock* case was Springer v. United States, 102 U.S. 586 (1880). In this case, the Court unanimously upheld the validity of the Civil War income tax, which embraced (13 Stat. 479):

> the annual gains, profits, and income of every person . . . whether derived from any kind of property, rents, interest, dividends, or salaries, or from any profession, trade, employment, or vocation . . . or from any other source whatever.

Citing the *Hylton* case, and other cases in which it had held that taxes on the receipts of insurance companies, on state bank notes, and on inheritances were all indirect taxes, the Court held that the federal income tax was also indirect, saying (102 U.S. at 602):

> Our conclusions are, that *direct taxes,* within the meaning of the Constitution, are only capitation taxes, as expressed in that instrument, and taxes on real estate; and that the tax of which the plaintiff in error complains is within the category of an excise or duty.

Despite this history, the Supreme Court in the *Pollock* case, by a vote of six to two (one Justice not sitting), held that insofar as it taxed income from real estate, the 1894 federal income tax was unconstitutional:

> . . . [I]t is admitted that a tax on real estate is a direct tax. Unless, therefore, a tax upon rents or income issuing out of lands is intrinsically so different from a tax on the land itself that it belongs to a wholly different class of taxes, such taxes must be regarded as falling within the same category as a tax on real estate *eo nomine*. . . . An annual tax upon the annual value or annual user of real estate appears to us the same in substance as an annual tax on the real estate, which would be paid out of the rent or income. . . . If, by calling a tax indirect when it is essentially direct, the rule of protection could be frittered away, one of the great landmarks defining the boundary between the Nation and the States of which it is composed, would have disappeared, and with it one of the bulwarks of private rights and private property. [157 U.S. at 580, 581, 583.][8]

[6] 5 Elliot, Debates on the Adoption of the Federal Constitution (1866) 451.

[7] Hylton v. United States, 3 Dall. 171 (1796).

[8] The Editor, as the incumbent of a professorship established in honor of Charles F. Southmayd, cannot resist noting that Southmayd was credited by Joseph H. Choate, who argued the *Pollock* case, with working out the theory that a tax on rent was necessarily a tax on the property from which the rent was derived, thus providing "the keystone of the whole argument, and, indeed, of the decision which overthrew the Act of Congress." Choate, Memorial of Charles F. Southmayd, in Hicks (ed.), Arguments and Addresses of Joseph Hedges Choate (1926) 139, 148. See, however, 26

The *Springer* case was distinguished because none of the income of the taxpayer there in question was derived from real estate, a factual distinction that was accurate but that probably would have come as a surprise to the *Springer* court.

In addition to holding that the inclusion of rents was unconstitutional, the Court in the *Pollock* case decided, all eight Justices agreeing, that the inclusion of municipal bond interest constituted "a tax on the power of the States and their instrumentalities to borrow money" and that it was unconstitutional as a violation of our federal system of government. This determination was not of fundamental importance, because an income tax exemption for interest from state and municipal bonds was entirely feasible (and, indeed, later income tax statutes have exempted such income). It might even have been possible to re-enact a federal income tax with an exemption for income derived from real property. But two other questions were left unanswered because the Court was equally divided, and so long as these questions were in doubt, re-enactment of an income tax law was hardly likely. The first was whether a tax on income from personal property was an improper direct tax. This was a fundamental issue, because if not only rents but also interest and dividends were entitled to an exemption, a federal income tax would have to be restricted to personal earnings and business profits. Secondly, the Court did not decide whether the granting of a minimum exemption of $4000 to individuals violated the uniformity clause of Article I, Section 8, Clause 1 of the Constitution: "[A]ll Duties, Imposts and Excises shall be uniform throughout the United States." This issue too was basic. A third question of great immediate importance was also left unanswered by an equally divided Court: whether the invalid provisions taxing income from real estate and municipal bond interest were separable from the rest of the statute or rendered it invalid in toto.

One week later, counsel for the appellants applied for a rehearing on the undecided questions, and the Attorney General in response suggested that the whole case be reargued. The Court set both applications for rehearing down for argument in May, 1895; this time all nine Justices were on the bench. In a second opinion (158 U.S. 601), the previous holding as to income from real estate was reaffirmed by a vote of five to four. The same five justices agreed that a tax on the income from personal property was an invalid direct tax, and they held that the invalid provisions were not separable from the rest of the tax, so that the tax was invalid in toto.[9] Mr. Justice Jackson, who did not sit on the first argument, voted to uphold the tax on all three counts. Since he was part of a minority of four, it was immediately assumed that one of the four Justices who at the first argument thought the tax on income from personal property was proper and that the provision taxing rents was separable from the rest of the statute must have switched sides. This in itself would not have been of earth-shaking importance, but it was dramatic evidence of the power of a single judge, and the fact that the reports did not reveal the name of the "vacillating" judge lent an air of mystery to the event. Mr. Justice Shiras was long identified, on what now seems to be

---

Cong. Rec. 6826-6827 (1894), which shows that this argument was made during the debate preceding enactment of the 1894 tax and that an amendment to exempt rents from real estate on the ground that their inclusion would be unconstitutional was rejected.

[9] The Court did not find it necessary to pass on the other undecided question — did the $4000 exemption violate the uniformity clause of Article I? A few years later, however, in Knowlton v. Moore, 178 U.S. 1 (1900), the Supreme Court held that a federal inheritance tax was constitutional despite certain exemptions; the term "uniform throughout the United States," it held, meant geographical uniformity, so that persons and property would be taxed in the same manner without regard to geographical location, rather than "intrinsic" uniformity (i.e., without exemptions). See also Brushaber v. Union Pacific Rr. Co., 240 U.S. 1 (1916) (progressive rate structure not a violation of due process clause of Fifth Amendment).

slim evidence, as the judge who switched, though some scholars have more recently awarded the blame, or credit, to others. It is also possible that the assumption of a switch is incorrect.[10]

After the *Pollock* decision, advocates of the income tax turned to an amendment to the Constitution as a means of reviving the tax, though there was also some agitation for confronting the Supreme Court with a new statute in the hope of securing a reversal of the judicial position. McKinley's victories in 1896 and 1900 over William Jennings Bryan, the candidate of the Democrats and Populists, reflected the temper of the times, however, and not even the financial demands of the Spanish-American War could restore the federal income tax. But within a few more years after the *Pollock* case, in which Mr. Justice Field had called the income tax "usurpation," an "assault upon capital," and "the steppingstone to . . . a war of the poor against the rich" (157 U.S. at 607), the very same tax had found eminent support within the Republican Party itself: both Theodore Roosevelt and William Howard Taft announced that they favored a federal income tax. Taft, indeed, expressed at one time the view that a constitutional amendment might not be required because of the changed membership on the Supreme Court, though he later reconsidered. Bryan, apparently having more faith in the rule of precedent than the future Chief Justice, insisted that a constitutional amendment was necessary, and that Taft's hope of a change in the Supreme Court's sentiment was insincere. Whether Taft himself was engaged in a campaign maneuver or not, the insurgent Republicans who followed Roosevelt were unquestionably serious.

In 1909, a combination of these insurgent Republicans and the Democrats laid plans for an income tax amendment to the Payne-Aldrich Tariff bill, then pending in the Senate. The proposal was to tax both corporate and individual incomes, with a $5000 exemption; it was a direct challenge to the *Pollock* case, except that interest from state, county, and municipal bonds was to be excluded, in recognition of the Supreme Court's unanimity on this point. The conservative wing of the Republican Party was able to head off the threat by winning over President Taft, but the price of victory was high. To obtain Taft's assistance in beating down the income tax on individuals, its opponents were forced to agree to the enactment of a corporate income tax[11] and to a joint resolution proposing

---

[10] There is a full account of the puzzle and a review of earlier comments in Shiras, Justice George Shiras, Jr. of Pittsburgh (1953) 168-183.

[11] The 1909 corporate income tax was held constitutional in Flint v. Stone Tracy Co., 220 U.S. 107 (1911). The Court rejected (220 U.S. at 150) the argument that it imposed an unapportioned "direct" tax:

"Within the category of indirect taxation, as we shall have further occasion to show, is embraced a tax upon business done in a corporate capacity, which is the subject-matter of the tax imposed in the act under consideration. The *Pollock* case construed the tax there levied as direct, because it was imposed upon property simply because of its ownership. In the present case the tax is not payable unless there be a carrying on or doing of business in the designated capacity, and this is made the occasion for the tax, measured by the standard prescribed. The difference between the acts is not merely nominal, but rests upon substantial differences between the mere ownership of property and the actual doing of business in a certain way."

The Court also upheld (220 U.S. at 162) the inclusion of income from state and municipal bonds:

"It is further contended that some of the corporations, notably insurance companies, have large investments in municipal bonds and other non-taxable securities, and in real estate and personal property not used in the business, that therefore the selection of the measure of the income from all sources is void, because it reaches property which is not the subject of taxation — upon the authority of the *Pollock* case, supra. But this argument confuses the measure of the tax upon the privilege, with direct taxation of the estate or thing taxed. In the *Pollock* case, as we have seen, the tax was held unconstitutional, because it was in effect a direct tax on the property solely because of its ownership."

a constitutional amendment to permit an individual income tax on all types of income. Taft favored the constitutional amendment partly as a sop to the insurgents and partly because he thought that an income tax might be good policy in time of great national need. The backers of the income tax were dismayed by Taft's open opposition and especially by the fact that a constitutional amendment could be defeated if only twelve state legislatures were won over by the conservatives.[12] Moreover, even with an amendment to the Constitution, the battle in Congress would have to be fought again, perhaps at a less auspicious time.

The joint resolution passed by Congress in 1909 on Taft's insistence, which in 1913 became the Sixteenth Amendment, was in the following terms:

> The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

The most influential opposition to the proposed amendment, when it was before the states for ratification, stemmed from a special message from Governor Charles Evans Hughes to the New York State Legislature in 1910. Governor Hughes stated that he believed the federal government should have the power to impose an unapportioned income tax, but he recommended against ratification because the words "from whatever source derived" in the proposed amendment, "if taken in their natural sense," would permit income from state and municipal bonds to be taxed by the federal government, a power that would "afford the opportunity for federal action in violation of the fundamental conditions of State authority." This message led to the defeat of ratification in New York in 1910. Some supporters of the amendment rejected Hughes' construction, but others were willing to accept it, and his views were quoted throughout the nation. But the Democrats and insurgent Republicans were successful in the state elections of 1910 and 1912, and by early in 1913 thirty-six states (including New York) had ratified the amendment.

The Sixteenth Amendment thus became a part of the Constitution on February 25, 1913, less than four years after the advocates of the income tax thought they had been defrauded of victory by the maneuver of the tax's opponents. Within a few months, moreover, Congress passed the Revenue Act of 1913, imposing a "normal" tax of 1 per cent (with an exemption of $3000 for an individual and of $1000 additional for a married person living with his spouse) and a "surtax" ranging from 1 per cent on net income from $20,000 to $50,000 up to 6 per cent on that part of any net income exceeding $500,000. This should be compared with the income tax proposal that was defeated in 1909: a flat 2 per cent on net income in excess of $5000.

The Role of the Income Tax Today: A Brief Survey

The income tax's career from 1913 to the present day is starkly summarized in Tables I and II.

Where do we go from here? In answering this question, we might begin by examining the last column of Table II — the expenditures of the federal government. These expenditures, broken down for several recent years, are shown in Table III.

---

[12] Amending the Constitution seemed a graver and more formidable undertaking then than now; the first ten amendments were virtually part of the original Constitution, the eleventh and twelfth had been adopted in 1798 and 1804, and for more than a century the only other amendments were the thirteenth, fourteenth, and fifteenth, representing the political settlement of a civil war.

* Assuming use of standard deduction and no capital gains or other specially treated items.

What are the prospects for a massive reduction in these expenditures — not by substituting paper napkins for linen on naval flagships, but by fundamental cuts in the budget? Much of our budget obviously hinges on the men in Moscow and Peiping, not on Bostonians and San Franciscans. A dependable international settlement would have a prompt repercussion on federal expenditures, and so would further aggression. Our expenditures for national defense and foreign aid reflect our international hopes, aims, and estimates. These in turn are partly trimmed to our economic position, but not even those who believe that the Kremlin's long-range strategy is to lure us into "bankruptcy" would recommend a cessation of defense expenditures to improve the national financial statement. Other important items in the federal budget, like veterans' benefits and interest on the public debt, can be reduced only painfully. The prospect for a substantial

cut in these expenditures is dark. Still other domestic expenditures are more flexible, but social aims, regional and occupational pressures, political pledges and ambitions, and kindred drives may lead to increases instead of to reductions. Moreover, if expenditures that aid one group (farmers, veterans, tenants of public housing developments, etc.) are — or seem to be — financed by taxes on other groups, the pressure to cut expenditures may be decisively overbalanced by the drive to increase benefits. Last year's level of federal expenditures is not sacrosanct; one has only to examine the last column of Table II to see how widely expenditures can vary from decade to decade. But Table III also demonstrates that our international interests, aspirations, and responsibilities are of overwhelming importance in fixing the level of national expenditures.

So much for the expenditure side of the federal budget. What of federal taxes? While the two items are related, they are certainly not in balance. Though expenditures decline, the level of taxation may be maintained to produce a surplus for debt retirement, to combat inflation by draining off funds that might be used for consumer goods, or for other reasons. Conversely, taxes might be cut without a corresponding decline in expenditures, the gap being closed by government borrowing. Such a fiscal policy might be adopted in a depression in order to stimulate the national economy by government spending; deficit financing may also be resorted to in wartime, to finance expenditures essential to national survival, if taxes are already as high as is politically or economically feasible. A gap between federal expenditures and federal taxes, then, is not only possible but may be a deliberately adopted policy. Still, one cannot minimize the facts that, on the one hand, there is strong opposition to deficit financing, while, on the other hand, any decrease in federal expenditures will stimulate a demand that the "saving" be "passed on" to the taxpayer. The bond between taxes and expenditures cannot be ignored, then, though it may be more of an uneasy family tie than an inflexible chain. Without a drastic change in federal expenditures, a drastic change in total federal taxes is unlikely.

To be sure, the taxpayer's readiness to accept heavy federal expenditures will

be molded not only by his assessment of their short and long run value to him, but also by the type of tax imposed to finance the expenditures. A tax that is out in the open, like an income or sales tax, may cause more resistance to federal expenditures than one that is less clearly identifiable — like a manufacturer's excise, though even the latter type of tax, if separately stated by the vendor of products or services, may produce "tax consciousness" on the consumer's part. An income tax paid once a year may be a crushing blow, while the same amount withheld from wages may not be missed, as though gross wages were a mirage and "take-home" pay the only reality. On the other hand, if the tax is hidden, some taxpayers may be uneasy about expenditures they would endorse if they knew where the money was coming from; and still others, feeling that the income tax withholding system is fit only for serfs and school children, may protest any expenditures by a government that will not trust them until the annual due date. The distribution of the burden among economic and regional groups and the taxpayer's sense of justice also affect the likelihood of a taxpayers' movement for the reduction of expenditures. While a taxpayers' revolution is always possible, the author's own, no doubt unforgivably cynical, conclusion is that the users of the mail are about as likely to band together to force a reform of the postal service.

If federal expenditures, and hence federal taxes, remain high, what part will the federal income tax play in the foreseeable future? Its phenomenal success in raising revenue cannot be disputed, but its position of pre-eminence has not gone unchallenged. Some critics argue that it is dangerous for the federal government to rely so heavily on a tax whose yield is entirely at the mercy of national income, so that any decline in income will produce an immediate decline in revenue.[13] To others, however, this "built-in flexibility," far from being a drawback, is one of the merits of the income tax; the automatic decline in tax liability when income falls serves to release consumer spending power when it is most needed, without the delay of political action, while in a period of boom, the automatic rise in tax liability serves to reduce the inflationary pressure of increased purchasing power.

The most vigorous attacks on the pre-eminence of the federal income tax, however, have come from those who fear its strength, not its instability. In part, the fear is that the income tax undermines the incentive to work. The criticism is not easily assessed, and the task is not made less perplexing by the fact that many of the critics are academic economists, who, if they are themselves motivated by financial ambition, have shown poor judgment, and lawyers, among whom the tradition of uncompensated public service is strong. Some taxpayers are indifferent to money; but others, no doubt, are indifferent to everything else. Even those who do not themselves care much for money may of course be goaded into lethargy by the government's demands for part of what they earn. Of those taxpayers who are driven principally by ambition for financial success, some may work harder under the lash of the income tax to maintain a stable after-tax income, while others may flee to Florida or Tahiti or to jobs that require less energy. While in general it is thought that an income tax on wages and salaries cannot be shifted by the taxpayer, it may be that some groups, e.g., organized labor, may demand higher pay for the same work, leaving their incentives untouched by the tax, except insofar as the whole economy eventually reflects the higher cost of labor. The income tax's impact on incentives is unquestionably also affected by the purpose for which the tax is levied, the climate of political opinion, the steep-

[13] For estimates of the effect of a reduction in personal income on the yield of the federal income tax on individuals, see Pechman, Yield of the Individual Income Tax During a Depression, 7 Nat. Tax J. 1 (1954). See also Poole, Rolph, Brown, and Lutz, 3 Tax Revision Compendium, House Committee on Ways and Means (1959) 2331-2382.

ness of any increase, the prospects for later changes in tax rates, the taxpayer's sense of justice, etc.

If we assume that the federal income tax impairs the incentives of persons who can join or withdraw from the labor market with comparative freedom — like men near retirement age or housewives — one must still decide whether it is undesirable for housewives to turn down factory jobs or for business executives to accelerate their retirement. Opinions would surely differ, and we cannot avoid the question by saying that such decisions should be left to the individual without coercion by the tax system. All taxes have effects on the economy, and if the income tax were reduced or repealed to encourage the housewife or older executive to work, some other tax would have to be imposed, or deficit financing would have to be resorted to, and the taxpayer would then be coerced in some other area of his economic life. We know little of the incentive effects of income taxation,[14] but even if we knew much more, policy decisions would not flow inexorably from the information.

Economists seem to feel on more solid ground when they turn from the impact of income taxation on incentives to its effect on consumption and savings. Assuming that the tax is not shifted, as by a successful demand for higher wages or salaries, the usual view is that it deprives low income taxpayers of funds that would go for consumer goods and services, while high income groups are impelled to reduce their savings rather than their consumption. This conclusion rests on the assumption that low incomes are largely or entirely exhausted by consumption expenditures, saving being either nil or confined to relatively inelastic items like insurance premiums. Higher income groups devote increasingly large portions of their income to savings, it is thought, and hold their consumption at relatively inflexible levels. Our knowledge of the distribution of investments among income groups is fragmentary, but one careful study presented these conclusions:

> 1. That, as a minimum estimate, the top 1 per cent of all spending units with incomes of about $15,000 and over accounted for more than one quarter of the annual accumulations of investable funds made by all spending units in 1948 and presumably also in other postwar years.
>
> 2. That, again as a minimum estimate, the top 3 per cent of all spending units with incomes of $10,000 and over accounted for more than 40 per cent of the total.
>
> 3. That the top 5 per cent of all spending units with net incomes of $7500 and over accounted for more than 55 per cent of the total.[15]

These estimates of 25 per cent, 40 per cent, and 55 per cent as the annual accumulations of investable funds by the top 1 per cent, 3 per cent, and 5 per cent were regarded by the authors as minimums that might more probably be stated as 30-35 per cent, 45-50 per cent, and 60-65 per cent respectively.

Though these statistics indicate a high degree of concentration of "investable funds," they also indicate that some 65-75 per cent of the annual accumulation of such funds is diffused among the 99 per cent of spending units with incomes of under $15,000.[16] The income tax even at present rates is hardly confiscatory

---

[14] A study of business executives found some evidence of an adverse effect of income taxation on incentives, but it also states: "The evidence of the interviews tends to show that the extent to which business executives have reduced their work and effort, as a result of taxes, has frequently been much exaggerated . . . What all history goes to show is again confirmed by a good deal of evidence in this study, that difficulty, danger, and strenuous effort are themselves incentives to many men." Sanders, Effects of Taxation on Executives (1951) 12, 14. [15] Butters, Thompson, and Bollinger, Effects of Taxation: Investments by Individuals (1953) 19.

[16] Another study estimates that of the $12 billion of corporate dividends attributable to individuals in 1960, 27.2 per cent was received by persons with adjusted gross income under $10,000,

at the level of $15,000 and below, and these are the families that would have to bear the brunt of any alternative tax that might be levied to replace the federal income tax. Would their investment capacity be enhanced, or reduced, if Congress turned its affections from the income tax to a national sales or manufacturers' excise tax? One must not overlook, of course, the apparent fact that the higher income groups, on whom the income tax rests more heavily, invest increasingly higher portions of their investable funds in risk ventures, without which there can be no sound investment of lower class money; and it is also possible that lower income groups keep disproportionately large parts of their savings in the form of cash rather than in investments. But we may be seeing a shift in this pattern, as insurance companies, pension funds, investment companies, and other pools of capital that are fed by lower income groups exhibit an interest in the type of business equities that they once avoided as imprudent investments. Moreover, installment investment plans for lower income groups may introduce an element of inelasticity here, at least so long as wages exceed the subsistence level. It is not inconceivable that we will become a nation of mass investment, as well as mass purchasing, power. If that time is already at hand, we shall have to rethink, and perhaps to revise, our views of the relation of income taxation to savings and investment.

Individuals are not the only source of funds for investment, of course, and they may not even be the most important. Corporate investment in recent years has been financed by retained earnings more than by the sale of securities. The corporate income tax reduces earnings available for investment, though this pressure may be alleviated to some unknown degree by a shifting of the tax through the medium of higher prices or lower wages. It may also be alleviated by a reduction in dividends, though this expedient, while conserving the corporation's internal resources, would repel outside capital. Besides reducing the supply of corporate capital for investment, an income tax may reduce the incentive to invest. Generalizations in this area are but faint guideposts to national policy, however, without differentiation according to the size, age, and risk of the enterprise. In its present form, the federal income tax may encourage investment in bonds rather than in stocks, and in tax-exempt state and municipal bonds rather than in taxable securities, but these effects, which will be adverted to later in this book, are more adventitious than central to income taxation.

As has already been indicated, the attempt to measure or predict the effect of income taxation on the drive to work and on the pattern of consumption, savings, and investment, is complicated by the rudimentary state of our knowledge about the incidence of taxation. Does the burden of an income tax rest on the person who pays it, or can he shift the burden, in either the short or the long run, to others? Traditionally it has been thought that an income tax on business profits cannot be shifted either by cutting wages or other costs or by raising prices, because the taxpaying business must compete with the marginal firm that, because it is just breaking even, pays no income tax, and fixes its own (and therefore its competitors') prices without regard to the tax. In recent years, however, economists have been less sure that the marginal firm sets the pace for the others; and, even if it theoretically would do so under conditions of perfect competition, the intervention of monopolistic advantages (trade names, unique locations, other forms of goodwill, etc.) will in practice greatly modify the role of the marginal producer. It may be that even with such advantages, the most profitable

and another 26 per cent by those with adjusted gross income from $10,000 to $25,000, with a total of 70 per cent being received by persons with adjusted gross income under $50,000. Crockett and Friend, Characteristics of Stock Ownership (U. of Pa. 1963, preliminary) Table 1.3. See also Holland, Dividends Under the Income Tax (1962) Table 2.

price prior to the levy of an income tax will still be the most profitable price afterwards, so that the tax could be the occasion but not the cause of increased prices. But if the firm has not previously pressed its advantages home and is impelled to do so by the tax, the tax has in a very real sense been "shifted." The chairman of the finance committee of the U.S. Steel Corporation and the research department of the C.I.O. have both asserted that corporate income taxes are costs that are passed on to the public in the form of higher prices,[17] and one must think twice before rejecting these empirical opinions in favor of a contrary position that is derived from an economic "model" that may have no counterpart in real life. An income tax that was shifted would, of course, have very different effects upon incentives, savings, and investment from one whose burden remained on the taxpayer.

Many economists who reject the possibility of a short-run shifting of an income tax acknowledge that it may be shifted in the long run. If the marginal firm is earning no profits, they reason that it will be induced to transfer its investment to a sector of the economy where a return can be realized, thus curtailing supply in the old area, while no new funds will flow there until prices have risen sufficiently to offer a profit. These effects can be felt only as fast as the marginal firms can, and will, liquidate. Similarly, the traditional view has been that an income tax on wages cannot be shifted. But a strong union's insistence on stable "take-home" pay will surely have some effect, at least in the short run. When we look beyond the immediate consequences of such institutional pressure, however, we find that increased wages will in turn affect prices, consumption, and investment, and predictions become precarious indeed.

The principle of progression in the federal income tax has always been controversial, but since the end of World War II it has been more severely criticized than at any time since the formative years of the tax. Just as many supporters of the tax look on progression as its greatest virtue (though they may disagree about the proper rate of progression), so many of its critics have come to think that this is its worst characteristic; and, unquestionably, a proportional income tax would be palatable, and perhaps even attractive, to some of them. Progression is inescapable if any personal or dependency exemptions are allowed, a practice as old as the British income tax of 1799, and a more deliberate form of progression also has some eighteenth and early nineteenth century antecedents.[18] But not until the Civil War income tax (both in the North and the South) can significant graduation be found, and this was only the primitive origin of what is now, as Table I indicates, a fine art. As the student will soon discover, many of the most troublesome administrative and legal problems created by the federal income tax are the direct result of progression; these difficulties and complications may not in themselves count heavily against progression, if it can be defended on more fundamental grounds, but they do force us to think about whether a progressive tax has advantages over a proportional tax that would be much simpler.

Is progression justified? The taxes on cigarettes, whiskey, retail sales, and real property are the same for each taxable item and taxpayer. If the taxpayer's pur-

[17] Goode, The Corporation Income Tax (1951) 44-45.

[18] In rejecting a contention that the progressive rate structure of the 1913 income tax violated the due process clause of the Fifth Amendment, the Supreme Court said in Brushaber v. Union Pacific Railroad Co., 240 U.S. 1, 25 (1916): "It is true that it is elaborately insisted that although there be no express constitutional provision prohibiting it, the progressive feature of the tax causes it to transcend the conception of all taxation and to be a mere arbitrary abuse of power which must be treated as wanting in due process. But the proposition disregards the fact that in the very early history of the government a progressive tax was imposed by Congress, and that such authority was exerted in some, if not all, of the various income taxes enacted prior to 1894 to which we have previously adverted."

chases increase in number or his property in value, he pays proportionately, not progressively, more. If the tax on the third martini is no more than the tax on the first, why should the millionth dollar of income in a given year be taxed more heavily than the ten-thousandth? A number of arguments for progression have been put forward; some are variations on the "sacrifice" theory, assuming that it is less painful to relinquish the last dollar of a high income than the last dollar of a lower income, an idea that is popularly expressed in the phrase, "ability to pay"; some rest on the assumption that the benefits "bought" with taxes increase progressively with the taxpayer's income or wealth; sometimes there are appeals to equalitarian principles; and sometimes it is argued that progression contributes to a better balance between savings and consumption in the economy. None of the purely "rational" arguments is entirely satisfactory; either they rest on premises that are intuitive rather than demonstrable, or they carry implications that go far beyond progressive taxation alone. It seems likely that the emotional and ethical appeal of progression is ultimately more compelling; but, of course, it is less susceptible to analysis. The authors of a painstaking examination of the intellectual history of progression concluded:

> The case for progression, after a long critical look, thus turns out to be stubborn but uneasy. The most distinctive and technical arguments advanced in its behalf are the weakest. It is hard to gain much comfort from the special arguments, however intricate their formulations, constructed on notions of benefit, sacrifice, ability to pay, or economic stability. The case has stronger appeal when progressive taxation is viewed as a means of reducing economic inequalities. But the case for more economic equality, when examined directly, is itself perplexing. And the perplexity is greatly magnified for those who in the quest for greater equality are unwilling to argue for radical changes in the fundamental institutions of the society. [Blum and Kalven, The Uneasy Case for Progressive Taxation (1953) 103, also to be found in 19 U. of Chi. L. Rev. 417 (1952).]

The strength of conviction in this area is amply demonstrated by reviews of the Blum-Kalven study. John Chamberlain, in whose eyes the Sixteenth Amendment "legalizes a theft," welcomed the book for conferring "academic recognition" on "the intellectual sapping operation against the progressive principle." [19] Randolph Paul, on the other hand, asserted that the book "has confirmed rather than shaken my belief that there should be more, rather than less, progression in the American tax system." [20]

In point of fact, although the maximum rate of the 1954 Code soared to 91 per cent (taxable income in excess of $300,000 on a separate return, $400,000 on a joint return), and was not reduced to its present level of 70 per cent until 1964, marginal rates, of course, apply only to that part of taxable income that exceeds the previous bracket, so that the average or effective rate is always lower than the marginal rate. Moreover, the degree of progression is reduced even more by the omission of such items as state and municipal bond interest from the taxable base, by the reduced rate applicable to long-term capital gains, and by such deductions as percentage depletion. Thus, Table IV shows that the effective tax rate for taxable returns filed for 1960 was below 35 per cent of "amended adjusted gross income" (roughly speaking, gross income less business deductions, but including capital gains in full) for taxpayers with $100,000 to $200,000 of amended adjusted gross income and even lower for those in the $1,000,000 and over bracket. If "amended adjusted gross income," as employed in Table IV, were recomputed to take account of tax-exempt state and municipal bond interest, deductions for percentage depletion to the extent they exceed the taxpayer's actual investment, and certain other items that are excluded or deducted in computing taxable in-

come though they do not reduce the taxpayer's spendable income, the effective rates would probably be even less progressive.

TABLE IV

EFFECTIVE TAX RATES BASED ON ADJUSTED GROSS INCOME AND AMENDED ADJUSTED GROSS INCOME FOR ALL TAXABLE RETURNS, 1960

(Dollar Amounts In Millions)

Adjusted gross income	*Number of returns (thousands)*	*Adjusted gross income*	*Excluded net long-term capital gains*	*Amended adjusted gross income*	*Tax after credits*	*Tax as percent of adjusted gross income*	*Tax as percent of amended adjusted gross income*
Up to $5,000	22,751.0	$69,141	$423	$69,564	$6,274	9.1	9.0
$5,000-$10,000	19,998.0	138,455	789	139,244	15,362	11.1	11.0
$10,000-$20,000	4,422.0	56,128	933	57,060	8,448	15.0	14.8
$20,000-$50,000	764.0	21,901	1,001	22,902	4,993	22.8	21.8
$50,000-$100,000	101.0	6,648	652	7,300	2,273	34.2	31.1
$100,000-$150,000	14.0	1,688	283	1,971	681	40.3	34.6
$150,000-$200,000	4.0	750	170	920	320	42.6	34.7

If we widen our angle of vision to embrace other types of taxes in judging the degree of progression in the total tax burden — national, state, and local — we encounter much that is obscure, but it is at least possible that the progressivity of the federal income tax merely counteracts the regressivity of state, local, and other federal taxes, producing an aggregate national tax burden that is roughly proportionate to income.[21] However progressive, regressive, or proportionate a tax (or the entire tax burden) may be as to income classes, however, the taxpayers in any one class may well bear unequal burdens. The effective rates of Table IV, for example, are averages for the income classes in question, and the effective rate for any individual taxpayer may be very different from the average for his income class because of differences in the "mix" of income items received. Thus, for 1002

[21] See Musgrave, How Progressive Is the Income Tax? 3 Tax Revision Compendium, House Ways and Means Committee, 1959, p. 2223; Bishop, The Tax Burden by Income Class, 1958, 14 Nat. Tax J. 41 (1961); Musgrave, Carroll, Cook, and Frane, Distribution of Tax Payments by Income Groups: A Case Study for 1948, 4 id. 1 (1951); Tucker, Distribution of Tax Burdens in 1948, 4 id. 269 (1951); Musgrave and Frane, A Rejoinder to Dr. Tucker, 5 id. 15 (1952); Colm and Wald, Some Comments on Tax Burden Comparisons, 5 id. 1 (1952); Neisser, The Dynamics of Tax Burden Comparisons, 5 id. 351 (1952). These articles cite several earlier studies.

For another conclusion ("the total tax system is highly progressive in its effect"), see Beaton, Family Tax Burdens by Income Levels, 15 Nat. Tax J. 14 (1962); see also Tax Foundation, Allocation of the Tax Burden by Income Class (1960).

For an attempt to gauge the net redistributive effect of the American fiscal system, taking into account not only tax burdens but also the receipt of benefits by income groups, see Adler, The Fiscal System, the Distribution of Income, and Public Welfare, in Poole, Fiscal Policies and the American Economy (1951) 359.

For a discussion of the theoretical framework of progression, see Morag, Reflections on Progressive Taxation, 11 Nat. Tax J. 219 (1958).

returns with 1959 adjusted gross income of $500,000 or over, the median effective rate was 27.6 per cent, but the effective rates ranged from 0 to 78.4 per cent.[22] Finally, it should be noted that much discussion of tax burdens assumes that the weight of a tax falls on the nominal taxpayer. If the taxpayer can shift part or all of the burden to other persons, however, calculations like Table IV would have to be revised to reflect one's conclusions about the prickly subject of tax "incidence." [23]

In recent years, opponents of progression have centered their hopes on a movement, which has taken several forms, to amend the Constitution to limit the maximum rate for federal income taxation to 25 per cent. The movement apparently drew some strength from a widely publicized essay by Colin Clark, the Australian economist, arguing that "the safe political and economic level of taxation is somewhere near 25 per cent of the national income" and that "beyond this point inflation may become uncontrollable." [24] Although this benchmark referred to the ratio of all types of taxes, national and state, to total national income, it seems to have gained unwarranted currency as a scientific validation of the proposal to limit federal income taxation to 25 per cent of the individual taxpayer's income.

The original plan for combating federal income tax progression, which has been before the states since 1939, was for petitions by the state legislatures for a constitutional convention, a method for proposing amendments that is authorized by Article V of the Constitution, though never yet employed. Some twenty-nine states have adopted such resolutions; only thirty-four are required by the Constitution.[25] But in some states the resolution was vetoed by the governor or later rescinded by the state legislature, and the effect of such action is not clear. Also perplexing is the question whether all resolutions must be adopted within some limited period of time. (The first of the resolutions was adopted in 1939.) Some of the resolutions call for a maximum rate of income tax of 25 per cent, with no escape; others permit the limit to be raised by a vote of three quarters of the members of both Houses of Congress, but only "in the event of a war in which the United States is engaged creating a grave national emergency requiring such action to avoid national disaster." Even in such a case, the action (requiring a consensus not needed for any other action by Congress, including the declaration of war) is effective for a one year period only, though by a similar vote the limit may be raised for successive periods of one year each. It is not clear whether the Korean "police action" would have been a "war" as that term is used in the proposed amendment, nor whether a declaration by Congress that a war had created the requisite emergency would be conclusive on the courts. The limit may be lifted only while the nation is "actively engaged" in war, a qualification that would presumably prevent going above 25 per cent in later

---

22 See Hearings on H.R. 8363 (Revenue Act of 1963), Senate Finance Committee, 88th Cong., 1st Sess., Part 1, pp. 278-282. The range of effective rates disclosed by these tables is itself computed by subclasses of income groups, so that the range for individual taxpayers would be even greater.

23 Note 21 supra; see also citations in Selected Bibliography.

24 Clark, The Danger Point in Taxes, Harper's Magazine 67 (December, 1950); Clark, Public Finance and Changes in the Value of Money, 55 Economic J. 371 (1945); for criticisms, see Goode, An Economic Limit on Taxes: Some Recent Discussions, 5 Nat. Tax J. 227 (1952); Tax Institute, The Limits of Taxable Capacity (1953).

It is an irony of contemporary intellectual history that Clark's 25 per cent limit was foreshadowed in his pamphlet, A Socialist Budget, recommending policies for a Labor Government "for a period of transition to Socialism," published by the British New Fabian Research Bureau in 1935.

25 Constitutional Limitation on Federal Income, Estate, and Gift Tax Rates (Joint Committee on the Economic Report and House Select Committee on Small Business), 82d Cong., 2d Sess. (1952); Packard, The Need to Limit Federal Taxes, 32 Taxes 151, 154 (1954).

years to pay veterans' benefits, to pay off a war-occurred debt, or even to pay the interest on war bonds.

The Constitution is silent on the powers of a constitutional convention, and it is possible that its authority would be unlimited. Partly because of the possibility that a convention would have the power to rewrite the Constitution (although its proposals would still be subject to ratification in the same manner as amendments proposed in the usual manner by Congress), and partly because of other uncertainties in the use of a convention, the tax limitation movement turned to the more traditional way of amending the Constitution — by an amendment proposed by a two-thirds vote of both Houses of Congress and submitted for ratification to the states.

In 1951, the so-called first Reed-Dirksen Amendment was introduced, imposing the familiar 25 per cent limit as the maximum rate for federal income taxation. Like the state proposal, this amendment provides for a suspension of the limit by a vote of three fourths of the membership of both Houses of Congress in time of war when necessary "to avoid national disaster." It also permits the limit to be raised, by a similar vote, to 40 per cent at any time, for one or more periods of one year each. This proposal was later modified to permit Congress by a three-fourths vote to exceed the limit at any time, except that the top rate (if above 25 per cent) may never be more than 15 percentage points above the bottom rate. While enlarging the power of Congress to suspend the 25 per cent limit, the modified proposal would restrict the degree of progression even in wartime, by requiring the top and bottom rates to be separated by no more than 15 percentage points.[26]

It has been estimated that the 25 per cent limit on income taxation would have reduced federal revenues by $16 billion, using 1951 income levels as the basis of comparison. Corporate income tax liabilities would have accounted for $14 billion of this revenue loss and individual income tax liabilities for $2 billion. If this loss was not made up by a reduction in expenditures or by federal borrowing, some additional tax or taxes would have been necessary, and the most likely would be a federal sales tax. It has been estimated that a tax of 10 per cent on all retail sales, or 15 per cent on all retail sales except food, would have been necessary to fill the gap.[27]

In the early nineteen fifties, the Reed-Dirksen proposals seemed to be making some headway, but by 1962, a special committee of the American Bar Association (which had endorsed the idea of a constitutional amendment) concluded that "in the foreseeable future, it seems utterly impossible to secure the adoption of such an amendment." [28] Perhaps so. If revived, the income tax limitation movement, like the attack on other aspects of the federal income tax, must eventually come to grips with the problem of alternative sources of federal revenue, unless deficit spending is to be employed or the level of expenditures is drastically cut. Any

---

[26] But exemptions would be permissible, so that Congress (by a three-quarters vote) could apparently enact an income tax with exemptions for the taxpayer, his spouse, and his dependents (for example) of $2500 each, with a tax rate of 75 per cent for the first $25,000 above the exemptions and of 90 per cent for all amounts thereafter.

[27] The course of a running debate on the tax limitation movement may be followed in these articles: Griswold, Can We Limit Taxes to 25 Percent? 190 Atlantic Monthly 76 (1952); Dresser, The Case for the Income Tax Amendment: A Reply to Dean Griswold, 39 A.B.A.J. 25 (1953); Dresser, The Reed-Dirksen Amendment: Developments in the 83d Congress, 39 id. 206 (1953); Cary, The Income Tax Amendment: A Strait Jacket for Sound Fiscal Policy, 39 id. 885 (1953); Dresser, The Reed-Dirksen Amendment: A Reply to Professor Cary, 40 id. 35 (1954).

[28] Report of Special Committee on Proposed Constitutional Amendment Relative to Taxes on Incomes, Inheritances and Gifts, 87 A.B.A. Annual Reports (1962) 348; the 1952 report which led to A.B.A. endorsement of the amendment may be found in 77 id. 578 (1952).

tax that is levied as a substitute for the federal income tax will have its own effect on incentives, spending, investment, and the price level; and in predicting these effects, it is necessary to make assumptions about the shifting and incidence of any such alternative tax. Moreover, one must also contend with the taxpayer's sense of fairness: would an abandonment of the progressive principle in the income tax arouse animosity to any other tax that might be imposed in its place, and frustrate its administration? The student who wishes to pursue these problems further will find suggestions in the Bibliography at the end of this introduction.

A Hop, Skip, and Jump Through Federal Tax Procedure[29]

When income tax rates began to soar at the beginning of World War II, it became evident that the old practice of waiting until March 15[30] of each year to collect the tax on the income of the preceding year called for a degree of thrift that many taxpayers lacked and would guarantee a large volume of uncollectible tax liabilities. To meet this problem, Congress enacted the Current Tax Payment Act of 1943, putting wage and salary earners on a withholding basis of tax collections. This system, which has been in effect ever since, covers all wage and salary payments by an employer to an employee, except payments to agricultural and domestic workers and a few other groups. The employee informs his employer of the number of exemptions to which he is entitled, and the employer then computes, either by a formula or by reference to tables prescribed by statute, the amount to be withheld at each pay period from the employee's wages. The employer periodically pays the withheld amounts to the Treasury, and at the end of the year he prepares a Withholding Tax Statement (Form W-2) for each employee. One copy of this form is sent to the Treasury, where it serves as an information return to insure compliance by the employee. Another copy is attached by the employee to his tax return. The amount withheld is credited on his actual liability, and he either pays the balance due or receives a refund if there was an overpayment. If the employee is in the lower tax brackets, the amount withheld will correspond closely, and perhaps exactly, to the tax due, unless he worked irregularly, had outside income, or had deductions exceeding the standard amount assumed by the withholding tables. (An employee who anticipates a tax liability in excess of the amount that would normally be withheld may authorize his employer to withhold additional amounts.) In the fiscal year 1960, $32.7 billion was withheld by employers under this system, as against aggregate tax liability for individuals of $39.5 billion.

Although the withholding system keeps many taxpayers on a current basis, requiring only minor year-end adjustments between the amount withheld and the actual tax liability, there are many gaps in its coverage. Being restricted to wage payments, it does not cover income from self-employment or from investments; and for upper-bracket employees the amounts withheld may be only a small down payment on the actual liability.

For these reasons, the withholding system was buttressed by the "declaration of estimated tax" method of paying taxes currently. Certain taxpayers must file a declaration of "estimated tax" on April 15 of each year (or on a corresponding date if a fiscal year is employed), estimating their tax liability for the current

[29] Tax procedure is examined in more detail in Chapter 10.

[30] The filing date for individual taxpayers on a calendar year basis was extended to April 15 by the 1954 Code. Corporate returns, however, are due on March 15 in the case of calendar year taxpayers. Most non-business taxpayers and many business taxpayers file on the calendar year basis, but a fiscal year may be elected instead, in which event an individual return is due 3½ months, and a corporate return 2½ months, after the fiscal year ends.

year and the amount to be withheld from their wages. Any balance due must be paid in four installments, the first on April 15 (when the declaration is filed) and the others on June 15, September 15, and the following January 15. Declarations of estimated tax must be filed by any person who expects gross income in excess of $10,000 (married persons entitled to file joint returns, heads of households, and certain surviving spouses) or $5000 (others) or who expects gross income in excess of $200 from sources other than wages subject to withholding. (If the estimated tax is less than $40, however, a declaration is not required.) When the tax return itself is filed on April 15 of the following year, payments of estimated tax, like taxes withheld from wages, are credited against the actual tax liability reported on the return, and any balance is either paid by or refunded to the taxpayer, as the case may be. A penalty is imposed by §6654 on a taxpayer who substantially underestimates his tax liability, unless he qualifies for relief under one of several exceptions.

An individual income tax return must be filed by anyone with gross income of $600 or more for the taxable year, unless he is 65 or older, in which case the limit is $1200. A taxpayer whose gross income falls below the limit could have no tax liability, but if any amounts were withheld from his wages or paid on a declaration of estimated tax, he would file a return in order to get a refund.

The simplest return is Form 1040A, the employee's optional return, which may be used by a taxpayer with gross income of less than $10,000 provided (a) he had no income other than wages, dividends, and interest, and (b) not more than $200 of gross income that was not subject to withholding. Form 1040A calls for a statement of the taxpayer's exemptions, his employer's name and address, his wages and other income, and the amount of tax withheld.

Form 1040 is more elaborate. It requires a statement of the taxpayer's exemptions, detailed information about his income from all sources (wages, salaries, dividends, interest, rents and royalties, etc.), and an itemization of his business and personal deductions. (In lieu of itemizing personal deductions, such as charitable contributions, interest, taxes, and extraordinary medical expenses, the taxpayer may take the optional "standard deduction," infra page 328.) A number of supplemental schedules must be completed and attached to Form 1040 if relevant to the taxpayer's circumstances. Thus, if he was engaged in a business or profession, the income and deductions attributable to this activity are reported on Schedule C, and the net profit or loss is carried from Schedule C to Form 1040 itself. Similarly, if the taxpayer sold or exchanged any property, he reports such transactions on Schedule D, and carries the profit or loss on such transactions from Schedule D to Form 1040. Another schedule is employed by farmers (Form 1040F), the net profit or loss being likewise carried over from this schedule to the body of Form 1040. From this information, the taxpayer computes his tax liability, crediting himself with the amounts withheld from his wages or paid on his declaration of estimated tax. He pays the balance due or, in case of an overpayment, informs the Treasury whether he wishes it refunded to him or credited on his declaration of estimated tax for the current year.

Before the enactment of the 1954 Code, corporations were not required to file declarations of estimated tax. Moreover, until 1950, the corporate tax liability was payable in equal quarterly installments after the end of the taxable year; since then, however, the delay in payment has been gradually reduced, so that a corporation on the calendar year basis must pay the tax in equal installments on March 15 and June 15 of the following year, and, if its estimated tax liability exceeds $100,000, the excess must be paid in installments under a pay-as-you-go system similar to that applicable to individuals.

The corporate income tax return is Form 1120. Provision is made on the

return for reconciling differences between the treatment of financial items for tax purposes and their treatment on the regular books of the corporation. Special forms are prescribed for certain categories of corporations, such as life insurance companies, personal holding companies, and others. While an individual is required to file a return only if his gross income is $600 or more, a corporation must file a return without regard to the amount of its gross income or even if the year's operations produced a loss.

Fiduciaries must also file tax returns. A fiduciary who is in charge of an individual's income (e.g., the guardian of a minor or the committee of an incompetent) must file a tax return for the person in his charge, and an executor or administrator must file a final return for the income of a decedent to the date of death. In addition, Form 1041 (fiduciary return) must be filed by the fiduciary for an estate if its gross income for the taxable year is $600 or more and for a trust if its gross income is $600 or more or if it has any taxable income. Generally speaking, the fiduciary deducts any amounts distributable to beneficiaries; these amounts are taxable to the beneficiaries, to be reported on their respective individual returns, and the fiduciary pays a tax only on the balance.

The partnership return requires a special word. A partnership reports its income and deductions on Form 1065 in about the same way that a corporation reports on Form 1120, but the partnership is not a taxable entity. After calculating its profit or loss for the taxable year, the firm reports, on a schedule at the end of Form 1065, how this amount is allocated among the partners by the partnership agreement. No tax is calculated, however, since each partner's share of the firm's profit or loss is reported by him on his individual tax return. The partnership return, then, is an information return, explaining how each partner's share of the firm's profit or loss has been computed.

Many other information returns are also filed with the Treasury. Form W-2, informing the government of an employee's gross wages and of the amount of taxes withheld by the employer, has already been mentioned. Any one who pays, in the course of his trade or business, $600 or more of wages, salaries, fees, commissions, or other compensation not subject to withholding must file Form 1099, and a similar information report is required by §6041 for payments, in the course of the payor's business, of $600 or more of rent, royalties, annuities, or other "fixed or determinable" income.[30a] The information return network was vastly expanded in 1962 by the amendment of §6042 and the enactment of §6049 to require the reporting of dividend and interest payments of $10 or more (subject to certain exemptions). Information regarding many other items, transactions, and persons (e.g., corporate liquidations, organization of foreign corporations, etc.) are also required by the Code and Treasury regulations.

The administrative machinery that is set in motion by the filing of a tax return is described in Chapter 10. After the returns have been checked for mathematical accuracy, examiners select for audit those that most merit further inspection. Their selection is based on the amount and nature of the income and deductions reported, errors apparent on the face of the return, random sampling techniques, and other criteria. In selecting the auditing returns, the revenue agents may obtain data from information returns, deductions claimed by other taxpayers, newspaper accounts of unusual or large-scale financial operations, and tips from informers. The examiner may also resort to a subpoena, if necessary, to examine the taxpayer and others who may have knowledge of his financial affairs.

[30a] The New York Times, October 14, 1960, reported that some winners of the "daily double" had failed to collect their awards because the racetracks were required to report their names on an information return to the Treasury.

When an examiner's audit discloses an error in tax liability, he advises the taxpayer of his finding and attempts to settle the matter by agreement. If an agreement is not reached with the examiner, the taxpayer may have an informal conference with a conferee in the same division, and if no agreement is reached at this level, he may have a formal conference with an appellate staff that is administratively independent of the examiner and his chief. Most disputes are settled within the Internal Revenue Service.

Should no agreement be reached, however, the taxpayer may "go to law." He may refuse to pay an alleged deficiency and file a petition in the Tax Court of the United States (formerly the Board of Tax Appeals), in which event he cannot ordinarily be required to pay the tax until the case is decided.[31] Instead of filing a petition in the Tax Court, the taxpayer may pay the deficiency and sue for a refund (with interest) in a federal District Court or in the Court of Claims. The advantages and drawbacks of the refund route as compared with the Tax Court are considered in Chapter 10. If the dispute involves not a deficiency but a refund (e.g., if after filing a return and paying the reported tax liability, the taxpayer finds that he reported too much income or failed to claim a deduction or credit to which he was entitled), and if the matter cannot be settled at the administrative level, the taxpayer may not go to the Tax Court, whose jurisdiction is restricted to deficiency cases, but must instead sue in the District Court or Court of Claims.

Cases in the Tax Court and in the District Courts go by appeal to the Courts of Appeals and thence by certiorari to the Supreme Court; cases in the Court of Claims may be reviewed only by the Supreme Court.

The Sources of Federal Tax Law in a Nutshell

Taxes are imposed only by statute, and while the lawyer will often err if he does not go beyond the statute in passing on a tax question, the statute should almost always be his starting point. Moreover, this is not a field where the statute is encrusted with the wisdom or folly of the centuries, like the Statute of Frauds, nor is it one where the statute's principal function is to declare or to qualify the common law, like the Uniform Partnership Act or the Negotiable Instruments Law. Seldom in the law is it so essential that the lawyer study his statute intensively; sometimes the judicial decisions are mere embellishments of the handiwork of Congress. At the same time, some areas of tax law, especially where statutory pronouncements were absent, vague, or confused, have been immensely influenced by judicial doctrines of a common law character, created, that is to say, by the courts as case after case came before them — and in these areas the lawyer must be attuned to the judiciary's signals even more than to those of Congress.[32] Moreover, the very detail of the statute is often deceptively clear, since, as the student will find, the courts may exercise their traditional power to disregard form for substance, and to hold that an arrangement that complies with the literal terms of the statute is not within its spirit, just as a deed absolute on its face may be shown to be a mortgage. One of the fascinations of federal tax law is the interplay between the detail of a statute and the creative spirit of the courts; and even the tax attorney who cannot pause to enjoy this interplay must understand it to survive.

---

[31] If the Commissioner determines that ultimate collection of the tax would be jeopardized by delay, however, he may levy a jeopardy assessment and seize the taxpayer's property. This drastic procedure is often employed in cases involving fraud, or where it is feared that the taxpayer may dissipate or secrete his property. The government may not ordinarily sell the seized property, however, by virtue of §6863(b)(3).

[32] See Brown, The Growing "Common Law" of Taxation, 1961 So. Calif. Tax Inst. 1.

The "statute" is of course the Internal Revenue Code of 1954. In recommending its enactment, the House Committee on Ways and Means said:

> Your committee has undertaken the first comprehensive revision of the internal-revenue laws since before the turn of the century and the enactment of the income tax. This revision includes a rearrangement of the provisions to place them in more logical sequence, the deletion of obsolete material, and an attempt to express the internal-revenue laws in a more understandable manner. . . .
>
> In addition, to the rearrangement, however, your committee has made many substantive changes in the code.[33]

It is apparent that, while the pre-1954 statute may not rule us from the grave, meditation on its meaning will be profitable, or at least necessary, for some time to come.

The "old" Internal Revenue Code, which was supplanted by the 1954 Code, was enacted in 1939, and was frequently amended in the years 1939-1954. Before 1939, federal income taxes were ordinarily levied by biennial Revenue Acts, but there was so much continuity of statutory language from one Revenue Act to another that permanent legislation in the form of an Internal Revenue Code was not a real break with the past. Before the 1939 Code was enacted, however, the re-enactment of a taxing provision by Congress sometimes carried an implication that a construction of that provision by the courts or by the Treasury was approved. After adoption of the 1939 Code, Congress from time to time altered those sections of the Code that it wished to change, but there was no reason (except when the 1954 Code was adopted) to re-enact satisfactory sections, and hence no occasion for judicial application of the re-enactment rule. While Congressional inaction in the face of an administrative or judicial construction of a statute sometimes leads to the inference that Congress has adopted that interpretation, especially if *other* sections of the same statute have been amended in the meantime, the theory that silence is tantamount to approval has been applied more sparingly than the re-enactment rule. It remains to be seen whether the 1954 Code, where it re-enacts pre-1954 provisions, will be held to blanket in the administrative and judicial construction of these provisions. The 1939 Code was merely a codification of existing law, intended to draw together in one place a mass of statutes scattered throughout the many volumes of the Statutes at Large, and consequently would not support an inference of Congressional approval of existing interpretations. But the 1954 Code is a "comprehensive revision," and when an existing provision of law is accepted and re-enacted by it, there is at least some basis for arguing that no fault was found with the decisions or regulations construing that provision.

Although the Congressional debates ordinarily do not illuminate technical problems of federal taxation, since they are usually concerned primarily with the tax's rates and expected yield, there are occasional exceptions, and then recourse to the Congressional Record is necessary. The Committee Reports, on the other hand, are frequently helpful, and it is common for the courts to rely heavily on them.[34] They are carefully prepared by technicians on the staff of

---

33 H.R. Rept. No. 1337, 83d Cong., 2d Sess. 1 (1954); the Senate Finance Committee's report, S. Rept. No. 1622 (1954), is identical on this point.

34 Since 1939, the reports of the House Committee on Ways and Means, the Senate Finance Committee, and the conference committees have been reprinted in the Internal Revenue Bulletin, which is published weekly by the Internal Revenue Service and complied into semi-annual volumes, cited 1963-1 C.B., 1963-2 C.B., etc. The Congressional reports for the period 1913-1939 were reprinted together in a separate number of the Bulletin: 1939-1 (Part 2) C.B.

On the use of such legislative "material" as an aid to the construction of statutes, see Read, MacDonald, and Fordham, Cases on Legislation (2d ed. 1959) 1222-1277.

the Joint Committee on Internal Revenue Taxation (composed of representatives of the House Ways and Means Committee and the Senate Finance Committee, who are assisted by a kind of legislative civil service of tax experts), but the profusion of technical detail in them makes it clear that they evidence the "intent" of Congress only if we apply the doctrine of respondeat superior.[35] Some members of the committee may know little of the content of the committee's reports, and this is a fortiori true of the members of Congress who do not serve on the tax committees, though no doubt some of them know no more about the statute itself.

Occasionally, though more rarely, the courts refer to the hearings before the House and Senate Committees as an aid to construction. Although some of the oral testimony is quite diffuse, interested public and private individuals and groups often present closely reasoned memoranda in support of their positions. If a proposal is accepted, modified, or rejected by the committee after it has been explained by testimony or memorandum, the presentation may be a clue to the meaning of the committee's action and, by extension, to the meaning of the action of Congress. The hearings are printed by the committees in limited quantities, however, and are to be found in only a few libraries.[36]

Second only to the statute and the legislative materials in importance are the Treasury Regulations. Section 7805 of the 1954 Code authorizes the Secretary of the Treasury or his delegate to prescribe "all needful rules and regulations for the enforcement" of the Code. Identical authority was vested in the Secretary by earlier law. In addition, the Secretary is authorized to prescribe Regulations to cover more specific areas, e.g., under §170 of the 1954 Code he may lay down the method of verifying charitable contributions, under §453 he may prescribe how income from certain installment sales is to be reported, and under §472 he is authorized to issue regulations governing use of the last-in-first-out method of accounting for inventories. Regulations issued under these sections are of a quasi-legislative character; Congress has chosen to delegate to the Treasury authority it might have exercised itself. Other Regulations interpret the statute for the guidance of the taxpayers and the staff of the Internal Revenue Service. Whatever their function, Regulations are issued from time to time in the form of Treasury Decisions ("T.D."), which are compiled at irregular intervals as a systematic series of regulations.

The current Regulations bear the key number "1" if related to the income tax provisions of the 1954 Code; "20" or "25" if related to the estate or gift tax

---

[35] The preparation of the committee report is described as follows in Blough, The Federal Taxing Process (1952) 75-76:

> Preparation of the Committee report is ordinarily in the hands of the Chief of Staff of the Joint Committee [on Internal Revenue Taxation] and his staff members. The report is customarily divided into two parts. The first is a discussion in non-technical language of the need for the legislation, what the bill provides, and the anticipated impact on various groups of taxpayers. Among the tax staffs this section of the report is referred to as the "guff." Despite this derisive label, the section is very important. The latter part of the Committee report is a technical explanation of what each section of the bill provides. The Legislative Counsel [of the Treasury] and the Treasury tax staff participate in the preparation of the technical section. This part of the report is coming to be known as the "paraphrase"; it consists largely of a paraphrase of each section of the bill with examples showing how the provision presumably would apply in given situations. The Committee members usually listen to a reading of the "guff" before the report is submitted but ordinarily do not go over the "paraphrase," at least not in Committee.

[36] On use by the judiciary of inaccessible legislative history as an aid to the construction of statutes, see Mr. Justice Jackson, concurring, in United States v. Public Utilities Commission, 345 U.S. 295, 319 (1953).

provisions, respectively. Thus, "Regs. §1.170-1" denotes a regulation having to do with §170 (income tax consequences of charitable contributions); "Regs. §20.2041-1" is concerned with §2041 (estate tax treatment of powers of appointment); "Regs. §25.2512-1," with §2512 (value of property in computing gift tax). The last compilations of regulations before enactment of the 1954 Code were known as "Regulations 118" (income tax), "Regulations 105" (estate tax), and "Regulations 108" (gift tax). There are other series for more specialized subjects. Changes in the Regulations are issued as Treasury Decisions, and when the changes have accumulated in quantity, a new compilation is issued. Thus, Regulations 118 was issued in 1953 to supplant Regulations 111, which had been frequently amended by Treasury Decisions after its issuance in 1943. The Administrative Procedure Act, 5 U.S.C. 1003, requires proposed regulations (with certain exceptions) to be published in the Federal Register to permit interested parties to file their objections or suggestions for consideration before adoption.

Regulations, whether of a legislative or an interpretive character, can serve a useful function only if both administrators and taxpayers can rely on them. Seldom are Regulations, of either kind, overturned by the courts, but occasionally a regulation, especially the interpretive type, is invalidated. It is impossible to generalize beyond saying that a regulation that was issued soon after the statute it interprets and that has been adhered to consistently by the government will command great respect from the courts, but that if contemporaneity and consistency are lacking, the courts will be less constrained to accept the regulation. As already mentioned, re-enactment of a statute may carry an implication of Congressional approval of an interpretive regulation,[37] and this doctrine may give the effect of law to some Regulations that were in force when the 1954 Code was enacted. Since this was a comprehensive revision, the re-enactment doctrine may now be applied with greater fidelity to the facts of legislative life than for earlier years when revenue acts often carried over much of the language of earlier acts in the interest of simplicity rather than because administrative interpretations were endorsed. Another problem in this area is whether a proper interpretive regulation, either with or without re-enactment of the underlying statute, in time takes on the force of law so that only Congress, and not the Treasury, may alter it. Partly because the Treasury seldom amends interpretive Regulations except to bring them into harmony with subsequent judicial decisions or new statutes, there is little authority on this subject. Despite earlier doubts, apparently the Treasury may ordinarily amend an interpretive regulation if the new interpretation is to be given prospective force only, and there may also be power to apply it retroactively. Retroactive application may be withheld by the Treasury itself, however, as wise administration, pursuant to its power, now conferred by Section 7805(b) of the 1954 Code, to prescribe the extent to which Regulations and rulings shall be applied prospectively only.[38]

In addition to the Regulations, which are issued by authority of the Secre-

---

37 It is hard to assess the importance of the re-enactment rule in this area. It may be only a handkerchief covering something already covered by a blanket if the court would have upheld the regulation, whether the statute had been re-enacted or not; but it may be crucial if the court thinks the regulation when issued was either debatable or demonstrably wrong, but that it gained authority as a result of silent acquiescence by Congress.

38 See Griswold, A Summary of the Regulations Problem, 54 Harv. L. Rev. 398 (1941), which cites a number of other important articles in footnote 1; Feller, Addendum to the Regulations Problem, id. at 1311; Griswold, Postscriptum, id. at 1323. Several important cases were decided after these articles were written: Helvering v. Reynolds, 313 U.S. 428 (1941); American Chicle Co. v. United States, 316 U.S. 450 (1942); Helvering v. Edison Bros. Stores, Inc., 133 F.2d 575, cert.

tary of the Treasury, a steady supply of rulings, instructions, releases, and other lesser pronouncements flows from the Internal Revenue Service. Not bearing the imprimatur of the Secretary, these documents are less authoritative than the Regulations, but they are of great importance in the day-to-day administration of the tax laws, and often they are persuasive to the courts. The most important are letters to taxpayers in response to requests for rulings on past or contemplated transactions and instructions of a more general nature to field offices of the Service. Some rulings are no more than a curt "yes" or "no" to an inquiry; others are more or less elaborately argued interpretations of the Code, Regulations, and judicial decisions. The most commonly encountered current series of such announcements are "Revenue Rulings" and "Revenue Procedures" (abbreviated "Rev. Rul." and "Rev. Proc."); earlier series that are still often cited were issued under the designation "I.T." (rulings to taxpayers on income tax matters), "G.C.M." (General Counsel Memorandum, usually discussions of legal problems of general interest), and "Mim." (Mimeograph, usually instructions to field offices). Many, but by no means all, Revenue Rulings are published in the Internal Revenue Bulletin. For the criteria governing publication, and the status and effect of rulings, see pages 916-923 infra.

Tax litigation commences in the Tax Court of the United States (formerly the Board of Tax Appeals), in the various federal District Courts, and in the Court of Claims. The opinions of the Tax Court fall into two categories: "regular" decisions, which are published by the court itself; and "memorandum" decisions, which are not officially reported but are published commercially by Prentice-Hall, Inc., and by Commerce Clearing House. The opinions of the District Courts, Court of Claims, Courts of Appeals, and Supreme Court are, of course, to be found in the regular federal reports, but the tax cases decided by these courts are also separately published by Prentice-Hall, Inc., in the series American Federal Tax Cases (cited as A.F.T.R.) and by Commerce Clearing House in the series United States Tax Cases (cited as U.S.T.C.). These sets also contain a few District Court opinions in tax cases that are not to be found in the Federal Supplement. A few opinions on federal tax claims are handed down by federal courts sitting in bankruptcy and by state courts passing on probate or receivership matters.

When the Internal Revenue Service loses a case in the Tax Court, the Commissioner often announces, in the Internal Revenue Bulletin, whether he "acquiesces" ("Acq." or "A") or does not acquiesce ("Non-Acq." or "NA") in the decision. Acquiescence operates as advice to the staff of the Service to rely on the decision in the disposition of other cases. Non-acquiescence indicates that the Service, whether it appeals the decision or not, will not accept the principle enunciated in it in disposing of other cases (though of course the decision is binding as to the taxpayer in the case itself, unless reversed on appeal), and that it may litigate the same issue when it arises again. Because decisions of the Tax Court are reviewed by eleven Courts of Appeals, the government may eventually succeed in obtaining a reversal of the Tax Court, even though the decision in the non-acquiesced case was affirmed by a Court of Appeals; indeed, the principal way for the Treasury to get a conflict among the circuits (as a basis for a petition for certiorari) when the Tax Court decides in favor of the taxpayer is to stick to its guns and relitigate the same issue in one or more other cases. After announcing its non-acquiescence, the Treasury may be dis-

---

denied, 319 U.S. 752 (1943). See also Davis, Administrative Law (1951) 217-226; White, The Scope of the Treasury's Power to Issue Nonretroactive Regulations, 38 Calif. L. Rev. 292 (1950); Eisenstein, Some Iconoclastic Reflections on Tax Administration, 58 Harv. L. Rev. 477 (1945).

couraged by a series of losses in the Courts of Appeals, or it may reconsider its views for other reasons, and substitute an acquiescence for non-acquiescence.[39] Another administrative practice related to litigation is based on the Treasury's power, already mentioned, to prescribe the extent to which its rulings and regulations will be applied prospectively only. When a judicial decision in the government's favor overrules earlier cases or conflicts with rulings that had been extensively relied on by taxpayers, the Treasury sometimes announces that a new regulation or ruling, issued to conform to the judicial decision, will not be applied retroactively.

SELECTED BIBLIOGRAPHY

History. Ratner, American Taxation (1942), is a standard account of taxation as a social force in American history. Seligman, The Income Tax (1911), is a study of the history and theory of income taxation, at home and abroad, by a scholar whose influence on federal income taxation in its early days was very great. Paul, Taxation in the United States (1954), follows Ratner and Seligman for the early period, but it is an indispensable account of the economic and political background of federal taxation from 1932 on, made more spirited by the author's own role as advisor and official of the Treasury Department from 1937 to 1944. Current problems in theory and administration are also discussed in detail. Another useful work is Blakey, The Federal Income Tax (1940), which summarizes each Revenue Act from 1913 to 1939. Shehab, Progressive Taxation (1953), traces the history of progression in the British income tax.

Statistics. Statistics of Income, published annually by the Treasury Department, is a compilation of information from tax returns. Additional information may be found in the Annual Reports of the Secretary of the Treasury and of the Commissioner of Internal Revenue, and in the Statistical Abstract of the United States and a supplement to it, Historical Statistics of the United States. See also Lampman, The Share of Top Wealth-Holders in National Wealth, 1922-1956 (1962), which reviews (pp. 8-12) earlier analytical studies of income and wealth; Pechman, What Would a Comprehensive Individual Income Tax Yield, 1 Tax Revision Compendium (House Committee on Ways and Means, 1959) 251; Hellmuth, The Corporate Income Tax Base, id. 283.

Theory. General works on public finance that discuss the relation of income taxation to the national economy are: Musgrave, The Theory of Public Finance (1959); Poole, Public Finance and Economic Welfare (1956); Due, Government Finance (1954); Rolph, Theory of Fiscal Economics (1954); Shultz and Harriss, American Public Finance (5th ed. 1950); see also Smithies and Butters (eds.), Readings in Fiscal Policy (1956).

Works that are concerned more exclusively with taxation are: Seligman, Essays in Taxation (10th ed. 1928); Simons, Personal Income Taxation (1938); Vickrey, Agenda for Progressive Taxation (1947); Blum and Kalven, The Uneasy Case for Progressive Taxation (1953); Rhys-Williams, Taxation and Incentive (1953); Kimmel, Taxes and Economic Incentives (1950); von Mering, The Shifting and Incidence of Taxation (1942). Other studies of the shifting and incidence of taxes are cited by Shultz and Harriss, supra, at pp. 193-226.

Current problems. Two outstanding collections of comments on income tax problems of current interest are: Tax Revision Compendium (House Ways and

[39] On the Internal Revenue Service's practice of continuing to litigate an issue after losing in one or more federal courts of appeals, in the hope that another appellate court will decide in the government's favor and thus create a more promising basis for exercise of the Supreme Court's certiorari jurisdiction, see infra pages 936-937.

Means Committee, 1959) (3 vols.), and Federal Tax Policy for Economic Growth and Stability (Joint Committee on the Economic Report, 1955); the papers in the latter volume were followed by hearings, published as: Hearings, Subcommittee on Tax Policy of Joint Committee on the Economic Report, 84th Cong., 1st Sess. (pursuant to Public Law 304, §5(a), 79th Cong.). Congressional hearings frequently include material of great interest, though it is often badly indexed and intermingled with partisan exhortation; see especially Hearings on General Revenue Revision, House Ways and Means Committee, 83d Cong., 1st Sess. (1953) (4 vols. organized by subject); Hearings on President's 1961 Tax Recommendations, House Ways and Means Committee, 87th Cong., 1st Sess. (1961) (4 vols.); Hearings on Revenue Act of 1962 (H.R. 10650), Senate Finance Committee, 87th Cong., 2d Sess. (1962) (11 vols. plus index); Hearings on President's 1963 Tax Message, House Ways and Means Committee, 88th Cong., 1st Sess. (1963) (7 vols.); Hearings on Revenue Act of 1963 (H.R. 8363), Senate Finance Committee, 88th Cong., 2d Sess. (1963) (5 vols. plus index). The Joint Economic Committee of Congress publishes occasional studies relating to federal taxation, including The Federal Revenue System: Facts and Problems (various dates), as does the Senate Small Business Committee.

The Brookings Institution, through the National Committee on Government Finance, is sponsoring a series of studies on government finance; the tax studies include Groves, Federal Tax Treatment of the Family (1963); McDonald, Federal Tax Treatment of Income from Oil and Gas (1962); Ott and Meltzer, Federal Tax Treatment of State and Local Government Securities (1963); and others.

The Tax Institute sponsors periodic symposiums on subjects of current interest and publishes the papers and discussions; recent symposiums include Reappraisal of Business Taxation (1961); Economic Effects of Section 102 (1951); and others that are referred to hereafter.

See also the annual proceedings of the National Tax Association and the publications of the Tax Foundation (pamphlets and a periodical, Tax Review).

Comprehensive recent proposals for tax reform may be found in: Smith, Federal Tax Reform (1961), and Hellerstein, Taxes, Loopholes and Morals (1963). Earlier programs for reform of the federal tax structure are: Groves, Postwar Taxation and Economic Progress (1946); Simons, Federal Tax Reform (1950); Paul, Taxation for Prosperity (1947), cc. 27-46; Committee on Postwar Tax Policy, A Tax Program for a Solvent America (1945).

Suggestive, but briefer, recent works include: Cary, Reflections upon the American Law Institute Tax Project and the Internal Revenue Code: A Plea for a Moratorium and Reappraisal, 60 Colum. L. Rev. 259 (1960); Lowndes, Federal Taxation and the Supreme Court, 1960 Sup. Ct. Rev. 222; Sneed, The Rule of Good Law and Federal Taxation, 2 Boston College Indus. & Comm. L. Rev. 203 (1961); Batt, The Gray Fleece of the Crimson Catt: A Primer of Tax Nonsense, 51 Ky. L.J. 187 (1962); Hambrick, The Illusion of Tax Reform, 56 Duke L.J. 56 (1963); Brown, The Growing "Common Law" of Taxation, 1961 So. Calif. Tax Inst. 1; Anthoine, Tax Reduction and Reform: A Lawyer's View, 63 Colum. L. Rev. 808 (1963).

Blough, The Federal Taxing Process (1952), is an excellent account of the way federal revenue laws are drafted, enacted, and administered. For a biting description of the platitudes employed in debates on tax policy, see Eisenstein, The Ideologies of Taxation (1961), discussed by Cahn, Arnold, McDonald, and the author, 18 Tax L. Rev. 1 (1962).

Empirical studies. A series of empirical studies of the effects of federal taxation, conducted under the sponsorship of the Harvard Business School, includes Butters and Lintner, Effect of Federal Taxes on Growing Enterprises (1945); Hall,

Effects of Taxation: Executive Compensation and Retirement Plans (1951); Smith, Effects of Taxation on Corporate Financial Policy (1952);

Legal works. The most comprehensive treatises are Mertens, Law of Federal Income Taxation (various dates), in 15 volumes, and, on procedure and practice, Casey, Federal Tax Practice (4 vols. 1955), both kept up-to-date by pocket part supplements. The Practising Law Institute publishes two excellent collections of pamphlets, systematically covering the subject of federal income taxation, entitled Fundamentals of Federal Taxation and Current Problems in Federal Taxation. Briefer summaries of federal income taxation are: Stanley and Kilcullen, The Federal Income Tax (4th ed. 1961); Haden, Fundamentals of Federal Taxation (1959); and Chirelstein, Day and Owens, Taxation In the United States (Harvard World Tax Series, 1963).

Treatises on particular subjects include: Magill, Taxable Income (rev. ed. 1945) (main problems of defining income); Bittker, Federal Income Taxation of Corporations and Shareholders (1959); Willis, Handbook of Partnership Taxation (1957); Bickford, Successful Tax Practice (1956); Freeman and Freeman, The Tax Practice Handbook (1960). Others are cited at appropriate places hereafter.

The student should also become familiar with the resources, and limitations, of the principal loose-leaf services: Prentice-Hall, Federal Taxes; Commerce Clearing House, Federal Tax Reporter; Rabkin and Johnson, Federal Income, Estate and Gift Taxation.

There are a number of annual tax institutes whose annual proceedings are published, including New York University Institute on Federal Taxation, Southern California Tax Institute, and Tulane Tax Institute.

The February, 1954, draft of a Federal Income Tax Statute, published in two volumes by the American Law Institute, may be profitably compared with the 1954 Code adopted by Congress.

Bibliography. There is a more complete bibliography in Blough, The Federal Taxing Process (1952) 481-494; and the Tax Institute of America publishes a comprehensive bibliography series, Tax Institute Bookshelf.

CHAPTER 1

Introductory: Some Characteristics of Income

The Sixteenth Amendment grants Congress the power "to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration." Section 61(a) of the Internal Revenue Code of 1954 announces broadly that:

> Except as otherwise provided in this subtitle, gross income means all income from whatever source derived, including (but not limited to) the following items. . . .

Section 22(a) of the 1939 Code was more elaborate:

> "Gross income" includes gains, profits, and income derived from salaries, wages, or compensation for personal service . . . of whatever kind and in whatever form paid, or from professions, vocations, trades, businesses, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in such property; also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever.

The committee reports on the 1954 Code state that while the language of §22(a) was simplified, the "all-inclusive nature of statutory gross income has not been affected thereby," and that there was no intention "to change the concept of income that obtains under §22(a)." H.R. Rept. A18; S. Rept. 168.* This introductory chapter is an examination of the outer limits of §61(a). We will leave for later study the various self-denying ordinances by which Congress has excluded from income certain items, or has allowed others to be deducted or credited. We are concerned here only with how far Congress might go if it chooses.

We shall see that the boundaries of the term "income" are hazy and shifting. Yet most transactions and items are either clearly within or clearly without its area. The bulk of our administrative rulings and judicial decisions is concerned with the issues that are met in later chapters of this book — issues which arise only where this chapter leaves off, so to speak. These more frequently litigated issues arise under provisions of the Internal Revenue Code that exclude from taxable income items that could clearly be taxed if Congress chose, that grant preferential treatment to certain kinds of income, and that allow various deductions, exemptions, and credits in computing the amount of tax due. Other areas of dispute are the determination of the proper year for reporting items that are admittedly income to the particular taxpayer in one year or another, and the determination of which of several taxpayers must report items that are undeniably income to one of them. Yet we cannot ignore, even though we less frequently encounter, the question which this chapter asks and seeks to answer: what are the characteristics of income?

The inquiry is a difficult one, and the author should confess at the outset that organizing this chapter has been troublesome. The Supreme Court, which at one time attempted to define "income" in a neat sentence, more recently announced:

* H.R. Rept. No. 1337 and S. Rept. No. 1622, 83d Cong., 2d Sess. (1954). The conference committee's report is H.R. Rept. No. 2543.

In fact, no single, conclusive criterion has yet been found to determine in all situations what is a sufficient gain to support the imposition of an income tax. No more can be said in general than that all relevant facts and circumstances must be considered. [Commissioner v. Wilcox, 327 U.S. 404, 407 (1946).]

The items or transactions that have forced the courts back to a consideration of fundamentals by requiring them to pass on the "outer limits" of the term "income" — thus providing the grist for this chapter — often seem to have little in common with each other. These items are, moreover, ordinarily of minor importance to the generality of taxpayers, and sometimes they are downright bizarre.

Furthermore, despite the fact that we have several times been advised that Congress intended "to use the full measure of its taxing power" in promulgating §22(a) of the 1939 Code, Helvering v. Clifford, infra page 372, it is not always clear whether courts in holding that this or that item is not "income" are excluding it on constitutional grounds or on the theory that it is not within the intended scope of §22(a). As indicated above, §61(a) of the 1954 Code is intended to have the same meaning as §22(a) of the 1939 Code. This would suggest that it does not change the treatment of the items dealt with in this chapter, whether they were believed by the courts to be exempt from taxation on constitutional grounds or only because not within the statutory grasp of §22(a). But the House Report on the 1954 Code states that the term "income" in §61(a) is used "in its constitutional sense," and, as will be seen, there are some instances where it has been thought that §22(a)'s use of the term "income" was not so broad. To add to our difficulty, the Senate Report says that in §61(a) "the word 'income' is used *as in section 22(a)* in its constitutional sense." S. Rept. 168 (emphasis supplied).

The waters are muddied still further by the fact that the Sixteenth Amendment is not the only source of Congressional authority to tax. Article I, Section 8, Clause 1 of the Constitution provides:

The Congress shall have Power to Lay and Collect Taxes, Duties, Imposts, and Excises, to pay the Debts and provide for the common Defense and general Welfare of the United States; but all Duties, Imposts, and Excises shall be uniform throughout the United States.

Direct taxes must by virtue of Article I, Sections 2 and 9, be apportioned among the states according to population (a requirement that makes them totally impracticable), and to the extent that an income tax is a direct tax, recourse must be had to the Sixteenth Amendment for relief from this requirement of apportionment. But to the extent that a tax on income or on anything else is *not* a direct tax, Congress does not have to rely on the Sixteenth Amendment.*

Even though a particular item is not "income" as the term is used in the Sixteenth Amendment, then, it is not necessarily placed beyond the reach of Congress. An indirect tax on the item is authorized by Article I, Section 8, Clause 1. But we then are face to face with a dilemma. For if the item is not "income," can Congress have intended to tax it under an income tax law? Would Congress have desired to add together "income" and other appropriate objects of taxation and levy a single graduated tax on the total? The student will find that the last two questions are hardly acknowledged, let alone answered, by the cases that follow. It has generally been assumed that if an item is not "income," Congress did not intend to tax it under the income tax sections of the Internal Revenue Code.

SELIGMAN, INCOME TAX*

7 Encyclopedia of the Social Sciences 628-629, 630-631 (1932)

The Concept of Taxable Income. As an economic concept income denotes a flow of wealth during a definite period, as opposed to capital as a fund of wealth at a distinct point of time. It may be defined as the money or money's worth which comes in during a definite period over and above the expenses of acquisition. The fiscal concept of income, however, is still subject to dispute. In the nineteenth century Hermann and Schmoller elaborated the free disposition or consumption concept, which regards as income only those receipts of which an individual can dispose without impairing his capital. More common outside Germany was the periodicity concept, which would limit income to regularly recurring receipts. The broadest definition of income for taxation purposes was formulated by Georg Schanz in 1894 and was independently advanced over two decades later by R. M. Haig, who defines income as "the money value of the net accretion to one's economic power between two points of time." This view is in substantial agreement with the accountant's practice of ascertaining the annual profit of an enterprise by comparing the balance sheet at the opening and the close of the year. As a reaction to Schanz, Strutz and Fuisting developed the source concept (Quellentheorie), which would confine taxable income to receipts from permanent sources.

With the exception of the income taxes in Basel and in Bremen, where the broader concept was almost wholly accepted, fiscal practice at the outset inclined toward the narrower interpretation of income. In the course of time, however, the concept was widened, the characteristic of regularity disappeared, while chance or aleatory receipts were subjected to supplementary taxes. At the present time findings, occasional earnings or lottery prizes are everywhere included in income, while inheritances are separately taxed, in part because they constitute irregular or accidental income. Special taxation of gifts is also widespread but is sometimes frustrated by administrative difficulties, as in the American experiment of 1922.† Neither the permanence of the source nor the regularity of the receipt any longer forms a necessary part of the concept of taxable income.

The widening of the income concept, however, brought forth a number of difficult problems. . . .

Another disputed point is the problem of including savings in taxable income. John Stuart Mill claimed that to include savings in income is to impose double taxation — a tax first on the entire income and then again on the yield of the income that has been transmuted into capital. This contention, which has been renewed in recent years by Einaudi and others, suffers from several defects. First, it rests on a confusion between the receipt and the disposition of income. Income may be either spent or saved; but both these actions are subsequent, not anterior, to the receipt. One must have the income before he decides what to do with it. The concept of income is independent of the use to which it is put. Secondly, the double tax argument is a fallacy. In the first year a tax is imposed on the entire income from whatever source derived; in the second year there is similarly imposed a new tax, which is now increased because of the additional income. This is not taxing the same thing twice, it is levying taxes on different things; namely the successive and therefore different incomes. If the individual prefers to save

* Published by The Macmillan Co. Reprinted by permission.

† A federal gift tax was imposed by the Revenue Act of 1924 (not 1922), but it was repealed by the 1926 Act. It was reimposed in 1932, however, and is still in effect. — Ed.

rather than to spend his income, his preference is evidently due to the anticipated advantages of his action. But these clearly augment his ability to pay. To refrain from taxing the proceeds of the capital into which the income of the previous year has been transmuted would involve the abandonment not of a double tax, but of a single tax. Thirdly, if savings are not taxed as income then the income tax is transformed into a tax on expenditure, which is the least defensible of all the criteria of ability to pay. While a poor man indeed spends less than a rich man, the disparity in outlay bears no proportion to the disparity in wealth. The richer a man is, the more difficult it is to spend his income and the more automatic his savings become. To tax both Henry Ford and his seven dollar a day employee on their expenditures would be a travesty of justice: the latter has to spend virtually his entire earnings; the former, even with the best of will, can spend only a fraction of his profits. For these reasons no country has ever seriously entertained the idea of excluding savings from taxable income. . . .

Quite an opposite suggestion was advanced by J. A. Hobson, urging that only so much of income should be deemed taxable as constitutes a true surplus. By surplus Hobson means "all rents and all gains for the use of capital, brains or labor which are not a necessary incentive to secure such use." But the essential vagueness of this concept and the almost insuperable difficulties of application, coupled with the well nigh practical identity of the results with those of the existing system of graduated income tax and exemptions, have combined to prevent any hearing for the suggestion.

NOTE

1. *Expenditure taxation.* Despite Seligman's conviction that it would be "a travesty of justice" to exempt savings and to tax only that part of income that is spent by the taxpayer, serious proposals have been made for an expenditures tax. See Kaldor, An Expenditure Tax (1955); Fisher and Fisher, Constructive Income Taxation: A Proposal for Reform (1942); Kust, Tax Reform for the Sixties, New Republic 11 (Jan. 16, 1961).

2. *Other definitions.* For an exhaustive account of attempts to define taxable income, see Wueller, Concepts of Taxable Income, 53 Pol. Sci. Q. 83, 557 (1938), 54 id. 555 (1939).

SURREY and WARREN, THE INCOME TAX PROJECT OF THE AMERICAN LAW INSTITUTE: GROSS INCOME, DEDUCTIONS, ACCOUNTING, GAINS AND LOSSES, CANCELLATION OF INDEBTEDNESS*

66 Harvard Law Review 761, 769-771, 775 (1953)

The American Law Institute through its Tax Project is undertaking a complete examination of the technical provisions of the federal income, estate, and gift tax laws. . . .

Those who seek a precise definition of "income" will not find complete solace in the Draft. On the contrary, as the Comments state, "Attempts to define 'income' have been unsatisfactory." The Eisner v. Macomber definition [infra p. 56] — "Income may be defined as the gain derived from capital and from labor, or from both combined, provided it be understood to include profit gained through a sale or conversion of capital assets" — is vulnerable on several grounds. For one thing, it is incomplete, for it hardly covers income from a cancellation of indebtedness. And for the hard questions that lie at the periphery it would force a narrow dissection of the terms "capital" or "labor" in place of a broad consideration of the issues. Is the act of picking up found money "labor"? Is the ac-

tivity required in an embezzlement "labor"? Essentially, the Eisner v. Macomber statement is a generalization rather than a definition.

The economists' definitions, apart from the fact that there is no unanimity among economists, are here not desirable. While they are helpful in indicating possible overall objectives of an income tax, they are neither appropriate for statutory use nor intended to be. For example, Henry Simons has defined personal income as "the algebraic sum of (1) the market value of rights exercised in consumption and (2) the change in the value of the store of property rights between the beginning and end of the period in question." From the standpoint of tax administration this definition clearly covers too much ground — for example, all forms of imputed income would be included — and hence puts too great a strain on the exclusion sections. For much the same reasons, attempts to solve the problem by starting with all receipts as the taxable base and then subtracting those receipts which should not be taxed are equally unsatisfactory. Such an approach requires at the outset a definition of "receipt." Is a cancellation of indebtedness a "receipt" by the debtor? Does an assignment of income involve a "receipt" by the assignor? Next, it requires an enumeration of all those receipts which should not be taxed, a task which is as difficult as that which would be faced under the economists' definitions. Loans, capital replacements, perhaps imputed income, would have to be specifically excluded since they are "receipts." Our experience will always be insufficient to achieve a satisfactory itemization of all of the desired exclusions. The less rigid term "income" does not involve us in this exclusionary strait jacket. The "receipts" approach is thus neither a simplification nor a clarification of the tax base for an income tax.

The Supreme Court has recognized the futility of attempting to capture the concept of income and confine it within a phrase. In U.S. v. Kirby Lumber Co. [infra p. 89] the Court explicitly abandoned the search for a definition, and succeeding cases have not revived the search. The courts have given a wide scope to the income tax, but have recognized that the borderline content of "income" must be determined case by case. Essentially the concept of income is a flexible one, with the result in a particular case being determined by the interplay of common usage, accounting concepts, administrative goals, and finally judicial reaction to these forces. Each force and judicial reaction in turn reflects an underlying judgment as to what types of receipts should be subject to a tax imposed on "income."

It is believed that this combination of wide inclusiveness and elasticity should be retained, and that a simple reference to "all gains, profits, and income" is sufficient. It is also believed that familiar wording should be continued to avoid generating, by attempts to eliminate linguistic overlapping, new and nebulous problems of definition. Hence the Draft adheres to the old and seasoned terminology of "gains, profits, and income." . . .

In the income tax, as in other complex legislation, the need is for a standard which will project our present aims into the future and serve as the vehicle for solving the unforeseen cases as they arise. The legislative function is not denied or thwarted when other branches of the Government are relied upon by Congress to perform substantial tasks in the application of statutes. Administration and judicial interpretation are necessary parts of the overall process of legislation. The income tax is no exception. The general phrase "gains, profits, and income" is a satisfactory legislative command to the administrator and the judge. It provides a proper balance between the demand of a particular taxpayer that he should not be called upon to pay a tax without prior warning and the demands of all other taxpayers as a group that each particular taxpayer bear his proper part of the tax burden. The phrase is therefore retained in the Draft as a standard to

solve the unforeseen cases until enough wisdom accumulates to build a more complete legislative solution to the problems of the future.

SECTION A. NON-CASH BENEFITS

UNITED STATES v. DRESCHER

179 F.2d 863 (2d Cir. 1950), cert. denied, 340 U.S. 821

Before L. HAND, Chief Judge, and SWAN and CLARK, Circuit Judges.

SWAN, Circuit Judge.

This appeal brings up for review an action against the United States to recover additional income taxes for the years 1939 and 1940 which the plaintiff asserts were illegally assessed and collected. He was an officer and director of Bausch & Lomb Optical Company, and in each of the taxable years the Company purchased from an insurance company at a cost of $5,000 a single premium annuity contract naming him as the annuitant. The taxes in dispute resulted from the Commissioner's including such cost as additional compensation received by the plaintiff in the year when the annuity contract was purchased. The district court awarded the plaintiff judgment for overpayments in the aggregate amount of $5,924.22, ruling that he received no income in 1939 or 1940 attributable to the purchase of the annuity contracts. The correctness of this ruling is presented by the appeal.

The facts are not in dispute. In 1936 the Optical Company inaugurated a plan to provide for the voluntary retirement at the age of 65 of its principal officers then under that age. There were five such, of whom Mr. Drescher was one. He was born April 28, 1894. Pursuant to this plan and in "recognition of prior services rendered," the Company purchased on December 28, 1939, and on the same date in 1940, a single premium, non-forfeitable annuity contract which named Mr. Drescher as the annuitant. Each policy was issued by Connecticut General Life Insurance Company and was delivered to the Optical Company which retained possession of it. It was the Company's intention, and so understood by the annuitant, that possession of the policy should be retained until the annuitant should reach the age of 65. The premium paid for each policy was $5,000. The amount of such payment was deducted by the Company in its tax return for the year of payment as part of the compensation paid to Mr. Drescher during that year. His salary as an officer was not reduced because of the purchase of the annuity contract, and he was not given the option to receive in cash the amounts expended by the Company for the premium payments. In filing income tax returns Mr. Drescher reported on the cash basis; the Optical Company on the accrual basis.

By the terms of the policy the Insurance Company agrees to pay the annuitant, commencing on December 28, 1958, a life income of $54.70 monthly under the 1939 policy and $44.80 monthly under the 1940 policy, with a minimum of 120 monthly payments. If the annuitant dies before receiving 120 monthly payments, the rest of them are payable to the beneficiary named in the policy. Each policy gives the annuitant an option to accelerate the date when monthly payments shall commence, but this option must be exercised by the annuitant in writing and endorsed on the policy. Consequently so long as the Optical Company retains possession of the policy the annuitant cannot exercise the option. If the annuitant dies before December 28, 1958, or before the acceleration date if he has exercised the option to accelerate monthly income payments, a death benefit is payable to the beneficiary designated by him (his wife). The policy reserves to him the right to change the beneficiary. The policy declares that "Neither this contract nor

any payment hereunder may be assigned, and the contract and all payments shall be free from the claims of all creditors to the fullest extent permitted by law." The policy has no cash surrender, salable, or loan value, and does not entitle the annuitant to a distribution of surplus.

This case is governed by the provisions of the Internal Revenue Code as they existed in 1939 and 1940. The appellant contends that the contracts are taxable to the annuitant in the year of purchase by the employer because §22(a) [1939 Code] sweeps into gross income "compensation for personal service, of whatever kind and whatever form paid, . . . and income derived from any source whatever." The taxpayer . . . cites Treasury rulings to the effect that retirement annuity contracts purchased for an employee gave rise to taxable income only as the annuitant received payments under the contract; and that the entire amount of each annuity payment was includible in gross income for the year of its receipt if he had made no contribution toward the purchase of the annuity. . . .

Whether we should construe the statute in accord with these Treasury rulings if the matter were res integra, we need not say. In this court the question of construction is not res integra because of our decision in Ward v. Commissioner, 2 Cir., 159 F.2d 502. That case involved a single premium annuity contract delivered to the annuitant and assignable by him. We there held that "the petitioner became taxable in 1941 upon whatever value was, by the delivery of the policy to him in that year, then unconditionally placed at his disposal. . . . This was the then assignable value of the policy." 159 F.2d page 504. We then considered whether it was error to value the policy in the amount of the premium paid for it. We recognized that the assignable value of the policy in 1941 might be less than the single premium paid for it, but as the purchaser had offered no proof that it was we held that the Tax Court was right in treating "cost to the purchaser as the assignable value of the policy when received by the taxpayer." 159 F.2d page 505.

As we shall not overrule the *Ward* case, the question is narrowed to determining whether the present case is distinguishable because the plaintiff's policies are non-assignable and were retained in the possession of the employer. We do not think these facts are sufficient to distinguish the cases with respect to taxability of the contracts, although they may affect the value of the rights the respective annuitants acquired. It cannot be doubted that in 1939 the plaintiff received as compensation for prior services something of economic benefit which he had not previously had, namely, the obligation of the insurance company to pay money in the future to him or his designated beneficiaries on the terms stated in the policy. That obligation he acquired in 1939 notwithstanding the employer's retention of possession of the policy and notwithstanding its non-assignability. The perplexing problem is how to measure the value of the annuitant's rights at the date he acquired them. The taxpayer contends that they then had no present value, while the appellant argues that their value was equal to the premium paid by the employer. We are unable to accept either contention.

The prohibition against assignment does not prove complete absence of present value. The right to receive income payments which accrued to the plaintiff when the Optical Company received each contract represented a present economic benefit to him. It may not have been worth to him the amount his employer paid for it; but it cannot be doubted that there is a figure, greater than zero although less than the premium cost, which it would have cost him to acquire identical rights. Likewise, the assurance that any beneficiary named by him at the time the contract was executed, or substituted by him at a later date, would in the event of his death receive the cost of each contract, plus interest after a few years, conferred a present economic benefit on him. Whatever present value the life insurance fea-

ture had to him is clearly taxable. See Commissioner v. Bonwit, 2 Cir., 87 F.2d 764, certiorari denied Bonwit v. Helvering, 302 U.S. 694. Another element of value inheres in the possibility that the annuitant could realize cash by contracting with a putative third person to hold in trust for him any payments to be received under the annuity contract. True, the promisee would run the risk that the annuitant might die before becoming entitled to any payment, in which event they would be payable to the beneficiary designated in the policy, but by exercising the reserved power to change the beneficiary the annuitant could designate his promisee. The power to make such a contract based on the policy may well have had some present value. No proof was offered as to this. For reasons which will be stated later the plaintiff had the burden of proving the amount by which he was overtaxed. On the other hand, it seems clear that the policy was worth less to the annuitant than the premium paid because the employer's retention of possession precluded him from exercising the privilege of accelerating the date of annuity payments since the insurance company's approval had to be endorsed upon the policy. The granting of this privilege must have been one of the factors taken into account in fixing the premium — at least, we may so assume in the absence of evidence. Hence deprivation of ability to exercise the privilege would decrease the value of the policy to the annuitant below its cost to the employer.

None of the authorities relied on by the parties is precisely in point on the issue of valuation. In Hackett v. Commissioner, 1 Cir., 159 F.2d 121, although the policy was non-assignable, the value to the annuitant was measured by the cost of the premium. As already stated, that basis is inapplicable here, for retention of the policy by the employer cut off the acceleration privilege. The same distinction exists with respect to the partially assignable policy involved in Oberwinder v. Commissioner, 8 Cir., 147 F.2d 255. And the tax treatment of the assignable policy in that case, as well as of those involved in the *Ward* case and in Hubbell v. Commissioner, 6 Cir., 150 F.2d 516, affords little guidance to a correct valuation here. Likewise, the cases holding free from taxation a nonassignable promise to pay money at a future date do not assist us, since they rest decision on taxability — here concluded by the *Ward* case — rather than on valuation. But it is unnecessary on the present appeal to determine the precise valuation of the policies.

As already mentioned the burden of proving by how much he was overtaxed was on the plaintiff. He had paid the additional taxes assessed upon the valuation ascribed by the Commissioner to the annuity contracts. An action to recover taxes erroneously collected is essentially an action for money had and received and unjustly detained by the defendant. Stone v. White, 301 U.S. 532; DeGuire v. Higgins, 2 Cir., 159 F.2d 921. Hence the plaintiff must show how much was unjustly detained. He relied upon the terms of the contract to prove that it had no present value whatever. But for reasons already stated we are satisfied that the 1939 policy had some present value and since he did not prove that such value was less than $5,000, the judgment in his favor cannot stand. . . .

Judgment reversed and cause remanded.

CLARK, Circuit Judge (dissenting in part).

I agree that the judgment must be reversed, but do not share in the view that some amount less than the $5,000 expended by the employer for this taxpayer in each of the years in question may be found to be the value of the annuity and hence the amount of additional compensation for which he is to be taxed. For the contrary seems to me well supported in reason and well established by the authorities cited in the opinion, some directly in point and some with, I suggest, immaterial variations of fact. In the light of modern conditions of life, the satisfying of the highly natural and indeed burning desire of most men of middle age

to obtain security for their old age and for their widows at death seems so clearly an economic benefit that I wonder it has been questioned as much as it has. Nor do I see the need to support this conclusion by looking for some highly theoretical possibility of turning this benefit into immediate dollars and cents any more than in the case where an employee is furnished living quarters or meals. Just as the latter are valued as additional compensation, though not assigned or assignable, so I think this highly valuable security is a purchased benefit for these company executives. Consequently the making of nice distinctions in either taxability or the amount thereof between assignable or accelerable annuities or their delivery or retention by the company — after careful forethought and advice of its attorneys with naturally an eye on both pension and tax possibilities — seems to me improper, when the general purpose to make adequate retirement provisions for these employees was made so clear.

Hence for any issues here involved I do not think it is important to discover what reasons impelled the employer to make the slightly differing provisions from those before this court in Ward v. Commissioner, 2 Cir., 159 F.2d 502, 505. Perhaps the employer may have had the prescience to foresee these tax problems which are troubling my brothers and did trouble the court below and may result in at least postponement, if not non-collectibility, of most, if not all, of the tax on the additional return provided by the employer for these executives. Perhaps, rather, the employer was providing only for a surer provision "free from the claims of all creditors to the fullest extent permitted by law" for this taxpayer and his wife. So in retaining possession of the policies and cherishing the present intent not to permit acceleration of the annuities, the employer may have had in mind a way of both securing the purchased services to the retirement age in normal cases and guarding against unusual situations due to disability or other special cause. In any event the fact is that the employer purchased at the going insurance rate those contracts which for the parties fulfilled the conditions desired.[1] Actually they would return to the annuitant, or to his widow, total amounts at least well in excess of the premiums paid and increasing yet more the longer he lived. The parties got just what they paid for in the insurance market, and its cost price is the additional compensation the executive received. The two features stressed in the opinion, namely, the nonassignability and the present non-accelerability of the annuities, may add to their usability for the particular purpose, but would seem not to change the basis of value. Perhaps, indeed, they render the contracts more desirable not only to the employer, but also to the annuitant's wife, as making the security provisions less easily impaired, and thus have a special appeal to a husband solicitous of his wife's future. At least, I do not see what basis we have for thinking they adversely affect values of provisions for a particular purpose, viz., security. If, in fact, these conditions do affect the amount of the premium, as the opinion rather naturally assumes, then all the more is the bargain of the parties to be respected as made; even the annuitant would doubtless be interested in a maximum return though it be strictly limited to himself or his wife. It seems to me that there is being set up some premise, not found in any of the precedents, of a fictitious partly-impaired transferability which is now somehow to be given a value in place of the wholly practical values set upon these contracts in the insurance market itself.

Of the cases, Hackett v. Commissioner, 1 Cir., 159 F.2d 121, seems directly in

[1] This was a tightly controlled corporation, so much so that the executives receiving the annuities and their families owned approximately 35 per cent of the voting stock, while the older officers and directors owned approximately 57 per cent. Hence there was never a sharp divergency of interest between these executives and their employer.

point and Judge Mahoney's opinion wholly persuasive as to both the meaning of the statute and the value to be set upon a nonassignable annuity contract. The suggested ground of distinction, that here retention of the policy by the employer cut off the acceleration privilege, cannot be accepted, since there does not appear to have been any such privilege in the annuity there considered; for no mention of the fact, or allusion of any kind to it, is made by the court. The same is true in Oberwinder v. Commissioner, 8 Cir., 147 F.2d 255, which also appears to be on all fours with this case. Similar results were reached in Hubbell v. Commissioner, 6 Cir., 150 F.2d 516, and by this court in Ward v. Commissioner, supra; for the reasons I have stated, the fact that the annuities in these cases were assignable should not make their purchase price any more accurate a gauge of their value than is the purchase price here. A like conclusion has been reached with respect to insurance premiums, Commissioner v. Bonwit, 2 Cir., 87 F.2d 764, certiorari denied Bonwit v. Helvering, 302 U.S. 694, and amounts deposited in the federal Civil Service Retirement Fund, Miller v. Commissioner, 4 Cir., 144 F.2d 287; while no case supporting a lesser valuation has been discovered. True, in the *Ward* case we spoke of the failure of the taxpayer "to show that the contract was not worth as much as it cost." Surely there is nothing in this record to suggest anything different. Here there was even an official of the insurance company to testify to the somewhat ordinary nature of these contracts. That the parties actually got the particular provisions they desired for their purposes does not at all suggest that the policies were overpriced.

Hence unless these benefits are now taxed, this small group of top executives will be given a tax advantage not accruing to less fortunate or less well-advised persons. Such taxation should not be confused or rendered abortive by directions for valuation impossible of execution in any realistic way.

NOTE

1. *Tax results in later years.* If the taxpayer had purchased the annuity contracts with his own funds, there would have been no tax consequences until he began to receive the annuity payments from the insurance company. Each monthly payment would have been in part a taxable receipt of income and in part a non-taxable return of capital, under rules that will be examined infra pages 153-154.

2. *Current statutory provisions.* In 1939 and 1940, when the annuity contracts in question were purchased by the taxpayer's employer, the Internal Revenue Code permitted an employer to establish a pension plan for employees, under which the employee would not be taxed until he began to receive his retirement income. (Mr. Drescher's annuities were not purchased pursuant to such a plan, perhaps because the employer wished to reward its employees ad hoc, rather than commit itself to a "plan.") In 1942, the statutory provisions governing such pension plans were tightened up, in order to prevent favoritism to highly paid employees and stockholding employees; this objective is achieved, at least to some extent, by provisions forbidding discrimination in favor of such employees and requiring a reasonably wide degree of coverage, now embodied in §401(a)(3) and (4) of the 1954 Code. At the same time, the Code was amended to provide explicitly that if an employer purchases an annuity contract for the benefit of an employee, not pursuant to a "qualified" plan, the employee is taxable if his rights are nonforfeitable except for failure to pay future premiums. See 1954 Code, §403(c). In Wilson v. Commissioner, 39 T.C. 362 (1962), a taxpayer attacked the constitutionality of §403(c), to the extent that it required him to report as income the premium paid by his employer for an annuity, arguing that because of his ill health the contract was worth less to him than its cost to the employer. The court rejected his argument, but it is not clear whether its decision is based on a failure of proof or on a broader ground.

3. *Effect of employer's own promise to pay in future.* Would Mr. Drescher have been taxed in 1939 and 1940 if his employer had agreed that for every year of service before

age 65, he would be paid by the employer itself a specified monthly amount commencing at 65? Does an employee who is covered by the federal Social Security system realize taxable income in the year he becomes assured of a pension at 65? Does a federal judge realize taxable income in the year in which he completes enough service so as to be entitled to retire at full pay?

4. *Procedural aspects.* Since the taxpayer reported the cost of the annuity contract as income on his 1939 and 1940 returns and paid the tax, his only remedy was to sue for a refund either in the federal District Court or in the Court of Claims. As to the final paragraph of the majority opinion, the same rule would have been applicable had the taxpayer sued in the Court of Claims. Had the taxpayer omitted the item from his 1939 and 1940 tax returns, and thereafter received a notice of deficiency (or "ninety-day letter") from the Commissioner of Internal Revenue, however, he would have had a choice: either to pay the tax and sue for a refund in the District Court or Court of Claims, or to refuse to pay the tax and sue the Commissioner in the Tax Court (formerly the Board of Tax Appeals). Infra pages 934-935. If he had chosen the latter method of attacking, would he have avoided the problem of proof that faced him in the District Court? A presumption of correctness attends the Commissioner's determination that a deficiency exists, and Rule 32 of the Tax Court Rules provides that, in general, "the burden of proof shall be upon the petitioner." See Rice, Tax, Fact and Fiction: Presumptions in Tax Cases, 1 S.D.L. Rev. 56 (1956); Ness, The Role of Statutory Presumptions in Determining Federal Tax Liability, 12 Tax L. Rev. 321, 328 et seq. (1957).

COMMISSIONER v. LoBUE

351 U.S. 243 (1956)

MR. JUSTICE BLACK delivered the opinion of the Court.

This case involves the federal income tax liability of respondent LoBue for the years 1946 and 1947. From 1941 to 1947 LoBue was manager of the New York Sales Division of the Michigan Chemical Corporation, a producer and distributor of chemical supplies. In 1944 the company adopted a stock option plan making 10,000 shares of its common stock available for distribution to key employees at $5 per share over a 3-year period. LoBue and a number of other employees were notified that they had been tentatively chosen to be recipients of nontransferable stock options contingent upon their continued employment. LoBue's notice told him: "You may be assigned a greater or less amount of stock based entirely upon your individual results and that of the entire organization." About 6 months later he was notified that he had been definitely awarded an option to buy 150 shares of stock in recognition of his "contribution and efforts in making the operation of the Company successful." As to future allotments he was told "It is up to you to justify your participation in the plan during the next two years."

LoBue's work was so satisfactory that the company in the course of 3 years delivered to him 3 stock options covering 340 shares. He exercised all these $5 per share options in 1946 and in 1947,[1] paying the company only $1,700 for stock having a market value when delivered of $9,930. Thus, at the end of these transactions, LoBue's employer was worth $8,230 less to its stockholders and LoBue was worth $8,230 more than before.[2] The company deducted this sum as an expense in its 1946 and 1947 tax returns but LoBue did not report any part of it as income. Viewing the gain to LoBue as compensation for personal services the Commissioner levied a deficiency assessment against him, relying on §22(a)

[1] There may be some question as to whether the first option was exercised in 1945 or 1946. See the discussion, infra, as to when the transactions were completed.

[2] The Commissioner assessed a deficiency on the basis of $8,680 although the record figures show a difference between option price and market value of $8,230. No explanation for the discrepancy appears in the record.

of the Internal Revenue Code of 1939 [§61(a), 1954 Code], which defines gross income as including "gains, profits, and income derived from . . . compensation for personal service . . . of whatever kind and in whatever form paid. . . ."

LoBue petitioned the Tax Court to redetermine the deficiency, urging that "The said options were not intended by the Corporation or the petitioner to constitute additional compensation but were granted to permit the petitioner to acquire a proprietary interest in the Corporation and to provide him with the interest in the successful operation of the Corporation deriving from an ownership interest." The Tax Court held that LoBue had a taxable gain if the options were intended as compensation but not if the options were designed to provide him with "a proprietary interest in the business." Finding after hearings that the options were granted to give LoBue "a proprietary interest in the corporation, and not as compensation for services" the Tax Court held for LoBue. 22 T.C. 440, 443. Relying on this finding the Court of Appeals affirmed, saying: "This was a factual issue which it was the peculiar responsibility of the Tax Court to resolve. From our examination of the evidence we cannot say that its finding was clearly erroneous." 223 F.2d 367, 371. Disputes over the taxability of stock option transactions such as this are longstanding. We granted certiorari to consider whether the Tax Court and the Court of Appeals had given [§61(a)] too narrow an interpretation. 350 U.S. 893.

We have repeatedly held that in defining "gross income" as broadly as it did in [§61(a)] Congress intended to "tax all gains except those specifically exempted." See, e.g., Commissioner v. Glenshaw Glass Co. [infra page 97]. The only exemption Congress provided from this very comprehensive definition of taxable income that could possibly have application here is the gift exemption of [§102(a), 1954 Code]. But there was not the slightest indication of the kind of detached and disinterested generosity which might evidence a "gift" in the statutory sense. These transfers of stock bore none of the earmarks of a gift. They were made by a company engaged in operating a business for profit, and the Tax Court found that the stock option plan was designed to achieve more profitable operations by providing the employees "with an incentive to promote the growth of the company by permitting them to participate in its success." 22 T.C., at 445. Under these circumstances the Tax Court and the Court of Appeals properly refrained from treating this transfer as a gift. The company was not giving something away for nothing.

Since the employer's transfer of stock to its employee LoBue for much less than the stock's value was not a gift, it seems impossible to say that it was not compensation. The Tax Court held there was no taxable income, however, on the ground that one purpose of the employer was to confer a "proprietary interest." [3] But there is not a word in [§61(a)] which indicates that its broad coverage should be narrowed because of an employer's intention to enlist more efficient service from his employees by making them part proprietors of his business. In our view there is no statutory basis for the test established by the courts below. When assets are transferred by an employer to an employee to secure better services they are plainly compensation. It makes no difference that the compensation is paid in stock rather than in money. Section [§61(a)] taxes income derived from compensation "in whatever form paid." And in another stock option case we said that [§61(a)] "is broad enough to include in taxable income any economic or financial benefit conferred on the employee as compensation, whatever the form or mode by which it is effected." Commissioner v. Smith, 324 U.S. 177, 181.

[3] The Tax Court noted "that in practically all such cases as the one before us, both the element of additional compensation and the granting of a proprietary interest are present." 22 T.C., at 445. See also Geeseman v. Commissioner, 38 B.T.A. 258, 263.

LoBue received a very substantial economic and financial benefit from his employer prompted by the employer's desire to get better work from him. This is "compensation for personal service" within the meaning of [§61(a)].

LoBue nonetheless argues that we should treat this transaction as a mere purchase of a proprietary interest on which no taxable gain was "realized" in the year of purchase. It is true that our taxing system has ordinarily treated an arm's length purchase of property even at a bargain price as giving rise to no taxable gain in the year of purchase. See Palmer v. Commissioner, 302 U.S. 63, 69. But that is not to say that when a transfer which is in reality compensation is given the form of a purchase the Government cannot tax the gain under [§61(a)]. The transaction here was unlike a mere purchase. It was not an arm's length transaction between strangers. Instead it was an arrangement by which an employer transferred valuable property to his employees in recognition of their services. We hold that LoBue realized taxable gain when he purchased the stock.

A question remains as to the time when the gain on the shares should be measured. LoBue gave his employer promissory notes for the option price of the first 300 shares but the shares were not delivered until the notes were paid in cash. The market value of the shares was lower when the notes were given than when the cash was paid. The Commissioner measured the taxable gain by the market value of the shares when the cash was paid. LoBue contends that this was wrong, and that the gain should be measured either when the options were granted or when the notes were given.

It is of course possible for the recipient of a stock option to realize an immediate taxable gain. See Commissioner v. Smith, 324 U.S. 177, 181-182. The option might have a readily ascertainable market value and the recipient might be free to sell his option. But this is not such a case. These three options were not transferable and LoBue's right to buy stock under them was contingent upon his remaining an employee of the company until they were exercised. Moreover, the uniform Treasury practice since 1923 has been to measure the compensation to employees given stock options subject to contingencies of this sort by the difference between the option price and the market value of the shares at the time the option is exercised. We relied in part upon this practice in Commissioner v. Smith, 324 U.S. 177, 324 U.S. 695. And in its 1950 Act affording limited tax benefits for "restricted stock option plans" Congress adopted the same kind of standard for measurement of gains. §130A, Internal Revenue Code of 1939, as amended, 64 Stat. 942. And see §421, Internal Revenue Code of 1954. Under these circumstances there is no reason for departing from the Treasury practice. The taxable gain to LoBue should be measured as of the time the options were exercised and not the time they were granted.

It is possible that a bona fide delivery of a binding promissory note could mark the completion of the stock purchase and that gain should be measured as of that date. Since neither the Tax Court nor the Court of Appeals passed on this question the judgment is reversed and the case is remanded to the Court of Appeals with instructions to remand the case to the Tax Court for further proceedings.*

Reversed and remanded.

[Mr. Justice Frankfurter and Mr. Justice Clark concurred.]

MR. JUSTICE HARLAN, whom MR. JUSTICE BURTON joins, concurring in part and dissenting in part.

In my view, the taxable event was the grant of each option, not its exercise.

---

* On remand, the Tax Court held that the income was realized when the taxpayer gave his notes, rather than when he paid them. LoBue v. Commissioner, 28 T.C. 1317 (1957). — ED.

When the respondent received an unconditional option to buy stock at less than the market price, he received an asset of substantial and immediately realizable value, at least equal to the then-existing spread between the option price and the market price. It was at that time that the corporation conferred a benefit upon him. At the exercise of the option, the corporation "gave" the respondent nothing; it simply satisfied a previously-created legal obligation. That transaction, by which the respondent merely converted his asset from an option into stock, should be of no consequence for tax purposes. The option should be taxable as income when given, and any subsequent gain through appreciation of the stock, whether realized by sale of the option, if transferable, or by sale of the stock acquired by its exercise, is attributable to the sale of a capital asset and, if the other requirements are satisfied, should be taxed as capital gain.[1] Any other result makes the division of the total gains between ordinary income (compensation) and capital gain (sale of an asset) dependent solely upon the fortuitous circumstance of when the employee exercises his option.[2]

The last two options granted to respondent were unconditional and immediately exercisable, and thus present no further problems. The first option, however, was granted under somewhat different circumstances. Respondent was notified in January 1945 that 150 shares had been "allotted" to him, but he was given no right to purchase them until June 30, 1945, and his right to do so then was expressly made contingent upon his still being employed at that date. His right to purchase the first allotment of stock was thus not vested until he satisfied the stated condition, and it was not until then that he could be said to have received income, the measure of which should be the value of the option on that date.

Accordingly, while I concur in the reversal of the judgment below and in the remand to the Tax Court, I would hold the granting of the options to be the taxable events and would measure the income by the value of the options when granted.

NOTE

1. *Origin of the "proprietary" option doctrine.* In Geeseman v. Commissioner (cited in footnote 3 of the Court's opinion), the Tax Court held that the exercise of certain stock

[1] Commissioner v. Smith, 324 U.S. 177, 324 U.S. 695, does not require an opposite result. In that case Smith's employer, Western, had undertaken the management of a reorganized corporation, Hawley, under a contract by which Western was to receive as compensation for its managerial services a specified amount of stock in Hawley if it was successful in reducing Hawley's indebtedness by a stated amount. Western, in turn, gave Smith, who was active in the Hawley reorganization, an option to buy, at the then-existing market price, a fixed share of any Hawley stock received under the management contract. The management contract was successfully performed, and a part of the Hawley stock received by Western — the value of which was of course substantially enhanced by the performance of the contract — was sold to Smith at the option price. Under the peculiar facts of that case — more analogous to an assignment to an employee of a share in the anticipated proceeds of a contract than to the usual employee stock option plan — the Tax Court's finding that the gain that would accrue to Smith upon the successful performance of the management contract was intended as "compensation" to him for his services was no doubt amply justified. But as the Court expressly stated in upholding that finding: "It of course does not follow that in other circumstances not here present the option itself, rather than the proceeds of its exercise, could not be found to be the only intended compensation." Id., at p. 182.

[2] Suppose two employees are given unconditional options to buy stock at $5, the current market value. The first exercises the option immediately and sells the stock a year later at $15. The second holds the option for a year, exercises it, and sells the stock immediately at $15. Admittedly the $10 gain would be taxed to the first as capital gain; under the Court's view, it would be taxed to the second as ordinary income because it is "compensation" for services. I fail to see how the gain can be any more "compensation" to one than it is to the other.

options granted by the Continental Can Company to its employees did not constitute a taxable occasion:

> It is true that the prospective purchasers were selected solely because they were valued employees of Continental Can Co., and there is no doubt that the added interest of these employees and the proprietary attitude toward the company which would result from their ownership of the stock constituted one of the motives for the granting of the option. It is equally obvious, however, that the continued employment of the petitioner was not dependent upon the receipt by him of the right to purchase the stock at less than the market price. The terms and conditions of his employment and the compensation he was receiving were in no way changed by the receipt of the privilege of purchasing the stock. . . . Furthermore the price to be paid by petitioner for the stock was substantial and, if consideration be given to the language of the offer, the margin of difference between the option price and the current market price at the time the option price was fixed, and to the fluctuation of prices on the stock market during the period in which the offer was made, we do not believe that it can be said that the margin of difference between the offering price and the fair market value of the stock was so great as to require the conclusion that the transaction here constituted the payment of compensation. . . . Accordingly we are unable to find in the instant case the elements which would indicate that the transaction was not what its form indicates, that is, a purchase of stock by the petitioner with a view to the subsequent realization of profit through dividends or sale or other disposition of the property.

The Commissioner of Internal Revenue acquiesced in the *Geeseman* case, 1939-1 C.B. 13; the Treasury Regulations were amended to tax the exercise of a stock option only to the extent that the spread "is in the nature of . . . compensation for services rendered or to be rendered"; and the era of the "proprietary" stock option commenced. (There were some earlier cases holding the exercise of stock options non-taxable, but, without Treasury endorsement, they were useless to the taxpayer who wanted to play it safe.) Many stock option plans were cleared in advance by the Internal Revenue Service, but a taxpayer whose employer did not apply for, or was denied, a ruling might find himself in the courts on the question whether his option was "proprietary" or "compensatory."

2. *The Smith case and the 1946 regulation.* The problem took on a new aspect in 1946, a few months after the Supreme Court decided the *Smith* case, cited in *LoBue.* There the Court held that a particular option was issued as compensation and that the "spread" at the time of exercise was taxable to the employee. The Treasury interpreted the decision as a green light to tax the spread in every case, and the Regulations were amended in 1946 to provide that "if property is transferred by an employer to an employee for an amount less than its fair market value, regardless of whether the transfer is in the form of a sale or exchange, the difference between the amount paid for the property and the amount of its fair market value at the time of the transfer is compensation and shall be included in the gross income of the employee."

The 1946 regulation was the center of controversy. Friedman and Silbert, Stock Option and Stock Purchase Plans, 8 N.Y.U. Inst. on Fed. Taxation 433 (1950); Comment, The Treasury's Proposal to Tax Employees' Bargain Purchases: T.D. 5507, 56 Yale L.J. 706 (1947). In 1950, the Senate Finance Committee stated that it "believes these regulations go beyond the decision of the Supreme Court in Commissioner v. Smith, 324 U.S. 177 (1945)." S. Rept. No. 2375, 81st Cong., 2d Sess., reprinted in 1950-2 C.B. 483, 526. The Tax Court continued to apply the *Geeseman* case to options granted before the amended regulation, which was intended to be prospective only, was issued (see Rosenberg v. Commissioner, 20 T.C. 5 (1953)) and, in LoBue v. Commissioner, 22 T.C. 440 (1954), it refused to apply the 1946 regulation to a post-1946 stock option, saying that it believed that the criteria of the *Geeseman* case are "still the most reliable guide to be followed."

3. *Statutory and non-statutory stock options since 1950.* The 1946 regulation, in conjunction with earlier doubts as to the breadth of the *Geeseman* doctrine, discouraged the issuance of employee stock options after 1946. The Revenue Act of 1950 added §130A to the 1939 Code, providing favorable tax treatment for so-called "restricted stock options." As a result of these tax benefits, stock options have once more become a popular device

for compensating corporate employees, especially executives. Section 130A was rewritten in 1954 and again in 1964; see §421, page 524 infra.

In 1959, the 1946 regulation was made inapplicable to employee stock options, and the more elaborate rules of Regs. §1.421-6 were substituted to govern the tax status of employee options not meeting the standards of §421. Unlike the 1946 regulation, the current provisions on "non-statutory" stock options (as amended in 1961) acknowledge the possibility that income is recognizable when the option is granted, and they also provide for situations in which the "spread" at the time of exercise cannot be computed because the employee cannot freely dispose of the stock. In cases decided before the new regulations were issued, the Tax Court held that restrictions on disposition may deprive the stock of a fair market value and thus prevent the assessment of tax when the option is exercised and that the "spread" between cost and fair market value could not be taxed in the year in which the restrictions on transfer expired because it "might be out of all proportion to the compensation involved in the original acquisition of the shares." Lehman v. Commissioner, 17 T.C. 652 (1951); Kuchman v. Commissioner, 18 T.C. 154 (1952).

For recent discussions of non-statutory stock options, see Lefevre, Nonrestricted Stock Options, 20 N.Y.U. Inst. on Fed. Taxation 353 (1962); Kempler, Non-restricted Stock Option Plans: Kuchman and Lehman Cases, 16 Tax L. Rev. 339 (1961).

4. *Stock options granted to independent contractors.* For the status of stock options granted to underwriters and other independent contractors, see Regs. §1.61-15; Victorson v. Commissioner, 326 F.2d 264 (2d Cir. 1964) (income realized by underwriter on exercising stock option); see also Fleischer and Meyer, What Treatment for Non-employee Stock Options? Underwriters' Position Difficult, 14 J. Taxation 274 (1961); Fleischer and Meyer, Tax Treatment of Securities Compensation: Problems of Underwriters, 16 Tax L. Rev. 119 (1960).

5. *Other employee discounts.* Although it is no longer applicable to stock options, Regs. §1.61-2(d)(2) carries forward the 1946 rule that the employee must report the "spread" if he acquires property from his employer for less than its fair market value. Does it apply to goods purchased at an employee's "courtesy" discount, or to meals sold for less than cost in an employee lunchroom?

In Commissioner v. Minzer, 279 F.2d 338, 340 (5th Cir. 1960), the court held that an insurance agent was taxable when he purchased a policy of insurance on his own life from one of the companies he represented, whether he remitted the full premium to the company and received the company's check in the amount of his customary commission or simply deducted the commission at the outset:

> The taxpayer obtained insurance which the companies were prohibited by law from selling to him at any discount. . . . It cannot be said that the insurance had a value less than the amount of the premiums. It must then be said that a benefit inured to the taxpayer to the extent of his commissions. The benefit is neither diminished nor eliminated by referring, as does the Tax Court, to the word "commission" as a verbal trap. The commissions were, we conclude, compensation for services and as such were income within the meaning of §61(a)(1).

BENAGLIA v. COMMISSIONER

36 B.T.A. 838 (1937)

STERNHAGEN: The Commissioner has added $7,845 each year to the petitioner's gross income as "compensation received from Hawaiian Hotels, Ltd.," holding that this is "the fair market value of rooms and meals furnished by the employer." In the deficiency notice he cites article 52[53], Regulations 77,* and holds inapplicable Jones v. United States, 60 Ct. Cls. 552; I.T. 2232; G.C.M. 14710; and

* "Where services are paid for with something other than money, the fair market value of the thing taken in payment is the amount to be included as income. . . . When living quarters such as camps are furnished to employees for the convenience of the employer, the ratable value need not be added to the cash compensation of the employees, but where a person receives as compensation for services rendered a salary and in addition thereto living quarters, the value to such person of the quarters furnished constitutes income subject to tax." — ED.

G.C.M. 14836. The deficiency notice seems to hold that the rooms and meals were not in fact supplied "merely as a convenience to the hotels" of the employer.

From the evidence, there remains no room for doubt that the petitioner's residence at the hotel was not by way of compensation for his services, not for his personal convenience, comfort, or pleasure, but solely because he could not otherwise perform the services required of him. The evidence of both the employer and employee shows in detail what petitioner's duties were and why his residence in the hotel was necessary. His duty was continuous and required his presence at a moment's call. He had a lifelong experience in hotel management and operation in the United States, Canada, and elsewhere, and testified that the functions of the manager could not have been performed by one living outside the hotel, especially a resort hotel such as this. The demands and requirements of guests are numerous, various, and unpredictable, and affect the meals, the rooms, the entertainment, and everything else about the hotel. The manager must be alert to all these things day and night. He would not consider undertaking the job and the owners of the hotel would not consider employing a manager unless he lived there. This was implicit throughout his employment, and when his compensation was changed from time to time no mention was ever made of it. Both took it for granted. The corporation's books carried no accounting for the petitioner's meals, rooms, or service.

Under such circumstances, the value of meals and lodging is not income to the employee, even though it may relieve him of an expense which he would otherwise bear. In Jones v. United States, supra, the subject was fully considered in determining that neither the value of quarters nor the amount received as commutation of quarters by an Army officer is included within his taxable income. There is also a full discussion in the English case of Tennant v. Smith, H.L. (1892) App. Cas. 150, III British Tax Cases 158. A bank employee was required to live in quarters located in the bank building, and it was held that the value of such lodging was not taxable income. The advantage to him was merely an incident of the performance of his duty, but its character for tax purposes was controlled by the dominant fact that the occupation of the premises was imposed upon him for the convenience of the employer. The Bureau of Internal Revenue has almost consistently applied the same doctrine in its published rulings.

The three cases cited by the respondent, Ralph Kitchen, 11 B.T.A. 855; Charles A. Frueauff, 30 B.T.A. 449; and Fontaine Fox, 30 B.T.A. 451, are distinguishable entirely upon the ground that what the taxpayer received was not shown to be primarily for the need or convenience of the employer. Of course, as in the *Kitchen* case, it can not be said as a categorical proposition of law that, where an employee is fed and lodged by his employer, no part of the value of such perquisite is income. If the Commissioner finds that it was received as compensation and holds it to be taxable income, the taxpayer contesting this before the Board must prove by evidence that it is not income. In the *Kitchen* case the Board held that the evidence did not establish that the food and lodging were given for the convenience of the employer. In the present case the evidence clearly establishes that fact, and it has been so found.

The determination of the Commissioner on the point in issue is reversed.

Reviewed by the Board.

Judgment will be entered under Rule 50. MURDOCK concurs only in the result.

ARNOLD, dissenting: I disagree with the conclusions of fact that the suite of rooms and meals furnished petitioner and his wife at the Royal Hawaiian Hotel were entirely for the convenience of the employer and that the cash salary was fixed without reference thereto and was never regarded as part of his compensation.

Petitioner was employed by a hotel corporation operating two resort hotels

in Honolulu — the Royal Hawaiian, containing 357 guest bed rooms, and the Moana, containing 261 guest bed rooms, and the bungalows and cottages in connection with the Moana containing 127 guest bed rooms, and the Waialae Golf Club. His employment was as general manager of both hotels and the golf club.

His original employment was in 1925, and in accepting the employment he wrote a letter to the party representing the employer, with whom he conducted the negotiations for employment, under date of September 10, 1925, in which he says:

> Confirming our meeting here today, it is understood that I will assume the position of general manager of both the Royal Waikiki Beach Hotel (now under construction) and the Moana Hotel in Honolulu, at a yearly salary of $10,000.00, payable monthly, together with living quarters, meals, etc., for myself and wife. In addition I am to receive $20.00 per day while travelling, this however, not to include any railroad or steamship fares, and I to submit vouchers monthly covering all such expenses.

While the cash salary was adjusted from time to time by agreement of the parties, depending on the amount of business done, it appears that the question of living quarters, meals, etc., was not given further consideration and was not thereafter changed. Petitioner and his wife have always occupied living quarters in the Royal Hawaiian Hotel and received their meals from the time he first accepted the employment down through the years before us. His wife performed no services for the hotel company.

This letter, in my opinion, constitutes the basic contract of employment and clearly shows that the living quarters, meals, etc., furnished petitioner and his wife were understood and intended to be compensation in addition to the cash salary paid him. Being compensation to petitioner in addition to the cash salary paid him, it follows that the reasonable value thereof to petitioner is taxable income. Cf. Ralph Kitchen, 11 B.T.A. 855; Charles A. Frueauff, 30 B.T.A. 449.

Conceding that petitioner was required to live at the hotel and that his living there was solely for the convenience of the employer, it does not follow that he was not benefited thereby to the extent of what such accommodations were reasonably worth to him. His employment was a matter of private contract. He was careful to specify in his letter accepting the employment that he was to be furnished with living quarters, meals, etc., for himself and wife, together with the cash salary, as compensation for his employment. Living quarters and meals are necessities which he would otherwise have had to procure at his own expense. His contract of employment relieved him to that extent. He has been enriched to the extent of what they are reasonably worth.

The majority opinion is based on the finding that petitioner's residence at the hotel was solely for the convenience of the employer and, therefore, not income. While it is no doubt convenient to have the manager reside in the hotel, I do not think the question here is one of convenience or of benefit to the employer. What the tax law is concerned with is whether or not petitioner was financially benefited by having living quarters furnished to himself and wife. He may have preferred to live elsewhere, but we are dealing with the financial aspect of petitioner's relation to his employer, not his preference. He says it would cost him $3,600 per year to live elsewhere.

It would seem that if his occupancy of quarters at the Royal Hawaiian was necessary and solely for the benefit of the employer, occupancy of premises at the Moana would be just as essential so far as the management of the Moana was concerned. He did not have living quarters or meals for himself and wife at the Moana and he was general manager of both and both were in operation during the years before us. Furthermore, it appears that petitioner was absent

from Honolulu from March 24 to June 8 and from August 19 to November 2 in 1933, and from April 8 to May 24 and from September 3 to November 1 in 1934 — about 5 months in 1933 and 3½ months in 1934. Whether he was away on official business or not we do not know. During his absence both hotels continued in operation. The $20 per day travel allowance in his letter of acceptance indicates his duties were not confined to managing the hotels in Honolulu, and the entire letter indicates he was to receive maintenance, whether in Honolulu or elsewhere, in addition to his cash salary.

At most the arrangement as to living quarters and meals was of mutual benefit, and to the extent it benefited petitioner it was compensation in addition to his cash salary, and taxable to him as income.

The Court of Claims in the case of Jones v. United States, relied on in the majority opinion, was dealing with a governmental organization regulated by military law where the compensation was fixed by law and not subject to private contract. The English case of Tennant v. Smith, involved the employment of a watchman or custodian for a bank whose presence at the bank was at all times a matter of necessity demanded by the employer as a condition of the employment. The facts in both these cases are so at variance with the facts in this case that they are not controlling in my opinion.

SMITH, TURNER and HARRON agree with this dissent.

NOTE

1. *Origin and history of "employer's convenience" doctrine.* Before the 1954 Code was enacted, there was no statutory provision dealing with meals and lodging supplied by employers to employees. Apparently the American source for the "convenience of the employer" doctrine was Jones v. United States, cited in the *Benaglia* case:

> If the nature of the services require the furnishing of a house for their proper performance, and without it the service may not be properly rendered, the house so furnished is part of the maintenance of the general enterprise, an overhead expense, so to speak, and forms no part of the individual income of the laborer. . . . It is indeed far from impressive that where an employer, in the course of the promotion and efficiency of the enterprise in which he is engaged, must of necessity provide the indispensable facilities for the successful prosecution of the same, because perchance an employee in the not to be avoided course of his duties may be in a position to avoid an expense which in a different character of service he might be obliged to incur, that therefore the use of the facility constitutes income. 60 Ct. Cl. 552, 575, 577 (1925).

The Regulations for many years contained a provision exempting the value of meals and quarters furnished to the employee "for the convenience of the employer." For the years 1933 and 1934 (involved in the *Benaglia* case), the provision was as set out in the footnote, supra page 46. From 1940 until the 1954 Code was enacted, the phraseology was as follows:

> If a person receives as compensation for services rendered a salary and in addition thereto living quarters or meals, the value to such person of the quarters and meals so furnished constitutes income subject to tax. If, however, living quarters or meals are furnished to employees for the convenience of the employer, the value thereof need not be computed and added to the compensation otherwise received by the employees. [Regs. 118, §39.22(a)-3.]

In 1950, the Internal Revenue Service issued Mim. 6472, 1950-1 C.B. 15, stating:

> The "convenience of the employer" rule is simply an administrative test to be applied only in cases in which the compensatory character of such benefits is not otherwise determinable. It follows that the rule should not be applied in any case in

which it is evident from the other circumstances involved that the receipt of quarters or meals by the employee represents compensation for services rendered.

Under this construction of the Regulations, the Internal Revenue Service took the position that a state civil service employee employed at a state institution was taxable on the value of meals and quarters if they were treated as part of his compensation by the state's civil service rules and regulations, even though he was required to live at the institution in order to be available for duty at all times. This position was not without judicial support (see Martin v. Commissioner, 44 B.T.A. 185 (1941), and Brasher v. Commissioner, 22 T.C. 637 (1954)), but it was rejected (at least for pre-1950 years) in Diamond v. Sturr, 221 F.2d 264 (2d Cir. 1955), because a flat exemption of any meals and lodging supplied for the convenience of the employer, in the opinion of the court, had "persisted through the interpretations of the Treasury and the Tax Court throughout years of reenactment of the Internal Revenue Code." The court also pointed out that in the case before it, a husband and wife were both receiving meals and lodging as housefather and housemother at a state training school for delinquent boys. Only the husband would be taxable under Mim. 6472, however, because his meals and lodging were treated as compensation by state law, while "for reasons obscured by the intricacies of the New York Civil Service system" his wife's were not.

Should meals and lodging be excluded from income? See Bittker, The Individual as Wage Earner, 11 N.Y.U. Inst. on Fed. Taxation 1147 (1953).

2. *1954 Code, §119.* Section 119 of the 1954 Code should be examined with care. To what extent is earlier law modified? Is it now necessary to determine whether meals or lodging are "intended as compensation"? Even though §119 provides that the terms of an employment contract or state statute are not "determinative," are they significant in deciding whether the meals or lodging are excluded by §119? Lodging is excluded only if the employee "is required to accept such lodging on the business premises of his employer as a condition of his employment." Does this automatically insure that the lodging was furnished "for the convenience of the employer"? Can meals be excluded even if the employee is not "required to accept" them "as a condition of his employment"? Was this requirement omitted from §119(1) only because employers do not customarily force-feed their employees, or is there some difference between meals and lodging so far as the requirements of acceptance as a condition of employment is concerned?

Do meals and lodging furnished for the employee's wife and children qualify for exclusion under §119?

On the meaning of "business premises of the employer," see United States v. Barrett, 321 F.2d 911 (5th Cir. 1963) (for state police, every road and highway, and evidently adjacent restaurants as well, constitute "business premises").

In most cases, the requisite "employer's convenience" is established by proof that the employee is "on call" outside of business hours. But see Setal v. Commissioner, ¶61,156 P-H Memo T.C., holding that meals and lodging furnished by a mining company at a company town in a mountainous area of California were provided for the "convenience of the employer" because the closest alternative facilities were 67 miles away by roads that were hazardous in winter; the same facts established that the lodging was a required condition of employment within the meaning of §119(2).

In Rev. Rul. 59-409, 1959-2 C.B. 48, the Internal Revenue Service ruled that the value of meals and lodging furnished by a school to resident faculty members (required to live on the premises to maintain order) and their families were not covered by §119: (a) when students were not in residence (in the absence of evidence that the faculty member's continued presence was required at such times); and (b) to the extent of the value of meals and lodging supplied to the faculty member's family, wife and children. The ruling was withdrawn, no reason being given, by Rev. Rul. 60-348, 1960-2 C.B. 41. What is the status of meals and lodging supplied to an employee's family?

For the status of meals and lodging received by individual proprietors and partners while at work, see Commissioner v. Robinson, 273 F.2d 503 (3d Cir. 1959).

3. *Cash allowances.* What is the status of meals and lodging that are provided by the employer to enable the employee to perform his duties more effectively, but that are charged against his salary? As originally promulgated, the Regulations under §119 pro-

vided that the value of meals and lodging could not be excluded if the employee was "required to reimburse the employer." Regs. §119-1(c)(2). In Boykin v. Commissioner, 260 F.2d 249 (8th Cir. 1958), however, the court held that the rental value of lodging furnished by an employer was excludable under §119 even though it was considered a part of the employer's compensation and was deducted from his salary. The Internal Revenue Service acquiesced in this decision, and in 1962 the Treasury proposed an amendment to the Regulations to bring them into conformity with this decision. Rev. Rul. 59-307, 1959-2 C.B. 48; 27 Fed. Reg. 12836 (Dec. 27, 1962).

What are the scope and purpose of §119's requirement that the meals and lodging be furnished "by" the employer? If the employer requires the employee to live and eat in a restricted area so as to be "on call," but does not want to go into the hotel or restaurant business, can a cash allowance paid to the employee to enable him to obtain suitable meals and lodging be excluded from income? Does the answer depend upon whether the purveyor of the meals and lodging is an "agent" of the employer or an "independent contractor"? See Regs. §119-1(c)(2), providing that such allowances "are includible in gross income to the extent that [they] constitute compensation"; this sentence is carried forward without change in the proposed amendments of December 27, 1962, referred to in the preceding paragraph.

If an employee is not allowed to exclude a cash allowance under §119, can he deduct the cost of the meals and lodging as business expenses under §162? See page 226 infra.

4. *Administrative and social security aspects of meals and lodging.* What are the administrative problems of taxing compensation in kind? See Guttentag, Leonard, and Rodewald, Federal Income Taxation of Fringe Benefits: A Specific Proposal, 6 Nat. Tax J. 250 (1953). Other tax and regulatory statutes must also cope with compensation in kind. See Comment, Tax Treatment of Compensation in Kind, 37 Calif. L. Rev. 628 (1949). Under the Social Security Act, the Treasury has issued regulations providing:

> Ordinarily, facilities or privileges (such as entertainment, medical services, or so-called "courtesy" discounts on purchases), furnished or offered by an employer to his employees generally, are not considered as remuneration for employment if such facilities or privileges are of relatively small value and are offered or furnished by the employer merely as a means of promoting the health, good will, contentment, or efficiency of his employees. The term "facilities or privileges," however, does not ordinarily include the value of meals or lodging furnished, for example, to restaurant or hotel employees, or to seamen or other employees aboard vessels, since generally these items constitute an appreciable part of the total remuneration of such employees. [Regs. §31.3121(a)-1(f).]

Is there any justification for including meals and quarters when calculating the employer's social security taxes and the employee's benefits but excluding them in computing the employee's income tax? See Pacific American Fisheries v. United States, 138 F.2d 464 (9th Cir. 1943).

See generally Macauley, Fringe Benefits and Federal Tax Treatment (1959).

5. *Other fringe benefits.* Consider the tax status of these three individuals: A works for $75 a week for the X Company, which makes available to its employees a cafeteria serving inexpensive meals, medical and dental service caring for the entire family, an extensive program of social and recreational activities, and a discount on purchases of its goods. These "fringe benefits" cost the employer, on the average, $5 weekly per employee. B receives $80 a week in identical employment for the Y Company, which offers its employees no such benefits. C receives $77.50 for identical work at Z Company, which offers no fringe benefits, but which has more pleasant lighting, air-conditioning, and foremen. These attractions cost Z Company about $2.50 weekly per employee.

Section B. Imputed Income

VICKREY, AGENDA FOR PROGRESSIVE TAXATION*

18-19, 24-25, 32-33, 44-47, 48-50 (1947)

I. Imputed Income from Assets

Home Ownership

Among the non-monetary items to be evaluated as part of income or spendings, the two most frequently mentioned are the rental value of owner-occupied homes and the value of homegrown produce consumed on the farm. Of these two the more important, in terms of securing an adequate progression of the tax, is imputed net rental. Home ownership tends to increase with increasing income, particularly in urban areas. However desirable home ownership may be as a social institution, the omission of this imputed net rent from the present federal income tax base is hardly the most appropriate or the most effective method of promoting home ownership. Even if a subsidy of home ownership should be considered proper, this particular form is inefficient, for the subsidy is greatest at the top of the income scale where the need for such a stimulus is least.

Present Discriminations. — The discrimination involved in ignoring imputed net rent may be seen from the following example. *A* may rent his home with the $800 income he gets from $20,000 worth of securities, while *D* sells $10,000 of securities and buys a similar home with the proceeds, using the $400 income from his remaining securities to pay taxes and maintenance costs and to set aside against the depreciation of the property. With no tax, *A* and *D* are in the same position economically, but under the present federal tax law not only does *D* have only $400 to report as income as compared with *A*'s $800, but from that $400, *D* will be able to deduct that part used to pay property and other taxes on the home. . . .

Consumer Durables Generally

Miscellaneous Consumer Durables. — From imputed rental it is only a slight generalization to the problem of imputed income from the ownership of other durable consumer goods. The problem is essentially similar, although of smaller magnitude. Consider an individual *A* who has $25,000 of securities and uses the income to rent a furnished dwelling, as compared with a comparable individual *B* who uses the income from $20,000 of securities to rent an unfurnished dwelling, uses the proceeds from the sale of $3,000 worth of securities to buy furnishings and uses the income from the remaining $2,000 to replace the furnishings as they wear out. If no allowance is made for such income, *A* will pay a heavier tax than *B*. If the yield is 4%, *A* will have to pay tax on $1,000 a year, *B* on only $880, though there is no difference in their real situation such as would warrant such a tax differential. Similarly if *B* sells $1,000 worth of securities and buys a phonograph and records with the proceeds, while *A* uses the $40 annual income from the securities to buy tickets to concerts, *A* will pay more tax than *B*, though his real income is quite comparable.

All forms of durable consumer goods give rise to an imputed income in this way, although the discrimination is not so patent if the item in question is not

* Published by The Ronald Press Company. Reprinted by permission.

commonly rented, and the services derived by the owner are of a type not comparable to any service commonly furnished separately.

Services of Debtors (Interest in Kind)

Bank Deposits. — In addition to the services of durable consumer goods as such, services in kind are sometimes rendered to the owners of certain types of assets in a way that is usually overlooked in determining income or consumption. One of the clearest cases of this is the service rendered by a bank to its depositors. For example, *A* may have a $500 bond, yielding $20 a year in interest and a checking account with little or no balance, so that he must pay the bank $20 a year in service charges. *B*, on the other hand, might sell the bond and deposit the proceeds, thus keeping a balance large enough so that there are no service charges to pay. Both *A* and *B* would be in the same economic position; but under usual methods of computing income, *B* would pay the smaller tax. . . .

Prepayments. — Another source of this type of imputed income is the purchase of goods or services in advance. Probably the most important instance of this is the purchase of fire and casualty insurance a year or more in advance. For example, *A* may purchase a five-year policy for $50, while *B* pays $12 annually for the same policy, or $2 a year more. Perhaps $1 of this difference may be due to economies in billing and the like, but about $1 per year will be the interest at about 4% on the average balance of $25, which *A* has invested in his policy. To equalize the tax on *A* and *B* it will be necessary to include in *A*'s income the $1 of interest earned on his deposit by the insurance company, which the insurance company presumably passes on to him in the form of insurance services and protection. . . .

III. Self-Service and Leisure

A taxpayer may not only consume some of the products he himself produces but he may also "consume" his own services. These services may nor may not be the same as those he normally sells to others: the principle involved is the same in either case, but the discrimination appears more distinctly when the services are of the same sort. For example, if a carpenter who has some carpentering to be done around his home were to stay home from his regular job a day or two to do it, then under the present income tax law (and under most concepts of income which have been translated into statistics), we do not consider this work as producing any income either individually or nationally. On the other hand, if he were to stay at his regular job and hire another carpenter to do the work, his income is increased by the amount earned, although the real situation has not substantially altered. Obviously the value of the work done at home should in principle be added to the income. The same principle holds, though the case is not so striking, if an accountant stays at home to do some amateur plumbing instead of working and using his earnings to hire a professional plumber. In a modern industrial economy with division of labor carried to considerable lengths, such cases are not likely to be frequent enough to constitute a serious problem.

Housework of Wives

The really important case of consumption of one's own services is that of the housework done by wives. If two housewives were to agree to do each other's work for pay, the income reported under present laws would be greater than if they each do their own work. An arrangement of just that sort is rather infrequent, but there are a large number of cases where a wife will go to work and employ a servant to do the work she formerly did herself. For the wife to thus

engage in "gainful" employment will increase the real family income only by the amount by which the wife's money earnings exceed the wages and keep of the servant. Where rates of tax are high and no allowance is made in the income tax base for income (or alternatively for expense) of this character the tax may seriously inhibit the entrance of married women into gainful occupations.

In wartime, when the manpower shortage is acute, the effects are serious. Even though the wife may require a full- or part-time servant if she goes to work, her productivity will often be greater than that of the servant or, at least, than her contributions as a housewife to the short-run output. In peacetime and particularly in time of unemployment there may be a plea that married women should stay at home anyhow; but even if this objective were accepted, a tax differential of this sort is hardly a desirable method of bringing about this result. From a strictly economic point of view the discrimination is patent, and the effect on the national income and the general welfare may be substantial; some allowance, no matter how arbitrary, is imperative. Even though the measurement of either the imputed income from the wife's efforts in the case where she stays at home, or the expenses attributable to her remunerative employment be extremely difficult, the magnitude of the problem and the frequency with which it occurs demand that it be given close attention. . . .

Objectives and Difficulties. — Fundamentally, the objective is to provide that if a wife is on the margin of deciding whether to take a job or to stay and do the housework the tax should not affect the decision; that is, the tax should be the same whichever she does. On this basis, one would either exempt from tax the minimum amount of the wife's earnings that would be necessary to persuade her to take a job, or add to the tax base of the non-working wife the maximum wage that could be offered without inducing her to take a job, or some equivalent combination of credit and imputed income would be required. The amount involved in such credits and additions would presumably vary with the other income of the family as well as with other factors. To attempt to determine such a quantity for each individual case would of course be completely impractical. On the other hand, to set up an arbitrary schedule related to family income would not be satisfactory either. The fundamental difficulty is that unless a tax is assessed on the imputed income from self-service and leisure in the case of single persons and husbands, or alternatively a very liberal earned income credit provided, any attempt to eliminate the effect of the tax on the employment of wives will necessarily involve discriminations and inconsistencies.

As an alternative, one might suggest the deduction from income of the expenses incurred because the wife works.* But this is also unsatisfactory, for the line between expenses that really take the place of the services of the wife and the additional services that can be afforded because of the increased income of the family is extremely difficult to draw, even if the expenses arising as a result of the wife's decision to go to work can be segregated. Other adjustments than the provision of substitute services may be made. Alternative expenditures may be made in rather subtle ways. Groceries may be purchased by telephone from a store offering delivery service instead of at the "cash and carry"; meals may be eaten more often in restaurants; higher prices may be paid generally because of lack of time for leisurely shopping; quarters may be of a different type, etc. . . .

The Non-Employed

The imputed income from the wife's industry has its counterpart in the case of the husband or single person who lives on a property income rather than from

* The 1954 Code, for the first time, authorized a deduction, much circumscribed by restrictions, for the child care expenses of the working mother and certain other persons. See §214, examined infra page 210. — Ed.

personal earnings. Though this difference is considerably less important in the aggregate amount involved, in the degree of choice open to the individual and in the importance of the difference to the individual, it merits consideration. In general, a person who voluntarily refrains from productive activity may be considered to be consuming his own services, or at least consuming his potential services in the form of leisure. At one extreme, this leisure may be valued at what the individual could earn by giving up the leisure and engaging in remunerative employment. But to tax a person on what he could earn if he would (which is what this would amount to), instead of on what he actually does earn, is probably somewhat harsh, inasmuch as the tax is payable in money and the individual under those circumstances might well not have the wherewithal to pay the tax. Assessment of such a tax would be rather like levying a heavy fine for vagrancy, graduated according to the talents of the victim, with the likelihood that alternative penalties might have to be invoked. In practice this issue is not likely to be taken up, since it may be extremely difficult to determine when idleness is voluntary (or perverse) and hence indicative of an imputed leisure income, and when it is involuntary and decidedly not productive of imputed income. There is already sufficient difficulty in distinguishing between voluntary and involuntary unemployment in the occupationally fairly well-defined groups of people covered by unemployment compensation: the difficulties of extending this to miscellaneous occupations, professions, and trades would be considerable.

But without attempting to evaluate leisure as such, there is a very real and concrete sense in which the cost of living of the gainfully occupied may exceed that of the individual who lives on property income exclusively. The employed person is under the necessity of living near his place of work, which in many cases means increased cost of housing. He usually has certain expenses for carfare to and from work, for clothing suitable to the work, and possibly other incidental items which cannot well be allowed as specific deductions from gross income. Particularly if he is single, he will probably have to pay to have certain services such as laundry, household cleaning, and possibly cooking done for him which he might, if at leisure, do for himself in his free time. Again, if single, he will probably spend more for food, being unable to prepare it himself, and whether married or single may have to spend more for lunches and so on. Shopping may be done in a more hurried and less thrifty fashion. Thus even in a strict monetary sense, there is a substantial difference in the real income of a person who earns an income and one who obtains the same money income from property.

NOTE

1. *Estimates of imputed income.* In Goode, Imputed Rent of Owner-occupied Dwellings Under the Income Tax (Brookings Institution, 1961), the additional federal income tax liability that would have accrued in 1958 if (a) imputed net rent for owner-occupied non-farm dwellings had been taxable, and (b) the personal deductions for mortgage interest and property taxes had been eliminated, is estimated at $3.2 billion; no estimate is given, for want of adequate information, for farm dwellings. The author also concludes that the progressivity of the income tax would not have been greatly altered, at least for most of the income range above $2000. The net value of owner-used consumer durable goods is not estimated, but the value of consumers' equities in such goods at the end of 1956 is estimated at $125 billion, compared with owners' equities of $240 billion in owner-occupied non-farm houses.

2. *Legal status of imputed income.* Apparently the only Supreme Court comment on the taxation of imputed income is in Helvering v. Independent Life Ins. Co., 292 U.S. 371 (1934), involving §245 (b) of the Revenue Act of 1921, the predecessor of §804(c)(3) of the 1954 Code. In the case of real estate owned and occupied by a life insurance company, maintenance expenses, taxes, and depreciation could be deducted only if the taxpayer in-

cluded in income the rental value of the real estate. The taxpayer asserted that the provision constituted a direct tax on the real estate, which was unconstitutional because not apportioned by population. The Court held that since deductions are a matter of legislative grace, Congress might qualify any deduction that it chose to allow. If the taxpayer did not wish to take the deductions, it was not required to include the rental value in income; thus, the rental value operated simply as a limitation on deductions that Congress could have denied entirely. The Court also said, however, that a tax on the rental value of a building (i.e., if the taxpayer were *required* to include the rental value in income) would be a "direct" tax within the meaning of Article I, Section 9, Clause 4 of the Constitution, valid only if apportioned among the states in proportion to population, and that it was not excused from the requirement of apportionment by the Sixteenth Amendment, because the rental value of a building occupied by its owner is not "income."

Section 1087 m-2(a) of the Wisconsin Income Tax Law of 1911 provided that "the term 'income' shall include . . . estimated rental of residence property occupied by the owner." This provision was upheld in Income Tax Cases, 148 Wis. 456, 134 N.W. 673, 135 N.W. 164 (1912). The United States Supreme Court dismissed a writ of error on procedural grounds and refused to comment on the substantive issue involved. Bolens v. Wisconsin, 231 U.S. 616 (1914). In the Revenue Acts of 1864, 1865, 1867, and 1870, Congress specifically rejected recommendations by the Commissioner of Internal Revenue that the "rental value of any homestead used or occupied by any person, or by his family, . . . be included and assessed as part of the income of such person." 13 Stat. 281 (1864), 14 Stat. 478 (1867), 16 Stat. 258 (1870); see Smith, The United States Federal Internal Tax History from 1861-1870, pp. 58, 62, 76 (1914).

See Hatch v. Employment Security Agency, 313 P.2d 1067 (Idaho, 1957), holding that a carpenter was ineligible for unemployment benefits during a period when he was constructing a residence for his family, on the ground that a substantial part of the fair market value of the house "must be regarded as remuneration for the work he did while not otherwise employed," under the state unemployment law. Two judges dissented.

3. *References.* Goode, supra paragraph 1; Marsh, The Taxation of Imputed Income, 58 Pol. Sci. Q. 514 (1943); Balch, Individual Income Taxes and Housing, 11 Nat. Tax J. 168 (1958).

SECTION C. THE REQUIREMENT OF A "REALIZATION"

EISNER v. MACOMBER
252 U.S. 189 (1920)

MR. JUSTICE PITNEY delivered the opinion of the Court.

This case presents the question whether, by virtue of the Sixteenth Amendment, Congress has the power to tax, as income of the stockholder and without apportionment, a stock dividend made lawfully and in good faith against profits accumulated by the corporation since March 1, 1913.

It arises under the Revenue Act of September 8, 1916, which, in our opinion . . . plainly evinces the purpose of Congress to tax stock dividends as income.

The facts, in outline, are as follows:

On January 1, 1916, the Standard Oil Company of California, a corporation of that state, out of an authorized capital stock of $100,000,000, had shares of stock outstanding, par value $100 each, amounting in round figures to $50,000,000. In addition, it had surplus and undivided profits invested in plant, property, and business and required for the purposes of the corporation, amounting to about $45,000,000, of which about $20,000,000 had been earned prior to March 1, 1913, the balance thereafter. In January, 1916, in order to readjust the capitalization, the board of directors decided to issue additional shares sufficient to constitute a stock dividend of 50 per cent of the outstanding stock, and to transfer from surplus account to capital stock account an amount equivalent to such issue. Appro-

priate resolutions were adopted, an amount equivalent to the par value of the proposed new stock was transferred accordingly, and the new stock duly issued against it and divided among the stockholders.

Defendant in error, being the owner of 2,200 shares of the old stock, received certificates for 1,100 additional shares, of which 18.07 per cent, or 198.77 shares, par value $19,877, were treated as representing surplus earned between March 1, 1913, and January 1, 1916.* She was called upon to pay, and did pay under protest, a tax imposed under the Revenue Act of 1916, based upon a supposed income of $19,877 because of the new shares; and an appeal to the Commissioner of Internal Revenue having been disallowed, she brought action against the Collector to recover the tax. In her complaint she alleged the above facts, and contended that in imposing such a tax the Revenue Act of 1916 violated Article 1, Sec. 2, Cl. 3, and Article 1, Sec. 9, Cl. 4, of the Constitution of the United States, requiring direct taxes to be apportioned according to population, and that the stock dividend was not income within the meaning of the Sixteenth Amendment. . . .

The Sixteenth Amendment must be construed in connection with the taxing clauses of the original Constitution and the effect attributed to them before the amendment was adopted. In Pollock v. Farmers' Loan & Trust Co., 158 U.S. 601, under the Act of August 27, 1894 (28 Stat. 509, 553, c. 349, Sec. 27), it was held that taxes upon rents and profits of real estate and upon returns from investments of personal property were in effect direct taxes upon the property from which such income arose, imposed by reason of ownership; and that Congress could not impose such taxes without apportioning them among the states according to population, as required by Article 1, Sec. 2, Cl. 3, and Section 9, Cl. 4, of the original Constitution.

Afterwards, and evidently in recognition of the limitation upon the taxing power of Congress thus determined, the Sixteenth Amendment was adopted, in words lucidly expressing the object to be accomplished: "The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration."

As repeatedly held, this did not extend the taxing power to new subjects, but merely removed the necessity which otherwise might exist for an apportionment among the states of taxes laid on income. . . .

A proper regard for its genesis, as well as its very clear language, requires also that this amendment shall not be extended by loose construction, so as to repeal or modify, except as applied to income, those provisions of the Constitution that require an apportionment according to population for direct taxes upon property,

* The par value of the dividend shares issued by the corporation was $25,000,000, and this figure, rather than their market value, was used in assessing the tax. The record, which consists chiefly of the taxpayer's complaint and the government's demurrer, does not disclose why; but this method being more favorable to the taxpayer than market value, it was not challenged by her. Of the $25,000,000 par value, about 82 per cent was charged by the corporation against surplus and undivided profits earned before March 1, 1913, and the remaining 18 per cent was charged against post-March 1, 1913, surplus and undivided profits. Tr. p. 5. Since the statute provided that a distribution of pre-1913 earnings and profits was non-taxable (infra p. 647), only 18 per cent of the total par value was treated as income to the shareholders. For the taxpayer in Eisner v. Macomber, this meant that about 18 per cent of the aggregate par value of her dividend shares was taxable.

As to market values, the complaint alleges that the taxpayer owned 2200 shares with a market value of $360-382 per share during the month before the dividend was declared and that during the month after the declaration her 2200 original and 1100 dividend shares were worth $234-268 per share, so that "the value of the capital stock owned by each stockholder, including the plaintiff's shares, was substantially unchanged by reason of the declaration of said stock dividend and the issue of additional shares of stock." Tr. pp. 4-5. — Ed.

real and personal. This limitation still has an appropriate and important function, and is not to be overridden by Congress or disregarded by the courts.

In order, therefore, that the clauses cited from Article 1 of the Constitution may have proper force and effect, save only as modified by the amendment, and that the latter also may have proper effect, it becomes essential to distinguish between what is and what is not "income," as the term is there used, and to apply the distinction, as cases arise, according to truth and substance, without regard to form. Congress cannot by any definition it may adopt conclude the matter, since it cannot by legislation alter the Constitution, from which alone it derives its power to legislate, and within whose limitations alone that power can be lawfully exercised.

The fundamental relation of "capital" to "income" has been much discussed by economists, the former being likened to the tree or the land, the latter to the fruit or the crop; the former depicted as a reservoir supplied from springs, the latter as the outlet stream, to be measured by its flow during a period of time. For the present purpose we require only a clear definition of the term "income," as used in common speech, in order to determine its meaning in the amendment, and, having formed also a correct judgment as to the nature of a stock dividend, we shall find it easy to decide the matter at issue.

After examining dictionaries in common use, we find little to add to the succinct definition adopted in two cases arising under the Corporation Tax Act of 1909 (Stratton's Independence v. Howbert, 231 U.S. 399, 415; Doyle v. Mitchell Bros. Co., 247 U.S. 179, 185), "Income may be defined as the gain derived from capital, from labor, or from both combined," provided it be understood to include profit gained through a sale or conversion of capital assets, to which it was applied in the *Doyle* Case, 247 U.S. 183, 185.

Brief as it is, it indicates the characteristic and distinguishing attribute of income essential for a correct solution of the present controversy. The government, although basing its argument upon the definition as quoted, placed chief emphasis upon the word "gain," which was extended to include a variety of meanings; while the significance of the next three words was either overlooked or misconceived. "Derived-from-capital"; "the gain-derived-from-capital," etc. Here we have the essential matter: *not* a gain accruing to capital; not a growth or increment of value in the investment; but a gain, a profit, something of exchangeable value, proceeding from the property, severed from the capital, however invested or employed, and coming in, being "derived" — that is, received or drawn by the recipient (the taxpayer), for his separate use, benefit and disposal — that is income derived from property. Nothing else answers the description.

The same fundamental conception is clearly set forth in the Sixteenth Amendment — "incomes, from whatever source derived" — the essential thought being expressed with a conciseness and lucidity entirely in harmony with the form and style of the Constitution.

Can a stock dividend, considering its essential character, be brought within the definition? To answer this, regard must be had to the nature of a corporation and the stockholder's relation to it. . . .

Certainly the interest of the stockholder is a capital interest, and his certificates of stock are but the evidence of it. They state the number of shares to which he is entitled and indicate their par value and how the stock may be transferred. They show that he or his assignors, immediate or remote, have contributed capital to the enterprise, that he is entitled to a corresponding interest proportionate to the whole, entitled to have the property and business of the company devoted during the corporate existence to attainment of the common objects, entitled to vote at stockholders' meetings, to receive dividends out of the corporation's profits if and when declared, and, in the event of liquidation, to receive a proportionate

share of the net assets, if any, remaining after paying creditors. Short of liquidation, or until dividend declared, he has no right to withdraw any part of either capital or profits from the common enterprise; on the contrary, his interest pertains not to any part, divisible or indivisible, but to the entire assets, business, and affairs of the company. Nor is it the interest of an owner in the assets themselves, since the corporation has full title, legal and equitable, to the whole. The stockholder has the right to have the assets employed in the enterprise, with the incidental rights mentioned; but, as stockholder, he has no right to withdraw, only the right to persist, subject to the risks of the enterprise, and looking only to dividends for his return. If he desires to dissociate himself from the company he can do so only by disposing of his stock.

For bookkeeping purposes, the company acknowledges a liability in form to the stockholders equivalent to the aggregate par value of their stock, evidenced by a "capital stock account." If profits have been made and not divided they create additional bookkeeping liabilities under the head of "profit and loss," "undivided profits," "surplus account," or the like. None of these, however, gives to the stockholders as a body, much less to any one of them, either a claim against the going concern for any particular sum of money, or a right to any particular portion of the assets or any share in them unless or until the directors conclude that dividends shall be made and a part of the company's assets segregated from the common fund for the purpose. The dividend normally is payable in money, under exceptional circumstances in some other divisible property; and when so paid, then only (excluding, of course, a possible advantageous sale of his stock or winding-up of the company) does the stockholder realize a profit or gain which becomes his separate property, and thus derive income from the capital that he or his predecessor has invested. . . .

A "stock dividend" shows that the company's accumulated profits have been capitalized, instead of distributed to the stockholders or retained as surplus available for distribution in money or in kind should opportunity offer. Far from being a realization of profits of the stockholder, it tends rather to postpone such realization, in that the fund represented by the new stock has been transferred from surplus to capital, and no longer is available for actual distribution.

The essential and controlling fact is that the stockholder has received nothing out of the company's assets for his separate use and benefit; on the contrary, every dollar of his original investment, together with whatever accretions and accumulations have resulted from employment of his money and that of the other stockholders in the business of the company, still remains the property of the company, and subject to business risks which may result in wiping out the entire investment. Having regard to the very truth of the matter, to substance and not to form, he has received nothing that answers the definition of income within the meaning of the Sixteenth Amendment. . . .

We are clear that not only does a stock dividend really take nothing from the property of the corporation and add nothing to that of the shareholder, but that the antecedent accumulation of profits evidenced thereby, while indicating that the shareholder is the richer because of an increase of his capital, at the same time shows he has not realized or received any income in the transaction.

It is said that a stockholder may sell the new shares acquired in the stock dividend; and so he may, if he can find a buyer. It is equally true that if he does sell, and in doing so realizes a profit, such profit, like any other, is income, and so far as it may have arisen since the Sixteenth Amendment is taxable by Congress without apportionment. The same would be true were he to sell some of his original shares at a profit. But if a shareholder sells dividend stock he necessarily disposes of a part of his capital interest, just as if he should sell a part of his old stock,

either before or after the dividend. What he retains no longer entitles him to the same proportion of future dividends as before the sale. His part in the control of the company likewise is diminished. Thus, if one holding $60,000 out of a total $100,000 of the capital stock of a corporation should receive in common with other stockholders a 50 per cent stock dividend, and should sell his part, he thereby would be reduced from a majority to a minority stockholder, having six-fifteenths instead of six-tenths of the total stock outstanding. A corresponding and proportionate decrease in capital interest and in voting power would befall a minority holder should he sell dividend stock; it being in the nature of things impossible for one to dispose of any part of such an issue without a proportionate disturbance of the distribution of the entire capital stock, and a like diminution of the seller's comparative voting power — that "right preservative of rights" in the control of a corporation. Yet, without selling, the shareholder, unless possessed of other resources, has not the wherewithal to pay an income tax upon the dividend stock. Nothing could more clearly show that to tax a stock dividend is to tax a capital increase, and not income, than this demonstration that in the nature of things it requires conversion of capital in order to pay the tax. . . .

We have no doubt of the power or duty of a court to look through the form of the corporation and determine the question of the stockholder's right, in order to ascertain whether he has received income taxable by Congress without apportionment. But, looking through the form, we cannot disregard the essential truth disclosed, ignore the substantial difference between corporation and stockholder, treat the entire organization as unreal, look upon stockholders as partners, when they are not such, treat them as having in equity a right to a partition of the corporate assets, when they have none, and indulge the fiction that they have received and realized a share of the profits of the company which in truth they have neither received nor realized. We must treat the corporation as a substantial entity separate from the stockholder, not only because such is the practical fact but because it is only by recognizing such separateness that any dividend — even one paid in money or property — can be regarded as income of the stockholder. Did we regard corporation and stockholders as altogether identical, there would be no income except as the corporation acquired it; and while this would be taxable against the corporation as income under appropriate provisions of law, the individual stockholders could not be separately and additionally taxed with respect to their several shares even when divided, since if there were entire identity between them and the company they could not be regarded as receiving anything from it, any more than if one's money were to be removed from one pocket to another.

Conceding that the mere issue of a stock dividend makes the recipient no richer than before, the government nevertheless contends that the new certificates measure the extent to which the gains accumulated by the corporation have made him the richer. There are two insuperable difficulties with this: In the first place, it would depend upon how long he had held the stock whether the stock dividend indicated the extent to which he had been enriched by the operations of the company; unless he had held it throughout such operations the measure would not hold true. Secondly, and more important for present purposes, enrichment through increase in value of capital investment is not income in any proper meaning of the term.

The complaint contains averments respecting the market prices of stock such as plaintiff held, based upon sales before and after the stock dividend, tending to show that the receipt of the additional shares did not substantially change the market value of her entire holdings. This tends to show that in this instance market quotations reflected intrinsic values — a thing they do not always do. But we regard the market prices of the securities as an unsafe criterion in an inquiry

such as the present, when the question must be, not what will the thing sell for, but what is it in truth and in essence.

It is said there is no difference in principle between a simple stock dividend and a case where stockholders use money received as cash dividends to purchase additional stock contemporaneously issued by the corporation. But an actual cash dividend, with a real option to the stockholder either to keep the money for his own or to reinvest it in new shares, would be as far removed as possible from a true stock dividend, such as the one we have under consideration, where nothing of value is taken from the company's assets and transferred to the individual ownership of the several stockholders and thereby subjected to their disposal. . . .

Upon the second argument,* the Government, . . . virtually abandoning the contention that a stock dividend increases the interest of the stockholder or otherwise enriches him, insisted as an alternative that by the true construction of the Act of 1916 the tax is imposed not upon the stock dividend but rather upon the stockholder's share of the undivided profits previously accumulated by the corporation; the tax being levied as a matter of convenience at the time such profits become manifest through the stock dividend. If so construed, would the act be constitutional?

That Congress has power to tax shareholders upon their property interests in the stock of corporations is beyond question; and that such interests might be valued in view of the condition of the company, including its accumulated and undivided profits, is equally clear. But that this would be taxation of property because of ownership, and hence would require apportionment under the provisions of the Constitution, is settled beyond peradventure by previous decisions of this court.

The Government relies upon Collector v. Hubbard (1870), 12 Wall. 1, 17, which arose under §117 of the Act of June 30, 1864, c. 173, 13 Stat. 223, 282, providing that "the gains and profits of all companies, whether incorporated or partnership, other than the companies specified in this section, shall be included in estimating the annual gains, profits, or income of any person entitled to the same, whether divided or otherwise." The court held an individual taxable upon his proportion of the earnings of a corporation although not declared as dividends and although invested in assets not in their nature divisible. Conceding that the stockholder for certain purposes had no title prior to dividend declared, the court nevertheless said (p. 18): "Grant all that, still it is true that the owner of a share of stock in a corporation holds the share with all its incidents, and that among those incidents is the right to receive all future dividends, that is, his proportional share of all profits not then divided. Profits are incident to the share to which the owner at once becomes entitled provided he remains a member of the corporation until a dividend is made. Regarded as an incident to the shares, undivided profits are property of the shareholder, and as such are the proper subject of sale, gift, or devise. Undivided profits invested in real estate, machinery, or raw material for the purpose of being manufactured are investments in which the stockholders are interested, and when such profits are actually appropriated to the payment of the debts of the corporation they serve to increase the market value of the shares, whether held by the original subscribers or by assignees." In so far as this seems to uphold the right of Congress to tax without apportionment a stockholder's interest in accumulated earnings prior to dividend declared, it must be regarded as overruled by Pollock v. Farmers' Loan & Trust Co., 158 U.S. 601, 627, 628, 637. Conceding Collector v. Hubbard was inconsistent with the doctrine of that case, because it sustained a direct tax upon prop-

* Eisner v. Macomber was argued in 1919 and reargued by order of the Court in 1920. — Ed.

erty not apportioned among the States, the Government nevertheless insists that the Sixteenth Amendment removed this obstacle, so that now the *Hubbard Case* is authority for the power of Congress to levy a tax on the stockholder's share in the accumulated profits of the corporation even before division by the declaration of a dividend of any kind. Manifestly this argument must be rejected, since the Amendment applies to income only, and what is called the stockholder's share in the accumulated profits of the company is capital, not income. As we have pointed out, a stockholder has no individual share in accumulated profits, nor in any particular part of the assets of the corporation, prior to dividend declared.

Thus, from every point of view, we are brought irresistibly to the conclusion that neither under the Sixteenth Amendment nor otherwise has Congress power to tax without apportionment a true stock dividend made lawfully and in good faith, or the accumulated profits behind it, as income of the stockholder. The Revenue Act of 1916, in so far as it imposes a tax upon the stockholder because of such dividend, contravenes the provisions of Article I, §2, cl. 3, and Article I, §9, cl. 4, of the Constitution, and to this extent is invalid notwithstanding the Sixteenth Amendment.

Judgment affirmed.

MR. JUSTICE HOLMES dissenting. . . .

I think that the word "incomes" in the Sixteenth Amendment should be read in "a sense most obvious to the common understanding at the time of its adoption." . . . For it was for public adoption that it was proposed. McCulloch v. Maryland, 4 Wheat. 316, 407. The known purpose of this Amendment was to get rid of nice questions as to what might be direct taxes, and I cannot doubt that most people not lawyers would suppose when they voted for it that they put a question like the present to rest. I am of opinion that the Amendment justifies the tax. . . .

MR. JUSTICE DAY concurs in this opinion.

MR. JUSTICE BRANDEIS delivered the following dissenting opinion:

Financiers, with the aid of lawyers, devised long ago two different methods by which a corporation can, without increasing its indebtedness, keep for corporate purposes accumulated profits, and yet, in effect, distribute these profits, among its stockholders. One method is a simple one. The capital stock is increased; the new stock is paid up with the accumulated profits; and the new shares of paid-up stock are then distributed among the stockholders pro rata as a dividend. If the stockholder prefers ready money to increasing his holding of the stock in the company, he sells the new stock received as a dividend. The other method is slightly more complicated. Arrangements are made for an increase of stock to be offered to stockholders pro rata at par, and, at the same time, for the payment of a cash dividend equal to the amount which the stockholder will be required to pay to the company, if he avails himself of the right to subscribe for his pro rata of the new stock. If the stockholder takes the new stock, as is expected, he may endorse the dividend check received to the corporation and thus pay for the new stock. In order to ensure that all the new stock so offered will be taken, the price at which it is offered is fixed far below what it is believed will be its market value. If the stockholder prefers ready money to an increase of his holdings of stock, he may sell his right to take new stock pro rata, which is evidenced by an assignable instrument. In that event the purchaser of the rights repays to the corporation, as the subscription price of the new stock, an amount equal to that which it had paid as a cash dividend to the stockholder.

Both of these methods of retaining accumulated profits while in effect distributing them as a dividend had been in common use in the United States for many years prior to the adoption of the Sixteenth Amendment. They were recognized

equivalents. Whether a particular corporation employed one or the other method was determined sometimes by requirements of the law under which the corporation was organized; sometimes it was determined by preferences of the individual officials of the corporation; and sometimes by stock market conditions. Whichever method was employed the resultant distribution of the new stock was commonly referred to as a stock dividend. . . .

It is conceded that if the stock dividend paid to Mrs. Macomber had been made by the more complicated method pursued by the Standard Oil Company of Kentucky; that is, issuing rights to take new stock pro rata and paying to each stockholder simultaneously a dividend in cash sufficient in amount to enable him to pay for this pro rata of new stock to be purchased * — the dividend so paid to him would have been taxable as income, whether he retained the cash or whether he returned it to the corporation in payment for his pro rata of new stock. But it is contended that, because the simple method was adopted of having the new stock issued direct to the stockholders as paid-up stock, the new stock is not to be deemed income, whether she retained it or converted it into cash by sale. If such a different result can flow merely from the difference in the method pursued, it must be because Congress is without power to tax as income of the stockholder either the stock received under the latter method or the proceeds of its sale; for Congress has, by the provisions in the Revenue Act of 1916, expressly declared its purpose to make stock dividends, by whichever method paid, taxable as income. . . .

Hitherto powers conferred upon Congress by the Constitution have been liberally construed, and have been held to extend to every means appropriate to attain the end sought. In determining the scope of the power the substance of the transaction, not its form has been regarded. . . . Is there anything in the phraseology of the Sixteenth Amendment or in the nature of corporate dividends which should lead to a departure from these rules of construction and compel this court to hold, that Congress is powerless to prevent a result so extraordinary as that here contended for by the stockholder? . . .

Mr. Justice Clarke concurs in this opinion.

NOTE

1. *The birth of a doctrine.* The decision in Eisner v. Macomber had been avidly awaited by the financial world, especially since a number of corporations had announced that stock dividends would be declared if held non-taxable. When Mr. Justice Pitney began to read his opinion, its import was misunderstood by a representative of Dow, Jones & Company, and a report that the Court had held the dividend taxable was sent out on the ticker. A collapse of stock prices, especially of those corporations which had previously been expected to declare stock dividends, resulted. After the false report was corrected, there was a rebound, sending prices up more than they had dropped. One observer blamed the incident on the fact that Supreme Court opinions are read "in a low or mumbling tone" and added: "I have heard that a committee of stockbrokers is going to investigate the occurrence." New York Times, March 9, 1920, p. 1.

Eisner v. Macomber has been included at this point because of its discussion of the term "income." The subsequent statutory and judicial treatment of stock dividends must be reserved for detailed examination later. Infra pages 689-692.

2. *Some implications of the decision.* If Congress can impose taxes on telephone service, club dues, stock transfers, and the purchase or sale of jewelry, why does the majority in the *Macomber* case conclude that a tax on the receipt of a stock dividend is unconstitutional? Does the decision imply that the increase in the value of property could not be

* This was an unrelated transaction, used by Mr. Justice Brandeis only for purposes of illustration. — Ed.

taxed to a donor of property when he gives it away, or to a decedent for the year in which he dies and transmits the property by will?

See infra page 431, for a proposal to impose an income tax on appreciation in property held at the time of owner's death, advanced by President Kennedy in 1963 but not enacted.

Note Mr. Justice Brandeis' description of a "simple" method by which a corporation can retain its accumulated profits and "yet, in effect distribute these profits, among its shareholders." Would it be still more simple for the directors to declare no dividends, either in cash or in stock, and advise the shareholders that if they want cash they can realize on the increase in the value of their investment by selling some of their original shares? Does the Brandeis dissent imply that shareholders could be required to report their unrealized appreciation (the increase in value between the beginning of the taxable year and its end) as income each year?

Despite the assertion in the penultimate paragraph of the majority opinion of Eisner v. Macomber that "what is called the stockholder's share in the accumulated profits of the company is capital, not income," Congress requires the United States shareholders of foreign personal holding companies and of certain other foreign corporations to report their proportionate share of corporate income even though it is accumulated by the corporation rather than distributed to them. The relevant provisions are §551 (foreign personal holding companies) and §951 ("controlled" foreign corporations). Under §1373, the undistributed income of so-called "Subchapter S corporations" is also taxed directly to the shareholders, but this provision is elective rather than compulsory.

3. *The views of commentators.* No other income tax case has been as extensively and acutely discussed as Eisner v. Macomber. A classic article by Thomas Reed Powell is, Stock Dividends, Direct Taxes, and the Sixteenth Amendment, 20 Colum. L. Rev. 536 (1920); he concludes that the majority Justices are better economists than the minority but finds a "stalemate" in the legal battle. E. R. A. Seligman, the distinguished economist, supported the majority, Studies in Public Finance, c. 5 (1925), while his son, an attorney, preferred the dissents, Implications and Effects of the Stock Dividend Decision, 21 Colum. L. Rev. 313 (1921). Henry Simons, who ordinarily had little use for the views of Seligman père, nevertheless agreed with him in approving the result of the decision, though he could not accept the Court's reasoning:

> The decision that stock dividends should be ignored in calculating taxable income (except for the appropriate changes in the basis from which capital gains and losses are measured) was eminently sound, as a judgment about a question of legislative policy. It is most unfortunate, however, that a constitutional issue was ever raised; for brief experience with the legislation in question would almost certainly have led to general disapproval and early repeal. . . . Actually, an utterly trivial issue was made the occasion for injecting into our fundamental law a mass of rhetorical confusion which no orderly mind can contemplate respectfully, and for giving constitutional status to naive and ridiculous notions about the nature of income and the rationale of income taxes. [Simons, Personal Income Taxation 198-199 (1938).]

But see Surrey, The Supreme Court and the Federal Income Tax: Some Implications of the Recent Decisions, 35 Ill. L. Rev. 779 (1941): "The cornerstone was laid, but the Court proceeded no further with its task of building upon it a concept of income. Each succeeding opinion paid its respects to the principle of realization which was the core of the Court's pronouncement in Eisner v. Macomber, but went on to a result which never matched the rigor of that pronouncement."

Does the case that follows retreat from the "rigor" of Eisner v. Macomber?

HELVERING v. BRUUN

309 U.S. 461 (1940)

MR. JUSTICE ROBERTS delivered the opinion of the Court.

The controversy had its origin in the petitioner's assertion that the respondent realized taxable gain from the forfeiture of a leasehold, the tenant having erected a new building upon the premises. The court below held that no income had

been realized. Inconsistency of the decisions on the subject led us to grant certiorari. . . .

The Board of Tax Appeals made no independent findings. The cause was submitted upon a stipulation of facts. From this it appears that on July 1, 1915, the respondent, as owner, leased a lot of land and the building thereon for a term of ninety-nine years.

The lease provided that the lessee might, at any time, upon giving bond to secure rentals accruing in the two ensuing years, remove or tear down any building on the land, provided that no building should be removed or torn down after the lease became forfeited, or during the last three and one-half years of the term. The lessee was to surrender the land, upon termination of the lease, with all buildings and improvements thereon.

In 1929 the tenant demolished and removed the existing building and constructed a new one which had a useful life of not more than fifty years. July 1, 1933, the lease was cancelled for default in payment of rent and taxes and the respondent regained possession of the land and building.

The parties stipulated

> that as at said date, July 1, 1933, the building which had been erected upon said premises by the lessee had a fair market value of $64,245.68 and that the unamortized cost of the old building, which was removed from the premises in 1929 to make way for the new building, was $12,811.43, thus leaving a net fair market value as at July 1, 1933, of $51,434.25, for the aforesaid new building erected upon the premises by the lessee.

On the basis of these facts, the petitioner determined that in 1933 the respondent realized a net gain of $51,434.25. The Board overruled his determination and the Circuit Court of Appeals affirmed the Board's decision.

The course of administrative practice and judicial decision in respect of the question presented has not been uniform. In 1917 the Treasury ruled that the adjusted value of improvements installed upon leased premises is income to the lessor upon the termination of the lease. The ruling was incorporated in two succeeding editions of the Treasury Regulations. In 1919 the Circuit Court of Appeals for the Ninth Circuit held in Miller v. Gearin, 258 F. 225, that the regulation was invalid as the gain, if taxable at all, must be taxed as of the year when the improvements were completed.

The regulations were accordingly amended to impose a tax upon the gain in the year of completion of the improvements, measured by their anticipated value at the termination of the lease and discounted for the duration of the lease. Subsequently the regulations permitted the lessor to spread the depreciated value of the improvements over the remaining life of the lease, reporting an aliquot part each year, with provision that, upon premature termination, a tax should be imposed upon the excess of the then value of the improvements over the amount theretofore returned.

In 1935 the Circuit Court of Appeals for the Second Circuit decided in Hewitt Realty Co. v. Commissioner, 76 F.2d 880, that a landlord received no taxable income in a year, during the term of the lease, in which his tenant erected a building on the leased land. The court, while recognizing that the lessor need not receive money to be taxable, based its decision that no taxable gain was realized in that case on the fact that the improvement was not portable or detachable from the land, and if removed would be worthless except as bricks, iron, and mortar. It said, 76 F.2d at page 884:

> The question as we view it is whether the value received is embodied in something separately disposable, or whether it is so merged in the land as to become financially a

part of it, something which, though it increases its value, has no value of its own when torn away.

This decision invalidated the regulations then in force.

In 1938 this court decided M. E. Blatt Co. v. United States, 305 U.S. 267. There, in connection with the execution of a lease, landlord and tenant mutually agreed that each should make certain improvements to the demised premises and that those made by the tenant should become and remain the property of the landlord. The Commissioner valued the improvements as of the date they were made, allowed depreciation thereon to the termination of the leasehold, divided the depreciated value by the number of years the lease had to run, and found the landlord taxable for each year's aliquot portion thereof. His action was sustained by the Court of Claims. The judgment was reversed on the ground that the added value could not be considered rental accruing over the period of the lease; that the facts found by the Court of Claims did not support the conclusion of the Commissioner as to the value to be attributed to the improvements after a use throughout the term of the lease; and that, in the circumstances disclosed, any enhancement in the value of the realty in the tax year was not income realized by the lessor within the Revenue Act.

The circumstances of the instant case differentiate it from the *Blatt* and *Hewitt* cases; but the petitioner's contention that gain was realized when the respondent, through forfeiture of the lease, obtained untrammeled title, possession and control of the premises, with the added increment of value added by the new building, runs counter to the decision in the *Miller* case and to the reasoning in the *Hewitt* case.

The respondent insists that the realty, — a capital asset at the date of the execution of the lease, — remained such throughout the term and after its expiration; that improvements affixed to the soil became part of the realty indistinguishably blended in the capital asset; that such improvements cannot be separately valued or treated as received in exchange for the improvements which were on the land at the date of the execution of the lease; that they are, therefore, in the same category as improvements added by the respondent to his land, or accruals of value due to extraneous and adventitious circumstances. Such added value, it is argued, can be considered capital gain only upon the owner's disposition of the asset. The position is that the economic gain consequent upon the enhanced value of the recaptured asset is not gain derived from capital or realized within the meaning of the Sixteenth Amendment and may not, therefore, be taxed without apportionment.

We hold that the petitioner was right in assessing the gain as realized in 1933.

We might rest our decision upon the narrow issue presented by the terms of the stipulation. It does not appear what kind of a building was erected by the tenant or whether the building was readily removable from the land. It is not stated whether the difference in the value between the building removed and that erected in its place accurately reflects an increase in the value of land and building considered as a single estate in land. On the facts stipulated, without more, we should not be warranted in holding that the presumption of the correctness of the Commissioner's determination has been overborne.

The respondent insists, however, that the stipulation was intended to assert that the sum of $51,434.25 was the measure of the resulting enhancement in value of the real estate at the date of the cancellation of the lease. The petitioner seems not to contest this view. Even upon this assumption we think that gain in the amount named was realized by the respondent in the year of repossession.

The respondent can not successfully contend that the definition of gross income

in [§61(a) of the 1954 Code] is not broad enough to embrace the gain in question. That definition follows closely the Sixteenth Amendment. Essentially the respondent's position is that the Amendment does not permit the taxation of such gain without apportionment amongst the states. He relies upon what was said in Hewitt Realty Co. v. Commissioner, supra, and upon expressions found in the decisions of this court dealing with the taxability of stock dividends to the effect that gain derived from capital must be something of exchangeable value proceeding from property, severed from the capital, however invested or employed, and received by the recipient for his separate use, benefit, and disposal. He emphasizes the necessity that the gain be separate from the capital and separately disposable. These expressions, however, were used to clarify the distinction between an ordinary dividend and a stock dividend. They were meant to show that in the case of a stock dividend, the stockholder's interest in the corporate assets after receipt of the dividend was the same as and inseverable from that which he owned before the dividend was declared. We think they are not controlling here.

While it is true that economic gain is not always taxable as income, it is settled that the realization of gain need not be in cash derived from the sale of an asset. Gain may occur as a result of exchange of property, payment of the taxpayer's indebtedness, relief from a liability, or other profit realized from the completion of a transaction. The fact that the gain is a portion of the value of property received by the taxpayer in the transaction does not negative its realization.

Here, as a result of a business transaction, the respondent received back his land with a new building on it, which added an ascertainable amount to its value. It is not necessary to recognition of taxable gain that he should be able to sever the improvement begetting the gain from his original capital. If that were necessary, no income could arise from the exchange of property; whereas such gain has always been recognized as realized taxable gain.

Judgment reversed.

The Chief Justice concurs in the result in view of the terms of the stipulation of facts.

Mr. Justice McReynolds took no part in the decision of this case.

NOTE

1. *Scope of Bruun case.* Would the result have been the same if the original building had not been razed but had been made more valuable by the tenant, either because he had renovated it or because by superior management he had attracted a better class of tenants?

Was the 1933 value of the land and new building combined at least $51,434 greater than the unamortized cost of the land and old building? Or is it possible that, for example, the land had cost $50,000 but was worth only $10,000 in 1933, so that the "net gain of $51,434" represented merely the difference between the value of the new building and the unamortized cost of the old? See Trask v. Hoey, 177 F.2d 940 (2d Cir. 1949).

2. *Statutory modification of Bruun rule.* Constitutional or not, a tax on the value of Mr. Bruun's building may strike unfairly because so much income is telescoped into a single year. The taxpayer could have avoided this problem by constructing the building himself and charging a higher annual rent to recoup its cost. If the Court's decision had been anticipated, the taxpayer might have preferred to renegotiate the rent downward, possibly to substantially less than the property's fair rental value, just to keep the tenant from throwing up the lease. These considerations led Congress in 1942 to enact what is now §109 of the 1954 Code; see also §1019. Note that §109 excludes only such income as the lessor derives upon the *termination* of a lease. Does it apply if the lease expires at the end of the term stipulated by the parties, or only if there is a premature termination (e.g., for nonpayment of rent)?

Note the parenthetical phrase in §109, which is construed by the Regulations in §1.109-1(a); see also §1.61-8(c). How can we determine whether a lessee-constructed improvement constitutes "rent"? In I.T. 4009, 1950-1 C.B. 13, the Internal Revenue Service ruled as follows:

> Under the terms of a 5-year lease of an 80-acre tract of land, the lessee is not required to pay rent, but, in lieu thereof, he agrees to install on the premises a complete irrigation system. The lessee further agrees to clear and level the land, dig ditches, drill a well, install a pump with motor and bring electricity thereto, spread gypsum on the land, plant alfalfa on a certain part thereof, and pay certain taxes, all improvements to become the property of the lessor at the termination of the lease. . . .
>
> In the instant case, the terms of the lease, under which it was agreed that in lieu of rent certain improvements of such a nature as to result in immediate benefit to the lessor when completed or partially completed would be placed upon the land, indicate an intention that the addition of such improvements should be deemed to be rent. Accordingly, it is held that income will result to the lessor to the extent of the fair market value, subject to the lease, of the improvements placed upon the land in any taxable year.

See also Your Health Club, Inc. v. Commissioner, 4 T.C. 385 (1944) (where a lessee was obligated to pay an annual rental of $4250, but was permitted to make certain improvements to the premises, the cost of which might be applied against the rent to the extent of $1500).

INAJA LAND CO. v. COMMISSIONER
9 T.C. 727 (1947)

[In 1928 the taxpayer paid $61,000 for 1236 acres of land on the banks of the Owens River, Mono County, California, together with certain water rights, for use as a private fishing club. The City of Los Angeles constructed a tunnel nearby in 1934 and commenced to divert polluted waters into the Owens River, and this action had a deleterious effect on the fishing on the taxpayer's preserve. In 1939 the City paid taxpayer $50,000 for a release of any liability for this diversion of foreign waters, and for an easement to continue to divert such waters, into the Owens River. In settling its claim against the City, the taxpayer incurred attorneys' fees and costs of $1055.]

LEECH, Judge: The question presented is whether the net amount of $48,945 received by petitioner in the taxable year 1939 under a certain indenture constitutes taxable income under [§61(a)], or is chargeable to capital account. The respondent contends: (a) That the $50,000, less $1,055 expenses incurred, which petitioner received from the city of Los Angeles under the indenture of August 11, 1939, represented compensation for loss of present and future income and consideration for release of many meritorious causes of action against the city, constituting ordinary income; and, (b) since petitioner has failed to allocate such sum between taxable and nontaxable income, it has not sustained its burden of showing error. Petitioner maintains that the language of the indenture and the circumstances leading up to its execution demonstrate that the consideration was paid for the easement granted to the city of Los Angeles and the consequent damage to its property rights; that the loss of past or future profits was not considered or involved; that the character of the easement rendered it impracticable to attempt to apportion a basis to the property affected: and, since the sum received is less than the basis of the entire property, taxation should be postponed until the final disposition of the property. . . .

Upon this record we have concluded that no part of the recovery was paid for loss of profits, but was paid for the conveyance of a right of way and easements.

and for damages to petitioner's land and its property rights as riparian owner. Hence, the respondent's contention has no merit. Capital recoveries in excess of cost do constitute taxable income. Petitioner has made no attempt to allocate a basis to that part of the property covered by the easements. It is conceded that all of petitioner's lands were not affected by the easements conveyed. Petitioner does not contest the rule that, where property is acquired for a lump sum and subsequently disposed of a portion at a time, there must be an allocation of the cost or other basis over the several units and gain or loss computed on the disposition of each part, except where apportionment would be wholly impracticable or impossible. Nathan Blum, 5 T.C. 702, 709. Petitioner argues that it would be impracticable and impossible to apportion a definite basis to the easements here involved, since they could not be described by metes and bounds; that the flow of the water has changed and will change the course of the river; that the extent of the flood was and is not predictable; and that to date the city has not released the full measure of water to which it is entitled. In Strother v. Commissioner, 55 Fed. (2d) 626, the court says:

> . . . A taxpayer . . . should not be charged with gain on pure conjecture unsupported by any foundation of ascertainable fact. See Burnet v. Logan, 283 U.S. 404.

This rule is approved in the recent *Raytheon Prod. Corp.* case [infra p. 86]. Apportionment with reasonable accuracy of the amount received not being possible, and this amount being less than petitioner's cost basis for the property, it can not be determined that petitioner has, in fact, realized gain in any amount. Applying the rule as above set out, no portion of the payment in question should be considered as income, but the full amount must be treated as a return of capital and applied in reduction of petitioner's cost basis. Burnet v. Logan, 283 U.S. 404.

Reviewed by the Court.

Decision will be entered for the petitioner.

NOTE

1. *Effect in later year.* How should the Inaja Land Company report the sale of its entire property, in a later year, for $25,000?

2. *Allocation of taxpayer's cost.* See Regs. §1.61-6, providing that upon the sale of subdivided property, gain or loss shall be computed on the sale of each parcel, notwithstanding the taxpayer has not recouped his entire investment. This rule has been applied in a long line of cases, some of which are cited with approval in Heiner v. Mellon, 304 U.S. 271, 275 n.3 (1938). Suppose the taxpayer paid $10,000 for a tract of land, a block of securities, or a similar aggregate of property, and sells one half for $7500. Has he had a gain under Eisner v. Macomber's definition? What if he can prove that later in the year of sale the remaining property declined in value to $1000?

3. *Constitutional aspects.* On the constitutionality of taxing the gain on an isolated sale of property by a person who is not engaged in the business of selling such property, see Merchant's Loan & Trust Co. v. Smietanka, 255 U.S. 509, 520-521 (1921):

> It is elaborately argued in this case . . . and in other cases since argued, that the word "income" as used in the Sixteenth Amendment and in the Income Tax Act we are considering does not include the gain from capital realized by a single isolated sale of property but that only the profits realized from sales by one engaged in buying and selling as a business — a merchant, a real estate agent, or broker — constitute income which may be taxed.
>
> It is sufficient to say of this contention, that no such distinction was recognized in the Civil War Income Tax Act . . . or in the Act of 1894 . . . , declared unconstitutional on an unrelated ground; that it was not recognized in determining income

under the Excise Tax Act of 1909 . . . ; that it is not to be found, in terms, in any of the income tax provisions of the Internal Revenue Acts of 1913, 1916, 1917 or 1919; that the definition of the word "income" as used in the Sixteenth Amendment, which has been developed by this court, does not recognize any such distinction; that in department practice, for now seven years, such a rule has not been applied; and that there is no essential difference in the nature of the transaction or in the relation of the profit to the capital involved, whether the sale or conversion be a single, isolated transaction or one of many. The interesting and ingenious argument, which is earnestly pressed upon us, that this distinction is so fundamental and obvious that it must be assumed to be a part of the "general understanding" of the meaning of the word "income" fails to convince us that a construction should be adopted which would, in a large measure, defeat the purpose of the Amendment.

SECTION D. RECOVERY OF CAPITAL

STANTON v. BALTIC MINING CO.

240 U.S. 103 (1916)

[Under the 1913 income tax law, the taxpayer (a mining corporation) was taxed on its gross receipts less business expenses and losses and less 5 per cent of the gross value of its production of ore. It attacked the constitutionality of the law on a number of grounds, only one of which is involved in the extract that follows. This ground was that the 5 per cent allowance for depletion of its ore body was inadequate, since the ore in question had cost it more than the depletion allowance. This contention can be better understood if illustrated. Assume that a mining corporation pays $1,000,000 for a mine containing 1,000,000 tons of recoverable ore, and that the land will be totally worthless when this deposit has been mined. Assume further that in a given year 100,000 tons are mined and sold for $1,500,000. Under the 1913 law the taxpayer could deduct 5 per cent of the sales price, or $75,000, for depletion, and the balance (less other expenses) would be taxable income. But, argued the taxpayer, the 100,000 tons of ore mined actually cost $100,000, since it paid $1,000,000 for a deposit of 1,000,000 tons, and therefore the depletion allowance is inadequate. (It should be noted that percentage depletion might exceed, instead of falling short of, any particular taxpayer's cost for his product. The importance of this possibility is seen infra page 317.)]

MR. CHIEF JUSTICE WHITE delivered the opinion of the Court.

. . . The contention is that as the tax here imposed is not on the net product, but in a sense somewhat equivalent to a tax on the gross product of the working of the mine by the corporation, therefore the tax is not within the purview of the 16th Amendment, and consequently it must be treated as a direct tax on property because of its ownership, and as such void for want of apportionment. But, aside from the obvious error of the proposition, intrinsically considered, it manifestly disregards the fact that by previous ruling* it was settled that the provisions of the 16th Amendment conferred no new power of taxation, but simply prohibited the previous complete and plenary power of income taxation possessed by Congress from the beginning from being taken out of the category of indirect taxation to which it inherently belonged, and being placed in the category of direct taxation subject to apportionment by a consideration of the sources from which the income was derived, — that is, by testing the tax not by what it was, a tax on income, but by a mistaken theory deduced from the origin or source of the income taxed. Mark, of course, in saying this we are not here considering a

* Brushaber v. Union Pacific R. Co., 240 U.S. 1 (1961). — ED.

tax not within the provisions of the 16th Amendment, that is, one in which the regulation of apportionment or the rule of uniformity is wholly negligible because the tax is one entirely beyond the scope of the taxing power of Congress, and where consequently no authority to impose a burden, either direct or indirect, exists. In other words, we are here dealing solely with the restriction imposed by the 16th Amendment on the right to resort to the source whence an income is derived in a case where there is power to tax for the purpose of taking the income tax out of the class of indirect, to which it generically belongs, and putting it in the class of direct, to which it would not otherwise belong, in order to subject it to the regulation of apportionment. But it is said that although this be undoubtedly true as a general rule, the peculiarity of mining property and the exhaustion of the ore body which must result from working the mine cause the tax in a case like this, where an inadequate allowance by way of deduction is made for the exhaustion of the ore body, to be in the nature of things a tax on property because of its ownership, and therefore subject to apportionment. Not to so hold, it is urged, is as to mining property but to say that mere form controls, thus rendering in substance the command of the Constitution that taxation directly on property because of its ownership be apportioned, wholly illusory or futile. But this merely asserts a right to take the taxation of mining corporations out of the rule established by the 16th Amendment when there is no authority for so doing. It moreover rests upon the wholly fallacious assumption that, looked at from the point of view of substance, a tax on the product of a mine is necessarily in its essence and nature in every case a direct tax on property because of its ownership, unless adequate allowance be made for the exhaustion of the ore body to result from working the mine. We say wholly fallacious assumption because, independently of the effect of the operation of the 16th Amendment, it was settled in Stratton's Independence v. Howbert, 231 U.S. 399, that such tax is not a tax upon property as such because of its ownership, but a true excise levied on the results of the business of carrying on mining operations.

As it follows from what we have said that the contentions are in substance and effect controlled by the *Brushaber* case, and, in so far as this may not be the case, are without merit, it results that, for the reasons stated in the opinion in that case and those expressed in this, the judgment must be and it is affirmed.

MR. JUSTICE MCREYNOLDS took no part in the consideration and decision of this case.

NOTE

Implications of Baltic Mining case. What if by the time the mine has been exhausted the taxpayer has been taxed on more than the difference between its gross receipts and the sum of operating expenses plus the cost of the mine? Would the Court's reasoning sustain a federal "excise" tax on the receipt by taxpayer Macomber of her stock dividends? See Magill, Taxable Income 355-373 (rev. ed. 1945). Does this case mean that taxpayers engaged in selling property need not be allowed a deduction for the cost of the property?

Doyle v. Mitchell Bros. Co., 247 U.S. 179 (1918), involved a corporate taxpayer that sold, after the 1909 corporate income tax was enacted, timber that it had purchased before 1909. The taxpayer sought to offset against the gross receipts from the timber its *value* as of the beginning of 1909, and the Treasury took the position that only its *cost* could be used in computing taxable income. The Court held for the taxpayer, saying:

> There is no express provision that even allows a merchant to deduct the cost of the goods that he sells. Yet it is plain, we think, that by the true intent and meaning of the act the entire proceeds of a mere conversion of capital assets were not to be treated as income. . . . In order to determine whether there has been gain or loss, we must withdraw from the gross proceeds an amount sufficient to restore the capital value that

existed at the commencement of the period under consideration. . . . It may be observed that it is a mere question of methods, not affecting the result, whether the amount necessary to be withdrawn in order to preserve capital intact should be deducted from gross receipts in the process of ascertaining gross income, or should be deducted from gross income in the form of a depreciation account in the process of determining net income. In either case the object is to distinguish capital previously existing from income taxable under the act. There is only a superficial analogy between this case and the case of an allowance claimed for depreciation of a mining property through the removal of minerals, since we have held that owing to the peculiar nature of mining property its partial exhaustion attributable to the removal of ores cannot be regarded as depreciation within the meaning of the act. [247 U.S. at 184-188.]

See Magill, Taxable Income 347-368 (rev. ed. 1945), discussing the *Stanton* and *Mitchell Bros. Co.* cases, which states (p. 351):

> . . . the *Stanton* case is not a sufficient basis for the generality that gross *receipts* (as distinguished from gross income) can be taxed as income under the [Sixteenth] amendment. Rather, the *Stanton* case and its successors are authority for the proposition that, in view of the fact that the extent of a mineral deposit is an unknown quantity, Congress may impose limitations on the depletion deduction which it could not place upon the deduction for the cost of other goods sold. Stated in another way, the theory may be that, as in Great Britain, the proceeds of the output of a mine, less the cost of production, are income, and because of inherent uncertainties [in calculating the cost of the ore mined] no direct allowance for depletion need be made, any loss on account of the working of the mine being allowed if, and when, the mine is sold.

See also Spreckels Sugar Refining Co. v. McClain, 192 U.S. 397 (1904), where the Supreme Court upheld as an excise, against the contention that it was an unapportioned direct tax, a tax on the gross annual receipts of any person or corporation carrying on the business of refining sugar.

SULLENGER v. COMMISSIONER

11 T.C. 1076 (1948)

MURDOCK, Judge: . . .

The petitioner paid to wholesale meat packing firms during the taxable years, for meats purchased from them, amounts in excess of the O.P.A. [Office of Price Administration, a World War II agency] prices in effect at the time of the purchases. The petitioner then sold the meat and the income from those sales is being taxed. The Commissioner, in determining the deficiencies, failed to recognize the excess over O.P.A. prices as cost of goods sold.

The respondent argues that the amounts paid in excess of the O.P.A. prices were "not truly a part of cost of goods sold" but were "in reality nothing but a 'bribe' to the various packing firms or amounts paid to them illegally to induce them to sell the goods to petitioner at the ceiling price." He then argues that the amounts must be considered from the standpoint of deductions, deductions are a matter of grace and not of right, to allow these amounts as deductions would be contrary to public policy, and, therefore, the determination of the Commissioner must be affirmed.

The trouble with his argument is that its major premise is unsound. The amounts in question were actually, as the stipulation shows, a part of the cost of goods sold and are not being claimed by this petitioner as a deduction under [§162]. [Section 162] makes no provision for the cost of goods sold, but the Commissioner has always recognized, as indeed he must to stay within the Constitution, that the cost of goods sold must be deducted from gross receipts

in order to arrive at gross income.* No more than gross income can be subjected to income tax upon any theory. The income from a business which is wholly illegal was held subject to income tax in United States v. Sullivan, 274 U.S. 259. Nevertheless, it was necessary to determine what that income was, and the cost of an illegal purchase of liquor was subtracted from proceeds of the illegal sale of the liquor in order to arrive at the gain from the illegal transactions which were subjected to income tax in that case. This is not a case of penalties provided for violation of the O.P.A. regulations. See the Emergency Price Control Act of 1942 (Title 50, App. U.S.C.A., sec. 901 et seq.). No authority has been cited for denying to this taxpayer the cost of goods sold in computing his profit, which profit alone is gross income for income tax purposes. It is unnecessary to discuss cases involving deductions, since this case does not involve any deduction. The point in controversy is decided for the petitioners.

Reviewed by the Court.

Decisions will be entered under Rule 50.

DISNEY, J., dissenting.

I can not agree with the conclusion that the cost of goods above the ceiling price set by law should be subtracted from gross receipts in order to determine gross income. No such question was considered or conclusion reached in United States v. Sullivan, 274 U.S. 259, relied on in the majority opinion. There only two points were considered: (a) Is the income from illegal business taxable? (b) Did the Fifth Amendment protect the taxpayer from making a return? As indication of how narrow the Court's field of examination was, we quote the last paragraph:

> It is urged that if a return were made the defendant would be entitled to deduct illegal expenses such as bribery. This by no means follows, but it will be time enough to consider the question when a taxpayer has the temerity to raise it.

This problem has received attention in I.T. 3724 [where] precisely the instant situation was involved, and amounts paid in "black market" operations in excess of ceiling prices were held not allowable either as a part of cost of goods sold, or as business expense deduction in computing Federal income tax. The I.T. quotes the Emergency Price Control Act of 1942, in pertinent part, as follows: "It shall be unlawful, . . . to sell or deliver any commodity, or in the course of trade or business to buy or receive any commodity, . . . in violation of any . . . price schedule . . ." set by the law. [1945 C.B. 57.] Thus, both the buying and selling by the petitioner were illegal, if above ceiling prices. Though Steinberg v. United States, 14 Fed. (2d) 564, holds that ordinary and necessary expenses may be deducted in arriving at profits of an illegal business, a long line of cases establishes that "ordinary and necessary" does not include illegal expenses contrary to public policy. Such cases are assembled in I.T. 3724, supra; and there it is concluded, referring to payments in excess of ceiling prices, that "The excess payments are not legitimately to be classified as a part of the cost of goods sold, and public policy decrees that no tax advantage may be derived from such expenditures." I am unable to distinguish the expenditure here involved, so far as here concerned, from expenses found, on grounds of public policy, not to be ordinary and necessary; and any suggestion that the petitioners' capital went into the goods purchased is subject to the same conclusion, that public policy forbids the allowance. The majority view stultifies the law. In effect it means that, though for purposes of preventing inflation the O.P.A. law is effective, the law of income taxation can not recognize it, regardless of the sound public policy involved.

* See Regs. §1.61-3(a). — ED.

The law of income taxation is thus made to uphold the inflation the O.P.A. law seeks to prevent. Had the petitioner, violating the O.P.A. law in purchasing above price ceilings, taken, on the contrary, a loss, it would not be allowable. Lawrence A. Wagner, 30 B.T.A. 1099, and cases following it. On the broad question of public policy here involved, I think there is no sound reason to distinguish the present situation from those above covered. The definition of income is broad and inclusive, therefore illegality of business can not serve as a shield; but it does not follow that every expense incurred, however illegal in its nature, may serve to diminish the receipts. Would expenses of bribery be allowed because an integral part of an illicit business? If not, why exclude from the same category an amount expended which is equally illegal? The amount above ceiling price is affirmatively and positively illegally expended, under the O.P.A. law. It was not necessary, in order to stay in business, to pay the prices in excess of the ceiling set (under any application of Commissioner v. Heininger, 320 U.S. 467), so far as I see indicated in this case. I think the law here administered must be consistent with the statute passed against inflation, and not contribute thereto despite that law. The whole income tax set-up and administration is a creature of constitution and law. Why an expenditure in contravention of law, and of public policy, should be permitted subtraction and thus affect such taxation, is difficult to understand. Is the law of income tax thus to serve as an exception to the O.P.A. law and its objectives? I think that purchases, like other expenses, to secure effect in reducing what would otherwise be taxed, must be within the law. I respectfully dissent.

NOTE

1. *Result in other cases.* In a number of other cases, the same result was reached on the ground that Congress did not *intend* to disallow such over-ceiling payments in calculating taxable income. Commissioner v. Weisman, 197 F.2d 221 (1st Cir. 1952); and cases cited in I.T. 4104, 1952-2 C.B. 71, where the Internal Revenue Service announced its acquiescence in the *Sullenger* case. Chief Judge Magruder, concurring in the *Weisman* case, said:

> But I hope the court's opinion will not give the impression that there is any serious doubt of the constitutional power of Congress to exclude from the offset so much of the cost of the goods sold as represented payment by the taxpayer in excess of the applicable ceiling price.
>
> It may be that a merchant's gross receipts from sales of a commodity represent a return of capital, and not gross income, at least to the extent of the cost to the merchant of the goods sold. In this view, a tax by Congress on the merchant's gross receipts, as such, would not be a tax on income, sustainable under the Sixteenth Amendment. The question then would be whether such a tax fell within the general taxing power of Congress conferred by Article I, §8, of the Constitution, or whether it would be deemed a "direct" tax which had to be laid in proportion to the population, as provided in Article I, §9.

Judge Magruder went on to argue that as a penalty for violating the price control program, Congress could have provided for the disallowance of over-ceiling payments for goods sold:

> It seems to me clear that Congress would have constitutional power to impose such a sanction, to be applied in the administration of the tax laws, whether or not Congress would have power to impose a general tax on gross receipts, applicable to the law-abiding as well as to law violators. [197 F.2d at 224-226.]

See the *Spreckels Sugar Refining Co.* case, supra page 72.

2. *Disallowance by statute.* The World War II Price Control Act authorized the President to prescribe the extent to which over-ceiling *wage* and *salary* payments should

be disregarded "in determining the costs or expenses of any employer," and pursuant to this authorization the President issued an Executive Order providing that such payments should not be allowed as deductions under the Internal Revenue Code. In Weather-Seal Mfg. Co. v. Commissioner, 16 T.C. 1312 (1951), aff'd per curiam, 199 F.2d 376 (6th Cir. 1952), this disallowance was held to be constitutional, despite the fact that the disallowed wage payments were, pursuant to customary accounting practice, part of the taxpayer's "cost of goods sold." See also N. A. Woodworth Co. v. Kavanaugh, 102 F. Supp. 9 (E.D. Mich. 1952), aff'd per curiam, 202 F.2d 154 (6th Cir. 1953).

The Defense Production Act of 1950 (unlike its World War II counterpart, under which the *Sullenger* case was decided) expressly authorized a disallowance of over-ceiling payments in calculating gain on the sale of property. I.T. 4105, 1952-2 C.B. 93; see Pedone v. United States, 151 F. Supp. 288 (Ct. Cl. 1957) (divided court).

3. *Illegal payments as deductible business expenses.* As to whether illegal payments may be deducted as "ordinary and necessary" business expenses, see pages 279-283 infra.

PERRY v. UNITED STATES

160 F. Supp. 270 (Ct. Cl. 1958)

WHITAKER, Judge.

Plaintiffs, who have filed a joint income tax return for the calendar year 1953, sue to recover taxes paid by them for that year in the amount of $8,287.26, plus interest as provided by law. The issue presented is whether an income tax may be imposed upon the corpus of a charitable trust that has been returned to the sole settlor when the donees thereof have refused to comply with the terms of the gift.

Plaintiff William F. Perry in 1944 created a trust for the benefit of the Town of Fitzwilliam, New Hampshire. The corpus was to be used for the construction of an addition to the Public Library and for no other purpose. The town decided that it did not desire to build the addition to the library, and the corpus of the trust was returned to the settlor in 1953.

The Commissioner of Internal Revenue required plaintiffs to include in their income tax return for 1953 the amount returned to them in that year. Plaintiffs say this is improper, because what they received was a return of capital, and not income. The defendant says it was proper because plaintiffs, in the years they made contributions to the trust, deducted the amounts contributed from their income, and thus received a tax benefit in those years.

There can be no doubt that what the taxpayer received from the town in 1953 was a return of capital and not income, except for the accumulations of interest and dividends on the corpus. The taxpayer admits he is required to include these accumulations in his income.

The taxpayer does not admit that he is required to account for the appreciation in value of the securities, and we do not think he is. He gave the securities to the town for a specific purpose. When the securities were returned, because the town did not desire them for this purpose, it was as if they had remained in the taxpayer's possession all the time, and, hence, he was not required to account for the appreciation in value until he disposed of them.

As stated, the return to the taxpayer of the property he had tried to give away cannot possibly be considered as income — he merely got back his own property. It cannot possibly be considered as income, except on the ground that he had deducted from his income the amount contributed in each year, thus reducing his taxes. In such cases the courts have heretofore required the inclusion of an item recovered, where a deduction had been taken for it in a prior year.

The only rational basis for such decisions is that it would be inequitable for the taxpayer to reduce his taxes for prior years on account of the contributions,

and not to pay taxes on them when he got them back. This is the so-called tax benefit rule. It is a rule enunciated by the courts, and not by Congress, and is based altogether on equitable considerations. But the Supreme Court, in the case of Lewyt Corp. v. Commissioner, 349 U.S. 237, 240, had this to say of equitable considerations in the administration of tax law:

> But the rule that general equitable considerations do not control the measure of deductions or tax benefits cuts both ways. It is as applicable to the Government as to the taxpayer. Congress may be strict or lavish in its allowance of deductions or tax benefits. The formula it writes may be arbitrary and harsh in its applications. But where the benefit claimed by the taxpayer is fairly within the statutory language and the construction sought is in harmony with the statute as an organic whole, the benefits will not be withheld from the taxpayer though they represent an unexpected windfall. . . .

In other words, the Supreme Court said that equitable considerations have no place in the laws of taxation. The tax benefit rule is based upon equitable considerations, and if we are to take the statement in Lewyt Corp. v. Commissioner, supra, at its face value, we must hold that the amounts received in 1953 are not to be included in gross income merely because the taxpayer had received a tax benefit on account of them in prior years.

We must say, however, that the tax benefit rule seems well entrenched in judicial decision. The Supreme Court impliedly recognized it in Dobson v. Commissioner [infra p. 862], and had done so many times before.

The only Congressional sanction for the tax benefit rule is [§111], which prohibits the inclusion within income of a subsequent year of all amounts recovered as to which the taxpayer had received no tax benefit as the result of a deduction in a prior year. This was limited, however, to the recovery of bad debts, and taxes and delinquency amounts.

The present case does not come within the provisions of that statute. The Commissioner of Internal Revenue, however, after the enactment of [§111] made the section applicable to transactions other than bad debts and taxes. In [Regs. §1.111-1(a)] it was provided that tax benefit principles should apply to "other losses, expenditures, and accruals made the basis for deductions."

If, therefore, we should hold that the amounts received in 1953 were not includable in gross income at all, we would be going contrary to prior judicial decisions, and to the express provisions of the Treasury Regulations. Therefore, bowing to the weight of judicial precedents, and in the face of the language in the *Lewyt* case, supra, we feel compelled to hold that we must take into account the tax benefit received by the taxpayers in prior years.

By this we mean that in computing income for 1953, the taxpayers should exclude from their income the amount of the corpus returned to them in that year, but they should add to the tax thus computed on their 1953 income the amount by which their taxes in prior years had been decreased on account of the deductions made for contributions to this trust fund. So computed, the Government would recoup the taxes escaped in the prior year on account of the deduction. It would be inequitable to require plaintiffs to include in their income for 1953 the aggregate of the deductions claimed in prior years, because of the fact that the rates of taxation vary greatly from year to year, and because the inclusion in one year of all the deductions taken in several years would probably put the taxpayer in a higher tax bracket.

In computing the gain on the stock sold by the settlor shortly after it was returned to him, original cost should be used as a basis.

Plaintiffs are entitled to recover, including interest as provided by law, and judgment is entered to that effect. . . .

JONES, Chief Judge, and LITTLETON, Judge, concur.

MADDEN, Judge (dissenting).

When the plaintiff William F. Perry conveyed the property in question to the town, he inserted a condition that if the property was not used to finance an addition to the library, it should be returned to him. He thus retained an interest in the property, of a highly contingent nature, an interest not at all likely to expand into complete ownership. But his contingent interest did expand into complete ownership.

If one sells a piece of land, and is paid for it, but puts a condition in the deed that if liquor is sold on the premises he is to get the land back, he has a contingent interest comparable to that of the grantor plaintiff in the instant case. If the condition happens and he gets the land back, I suppose there are no immediate income tax consequences. If he later sells it, I suppose his basis would be zero, because he was once paid for the land, and his capital gain or loss was computed at that time.

The factor in the instant case that produces possible tax consequences is that the conveyance subject to the condition subsequent was a conveyance to charity, and therefore was deductible, and was deducted from otherwise taxable income in the year in which the conveyance was made.

The plaintiff urges that the reconveyance from the town to him was a gift, and therefore expressly tax free to him as recipient, under [§102(a)]. This would present the unusual situation of a gift *from a charity,* in contrast to the usual one of a gift to a charity. The interest which the plaintiff reserved in the property when he conveyed it to the town was the reason and consideration for the town's reconveyance to him, and the transaction was not a gift.

What we have, then, is the unanticipated recovery by a former owner of property of that property after he has given it up for lost. The plaintiff was in a situation comparable to that of the person who has had to pay taxes and hopes that he may get them back later by litigation, or the one who has given up all real hope of collecting a debt owed to him. In the latter case, the income tax law allows a deduction from income for the taxes paid, and for the bad debt. In these latter situations, if the taxpayer recovered his taxes or collected his bad debt in a later year, the administrative authorities and the courts, without the help of any statute, required him to pay income tax upon his recovery. Of course, one does not ordinarily acquire taxable income by collecting a debt, or by a refund of taxes which he never should have had to pay. The reason that the money was regarded as taxable in the special cases referred to was that, once having used the taxes paid or the bad debt as a tax deduction, the prospect of recovery was, *for income tax purposes,* written off, though as a legal claim it still existed. Having been written off, the later realization of the claim was, *again for tax purposes,* like a windfall to the taxpayer, and within the broad definition of taxable income. See Commissioner v. Glenshaw Glass Co., 348 U.S. 426; Park & Tilford Distillers Corp. v. United States, 107 F. Supp. 941.

Section [111] was not the origin of the doctrine of taxability in the situations described above. It was rather a limitation upon the existing judge-made rule of taxability, limiting the amount of the recovery which could be taxed to the amount which had actually been used as a deduction in the prior year. Section [111] applies only to the later recovery of bad debts, taxes, and delinquency amounts.

The doctrine which existed prior to [§111] would certainly have been applicable to other situations which fell within the reason of the doctrine. For example, if one had taken a deduction for property stolen from him, and had in a later year recovered the stolen property, he would, I should suppose, have been

taxable upon its value. He owned it all the time for most legal purposes, but for income tax purposes he had written it off. I think the same is true of the unique situation of the plaintiff.

From what I have said, it would follow that the law prior to the enactment of [§111] would be applicable to situations other than those covered by that section. There is no indication that Congress intended to change the law except to put the limitation noted above upon it, for the benefit of the taxpayer in the kind of cases that most frequently arise. We need not decide whether the limitation would be applicable in the instant case, since the plaintiff received full tax deductions for the charitable gifts in the years in which they were made.

If the foregoing analysis is correct, the property reconveyed to the plaintiff was taxable income. I think it should be treated as such. The comparable recoveries, in the cases of bad debts and refunds of taxes, were so treated under the judge-made law which preceded the enactment of [§111] and are so treated under that section. If Congress, in enacting [§111] had chosen to provide in it for the meticulous recomputation which the court's opinion requires, that would have been a reason for the court's doing so in this analogous case not covered by the statute. Since Congress did not regard such a recomputation as necessary to do equity in the numerous cases covered by the statute, I think the plaintiff's unusual situation should not be accorded a treatment different from that accorded other taxpayers whose claims to equitable treatment are exactly equivalent to those of the plaintiff.

LARAMORE, Judge, joins in the foregoing dissenting opinion.

NOTE

1. *Recovery of amount previously deducted.* If Jones lends his automobile or a sum of money to Smith, we would not expect Jones to realize taxable income on getting his car or his money back; and one might assume that the recovery of an amount paid on account of an erroneous grocery bill or an unconstitutional tax would be equally excluded from gross income. It has long been established, however, that the collection of a loan that was written off as a bad debt, or the recovery of a sum that was deducted as a tax or business expense, may produce taxable income; estoppel (arising from the taxpayer's representation of the debt as uncollectible, or the payment as actually due) is the usual explanation of this principle, though sometimes other theories are advanced (e.g., that the recovery takes the place of the increase in taxable income that would have been reported in the earlier year had it not been for the deduction). See Plumb, The Tax Benefit Rule Today, 57 Harv. L. Rev. 129, 131 (1943), which cites the relevant cases and authorities. Less clear is the extent of the taxpayer's obligation to report recoveries of items that could have been (but were not) deducted and items that were deducted erroneously.

2. *The "tax benefit" rule.* The principle that the recovery of an amount previously deducted is includible in income is sometimes applied only if the deduction served to reduce the taxpayer's income tax (either directly, or by increasing a loss that was of tax benefit in another year). Both the basic principle and the "tax benefit" variation are of judicial and administrative rather than statutory origin; but in 1942 Congress enacted the predecessor of §111, providing that income attributable to the recovery of a bad debt, prior tax, or "delinquency amount" (interest paid for late filing of a tax return, etc.) may be excluded from gross income to the extent that the prior deduction was of no tax benefit. (Section 111 unmistakably implies, even though it does not explicitly provide, that the recovery *is* taxable to the extent that the deduction *was* of tax benefit, thus endorsing the "basic principle" described above.) In *Perry,* the court states that §111 does not preempt the "tax benefit" field, and Regs. §1.111-1(a) agrees with this conclusion; see also California & Hawaiian Sugar Refining Corp. v. United States, 311 F.2d 235 (Ct. Cl. 1962) (recovery of unconstitutional taxes held a return of capital to a taxpayer that was a tax-exempt co-op when the taxes were paid and hence not entitled to deduct them, though it

was a taxable organization when the recovery was received). When the taxpayer is able to "use" the full amount of a deduction to derive a tax benefit, however, the "basic principle" has usually required the recovery to be included in income even if the increase in tax thus produced exceeds the reduction in the earlier year's tax. The *Perry* case is idiosyncratic in excluding the recovery from income but increasing the tax for the year of recovery by the amount of the saving enjoyed in the earlier year, and the Internal Revenue Service has announced its non-acquiescence. Rev. Rul. 59-141, 1959-1 C.B. 17.

This subject is examined more fully infra pages 867-869.

SECTION E. RECOVERIES FOR PERSONAL AND BUSINESS INJURIES

SOL. OP. 132
I-1 C.B. 92 (1922)

The question presented is whether the following receipts constitute income within the meaning of the sixteenth amendment and the statutes enacted thereunder: (1) Damages for alienation of affections; (2) damages for slander or libel of personal character; and (3) money received by a parent in consideration of the surrender of his right to the custody of his minor child.

All of these items relate to personal or family rights, not property rights, and accordingly may be treated together. Nor is there a material distinction between payment under an agreement of the parties and payment pursuant to a judgment of a court.

It is held in Solicitor's Memorandum 957 that money recovered as damages in libel proceedings is subject to income tax, and in Solicitor's Memorandum 1384, that damages for alienation of a wife's affections are not exempt from income tax under [§104(a)(2), relating to "damages received . . . on account of personal injuries or sickness"]. Both of these rulings, however, were made prior to the decision of the Supreme Court in Eisner v. Macomber (252 U.S. 189). Solicitor's Memorandum 1384 correctly held that the exemption contained in [§104(a)(2)] does not include damages for alienation of affections, but the question is really more fundamental, namely, whether such damages received by a lawyer for libel of his professional reputation constitute income. Business libel may be distinguished from ordinary defamation of character and is not here under consideration. The ruling in Solicitor's Memorandum 957, however, was not limited but apparently applied to libel generally.

In Stratton's Independence v. Howbert (231 U.S. 399) and in Eisner v. Macomber (252 U.S. 189, 207), the Supreme Court defined income as "the gain derived from capital, from labor, or from both combined. . . ." In other words, without gain of some sort no income within the meaning of the sixteenth amendment can be said to be realized.

In the light of these decisions of the Supreme Court it must be held that there is no gain, and therefore no income, derived from the receipt of damages for alienation of affections or defamation of personal character. In either case the right invaded is a personal right and is in no way transferable. While a jury endeavors roughly to compute the amount of damage inflicted, in the very nature of things there can be no correct estimate of the money value of the invaded rights. The rights on the one hand and the money on the other are incomparable things which can not be placed on opposite sides of an equation. If an individual is possessed of a personal right that is not assignable and not susceptible of any appraisal in relation to market values, and thereafter receives either damages or

payment in compromise for an invasion of that right, it can not be held that he thereby derives any gain or profit. It is clear, therefore, that the Government can not tax him on any portion of the sum received. This also applies to money received in consideration of the surrender of the custody of a minor child. Holding otherwise would be equivalent to treating as chattels the wife whose affections were alienated and the child whose custody was surrendered.

In the cases cited above, in Lynch v. Turrish (247 U.S. 221), and in other cases, the Supreme Court has repeatedly held that gross income does not include everything that comes in. In Gould v. Gould (245 U.S. 151) it was held that alimony is not income.* Before the enactment of [1954 Code, §104(a)(2)], which specifically exempted from gross income damages for personal injuries, it was held that damages for personal injuries due to accident do not constitute income. T.D. 2747 (not published in Bulletin service). Much less should damages for alienation of affections or defamation of personal character be held to constitute income. Slander or libel affecting business reputation or property rights, however, are not considered in this opinion.

I am of the opinion, therefore, that money received, whether under agreement of the parties or pursuant to judgment of a court, on account of damages for alienation of affections or defamation of personal character or in consideration of the surrender of the custody of a minor child, does not constitute income within the meaning of the sixteenth amendment and the statutes enacted thereunder.

Solicitor's Memorandum 957 is modified to accord with this opinion, and Solicitor's Memorandum 1384 is revoked.

NOTE

1. *Breach of promise to marry.* In 1923, the Internal Revenue Service announced that damages received for breach of a promise to marry were not taxable, on the ground that "a promise to marry is a personal right not susceptible of any appraisal in relation to market values and that damages or payment in compromise of the invasion of such right does not constitute taxable income." I.T. 1804, II-2 C.B. 61, 62 (1923).† Later this ruling

* Periodic payments of alimony are now ordinarily taxable to the ex-wife, under a statutory provision (§71) that is examined infra page 178 et seq. — Ed.

† See Ruslander, Humor in Income Tax Cases, 16 U. of Pitt. L. Rev. 223 (1955):

"In 1920, a taxpayer was facing a threatened criminal prosecution for having filed a false federal income tax return. He had not included in his income $30,000 received in the year at issue as damages for alienation of his wife's affections. He loved his wife and their one child, a son, and after his case was settled he went to pieces, lost his job, took to drink and forgot all about income taxes. When the revenue agent caught up with him he had no money to pay the tax claimed. He was told that he could be sent to jail for fraud because he had concealed receipt of this $30,000.

"Taxpayer and his counsel (the author) went to Washington to argue the case before a committee of three taxing officials representing the Commissioner of Internal Revenue. This was before Congress had created the Board of Tax Appeals, now The Tax Court of the United States. The presiding member of this committee was a young unmarried woman. The other two members were men. The history of the case was gone into, the taxpayer was present in person and was exhibited to the best advantage possible. Counsel argued that they came from the great Commonwealth of Pennsylvania, a state where a married man had a property right in his wife known as the right of 'consortium,' and if a married man was wrongfully deprived of this right and received damages to compensate him for his loss, the money received did not, as limited by the Sixteenth Amendment to the Constitution of the United States, constitute '. . . incomes, from whatever source derived. . . .' Therefore, that $30,000 at issue was not subject to an income tax as recognized by the United States Supreme Court. At the conclusion of this argument the lady of the committee asked if it were claimed that in this day and age a married man, even in Pennsylvania, had a property right in his wife. After being assured that such was the fact she said to the counsel, 'Young man, so far as I am concerned, you are talking a dead language.'

"The committee decided adversely to the taxpayer, but was reversed on appeal."

was revoked. I.T. 2170, IV-1 C.B. 28 (1925). The revocation was apparently based on a distinction between payments for relinquishing contract rights and payments to redress torts:

> As a general rule, rights acquired . . . through the exercise of one's physical or mental faculties, when converted into cash or its equivalent, constitute income to the recipient to the full amount received. . . .
>
> The situation presented by Solicitor's Opinion 132 is quite different. The payment involved was attributable to a tort. A personal injury was inflicted, an inherent right was invaded, a right in rem given by the law against the whole world. The holding is merely that payments to compensate a taxpayer for that of which he has been deprived by the invasion of such an inherent right do not constitute "gain" to him, and therefore no income results. . . .
>
> Solicitor's Opinion 132 is distinguishable in that the damages received by the taxpayer in that case were on account of a past injury suffered through an invasion of an inherent, personal right, a right which is granted by law to all persons in similar circumstances, as distinguished from one which arises out of a contract of which the benefits are due, in the last analysis, to the exercise of the mental faculties. [S.M. 2042, IV-1 C.B. 26, 27-28 (1925).]

In McDonald v. Commissioner, 9 B.T.A. 1340 (1928), damages for breach of contract to marry were held non-taxable on the authority of the *Hawkins* case, infra page 82.

2. *Right to privacy.* In Ehrlich v. Higgins, 52 F. Supp. 805 (S.D.N.Y. 1943), the widow of Paul Ehrlich (the discoverer of "Salvarsan") asserted that $42,500 paid to her by Warner Bros. Pictures, Inc., which was producing a motion picture based on her husband's life, was not taxable because the payment was intended as damages for invasion of her right of privacy. The court found that the payment was made primarily for the use of certain letters, notes, and similar material, and not as compensation for an invasion of privacy. But the court went on (52 F. Supp. at 808-809) to make this comment on Solicitor's Opinion 132:

> It seems probable that if a woman were paid a consideration in monthly payments for a voluntary release of her fiancé from a promise to marry, she would be paid for giving up a legal right and, therefore, the foundation would be the same as in all other contracts.
>
> The only suggestion in the literature on the subject that a contrary result might be reached appears in an opinion of the Solicitor of Internal Revenue (Cumulative Bulletin I-1, 92), where it is said that money received by a parent in consideration of the surrender of his right to the custody of his minor child stands on the same basis as damages for alienation of affections and damages for personal libel or slander. This notion permits no distinction between damages for wrongs committed and payments for giving up any legal right. The parent could contract for the labor of the child and the payments would not be exempt. The writer of the opinion arrived at the conclusion by the emotional avenue, saying that: "Holding otherwise would be equivalent to treating as chattels the wife whose affections were alienated and the child whose custody was surrendered." The real difference between the two cases is that in one there is consummated damage to a personal right which is compensated, and in the other a simple contract, whereby a right presently possessed is resigned for a future period for money.
>
> Much more accurate are the cases which recognize the fact that contractual surrender of any legal right for stated payments produces income to the recipient. So it has been held that payments not to work for another or compete in business are taxable as income. So, also, the sales of good will, together with tangible assets of a business are subject to the laws regulating taxes.
>
> If the contrary principle were recognized, there would be suits for refunds by each of the actresses in Hollywood upon the ground that, although each is paid a salary for personal services in the production of films, the real value which the producer obtains from the contract is the right to produce before the public the representation

so made, and that the payments are really damages in prospect for the violation of the right of personal privacy. The revenue laws do not contain any such loophole.

In Starrels v. Commissioner, 304 F.2d 574 (9th Cir. 1962), the taxpayer argued that an amount received by her from a motion picture producer for her consent to being portrayed in a movie based on her father's life was paid for an invasion of privacy and was excluded from gross income by §104(a)(2) (damages for personal injury, infra p. 154). The argument was rejected on the ground that no actual invasion of privacy occurred, and the court suggested also that §104(a)(2) would not apply, in any event, to payments received in advance of, and for consenting to, such an injury.

3. *Indemnification for loss of human rights.* In Rev. Rul. 55-132, 1955-1 C.B. 213, the Internal Revenue Service ruled that payments made by the United States under the War Claims Act to a taxpayer who had been a prisoner of war, because the enemy government had violated its obligation under the Geneva Convention to provide humane treatment and proper food, "are in the nature of reimbursement for the loss of personal rights and are not includible in . . . gross income. . . ." See also Rev. Rul. 56-518, 1956-2 C.B. 25, holding that compensation paid by West Germany to citizens or residents of the United States, formerly citizens of Germany, "pursuant to claims under its laws on account of [Nazi] persecution which resulted in damage to life, body, health, liberty, or to professional or economic advancement, are in the nature of reimbursement for the deprivation of civil or personal rights and do not constitute taxable income to the recipients."

4. *Reimbursement of expenses by public agency.* In Rev. Rul. 57-60, 1957-1 C.B. 25, modified, Rev. Rul. 60-280, 1960-2 C.B. 12, the Internal Revenue Service ruled that no income was realized by a parent who was reimbursed by a school board for transporting his children to school when school bus service was not available. See also Rev. Rul. 60-279, 1960-2 C.B. 11 (relocation payments to non-business persons for moving expenses and direct losses of property resulting from displacement by urban renewal program; held, not taxable); Rev. Rul. 63-136, 1963-29 I.R.B. 7 (benefit payments to persons undergoing retraining in areas of persistent unemployment; held, not taxable); Rev. Rul. 57-102, 1957-1 C.B. 26 (benefit payments to blind persons; not taxable). If a private employer reimburses an employee for personal expenses, however, the payment is ordinarily includible in income; page 227 infra.

HAWKINS v. COMMISSIONER

6 B.T.A. 1023 (1927)

FINDINGS OF FACT

Petitioner, an individual residing in San Francisco, Calif., was an industrial engineer engaged in corporate management. Prior to March 23, 1918, he had for some time been president of the C. L. Best Gas Traction Co. On that date he was removed from office by the directors, and thereafter certain of the officers of the corporation made and published defamatory statements about him. He instructed his attorney to file against the corporation and the individual officers a suit in libel and slander demanding $1,000,000 damages for injury to his reputation, business and health. Two of the officers of the corporation had already filed suits against the petitioner, one for libel and one for money owed by reason of an alleged misuse of corporate funds during petitioner's term of office. Before petitioner's attorney began the suit in his behalf a settlement of petitioner's claims was orally negotiated and made. By this settlement the petitioner received, on or about January 15, 1919, $100,000 in cash and the corporation's note for $12,500. He also received $306.41 as interest. In further consideration under the settlement agreement the two suits which had been begun against him were dismissed.

Opinion

STERNHAGEN: The consideration of the question whether the damages received for libel and slander are taxable as income must proceed not so much according to the refinements of economists, Lynch v. Turrish, 247 U.S. 221; Merchants' Loan & Trust Co. v. Smietanka, 255 U.S. 509, as according to such decisions of the Supreme Court as mark the course. That stock dividends, Eisner v. Macomber, 252 U.S. 189; stock rights, Miles v. Safe Deposit & Trust Co., 259 U.S. 247; subsidies, Edwards v. Cuba R.R. Co., 268 U.S. 628; or savings, under certain circumstances, on the liquidation of indebtedness through a drop in foreign exchange, Bowers v. Kerbaugh-Empire Co., 271 U.S. 170, have been held not to be income; while the gain from capital sales, Merchants' Loan & Trust Co. v. Smietanka, 255 U.S. 509; Goodrich v. Edwards, 255 U.S. 527; dividends in specie, Peabody v. Eisner, 247 U.S. 347; United States v. Phellis, 257 U.S. 156; and periodic payments under a will from a trust fund in which the payee has no direct interest, Irwin v. Gavit, 268 U.S. 161, have been held to be income, narrows the course but little, because the nature of the situations which gave rise to those decisions is inherently different from the question here.

The petitioner cites some of these decisions for the statement therein contained that income is the gain derived from capital or labor or both, including profit from the conversion of capital assets, and that nothing else answers the description. Whether this description of income is to be regarded as exclusive of everything not clearly within its terms, so that both the Sixteenth Amendment and the statute (which is said to be the fullest exercise of the constitutional power, Eisner v. Macomber, 252 U.S. 189; Irwin v. Gavit, 268 U.S. 161) are forever to be limited by a judicial definition, may still be doubtful, for the Supreme Court is not in the habit of defining words abstractly, but only for the purpose of determining whether the matter then under consideration comes within their fair intendment. The court has itself said that the word is not a crystal, Towne v. Eisner, 245 U.S. 418,* and it is conceivable that since the income tax is primarily an application of the idea of measuring taxes by financial ability to pay, as indicated by the net accretions to one's economic wealth during the year, there may be cases in which taxable income will be judicially found although outside the precise scope of the description already given.

This we think is not such a case, but is on the other hand one which in no event involves income. So far as the evidence shows, the amount which petitioner received was wholly by way of general damages for the personal injury suffered by reason of the defamatory statements made. It was compensation for injury to his personal reputation for integrity and fair dealing, including, as the record indicates, the injury to his health. This is the ordinary basis for compensatory damages, Childers v. San Jose Mercury Printing & Publishing Co., 105 Cal. 284; 38 Pac. 903. No suggestion is made that there was special damage paid or that any was asserted or that punitive or exemplary damages were claimed or paid, and we need not consider the law as to them. Here there is only the compensation which the law sanctions as the only remedy which has thus far been devised for an injury which in its nature is wholly personal and nonpecuniary. Even to the economist, character or reputation or other strictly personal attributes are not capital or otherwise measurable in terms of wealth, notwithstanding that all

* "But it is not necessarily true that income means the same thing in the Constitution and the Act. A word is not a crystal, transparent and unchanged, it is the skin of a living thought and may vary greatly in color and content according to the circumstances and the time in which it is used." Mr. Justice Holmes, in Towne v. Eisner, 245 U.S. 418, 425 (1918). — ED.

will recognize them as important factors of economic success. They are not property or goods. Such compensation as general damages adds nothing to the individual, for the very concept which sanctions it prohibits that it shall include a profit. It is an attempt to make the plaintiff whole as before the injury.

There is some support for this reasoning in the dictum of the Chief Justice in United States v. Supplee-Biddle Hardware Co., 265 U.S. 189, as to the insurance received by a corporation upon the life of its officer:

> . . . Life insurance in such a case is like that of fire and marine insurance, a contract of indemnity. Central Bank of Washington v. Hume, 128 U.S. 195. The benefit to be gained by death has no periodicity. It is a substitution of money value for something permanently lost, either in a house, a ship, or a life. Assuming without deciding that Congress could call the proceeds of such indemnity, income, and validly tax it as such, we think that in view of the popular conception of the life insurance as resulting in a single addition of a total sum to the resources of the beneficiary, and not in a periodical return, such a purpose on its part should be express, as it certainly is not here.

If compensation for the loss of a life is not taxable as income unless expressly provided, compensation for the injury to personal reputation should similarly require an express provision.

NOTE

1. *Loss of life.* The Internal Revenue Service has ruled that an award paid by the Mixed Claims Commission of the United States and Germany for the death of a passenger on the *Lusitania* is not taxable:

> An award paid for the loss of a life is compensation for the loss, and as such is not embraced in the general concept of the term "income." . . .
>
> It is held, therefore, that inasmuch as the award of 40*x* dollars payable to A is not expressly taxable under the provisions of the Revenue Act of 1926 [no different in this respect from any later Revenue Act], and is not embraced in the general concept of the term "income," the amount of the award is not taxable to A. [I.T. 2420, VII-2 C.B. 123, 124 (1928).]

This ruling was recently reaffirmed. Rev. Rul. 54-19, 1954-1 C.B. 179.

Note that since the award was designed "to restore A to substantially the same financial and economic status as she possessed prior to the death of her husband," it took the place of income that would have been taxed had he survived. Has the tort-feasor wronged the Treasury as well as his victim's family so that he should pay accordingly? See Wurzel, The Origin and Development of Quo Minus, 49 Yale L.J. 39 (1939). If the award *were* taxable, the position of the tort-feasor would not be an enviable one. To give a widow $75,000 free and clear, for example, would require a payment by the tort-feasor of more than $600,000 (at present rates and assuming the widow had no other income).

Do juries understand that their awards in death cases are not taxable? In Dempsey v. Thompson, 363 Mo. 339, 251 S.W.2d 42 (1952), it was held that the jury should be instructed that any award it made would not be taxable. On the other hand, the court held that although the recovery was to compensate for loss of future earnings, the defendant could not go into the extent to which such earnings would have been reduced by income taxes had the decedent not been injured, on the ground that a reasonably accurate estimate of future taxes is not possible. For an extended discussion of the extent to which federal juries in tort cases under the Federal Employers' Liability Act should be instructed (a) that the victim's lost earnings would have been taxable had the accident not occurred, (b) that the recovery will not be taxable as income upon receipt, and (c) that income earned on a recovery that is invested will be taxable, see McWeeney v. New York, New Haven, & Hartford R.R., 282 F.2d 34 (2d Cir. 1960). See also Hall v. Chicago & N.W. Ry. Co., 5 Ill. 2d 135, 150, 125 N.E.2d 77, 85 (1955) (if impact of taxation on plaintiff could be shown, plaintiff would want to go into defendant's right to deduct its tort liabilities as

business expenses, to claim higher fares, etc., "ad infinitum"); Maus v. New York, Chicago & St. L.R.R. Co., 165 Ohio St. 281, 135 N.E.2d 253 (1956); British Transport Commission v. Gourley, [1955] 3 All E.R. 796; Comment, Propriety of Comment on Non-Taxability of Personal Injury Verdicts, 21 U. of Chi. L. Rev. 156 (1953); Note, 69 Harv. L. Rev. 1945 (1956); Stevenson and Orr, The Tax Element in Damages, 1 Brit. L. Rev. 5 (1956).

2. *Statutory provisions.* Section 104 specifically exempts damages on account of personal injuries or sickness and is examined infra page 154 et seq.

The status of life insurance proceeds is also now governed by explicit statutory provisions, infra page 147.

FARMERS' & MERCHANTS' BANK v. COMMISSIONER

59 F.2d 912 (6th Cir. 1932)

Before MOORMAN, HICKS, and HICKENLOOPER, Circuit Judges.

HICKS, Circuit Judge.

Petitioner, a corporation, was engaged in the banking business at Catlettsburg, Ky., and within the district of the Federal Reserve Bank of Cleveland, Ohio. It was the custom of petitioner to make a charge for the collection of checks on foreign banks and of checks drawn on it and sent from other banks. Petitioner was not a member of the Federal Reserve System so that checks drawn on it instead of being cleared through the Reserve Bank were sent direct to petitioner by the holding bank and paid by drafts on Cincinnati or New York.

In 1920 the Reserve Bank demanded that petitioner should clear checks at par. This demand was refused, and thereupon the Reserve Bank notified its members that it would collect without charge all checks sent to it and drawn on petitioner. Its method was to employ agents who would appear daily at the bank with these checks and demand payment thereof in cash. This practice was followed about eighteen months. For a greater portion of the time these collections were effected in such an unusual and unbusinesslike manner as to attract unfavorable public comment, and petitioner claimed that it was thereby annoyed, embarrassed, and interfered with in the conduct of its affairs. Subsequently petitioner brought an action against the Reserve Bank for damages alleged to have been sustained by reason of these tactics. In its petition it set out particularly that, by reason of the wrongful conduct of the Reserve Bank, it had been forced to procure and keep in its vaults and with its correspondents unusually large amounts of money; that it had lost the earning power of a great deal of money; that it had lost deposits and depositors, and had failed to gain new ones; that it had been unable to grow, and to develop new business; and that it had been permanently injured in its reputation, standing, growth, and prosperity. The petition also included a claim for exemplary damages based upon a charge that the conduct of the Reserve Bank was malicious.

This action was compromised in 1925 and the Reserve Bank paid $18,750.00 in full settlement. The expense of the suit being deducted the net amount received by petitioner was reduced to $13,792.96. Respondent conceived that this fund represented earnings for the year 1925 and included it in petitioner's net income for that year. The Board of Tax Appeals sustained the respondent. It decided that at least some portion thereof represented earnings and that petitioner had failed to show what portion did not.

We cannot assent.

The fund involved must be considered in the light of the claim from which it was realized and which is reflected in the petition filed in its action against the Reserve Bank. We find nothing therein to indicate, with the certainty required in the statement of a cause of action, that petitioner sought reparation for profits which petitioner's misconduct prevented it from earning in 1925. Charles E.

Rous, petitioner's cashier, testified before the Board that the loss of such earnings could not be definitely determined and this probably furnishes the explanation for the failure definitely to demand it. Petitioner not only did not insist upon the restoration of anticipated profits as a matter of fact, but based its claim for damages upon an alleged tortious injury to the good will of its business, and we can see no legal distinction between compensation for destruction of or damage to incorporeal or intangible property, such as good will, and similar compensation for damage to tangible property. Compare Harris & Co. v. Lucas (C.C.A.) 48 F.(2d) 187, syl. 5.

We think that the gravamen of petitioner's action against the Reserve Bank was the injury inflicted to its banking business generally, and that the true measure of damages was compensation to be determined by ascertaining how much less valuable its business was by reason of the wrongful acts of the Reserve Bank. See Yates v. Whyel Coke Co., 221 F. 603, 607 (C.C.A. 6); Central Coal & Coke Co. v. Hartman, 111 F. 96, 99 (C.C.A. 8). Injury to its business of course means injury to its financial standing, credit, reputation, good will, capital, and other possible elements. Profits were one of the chief indications of the worth of the business; but the usual earnings before the injury, as compared with those afterward, were only an evidential factor in determining actual loss and not an independent basis for recovery. We think that, if petitioner's case had proceeded to a verdict, the law would not have awarded to it what it might have expected to gain but only that which it had actually lost. We are not justified in reading an element into the compromise which was not therein distinctly recognized in fact and would not have been recognized in law. We think therefore that there is no logical basis upon which petitioner could be charged with gain. See Strother v. Commissioner, 55 F.(2d) 626, 633 (C.C.A. 4). One may be recompensed for an injury but it is a rare case in which one should have a profit out of it.

The order of the Board of Tax Appeals is reversed.

RAYTHEON PRODUCTION CORP. v. COMMISSIONER

144 F.2d 110 (1st Cir. 1944), cert. denied, 323 U.S. 779

Before MAGRUDER, MAHONEY, and WOODBURY, Circuit Judges.

MAHONEY, Circuit Judge.

This case presents the question whether an amount received by the taxpayer in compromise settlement of a suit for damages under the Federal Anti-Trust Laws, 15 U.S.C.A. §1 et seq., is a non-taxable return of capital or income. . . .

The original Raytheon Company was a pioneer manufacturer of a rectifying tube which made possible the operation of a radio receiving set on alternating current instead of on batteries. In 1926 its profits were about $450,000; in 1927 about $150,000; and in 1928, $10,000. The Radio Corporation of America had many patents covering radio circuits and claimed control over almost all of the practical circuits. Cross-licensing agreements had been made among several companies including R.C.A., General Electric Company, Westinghouse, and American Telephone & Telegraph Company. R.C.A. had developed a competitive tube which produced the same type of rectification as the Raytheon tube. Early in 1927, R.C.A. began to license manufacturers of radio sets and in the license agreement it incorporated "Clause 9," which provided that the licensee was required to buy its tubes from R.C.A. In 1928 practically all manufacturers were operating under R.C.A. licenses. As a consequence of this restriction, Raytheon was left with only replacement sales, which soon disappeared. . . . On December 14, 1931, the petitioner caused its predecessor, Raytheon, to bring suit against R.C.A. in the District Court of Massachusetts alleging that the plaintiff had by 1926 created and then possessed a large and valuable good will in inter-

state commerce in rectifying tubes for radios and had a large and profitable established business therein so that the net profit for the year 1926 was $454,935; that the business had an established prospect of large increases and that the business and good will thereof was of a value exceeding $3,000,000; that by the beginning of 1927 the plaintiff was doing approximately 80% of the business of rectifying tubes of the entire United States; that the defendant conspired to destroy the business of the plaintiff and others by a monopoly of such business and did suppress and destroy the existing companies; that the manufacturers of radio sets and others ceased to purchase tubes from the plaintiffs; that by the end of 1927 the conspiracy had completely destroyed the profitable business and that by the early part of 1928 the tube business of the plaintiff and its property and good will had been totally destroyed at a time when it had a present value in excess of $3,000,000, and thereby the plaintiff was injured in its business and property in a sum in excess of $3,000,000. . . .

. . . R.C.A. and the petitioner finally agreed on the payment by R.C.A. of $410,000 in settlement of the anti-trust action. . . .

Damages recovered in an anti-trust action are not necessarily non-taxable as a return of capital. As in other types of tort damage suits, recoveries which represent a reimbursement for lost profits are income. Swastika Oil & Gas Co. v. Commissioner, 6 Cir., 1941, 123 F.2d 382, certiorari denied 1943, 317 U.S. 639; H. Liebes & Co. v. Commissioner, 9 Cir., 1937, 90 F.2d 932; Sternberg v. Commissioner, 1935, 32 B.T.A. 1039. The reasoning is that since the profits would be taxable income, the proceeds of litigation which are their substitute are taxable in like manner.

Damages for violation of the anti-trust acts are treated as ordinary income where they represent compensation for loss of profits. Commercial Electrical Supply Co. v. Commissioner, 1927, 8 B.T.A. 986; see Park v. Gilligan, D.C.S.D. Ohio 1921, 293 F. 129, 130.

The test is not whether the action was one in tort or contract but rather the question to be asked is "In lieu of what were the damages awarded?" Farmers' & Merchants' Bank v. Commissioner [supra p. 85]; . . . Plumb, "Income Tax on Gains and Losses in Litigation," (1940) 25 Cornell L.Q. 221. Where the suit is not to recover lost profits but is for injury to good will, the recovery represents a return of capital and, with certain limitations to be set forth below, is not taxable. Farmers' & Merchants' Bank v. Commissioner, supra. Plumb, supra, 25 Cornell L.Q. 221, 225. "Care must certainly be taken in such cases to avoid taxing recoveries for injuries to good will or loss of capital." 1 Paul and Mertens, Law of Federal Income Taxation §6.48.

Upon examination of Raytheon's declaration in its anti-trust suit we find nothing to indicate that the suit was for the recovery of lost profits. The allegations were that the illegal conduct of R.C.A. "completely destroyed the profitable interstate and foreign commerce of the plaintiff and thereby, by the early part of 1928, the said tube business of the plaintiff and the property good will of the plaintiff therein had been totally destroyed at a time when it then had a present value in excess of three million dollars and thereby the plaintiff was then injured in its business and property in a sum in excess of three million dollars." This was not the sort of anti-trust suit where the plaintiff's business still exists and where the injury was merely for loss of profits. The allegations and evidence as to the amount of profits were necessary in order to establish the value of the good will and business since that is derived by a capitalization of profits. A somewhat similar idea was expressed in Farmers' & Merchants' Bank v. Commissioner, supra, 59 F.2d at page 913. "Profits were one of the chief indications of the worth of the business; but the usual earnings before the injury, as compared with those afterward, were only an evidential factor in determining actual loss and not an inde-

pendent basis for recovery." Since the suit was to recover damages for the destruction of the business and good will, the recovery represents a return of capital. Nor does the fact that the suit ended in a compromise settlement change the nature of the recovery; "the determining factor is the nature of the basic claim from which the compromised amount was realized." Paul, Selected Studies in Federal Taxation, Second Series, pp. 328-9, footnote 76. . . .

But, to say that the recovery represents a return of capital in that it takes the place of the business good will is not to conclude that it may not contain a taxable benefit. Although the injured party may not be deriving a profit as a result of the damage suit itself, the conversion thereby of his property into cash is a realization of any gain made over the cost or other basis of the good will prior to the illegal interference. Thus A buys Blackacre for $5,000. It appreciates in value to $50,000. B tortiously destroys it by fire. A sues and recovers $50,000 tort damages from B. Although no gain was derived by A from the suit, his prior gain due to the appreciation in value of Blackacre is realized when it is turned into cash by the money damages.*

Compensation for the loss of Raytheon's good will in excess of its cost is gross income. See Magill, Taxable Income, p. 339. . . .

As the Tax Court pointed out, the record is devoid of evidence as to the amount of that basis and "in the absence of evidence of the basis of the business and good will of Raytheon, the amount of any nontaxable capital recovery cannot be ascertained." 1 T.C. 952. Cf. Sterling v. Commissioner, 2 Cir., 1937, 93 F.2d 304.

Where the cost basis that may be assigned to property has been wholly speculative, the gain has been held to be entirely conjectural and not taxable. In Strother v. Commissioner, 4 Cir., 1932, 55 F.2d 626, affirmed on other grounds, 1932, 287 U.S. 308, a trespasser had taken coal and then destroyed the entries so that the amount of coal taken could not be determined. Since there was no way of knowing whether the recovery was greater than the basis for the coal taken, the gain was purely conjectural and not taxed. Magill explains the result as follows: "as the amount of coal removed could not be determined until a final disposition of the property, the computation of gain or loss on the damages must await that disposition." Taxable Income, pp. 339-340. The same explanation may be applied to Farmers' & Merchants' Bank v. Commissioner, supra, which relied on the *Strother* case in finding no gain. The recovery in that case had been to compensate for the injury to good will and business reputation of the plaintiff bank inflicted by defendant reserve bank's wrongful conduct in collecting checks drawn on the plaintiff bank by employing "agents who would appear daily at the bank with checks and demand payment thereof in cash in such a manner as to attract unfavorable public comment." Since the plaintiff bank's business was not destroyed but only injured and since it continued in business, it would have been difficult to require the taxpayer to prove what part of the basis of its good will should be attributed to the recovery. In the case at bar, on the contrary, the entire business and good will were destroyed so that to require the taxpayer to prove the cost of the good will is no more impractical than if the business had been sold.[1]

. . . The decision of the Tax Court is affirmed.

---

* Under §1033, however, A can avoid the recognition of gain on the $50,000 received for the tortious destruction of Blackacre by investing this amount promptly in other property of a similar character (infra page 466). — ED.

1 Since the plant and other physical assets of the taxpayer were not destroyed but were used by it in the new tube business under licenses from R.C.A., the recovery was only for the destruction of business good will and not the physical assets.

Section F. Increase in Net Worth

UNITED STATES v. KIRBY LUMBER CO.

284 U.S. 1 (1931)

MR. JUSTICE HOLMES delivered the opinion of the Court.

In July, 1923, the plaintiff, the Kirby Lumber Company, issued its own bonds for $12,126,800 for which it received their par value. Later in the same year it purchased in the open market some of the same bonds at less than par, the difference of price being $137,521.30. The question is whether this difference is a taxable gain or income of the plaintiff for the year 1923. By the Revenue Act of 1921, gross income includes "gains or profits and income derived from any source whatever" [1954 Code, §61(a)] and by the Treasury Regulations . . . that have been in force through repeated reënactments, "If the corporation purchases and retires any of such bonds at a price less than the issuing price or face value, the excess of the issuing price or face value over the purchase price is gain or income for the taxable year." . . . We see no reason why the Regulations should not be accepted as a correct statement of the law.

In Bowers v. Kerbaugh-Empire Co., 271 U.S. 170, the defendant in error owned the stock of another company that had borrowed money repayable in marks or their equivalent for an enterprise that failed. At the time of payment the marks had fallen in value, which so far as it went was a gain for the defendant in error, and it was contended by the plaintiff in error that the gain was taxable income. But the transaction as a whole was a loss, and the contention was denied. Here there was no shrinkage of assets and the taxpayer made a clear gain. As a result of its dealings it made available $137,521.30 assets previously offset by the obligation of bonds now extinct. We see nothing to be gained by the discussion of judicial definitions. The defendant in error has realized within the year an accession to income, if we take words in their plain popular meaning, as they should be taken here. Burnet v. Sanford & Brooks Co., 282 U.S. 359, 365.

Judgment reversed.

BRADFORD v. COMMISSIONER

233 F.2d 935 (6th Cir. 1956)

Before MARTIN, MILLER and STEWART, Circuit Judges.

STEWART, Circuit Judge.

The question here is whether the petitioner realized $50,000 income in 1946 when her liability upon a note for $100,000 was discharged for $50,000.

In 1938 the petitioner's husband owed a Nashville bank approximately $305,000. The debt had grown out of investment banking ventures he had engaged in prior to the depression. He had pledged most of his assets to the bank as collateral, but the greater part of the indebtedness was unsecured. The brokerage firm of which he was a member held a seat on the New York Stock Exchange. In October of 1938 the Exchange adopted a rule requiring each general partner of a member firm to submit a detailed report of his indebtedness. Fearing that disclosure of so much indebtedness might impair the position of his firm with the Exchange, he persuaded the bank to substitute the note of his wife, the petitioner, for a portion of his indebtedness. Accordingly, the petitioner executed her note to the bank for $205,000 without receiving any consideration in return.

borrowed money from a bank in Germany repayable in marks. The marks were immediately converted into dollars, and the money was lost in the performance of construction contracts by a subsidiary company over a period of years. In a subsequent year, the taxpayer repaid the loan with greatly devalued marks. The question for decision was "Whether the difference between the value of marks measured by dollars at the time of payment . . . and the value when the loans were made was income." The Court decided that it was not, saying that "The loss was less than it would have been if marks had not declined in value; but the diminution of loss is not gain, profit, or income." 271 U.S. 170, 175.

The *Kerbaugh-Empire Co.* case was decided before the *Kirby Lumber Co.* and *Sanford & Brooks Co.* decisions. The case has been called "a frequently criticized and not easily understood decision." See Willard Helburn, Inc. v. Commissioner, 1 Cir., 1954, 214 F.2d 815, 819. It is nonetheless a decision which has not been overruled.[1] Whatever validity the *Kerbaugh-Empire Co.* decision may now have on its own facts, it remains an authority for the proposition that in deciding the income tax effect of cancellation of indebtedness for less than its face amount, a court need not in every case be oblivious to the net effect of the entire transaction. See Dallas Transfer & Terminal Warehouse Co. v. Commissioner, 5 Cir., 1934, 70 F.2d 95, 96; Transylvania R. Co. v. Commissioner, 4 Cir., 1938, 99 F.2d 69, 72.

Courts have not hesitated in appropriate circumstances to look behind the cancellation of indebtedness in a given calendar year, and in doing so to evaluate in its entirety the transaction out of which the cancellation arose. Thus, it has been consistently held that the partial forgiveness of indebtedness in a given year does not constitute taxable income to the debtor if the actual effect of the entire transaction was simply to reduce the purchase price of property acquired in a prior year. Hirsch v. Commissioner, 7 Cir., 1940, 115 F.2d 656; Allen v. Courts, 5 Cir., 1942, 127 F.2d 127; Helvering v. A. L. Killian Co., 8 Cir., 1942, 128 F.2d 433.

In Commissioner v. Rail Joint Co., 2 Cir., 1932, 61 F.2d 751, a corporate taxpayer, after a reappraisal of its assets, distributed a dividend consisting of its own debenture bonds. In a subsequent year the corporation purchased some of these bonds at less than their face amounts, retired them, and credited the difference to surplus. The court rejected the Commissioner's claim that the corporation thereby realized income in the year the bonds were retired. Stripped of superficial distinctions, the *Rail Joint Co.* case is identical in principle with the present case. In that case, as in this, the taxpayer received nothing of value when the indebtedness was assumed. Although the indebtedness was discharged at less than its face value, the taxpayer was in fact poorer by virtue of the entire transaction. That the reasoning of the *Rail Joint Co.* case has not lost its vitality is attested by a very recent Tax Court opinion which approved and followed it. Fashion Park, Inc., 1954, 21 T.C. 600. A parity of reasoning requires reversal of the Tax Court's decision in the present case.

Before concluding it should be emphasized that there is not before us on this review the question of the tax liability of petitioner's husband either in 1938 when his indebtedness was assumed by his wife, or in 1946 when it was discharged, nor do we have for decision any question as to the petitioner's gift tax liability. We have decided only that the petitioner herself under the circumstances of this case did not realize $50,000 of unreported income in 1946.

For the reasons stated, the decision of the Tax Court is reversed.

---

[1] The Supreme Court distinguished the *Kerbaugh-Empire Co.* case in both the *Sanford & Brooks Co.* opinion, 282 U.S. 359, 364, and the *Kirby Lumber Co.* opinion, 284 U.S. 1, 3.

NOTE

1. *Status of taxpayer's husband.* *Did* the taxpayer's husband realize income either in 1938 or in 1946? If he had borrowed money and lost it on the stock market, would a later cancellation of his debt be exempt from tax? If he had borrowed money to buy a residence and it had been destroyed by fire when uninsured, would a cancellation of the debt produce taxable income?

2. *Aftermath of wife's victory in Bradford case.* The government struggled mightily to redress its defeat in the *Bradford* case, but without success:

(a) In the original Tax Court case, the government had argued that the discharge in 1946 of the $100,000 note produced taxable income to either Mr. Bradford or Mrs. Bradford. The Tax Court absolved Mr. B, but held that Mrs. B was taxable. The government did not appeal the adverse decision as to Mr. B, but Mrs. B did appeal and was successful. Thereafter, the government assessed a deficiency against Mr. B for the year 1946, on the theory that the favorable appellate decision as to Mrs. B was inconsistent with the exclusion of the item from Mr. B's 1946 return. Without getting to the merits, the Tax Court held in Bradford v. Commissioner, 34 T.C. 1051 (1960), that the government was barred by res adjudicata and the statute of limitations, and that §§1311-1315 (mitigating the statute of limitations in certain circumstances, see pp. 875-879 infra) did not apply.

(b) The government also assessed a gift tax deficiency against Mrs. B for the year 1938, on the theory that the substitution of her notes for her husband's in that year was a taxable gift to him. In Bradford v. Commissioner, infra page 1020, the Tax Court rejected this theory.

3. *Effect of statute of limitations.* It has been held that income is realized by a debtor when his obligation becomes unenforceable because of the statute of limitations. Securities Co. v. United States, 85 F. Supp. 532 (S.D.N.Y. 1948). What is the tax consequence if he decides to pay the debt despite the running of the statute?

4. *Election to exclude income under §108.* When the cancellation of indebtedness constitutes income to the debtor, he may be able to take advantage of §108. This provision, which was enacted in 1939 as temporary legislation but has now become a permanent part of the Internal Revenue Code, provides that the taxpayer may elect not to recognize income from the discharge of a debt. The price exacted is the taxpayer's consent, under §1017, to a downward adjustment of the basis of the property to which the debt was applicable or of other assets. What is the effect of this adjustment? The election under §108 is open to all corporate taxpayers, but an individual may avail himself of it only if the canceled debt was incurred or assumed in connection with property used in his trade or business.

The *Hirsch* case, cited in *Bradford,* treated a cancellation of a purchase money obligation as a reduction of the purchase price, rather than as taxable income to the debtor. Note the similarity of this theory to the statutory option of §§108 and 1017.

Rev. 225 (1959); Chommie, The Debt Release: Gift or Increase in Net Worth? 4 Utah L. Rev. 36 (1954); Surrey, The Revenue Act of 1939 and the Income Tax Treatment of Cancellation of Indebtedness, 49 Yale L.J. 1153 (1940); Wright, Realization of Income Through Cancellations, Modifications, and Bargain Purchases of Indebtedness: I and II, 49 Mich. L. Rev. 459, 667 (1951).

LAKELAND GROCERY CO. v. COMMISSIONER

36 B.T.A. 289 (1937)

[The taxpayer, a corporation, filed a petition in bankruptcy, action on which was delayed by the court because the taxpayer was negotiating a composition with its creditors. In order to enable the taxpayer to remain in business, certain creditors accepted $15,472 in full payment of debts in the amount of $104,710.

been a gain or a profit. In the *Dallas* case the Board held, treating the transaction as a partial forgiveness of indebtedness, although deciding the case primarily on another theory, that taxable income was realized to the extent of the amount forgiven as assets were left cleared of debts to that extent. The reasoning of the court in reversing the Board and the distinction made by it between that case and United States v. Kirby Lumber Co. are equally applicable to the facts in this proceeding and make it unnecessary to extend this opinion. Based thereon, it is my opinion that the taxpayer did not realize any income as a result of the composition settlement. See also Commissioner v. Rail Joint Co., 61 Fed. (2d) 751; Burnet v. Campbell Co.

SMITH, VAN FOSSAN, and DISNEY agree with this dissent.

NOTE

1. *Insolvency before but not after discharge of debt.* In the *Dallas Transfer & Terminal Warehouse Co.* case, it was held that a corporation did not realize income when it transferred certain assets worth about $17,500 to its landlord in full settlement of a debt for back rent in the amount of about $108,000. Despite the uncertainty expressed in the *Lakeland Grocery Co.* opinion, the Dallas Transfer Company was insolvent before the cancellation of its debt but had assets above its liabilities thereafter. Holding that the taxpayer realized no taxable income, the Court of Appeals for the Fifth Circuit distinguished the *Kirby Lumber Co.* case:

> In the [*Kirby Lumber Co.*] case a corporation issued its bonds at par and in the same year repurchased some of them at less than par. The taxpayer's assets having been increased by the cash received for the bonds, by the repurchase of some of those bonds at less than par the taxpayer, to the extent of the difference between what it received for those bonds and what it paid in repurchasing them, had an asset which had ceased to be offset by any liability, with a result that after that transaction the taxpayer had greater assets than it had before. The decision . . . that the increase in clear assets so brought about constituted taxable income is not applicable to the facts of the instant case, as the cancellation of the respondent's past due debt to its lessor did not have the effect of making the respondent's assets greater than they were before that transaction occurred. Taxable income is not acquired by a transaction which does not result in the taxpayer getting or having anything he did not have before. Gain or profit is essential to the existence of taxable income. A transaction whereby nothing of exchangeable value comes to or is received by a taxpayer does not give rise to or create taxable income. [70 F.2d 95, 96.]

2. *Wages earned by insolvent taxpayer.* A owes $250 to a credit jeweler for an engagement ring and $5000 to a judgment creditor for personal injuries caused by A's negligent driving. A has a steady job but no assets. The jeweler and judgment creditor have attached $5 and $25 of A's weekly wages. Are these amounts taxable to him? See Parkford v. Commissioner, 133 F.2d 249 (9th Cir. 1943), cert. denied, 319 U.S. 741.

3. *Settlement of disputed claim.* D purchased a secondhand automobile for $500, paying $250 in cash and agreeing to pay the balance in 30 days. He refused to pay the balance on the due date, on the ground that the seller fraudulently misrepresented the condition of the car. To settle the dispute, the seller has agreed to accept $200 in full satisfaction. Will D realize taxable income on the settlement?

4. *Discharge in bankruptcy.* For special provisions governing the cancellation of debts by a discharge in bankruptcy, see Regs. §1.61-12(b); §§268-270 of the Bankruptcy Act.

SECTION G. GIFTS, "WINDFALLS," AND THE LIKE

COMMISSIONER v. GLENSHAW GLASS CO.

348 U.S. 426 (1955)

MR. CHIEF JUSTICE WARREN delivered the opinion of the Court.

This litigation involves two cases with independent factual backgrounds yet presenting the identical issue. The two cases were consolidated for argument before the Court of Appeals for the Third Circuit and were heard en banc. The common question is whether money received as exemplary damages for fraud or as the punitive two-thirds portion of a treble-damage antitrust recovery must be reported by a taxpayer as gross income [§61(a), 1954 Code]. In a single opinion, 211 F.2d 928, the Court of Appeals affirmed the Tax Court's separate rulings in favor of the taxpayers. 18 T.C. 860; 19 T.C. 637. Because of the frequent recurrence of the question and differing interpretations by the lower courts of this Court's decisions bearing upon the problem, we granted the Commissioner of Internal Revenue's ensuing petition for certiorari. 348 U.S. 813.

The facts of the cases were largely stipulated and are not in dispute. So far as pertinent they are as follows:

Commissioner v. Glenshaw Glass Co. — The Glenshaw Glass Company, a Pennsylvania corporation, manufactures glass bottles and containers. It was engaged in protracted litigation with the Hartford-Empire Company, which manufactures machinery of a character used by Glenshaw. Among the claims advanced by Glenshaw were demands for exemplary damages for fraud and treble damages for injury to its business by reason of Hartford's violation of the federal antitrust laws. In December, 1947, the parties concluded a settlement of all pending litigation, by which Hartford paid Glenshaw approximately $800,000. Through a method of allocation which was approved by the Tax Court, 18 T.C. 860, 870-872, and which is no longer in issue, it was ultimately determined that, of the total settlement, $324,529.94 represented payment of punitive damages for fraud and antitrust violations. Glenshaw did not report this portion of the settlement as income for the tax year involved. The Commissioner determined a deficiency claiming as taxable the entire sum less only deductible legal fees. As previously noted, the Tax Court and the Court of Appeals upheld the taxpayer.

Commissioner v. William Goldman Theatres, Inc. — William Goldman Theatres, Inc., a Delaware corporation operating motion picture houses in Pennsylvania, sued Loew's, Inc., alleging a violation of the federal antitrust laws and seeking treble damages. After a holding that a violation had occurred, William Goldman Theatres, Inc. v. Loew's, Inc., 150 F.2d 738, the case was remanded to the trial court for a determination of damages. It was found that Goldman had suffered a loss of profits equal to $125,000 and was entitled to treble damages in the sum of $375,000. William Goldman Theatres, Inc. v. Loew's, Inc., 69 F. Supp. 103, aff'd, 164 F.2d 1021, cert. denied, 334 U.S. 811. Goldman reported only $125,000 of the recovery as gross income and claimed that the $250,000 balance constituted punitive damages and as such was not taxable. The Tax Court agreed, 19 T.C. 637, and the Court of Appeals, hearing this with the *Glenshaw* case, affirmed. 211 F.2d 928.

It is conceded by the respondents that there is no constitutional barrier to the imposition of a tax on punitive damages. Our question is one of statutory construction: are these payments comprehended by §22(a) [1939 Code; §61(a), 1954 Code]?

The sweeping scope of the controverted statute is readily apparent:

Sec. 22. Gross Income.

(a) General Definition. — "Gross income" includes gains, profits and income derived from salaries, wages, or compensation for personal service . . . of whatever kind and in whatever form paid, or from professions, vocations, trades, business, commerce, or sales, or dealing in property, whether real or personal, growing out of the ownership or use of or interest in such property; also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, *or gains or profits and income derived from any source whatever. . . .* (Emphasis added.)

This Court has frequently stated that this language was used by Congress to exert in this field "the full measure of its taxing power." Helvering v. Clifford, 309 U.S. 331, 334; Helvering v. Midland Mutual Life Ins. Co., 300 U.S. 216, 223; Douglas v. Willcuts, 296 U.S. 1, 9; Irwin v. Gavit, 268 U.S. 161, 166. Respondents contend that punitive damages, characterized as "windfalls" flowing from the culpable conduct of third parties, are not within the scope of the section. But Congress applied no limitations as to the source of taxable receipts, nor restrictive labels as to their nature. And the Court has given a liberal construction to this broad phraseology in recognition of the intention of Congress to tax all gains except those specifically exempted. Commissioner v. Jacobson, 336 U.S. 28, 49; Helvering v. Stockholms Enskilda Bank, 293 U.S. 84, 78-91. Thus, the fortuitous gain accruing to a lessor by reason of the forfeiture of a lessee's improvements on the rented property was taxed in Helvering v. Bruun, 309 U.S. 461. Cf. Robertson v. United States, 343 U.S. 711; Rutkin v. United States, 343 U.S. 130; United States v. Kirby Lumber Co., 284 U.S. 1. Such decisions demonstrate that we cannot but ascribe content to the catchall provision of §22(a), "gains or profits and income derived from any source whatever." The importance of that phrase has been too frequently recognized since its first appearance in the Revenue Act of 1913 to say now that it adds nothing to the meaning of "gross income."

Nor can we accept respondents' contention that a narrower reading of §22(a) is required by the Court's characterization of income in Eisner v. Macomber, 252 U.S. 189, 207, as "the gain derived from capital, from labor or from both combined." [1] The Court was there endeavoring to determine whether the distribution of a corporate stock dividend constituted a realized gain to the shareholder, or changed "only the form, not the essence," of his capital investment. Id., at 210. It was held that the taxpayer had "received nothing out of the company's assets for his separate use and benefit." Id., at 211. The distribution, therefore, was held not a taxable event. In that context — distinguishing gain from capital — the definition served a useful purpose. But it was not meant to provide a touchstone to all future gross income questions. Helvering v. Bruun, supra, at 468-469; United States v. Kirby Lumber Co., supra, at 3.

Here we have instances of undeniable accessions to wealth, clearly realized, and over which the taxpayers have complete dominion. The mere fact that the payments were extracted from the wrongdoers as punishment for unlawful conduct cannot detract from their character as taxable income to the recipients. Respondents concede, as they must, that the recoveries are taxable to the extent that they compensate for damages actually incurred. It would be an anomaly that could not be justified in the absence of clear congressional intent to say that a

---

1 The phrase was derived from Stratton's Independence, Ltd. v. Howbert, 231 U.S. 399, 415, and Doyle v. Mitchell Bros. Co., 247 U.S. 179, 185, two cases construing the Revenue Act of 1909, 36 Stat. 11, 112. Both taxpayers were "wasting asset" corporations, one being engaged in mining, the other in lumbering operations. The definition was applied by the Court to demonstrate a distinction between a return on capital and "a mere conversion of capital assets." Doyle v. Mitchell Bros. Co., supra, at 184. The question raised by the instant case is clearly distinguishable.

recovery for actual damages is taxable but not the additional amount extracted as punishment for the same conduct which caused the injury. And we find no such evidence of intent to exempt these payments.

It is urged that re-enactment of §22(a) without change since the Board of Tax Appeals held punitive damages nontaxable in Highland Farms Corp., 42 B.T.A. 1314, indicates congressional satisfaction with that holding. Re-enactment — particularly without the slightest affirmative indication that Congress ever had the *Highland Farms* decision before it — is an unreliable indicium at best. Helvering v. Wilshire Oil Co., 308 U.S. 90, 100-101; Koshland v. Helvering, 298 U.S. 441, 447. Moreover, the Commissioner promptly published his nonacquiescence in this portion of the *Highland Farms* holding and has, before and since, consistently maintained the position that these receipts are taxable.[2] It therefore cannot be said with certitude that Congress intended to carve an exception out of §22(a)'s pervasive coverage. Nor does the 1954 Code's legislative history, with its reiteration of the proposition that statutory gross income is "all-inclusive," give support to respondents' position. The definition of gross income has been simplified, but no effect upon its present broad scope was intended.[3] Certainly punitive damages cannot reasonably be classified as gifts, cf. Commissioner v. Jacobson, 336 U.S. 28, 47-52, nor do they come under any other exemption provision in the Code. We would do violence to the plain meaning of the statute and restrict a clear legislative attempt to bring the taxing power to bear upon all receipts constitutionally taxable were we to say that the payments in question here are not gross income. See Helvering v. Midland Mutual Life Ins. Co., supra, at 223.

Reversed.

MR. JUSTICE DOUGLAS dissents.

MR. JUSTICE HARLAN took no part in the consideration or decision of this case.

NOTE

1. *Status of early rulings.* The departmental rulings referred to in footnote 2 of the *Glenshaw Glass Co.* opinion include Sol. Op. 132, I.T. 2420, and Rev. Rul. 54-19, relating to damages for alienation of affections, for defamation of personal character, for surrender of custody of a minor child, and for loss of life (supra pp. 79, 80, and 84). Does the Supreme Court endorse these rulings? If so, is it because the items involved are constitutionally immune from tax?

2. *Corporate recoveries of "insiders' profits."* In a companion case to *Glenshaw Glass Co.*, the Court held that recoveries by a corporation of profits derived by directors and major shareholders from trading in the corporation's securities, which under §16(b) of the Securities Exchange Act of 1934 "shall inure to and be recoverable by the [corporation]," constituted taxable income to the corporation:

---

[2] The long history of departmental rulings holding personal injury recoveries nontaxable on the theory that they roughly correspond to a return of capital cannot support exemption of punitive damages following injury to property. See 2 Cum. Bull. 71; I-1 Cum. Bull. 92, 93; VII-2 Cum. Bull. 123; 1954-1 Cum. Bull. 179, 180. Damages for personal injury are by definition compensatory only. Punitive damages, on the other hand, cannot be considered a restoration of capital for taxation purposes.

[3] In discussing §61(a) of the 1954 Code, the House Report states:

"This section corresponds to section 22(a) of the 1939 Code. While the language in existing section 22(a) has been simplified, the all-inclusive nature of statutory gross income has not been affected thereby. Section 61(a) is as broad in scope as section 22(a).

"Section 61(a) provides that gross income includes 'all income from whatever source derived.' This definition is based upon the 16th Amendment and the word 'income' is used in its constitutional sense." H.R. Rep. No. 1337, at A18.

A virtually identical statement appears in S. Rep. No. 1622, at 168.

We have this day decided that the recovery of punitive damages for fraud or antitrust violation is reportable as gross income within the meaning of §22(a). Commissioner v. Glenshaw Glass Co. The reasons which dictated that result are equally compelling here. We see no significant difference in the nature of these receipts which might make that ruling inapplicable. As in *Glenshaw*, the taxpayer realized the money in question free of any restrictions as to use. The payments in controversy were neither capital contributions nor gifts. Cf. Texas & Pacific R. Co. v. United States, 286 U.S. 285. There is no indication that Congress intended to exempt them from coverage. In accordance with the legislative design to reach all gain constitutionally taxable unless specifically excluded, we conclude that the petitioner is liable for the tax and the judgment is affirmed. [General American Investors Co. v. Commissioner, 348 U.S. at 434 (1955).]

3. *Found property.* Is found property taxable as income? What if a junk dealer finds $1000 in a drawer of a desk purchased for $5, or finds that the desk itself is a valuable antique? See Regs. §1.61-14; Dougherty v. Commissioner, ¶51,093 P-H Memo T.C. (decided before the *Glenshaw Glass Co.* case); Comment, Taxation of Found Property and Other Windfalls, 20 U. of Chi. L. Rev. 748 (1953).

4. *Subsidies.* In Edwards v. Cuba R.R. Co., 268 U.S. 628 (1925), it was held that subsidy payments received by a railroad from the government of Cuba for the construction of a new railroad "do not constitute income within the meaning of the Sixteenth Amendment." For a discussion of the present status of this case, see Freeman and Speiller, Tax Consequences of Subsidies to Induce Business Location, 9 Tax L. Rev. 255, 263-272 (1954); see also Texas & Pacific Ry. Co. v. United States, 286 U.S. 285 (1932); page 203 infra.

5. *Reference.* Wright, The Effect of the Source of Realized Benefits upon the Supreme Court's Concept of Taxable Receipts, 8 Stan. L. Rev. 164 (1956).

TAFT v. BOWERS
GREENWAY v. BOWERS
278 U.S. 470 (1929)

MR. JUSTICE MCREYNOLDS delivered the opinion of the Court.

Petitioners, who are donees of stocks, seek to recover income taxes exacted because of advancement in the market value of those stocks while owned by the donors. The facts are not in dispute. Both causes must turn upon the effect of [the predecessor of the first clause of §1015(a) of the 1954 Code], which prescribes the basis for estimating taxable gain when one disposes of property which came to him by gift. The records do not differ essentially and a statement of the material circumstances disclosed by No. 16 will suffice.

During the calendar years 1921 and 1922 the father of petitioner, Elizabeth C. Taft, gave her certain shares of Nash Motors Company stock, then more valuable than when acquired by him. She sold them during 1923 for more than their market value when the gift was made.

The United States demanded an income tax reckoned upon the difference between cost to the donor and price received by the donee. She paid accordingly and sued to recover the portion imposed because of the advance in value while the donor owned the stock. The right to tax the increase in value after the gift is not denied.

Abstractly stated, this is the problem:

In 1916 *A* purchased 100 shares of stock for $1,000, which he held until 1923 when their fair market value had become $2,000. He then gave them to *B* who sold them during the year 1923 for $5,000. The United States claim that under the Revenue Act of 1921 *B* must pay income tax upon $4,000, as realized profits. *B* maintains that only $3,000 — the appreciation during her ownership — can be regarded as income; that the increase during the donor's ownership is not income assessable against her within intendment of the Sixteenth Amendment.

The District Court ruled against the United States; the Circuit Court of Appeals held with them. . . .

We think the manifest purpose of Congress expressed in [the statute] was to require the petitioner to pay the enacted tax.*

The only question subject to serious controversy is whether Congress had power to authorize the exaction.

It is said that the gift became a capital asset of the donee to the extent of its value when received and, therefore, when disposed of by her no part of that value could be treated as taxable income in her hands.

The Sixteenth Amendment provides:

> The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration.

Income is the thing which may be taxed — income from any source. The amendment does not attempt to define income or to designate how taxes may be laid thereon, or how they may be enforced.

Under former decisions here the settled doctrine is that the Sixteenth Amendment confers no power upon Congress to define and tax as income without apportionment something which theretofore could not have been properly regarded as income.

Also, this court has declared:

> "Income may be defined as the gain derived from capital, from labor, or from both combined," provided it be understood to include profit gained through a sale or conversion of capital assets. Eisner v. Macomber, 252 U.S. 189, 207.

The "gain derived from capital," within the definition, is "not a gain accruing to capital, nor a growth or increment of value in the investment, but a gain, a profit, something of exchangeable value proceeding from the property, severed from the capital however invested, and coming in, that is, received or drawn by the claimant for his separate use, benefit and disposal." United States v. Phellis, 257 U.S. 156, 169.

If, instead of giving the stock to petitioner, the donor had sold it at market value, the excess over the capital he invested (cost) would have been income therefrom and subject to taxation under the Sixteenth Amendment. He would have been obliged to share the realized gain with the United States. He held the stock — the investment — subject to the right of the sovereign to take part of any increase in its value when separated through sale or conversion and reduced to his possession. Could he, contrary to the express will of Congress, by mere gift enable another to hold this stock free from such right, deprive the sovereign of the possibility of taxing the appreciation when actually severed, and convert the entire property into a capital asset of the donee, who invested nothing, as though the latter had purchased at the market price? And after a still further enhancement of the property, could the donee make a second gift with like effect, etc.? We think not.

* Prior to the enactment of the statutory provision under construction (now 1954 Code, §1015(a)), the Internal Revenue Service had ruled that the basis to the donee of property received by gift was its fair market value at the time of the transfer. In 1921, the House Committee on Ways and Means reported: "This rule has been the source of serious evasion and abuse. Taxpayers having property which has come to be worth far more than it cost give such property to wives or relatives by whom it may be sold without realizing a gain unless the selling price is in excess of the value of the property at the time of the gift." To cure this practice, Congress enacted what is now the first clause of §1015 (a). At the same time, it endorsed the administrative rule for pre-1921 gifts. §1015(c). See H.R. Rept. No. 350, 67th Cong., 1st Sess., 1939-1 (Part 2) C.B. 175. — Ed.

In truth the stock represented only a single investment of capital — that made by the donor. And when through sale or conversion the increase was separated therefrom, it became income from that investment in the hands of the recipient subject to taxation according to the very words of the Sixteenth Amendment. By requiring the recipient of the entire increase to pay a part into the public treasury, Congress deprived her of no right and subjected her to no hardship. She accepted the gift with knowledge of the statute and, as to the property received, voluntarily assumed the position of her donor. When she sold the stock she actually got the original sum invested, plus the entire appreciation and out of the latter only was she called on to pay the tax demanded.

The provision of the statute under consideration seems entirely appropriate for enforcing a general scheme of lawful taxation. To accept the view urged in behalf of petitioner undoubtedly would defeat, to some extent, the purpose of Congress to take part of all gain derived from capital investments. To prevent that result and insure enforcement of its proper policy, Congress had power to require that for purposes of taxation the donee should accept the position of the donor in respect of the thing received. And in so doing, it acted neither unreasonably nor arbitrarily.

The power of Congress to require a succeeding owner, in respect of taxation, to assume the place of his predecessor is pointed out by United States v. Phellis, 257 U.S. 156, 171:

> Where, as in this case, the dividend constitutes a distribution of profits accumulated during an extended period and bears a large proportion to the par value of the stock, if an investor happened to buy stock shortly before the dividend, paying a price enhanced by an estimate of the capital plus the surplus of the company, and after distribution of the surplus, with corresponding reduction in the intrinsic and market value of the shares, he was called upon to pay a tax upon the dividend received, it might look in his case like a tax upon his capital. But it is only apparently so. In buying at a price that reflected the accumulated profits, he of course acquired as a part of the valuable rights purchased the prospect of a dividend from the accumulations — bought "dividend on," as the phrase goes — and necessarily took subject to the burden of the income tax proper to be assessed against him by reason of the dividend if and when made. He simply stepped into the shoes, in this as in other respects, of the stockholder whose shares he acquired, and presumably the prospect of a dividend influenced the price paid, and was discounted by the prospect of an income tax to be paid thereon. In short, the question whether a dividend made out of company profits constitutes income of the stockholder is not affected by antecedent transfers of the stock from hand to hand.

There is nothing in the Constitution which lends support to the theory that gain actually resulting from the increased value of capital can be treated as taxable income in the hands of the recipient only so far as the increase occurred while he owned the property. And Irwin v. Gavit, 268 U.S. 161, 167, is to the contrary.

The judgment below is affirmed.

The CHIEF JUSTICE took no part in the consideration or decision of these causes.

NOTE

1. *Basis to donee.* Examine §1015(a) (the successor, in an amended form, of the provision involved in the foregoing case) with care. Using the illustration in the fifth paragraph of the opinion, what would B's gain or loss be if he sold the stock for $750? For $1500? What if the stock had been bought by A for $2000, had been worth $1000 at the time of the gift, and had been sold by B for $5000? For $750? for $1500?

Note §1015(a), last sentence, regarding the basis of donated property when it is impossible to ascertain the donor's basis, and see Caldwell v. Commissioner, 234 F.2d 660 (6th Cir.

1956), holding that in the absence of evidence regarding the donor's basis, neither gain nor loss is to be recognized.

Section 1015(d), added in 1958, authorizes an upward adjustment of the donee's basis for property received by gift, to reflect the federal gift tax paid on the transfer, but the basis as adjusted may not exceed the value of the property at the time of the gift.

2. *Taxability of donor.* Could the donor have been constitutionally taxed at the time of the gift on the stock's increase in value during the period he held it? Section 1015(a) seems clearly, though not explicitly, to exempt the donor, at least in ordinary circumstances. The Internal Revenue Service in recent years has ruled to the contrary in a few special situations. See Griswold, Charitable Gifts of Income and the Internal Revenue Code, 65 Harv. L. Rev. 84 (1951); Bittker, Charitable Gifts of Income and the Internal Revenue Code: Another View, id. 1375 (1952); Griswold, In Brief Reply, id. 1389; Roehner and Roehner, Realization: Administrative Convenience or Constitutional Requirement? 8 Tax L. Rev. 173 (1953). One of the rulings discussed in these articles has been revoked. Rev. Rul. 55-138, 1955-1 C.B. 223. Infra page 177.

3. *"Step-up" of basis of appreciated property at death.* Examine the first sentence of §1014(a). If in the foregoing case, the taxpayer's father had been elderly, would he have been well advised to hold the stock until death rather than transfer it by inter vivos gift?

Section H. Control and Claim of Right

UNITED STATES v. LEWIS
340 U.S. 590 (1951)

Mr. Justice Black delivered the opinion of the Court.

Respondent Lewis brought this action in the Court of Claims seeking a refund of an alleged overpayment of his 1944 income tax. The facts found by the Court of Claims are: In his 1944 income tax return, respondent reported about $22,000 which he had received that year as an employee's bonus. As a result of subsequent litigation in a state court, however, it was decided that respondent's bonus had been improperly computed; under compulsion of the state court's judgment he returned approximately $11,000 to his employer. Until payment of the judgment in 1946, respondent had at all times claimed and used the full $22,000 unconditionally as his own, in the good faith though "mistaken" belief that he was entitled to the whole bonus.

On the foregoing facts the Government's position is that respondent's 1944 tax should not be recomputed, but that respondent should have deducted the $11,000 as a loss in his 1946 tax return. See G.C.M. 16730, XV-1 Cum. Bull. 179 (1936). The Court of Claims, however, relying on its own case, Greenwald v. United States, 57 F. Supp. 569, held that the excess bonus received "under a mistake of fact" was not income in 1944 and ordered a refund based on a recalculation of that year's tax. 91 F. Supp. 1017, 1022. We granted certiorari, 340 U.S. 903, because this holding conflicted with many decisions of the courts of appeal, see, e.g., Haberkorn v. United States, 6 Cir., 173 F.2d 587, and with principles announced in North American Oil Consolidated v. Burnet [infra p. 836, where] we said:

> If a taxpayer receives earnings under a claim of right and without restriction as to its disposition, he has received income which he is required to return [i.e., to report], even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent. 286 U.S. at 424.

Nothing in this language permits an exception merely because a taxpayer is "mistaken" as to the validity of his claim. Nor has the "claim of right" doctrine been impaired, as the Court of Claims stated, by Freuler v. Helvering, 291 U.S. 35, or

Com'r v. Wilcox, 327 U.S. 404. The *Freuler* case involved an entirely different section of the Internal Revenue Code, and its holding is inapplicable here. 291 U.S. at 43. And in Com'r v. Wilcox, we held that receipts from embezzlement did not constitute income, distinguishing *North American Oil* on the ground that an embezzler asserts no "bona fide legal or equitable claim."

Income taxes must be paid on income earned (or accrued) during an annual accounting period. Cf. [1954 Code, §§441, 451(a), and 446(a)], and see Burnet v. Sanford & Brooks Co. [infra p. 851]. The "claim of right" interpretation of the tax laws has long been used to give finality to that period, and is now deeply rooted in the federal tax system. See cases collected in 2 Mertens, Law of Federal Income Taxation, §12.103. We see no reason why the Court should depart from this well-settled interpretation merely because it results in an advantage or disadvantage to a taxpayer.[1]

Reversed.

MR. JUSTICE DOUGLAS (dissenting).

The question in this case is not whether the bonus had to be included in 1944 income for purposes of the tax. Plainly it should have been because the taxpayer claimed it as of right. Some years later however it was judicially determined that he had no claim to the bonus. The question is whether he may then get back the tax which he paid on the money.

Many inequities are inherent in the income tax. We multiply them needlessly by nice distinctions which have no place in the practical administration of the law. If the refund were allowed, the integrity of the taxable year would not be violated. The tax would be paid when due; but the government would not be permitted to maintain the unconscionable position that it can keep the tax after it is shown that payment was made on money which was not income to the taxpayer.

NOTE

The question in the foregoing case is entangled with accounting concepts, and its ramifications will be considered later. Infra pages 851-857. But the student should bear in mind that a system of annual accounting for income will inevitably breed disputes over the proper year to report numerous items and may require some to be reported in one year though they are repaid in another.

See §1341 of the 1954 Code, establishing a new rule for facts like those in the *Lewis* case. The statute assumes that the appropriate adjustment is a deduction in the later year, rather than a refund for the earlier year; but if the deduction exceeds $3000, the taxpayer may either (1) use it in the usual fashion against the later year's income, or (2) compute a tax for the later year without the deduction, and then credit against the tax thus computed that part of the earlier year's tax that resulted from including the item in income then. (Under Regs. §1.1341-1(i), the latter alternative might reduce the liability for the later year to less than zero, producing a refund to the taxpayer.) Had §1341 been in existence in 1946, Lewis could have reduced his 1946 tax by the "tax cost" to him of including the item in 1944; and thus he would have been as well off under §1341 as with a refund for 1944, except for the interest payable on refunds. It should be noted, moreover, that a taxpayer who paid little or no tax when the item was included in gross income is permitted, under §1341 as under the *Lewis* case, to deduct it from the later year's income, even though the tax benefit in that year exceeds the tax cost of the earlier inclusion.

Although the approach of §1341 is basically simple, it produces many complications, as an examination of the regulations will demonstrate.

---

1 It has been suggested that it would be more "equitable" to reopen respondent's 1944 tax return. While the suggestion might work to the advantage of this taxpayer, it could not be adopted as a general solution because, in many cases, the three-year statute of limitations would preclude recovery. [1954 Code, §6511(a).]

RUTKIN v. UNITED STATES

343 U.S. 130 (1952)

MR. JUSTICE BURTON delivered the opinion of the Court.

The principal issue before us is whether money obtained by extortion is income taxable to the extortioner under §22(a) of the [1939] Code. For the reasons hereafter stated we hold that it is.

The petitioner, Rutkin, was indicted under [§7201, 1954 Internal Revenue Code], for willfully attempting to evade and defeat a large part of his income and victory taxes for 1943. He was charged with filing a false and fraudulent return stating his net income to be $18,966.64, whereas he knew that it was $268,622.04. That difference, which would increase his tax liability from $6,843.93 to $222,408.32, was due largely to his omission from his original return of $250,000 received by him in cash from Joseph Reinfeld. The United States claims that this sum was obtained by petitioner by extortion and as such was taxable income. Petitioner contests both the fact that the money was obtained by extortion and the conclusion of law that it was taxable income if so obtained. He contends also that he did not willfully attempt to evade or defeat the tax. Petitioner was found guilty by a jury in the United States District Court for the District of New Jersey, fined $10,000 and sentenced to four years in prison. The Court of Appeals affirmed, one judge dissenting. 189 F.2d 431. We granted certiorari, 342 U.S. 808, so as to pass upon the alleged conflict between that decision and the decision in Commissioner v. Wilcox, 327 U.S. 404.

The facts are unusual but there can be no doubt that, under the instructions given the jury, we must regard its verdict as reflecting its conclusion that the $250,000 was obtained by petitioner by extortion. There was substantial evidence supporting that result. Reinfeld's first association with petitioner was in 1929 with several others in a bootlegging operation known as the "High seas venture." It was accomplished through the use of a ship in the sale of whiskey at sea more than 12 miles from shore. Reinfeld testified that petitioner contributed no money to the enterprise but was taken in because Reinfeld's associates were afraid that otherwise they would get "interference and trouble" from petitioner. His interest was recognized to be 6% but, when the venture was liquidated in 1933, he already was overdrawn and no distribution was made to him. Without including petitioner, the others then organized Browne Vintners Co., Inc., a New York corporation, to engage in the liquor business. In 1936 petitioner, without making an investment, claimed a 6% interest in Browne Vintners. Despite Reinfeld's denial of petitioner's claim, Reinfeld paid him $60,000 and took from him an assignment of "any and all of such shares of capital stock in the said Browne Vintners Co., Inc., that I am entitled to." In 1940 all the Browne Vintners stock was sold for $7,500,000 to a purchaser who also assumed $8,000,000 of the company's debts. The shares of stock when sold stood in the names of, and were transferred by, "nominees" so as to conceal the identity of Reinfeld and the other beneficial owners. A capital gains tax upon the profits from these sales was paid by the respective nominees.[1] Petitioner was neither a stockholder of record nor a beneficial owner of any of the stock of the company at any time.

In 1941, in response to petitioner's request, Reinfeld gave him about $10,000 to

---

[1] The United States concedes that although, on a strict construction of the Internal Revenue Code, it may be that the proceeds of the sales should have been reported by the beneficial rather than by the record owners, their failure to so report the proceeds does not provide a satisfactory basis for a charge against them of a willful attempt to evade and defeat the tax in violation of [§7201].

help buy a tavern. When petitioner used the money for other purposes Reinfeld refused to finance him further and his "trouble" with petitioner began. In 1942 petitioner again claimed that he had had an interest in Browne Vintners Company and that Reinfeld must give him $100,000 to help him pay his debts. Upon Reinfeld's refusal, petitioner threatened to kill him. From that time on, the record presents a lurid story of petitioner's unsatisfied demands upon Reinfeld for various sums up to $500,000, petitioner's threatening use of a gun and his repeated statements that he would kill Reinfeld and Reinfeld's family unless his demands were met. Finally, on May 11, 1943, in New Jersey, Reinfeld paid petitioner $250,000 in cash.

Throughout this melodrama petitioner asserted that he was entitled to the payments he demanded from Reinfeld because of petitioner's alleged former interest in Browne Vintners Company. That interest never was identified by petitioner. Reinfeld and others testified positively that petitioner never had any such interest. Nevertheless, on May 11, Reinfeld handed to petitioner $250,000 in cash at the same time that Reinfeld paid $358,000 to Zwillman and Stacher representing their conceded interest in the proceeds of Browne Vintners stock. Petitioner, with Zwillman and Stacher, thereupon signed a "general release." It did not state the amounts paid but it did purport to release Reinfeld, Browne Vintners Company and others from all claims the signers had against them.

Under the jury's verdict, we accept the fact to be that petitioner had no basis for his claim to this $250,000 and that he obtained it by extortion. Accordingly, if proceeds of extortion constitute income taxable to the extortioner, his omission of it from his tax return was unlawful. The further factual issue whether, under all the surrounding circumstances, petitioner's omission of the $250,000 from his tax return amounted to a willful attempt to evade and defeat the tax is not open to review here. That issue is settled by the verdict of the jury supported by substantial evidence. It remains for us to determine the legal issue of whether money obtained by extortion is taxable to the extortioner under §22(a) [1939 Code].

Under the instructions to the jury, extortion here meant that the $250,000 was paid to petitioner in response to his false claim thereto, his harassing demands therefor and his repeated threats to kill Reinfeld and Reinfeld's family unless the payment were made. Petitioner was unable to induce Reinfeld to believe petitioner's false and fraudulent claims to the money to be true. He induced Reinfeld to consent to pay the money by creating a fear in Reinfeld that harm otherwise would come to him and to his family. Reinfeld thereupon delivered his own money to petitioner. Petitioner's control over the cash so received was such that, in the absence of Reinfeld's unlikely repudiation of the transaction and demand for the money's return, petitioner could enjoy its use as fully as though his title to it were unassailable.

An unlawful gain, as well as a lawful one, constitutes taxable income when its recipient has such control over it that, as a practical matter, he derives readily realizable economic value from it. Burnet v. Wells, 289 U.S. 670; Corliss v. Bowers, 281 U.S. 376. That occurs when cash, as here, is delivered by its owner to the taxpayer in a manner which allows the recipient freedom to dispose of it at will, even though it may have been obtained by fraud and his freedom to use it may be assailable by someone with a better title to it.

Such gains are taxable in the yearly period during which they are realized. This statutory policy is invoked in the interest of orderly administration. "[C]ollection of the revenue cannot be delayed, nor should the Treasury be compelled to decide when a possessor's claims are without legal warrant." National City Bank v. Helvering, 2 Cir., 98 F.2d 93, 96. There is no adequate reason why assailable unlawful gains should be treated differently in this respect from assailable

lawful gains. Certainly there is no reason for treating them more leniently. United States v. Sullivan, 274 U.S. 259, 263.

There has been a widespread and settled administrative and judicial recognition of the taxability of unlawful gains of many kinds under §22(a). The application of this section to unlawful gains is obvious from its legislative history. Section II, subd. B of the Income Tax Act of 1913 provided that "the net income of a taxable person shall include gains, profits, and income . . . from . . . the transaction of any *lawful* business carried on for gain or profit, or gains or profits and income derived from any source whatever. . . ." (Emphasis supplied.) 38 Stat. 167. In 1916, 39 Stat. 756, this was amended by omitting the one word "lawful" with the obvious intent thereafter to tax unlawful as well as lawful gains, profits or income derived from any source whatever.

There is little doubt now that where unlawful gains are secured by the fraud of the taxpayer they are taxable. In the instant case it is not questioned that the $250,000 would have been taxable to petitioner if he had obtained it by fraudulently inducing Reinfeld to believe petitioner's false claims to be true. That being so, it would be an extraordinary result to hold here that petitioner is to be tax free because his fraud was so transparent that it did not mislead his victim and his victim paid him the money because of fear instead of fraud.

We do not reach in this case the factual situation involved in Commissioner v. Wilcox, 327 U.S. 404. We limit that case to its facts. There embezzled funds were held not to constitute taxable income to the embezzler under §22(a). The issue here is whether money extorted from a victim with his consent induced solely by harassing demands and threats of violence is included in the definition of gross income under §22(a). We think the power of Congress to tax these receipts as income under the Sixteenth Amendment is unquestionable. The broad language of §22(a) supports the declarations of this Court that Congress in enacting that section exercised its full power to tax income. We therefore conclude that §22(a) reaches these receipts.

We have considered the other contentions of petitioner but find them without merit sufficient to justify a reversal or remand of the case.

The judgment of the Court of Appeals accordingly is affirmed.*

Affirmed.

MR. JUSTICE BLACK, with whom MR. JUSTICE REED, MR. JUSTICE FRANKFURTER, and MR. JUSTICE DOUGLAS concur, dissenting.

In Commissioner v. Wilcox, 327 U.S. 404, we held that embezzled money did not constitute taxable income to the embezzler under Section 22(a) of the [1939] Code. We there pointed out that the embezzler had no bona fide legal or equitable claim to the money, was under a definite legal obligation to return it to its rightful owner, and consequently had no more received the kind of "gain" or "income" which Congress has taxed than if he had merely borrowed money. One who extorts money not owed him stands in this precise situation. He has neither legal nor equitable claim to the extorted money and is under a continuing obligation to return it to its owner. See, e.g., Bank of the United States v. Bank of Washington, 6 Pet. 8, 19; Miller v. Eisele, 111 N.J.L. 268, 168 A. 426; 2 N.J.S.A. 2:73-1. A comparison of Mr. Justice Burton's opinion in this case with his dissent in the *Wilcox* case reveals beyond doubt that the Court today adopts the

* A petition for retrial, based on claims of newly discovered evidence and fraud by the government's principal witness, was denied by the District Court and its action was affirmed, one judge dissenting, by the Court of Appeals. United States v. Rutkin, 208 F.2d 647 (3d Cir. 1953); see also United States v. Rutkin, 212 F.2d 641 (3d Cir. 1954); Rutkin v. Reinfeld, 229 F.2d 248 (2d Cir. 1956) (civil action for damages for conspiracy to deprive plaintiff of his interest in certain liquor transactions; judgment for plaintiff reversed because transactions were unlawful). — ED.

reasoning of his prior dissent, thereby rejecting the *Wilcox* interpretation of §22(a). A tax interpretation which Congress has left in effect for six years is thus altered largely as a consequence of a change in the Court's personnel. I think that our former interpretation was right and do not believe that the Government is suffering because of a failure to collect income taxes from embezzlers and extortioners. Indeed further considerations strengthen my support of our *Wilcox* holding.

I fully agree that earnings from businesses such as gambling and bootlegging are subject to the income tax law even though these earnings are derived from illegal transactions. United States v. Sullivan, 274 U.S. 259. The majority seems to think that the *Wilcox* case holds otherwise because some states have laws which under special circumstances permit some particular groups to assert a legal claim for recovery of gambling losses or money paid for bootleg liquor. But these state laws vary far too much in their scope and operation to justify saying that these businessmen never have a bona fide legal or equitable claim to monies paid them. And ". . . we must generally assume, in the absence of a plain indication to the contrary, that Congress when it enacts a statute is not making the application of the federal act dependent on state law." Jerome v. United States, 318 U.S. 101, 104. Moreover, even if we were to take these state recoupment laws into consideration, the sums recovered under them would do no more than decrease the yearly net earnings of such questionable businesses. To all intents and purposes bootleggers and gamblers are engaged in going businesses and make regular business profit which should be taxed in the same manner as profits made through more legitimate endeavor. However, in my judgment it stretches previous tax interpretations too far to classify the sporadic loot of an embezzler, an extortioner or a robber as taxable earnings derived from a business, trade or a profession. I just do not think Congress intended to treat the plunder of such criminals as *theirs.*

It seems illusory to believe, as the majority apparently does, that the burden on honest American taxpayers will be lightened by a governmental policy of pursuing extortioners in futile efforts to collect income taxes. I venture the guess that this one trial has cost United States taxpayers more money than the Government will collect in taxes from extortioners in the next twenty-five years. If this statute is to be interpreted on the basis of what is financially best for honest taxpayers, it probably should be construed so as to save money by eliminating federal prosecutions of state crimes under the guise of punishing tax evaders.

Since it seems pretty clear that the Government can never collect substantial amounts of money from extortioners, there must be another reason for applying the tax law to money they extract from others. The Government's brief is suggestive of the only other reason that occurs to me — to give Washington more and more power to punish purely local crimes such as embezzlement and extortion. Today's decision illustrates an expansion of federal criminal jurisdiction into fields of law enforcement heretofore wholly left to states and local communities. I doubt if this expansion is wise from the standpoint of the United States or the states.

Insofar as the United States is concerned, many think that taking over enforcement of local criminal laws lowers the prestige of the federal system of justice. It certainly tends to make the federal system top-heavy. Of supreme importance is the fact that the United States cannot perform the monumental tasks which lie beyond state power if the time, energy and funds of federal institutions are expended in the field of state criminal law enforcement.

Federal encroachment upon local criminal jurisdiction can also be very injurious to the states. Extortion. robbery, embezzlement and offenses of that nature

are traditionally matters of local concern. The precise elements of these offenses as well as the problems underlying them vary from state to state. Federal assumption of the job of enforcing these laws must of necessity tend to free the states from a sense of responsibility for their own local conditions. Even when states attempt to play their traditional role in the field of law enforcement, the overriding federal authority forces them to surrender control over the manner and policy of construing and applying their own laws. State courts not only lose control over the interpretation of their own laws, but also are deprived of the chance to use the discretion vested in them by state legislatures to impose sentences in accordance with local ideas. Moreover, state prosecutors are deprived of the all-important function of deciding what local offenders should be prosecuted. Final authority to make these important decisions becomes located in the distant city of Washington, D.C. Here, as elsewhere, too many cooks may spoil the broth.

Moreover, I doubt if this expansion of federal criminal jurisdiction can be carried on in a manner consistent with our traditional ideas of what constitutes a fair trial in criminal cases. There is the question of the wisdom and fairness of subjecting a person to double and even triple prosecutions for the same conduct, since the nation, state and municipality might make this one mistake or wrong punishable as a crime.

That consideration gives additional weight to the view that where Congress is creating offenses which duplicate or build upon state law, courts should be reluctant to expand the defined offenses beyond the clear requirements of the terms of the statute. [Jerome v. United States, supra, 318 U.S. at page 105.]

Of course, looked at technically, multiple prosecutions for the same conduct could be avoided by national prosecution of one part of the conduct, state prosecution of another part, and municipal prosecution of a third part. This would still leave a defendant faced with the burden of defending three separate prosecutions.

Expansion of federal criminal jurisdiction entails many other unfair and complicating factors. Criminal rules of substance and of procedure vary widely among the jurisdictions. Punishment is frequently different. In fact, the same kind of conduct may be ignored as not worth criminal punishment by one jurisdiction while considered a serious criminal offense by another. For example, under the Federal White Slave Law men can be imprisoned five years for conduct which many states would not hold criminal at all. Schwartz, "Federal Criminal Jurisdiction and Prosecutors' Discretion," 13 Law and Contemporary Problems 64, 72. When faced with specific federal legislation, such differences in treatment may be inevitable, but I do not think the tax laws should be judicially extended for the purpose of taking from local officials the responsibility for prosecuting local offenses.

When the Government takes over a case like the one before us, the resulting confusion of issues is manifestly prejudicial to the defendant. Here for instance it can hardly be said that Rutkin was tried for tax evasion. Most of the 900 printed pages of oral testimony in the two weeks' trial are devoted to proof of things other than an attempt to evade the tax. Four pages deal with Rutkin's allegedly false 1943 tax return; three pages deal with the amount of tax Rutkin would have owed if he had received $250,000 more income than he actually reported; six pages contain testimony of Rutkin tending to show willful evasion of the tax laws so as to bring the case within Spies v. United States, 317 U.S. 492. A mere reference to the contents of the remaining 887 pages shows what a great threat there was that Rutkin would be convicted because he was a "bad man"

("scoundrel" to use the trial court's title) regardless of whether he was guilty or innocent of the tax evasion charged.

Most of the evidence dealt with the following aspects of Rutkin's past life and associations: Back in prohibition days Rutkin had joined one Reinfeld and others in a bootlegging scheme called the "High seas venture." The organization made millions. About 1940, some time after prohibition ended, Reinfeld, apparently acting for the group, sold the business establishment for about $7,500,000 net. Reinfeld's accounting methods and management of the proceeds were not satisfactory to his associates. They claimed that Reinfeld held back more than his share of the millions. Reinfeld claimed that some of his former associates, including Rutkin, were "overdrawn" and entitled to nothing out of the $7,500,000. This quarrel went on for several years during which time Reinfeld was required to pay hundreds of thousands of dollars to former partners as a result of their claims that he had swindled them. Rutkin was one of them. Rutkin's $250,000 was paid to him by lawyers whose reputations seem to have been above reproach. It was paid openly. And it was some eight years later when Rutkin sued Reinfeld for more millions that Reinfeld, apparently for the first time, charged that Rutkin had extorted the $250,000 under threats of death. Yet he has been convicted here of federal tax evasion on the theory that he was guilty of the crime of "extortion."

From the beginning to the end the evidence in this case was devoted to showing the lawless life Rutkin, Reinfeld and their associates led from the 1920's to 1950, ranging from bootlegging to bribery to gambling. The charge of the court largely emphasized and reemphasized the iniquity of the criminal conduct shown by the testimony. Early in his charge the trial court told the jury:

> You are not deciding which is the bigger scoundrel, Reinfeld or Rutkin; they have both blandly admitted on the stand that they prostituted justice in this country; that they paid public servants to close their eyes to law violation, and that is a canker which eats away at the body public. But you are not passing upon respective degrees of scoundrelism between any two people. The bland way in which we were told that the Reinfelds and the Rutkins and the Zwillmans and all of the others prostituted justice should give us cause for pause, but we are not passing on that question now.

In concluding his charge the trial court told the jury:

> The Government of the United States doesn't ask you to sacrifice anybody to prove its might. It asks you to do justice. That's all that Rutkin has a right to ask you to do, and that's what the government of the United States asks you to do. It asks you to remember its rights too, remembering that unpunished crime, undetected crime, are threats to the majesty and dignity of our government; and that unpunished crime undermines our government. We all of us must do that which is our duty and do it without fear or favor.

My study of this record leads me to believe that the fantastic story of supposed extortion told here would probably never have been accepted by a jury if presented in a trial uncolored by the manifold other inflammatory matters which took up 887 of the 900 pages in this "tax evasion" case.

If we are going to depart from the *Wilcox* holding, I think this is a poor case in which to do so. I would reverse this judgment.

JAMES v. UNITED STATES

366 U.S. 313 (1961)

MR. CHIEF JUSTICE WARREN announced the judgment of the Court and an opinion in which MR. JUSTICE BRENNAN and MR. JUSTICE STEWART concur.

The issue before us in this case is whether embezzled funds are to be included

in the "gross income" of the embezzler in the year in which the funds are misappropriated under §22(a) of the Internal Revenue Code of 1939 and §61(a) of the Internal Revenue Code of 1954.

The facts are not in dispute. The petitioner is a union official who, with another person, embezzled in excess of $738,000 during the years 1951 through 1954 from his employer union and from an insurance company with which the union was doing business. Petitioner failed to report these amounts in his gross income in those years and was convicted for willfully attempting to evade the federal income tax due for each of the years 1951 through 1954 in violation of §145(b) of the Internal Revenue Code of 1939 and §7201 of the Internal Revenue Code of 1954. He was sentenced to a total of three years' imprisonment. The Court of Appeals affirmed. 273 F.2d 5. Because of a conflict with this Court's decision in Commissioner v. Wilcox, 327 U.S. 404, a case whose relevant facts are concededly the same as those in the case now before us, we granted certiorari. 362 U.S. 974. . . .

The basis for the *Wilcox* decision was "that a taxable gain is conditioned upon (1) the presence of a claim of right to the alleged gain and (2) the absence of a definite, unconditional obligation to repay or return that which would otherwise constitute a gain. Without some bona fide legal or equitable claim, even though it be contingent or contested in nature, the taxpayer cannot be said to have received any gain or profit within the reach of §22(a)." Commissioner v. Wilcox, supra, at p. 408. Since Wilcox embezzled the money, held it "without any semblance of a bona fide claim of right," ibid., and therefore "was at all times under an unqualified duty and obligation to repay the money to his employer," ibid., the Court found that the money embezzled was not includible within "gross income." But, Rutkin's legal claim was no greater than that of Wilcox. It was specifically found "that petitioner had no basis for his claim . . . and that he obtained it by extortion." Rutkin v. United States [343 U.S. 130], at p. 135. Both Wilcox and Rutkin obtained the money by means of a criminal act; neither had a bona fide claim of right to the funds.[1] Nor was Rutkin's obligation to repay the extorted money to the victim any less than that of Wilcox. The victim of an extortion, like the victim of an embezzlement, has a right to restitution. Furthermore, it is inconsequential that an embezzler may lack title to the sums he appropriates while an extortionist may gain a voidable title. Questions of federal income taxation are not determined by such "attenuated subtleties." Lucas v. Earl, 281 U.S. 111, 114; Corliss v. Bowers, 281 U.S. 376, 378. Thus, the fact that Rutkin secured the money with the consent of his victim, Rutkin v. United States, supra, at p. 138, is irrelevant. Likewise unimportant is the fact that the sufferer of an extortion is less likely to seek restitution than one whose funds are embezzled. What is important is that the right to recoupment exists in both situations. . . .

The starting point in all cases dealing with the question of the scope of what is included in "gross income" begins with the basic premise that the purpose of Congress was "to use the full measure of its taxing power." Helvering v. Clifford, 309 U.S. 331, 334. And the Court has given a liberal construction to the broad phraseology of the "gross income" definition statutes in recognition of the inten-

[1] The Government contends that the adoption in *Wilcox* of a claim of right test as a touchstone of taxability had no support in the prior cases of this Court; that the claim of right test was a doctrine invoked by the Court in aid of the concept of annual accounting, to determine *when*, not *whether*, receipts constituted income. See North American Oil v. Burnet, 286 U.S. 417; United States v. Lewis, 340 U.S. 590; Healy v. Commissioner, 345 U.S. 278. In view of our reasoning set forth below, we need not pass on this contention. The use to which we put the claim of right test here is only to demonstrate that, whatever its validity as a test of *whether* certain receipts constitute income, it calls for no distinction between *Wilcox* and *Rutkin*.

tion of Congress to tax all gains except those specifically exempted. Commissioner v. Jacobson, 336 U.S. 28, 49; Helvering v. Stockholms Enskilda Bank, 293 U.S. 84, 87-91. The language of §22(a) of the 1939 Code, "gains or profits and income derived from any source whatever," and the more simplified language of §61(a) of the 1954 Code, "all income from whatever source derived," have been held to encompass all "accessions to wealth, clearly realized, and over which the taxpayers have complete dominion." Commissioner v. Glenshaw Glass Co., 348 U.S. 426, 431. A gain "constitutes taxable income when its recipient has such control over it that, as a practical matter, he derives readily realizable economic value from it." Rutkin v. United States, supra, at p. 137. Under these broad principles, we believe that petitioner's contention, that all unlawful gains are taxable except those resulting from embezzlement, should fail.

When a taxpayer acquires earnings, lawfully or unlawfully, without the consensual recognition, express or implied, of an obligation to repay and without restriction as to their disposition, "he has received income which he is required to return, even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent." North American Oil v. Burnet, supra, at p. 424. In such case, the taxpayer has "actual command over the property taxed — the actual benefit for which the tax is paid," Corliss v. Bowers, supra. This standard brings wrongful appropriations within the broad sweep of "gross income"; it excludes loans. When a law-abiding taxpayer mistakenly receives income in one year, which receipt is assailed and found to be invalid in a subsequent year, the taxpayer must nonetheless report the amount as "gross income" in the year received. United States v. Lewis, supra; Healy v. Commissioner, supra. We do not believe that Congress intended to treat a law-breaking taxpayer differently. Just as the honest taxpayer may deduct any amount repaid in the year in which the repayment is made, the Government points out that, "If, when, and to the extent that the victim recovers back the misappropriated funds, there is of course a reduction in the embezzler's income." Brief for the United States, p. 24.

[The Chief Justice then considered, and rejected, the taxpayer's argument that the *Wilcox* ruling had been endorsed by Congressional re-enactment of the Code in 1954 and by its failure to enact a bill to change the rule.]

But, we are dealing here with a felony conviction under statutes which apply to any person who "willfully" fails to account for his tax or who "willfully" attempts to evade his obligation. In Spies v. United States, 317 U.S. 492, 499, the Court said that [§7201] embodied "the gravest of offenses against the revenues," and stated that willfulness must therefore include an evil motive and want of justification in view of all the circumstances. Id., at 498. Willfulness "involves a specific intent which must be proven by independent evidence and which cannot be inferred from the mere understatement of income." Holland v. United States, 348 U.S. 121, 139.

We believe that the element of willfulness could not be proven in a criminal prosecution for failing to include embezzled funds in gross income in the year of misappropriation so long as the statute contained the gloss placed upon it by *Wilcox* at the time the alleged crime was committed. Therefore, we feel that petitioner's conviction may not stand and that the indictment against him must be dismissed.

Since MR. JUSTICE HARLAN, MR. JUSTICE FRANKFURTER, and MR. JUSTICE CLARK agree with us concerning *Wilcox,* that case is overruled. MR. JUSTICE BLACK, MR. JUSTICE DOUGLAS, and MR. JUSTICE WHITTAKER believe that petitioner's conviction must be reversed and the case dismissed for the reasons stated in their opinions.

Accordingly, the judgment of the Court of Appeals is reversed and the case is remanded to the District Court with directions to dismiss the indictment.

It is so ordered.

MR. JUSTICE BLACK, whom MR. JUSTICE DOUGLAS joins, concurring in part and dissenting in part.

. . .

I

We dissent from the way the majority of the Court overrules *Wilcox*. If the statutory interpretation of "taxable income" in *Wilcox* is wrong, then James is guilty of violating the tax evasion statute for the trial court's judgment establishes that he embezzled funds and wilfully refrained from reporting them as income. It appears to us that District Courts are bound to be confused as to what they can do hereafter in tax-evasion cases involving "income" from embezzlements committed prior to this day. Three Justices vote to overrule *Wilcox* under what we believe to be a questionable formula, at least a new one in the annals of this Court, and say that although failure to report embezzled funds has, despite *Wilcox*, always been a crime under the statute, people who have violated this law in the past cannot be prosecuted but people who embezzle funds after this opinion is announced can be prosecuted for failing to report these funds as a "taxable gain." Three other Justices who vote to overrule *Wilcox* say that past embezzlers can be prosecuted for the crime of tax evasion although two of those Justices believe the Government must prove that the past embezzler did not commit his crime in reliance on *Wilcox*. Thus, although it was not the law yesterday, it will be the law tomorrow that funds embezzled hereafter are taxable income; and although past embezzlers could not have been prosecuted yesterday, maybe they can and maybe they cannot be prosecuted tomorrow for the crime of tax evasion. (The question of the civil tax liability of past embezzlers is left equally unclear.) We do not challenge the wisdom of those of our Brethren who refuse to make the Court's new tax evasion crime applicable to past conduct. This would be good governmental policy even though the ex post facto provision of the Constitution has not ordinarily been thought to apply to judicial legislation. Our trouble with this aspect of the Court's action is that it seems to us to indicate that the Court has passed beyond the interpretation of the tax statute and proceeded substantially to amend it.

We realize that there is a doctrine with wide support to the effect that under some circumstances courts should make their decisions as to what the law is apply only prospectively. Objections to such a judicial procedure, however, seem to us to have peculiar force in the field of criminal law. In the first place, a criminal statute that is so ambiguous in scope that an interpretation of it brings about totally unexpected results, thereby subjecting people to penalties and punishments for conduct which they could not know was criminal under existing law, raises serious questions of unconstitutional vagueness. Moreover, for a court to interpret a criminal statute in such a way as to make punishment for past conduct under it so unfair and unjust that the interpretation should be given only prospective application seems to us to be the creation of a judicial crime that Congress might not want to create. This country has never been sympathetic with judge-created crimes. Their rejection under our Constitution was said to have been "long since settled in public opinion" even as early as 1812 when the question first reached this Court in United States v. Hudson & Goodwin, 7 Cranch 32. In that case this Court emphatically declared that the federal courts have no common-law jurisdiction in criminal cases. They are not "vested with jurisdic-

tion over any particular act done by an individual in supposed violation of the peace and dignity of the sovereign power." Rather, "[t]he legislative authority of the Union must first make an act a crime, affix a punishment to it, and declare the Court that shall have jurisdiction of the offense."

In our judgment one of the great inherent restraints upon this Court's departure from the field of interpretation to enter that of lawmaking has been the fact that its judgments could not be limited to prospective application. This Court and in fact all departments of the Government have always heretofore realized that prospective lawmaking is the function of Congress rather than of the courts. We continue to think that this function should be exercised only by Congress under our constitutional system.

II

We think *Wilcox* was right when it was decided and is right now. It announced no new, novel doctrine. One need only look at the Government's briefs in this Court in the *Wilcox* case to see just how little past judicial support could then be mustered had the Government sought to send Wilcox to jail for his embezzlement under the guise of a tax evasion prosecution. The Government did cite many cases from many courts saying that under the federal income tax law gains are no less taxable because they have been acquired by illegal methods. This Court had properly held long before *Wilcox* that there is no "reason why the fact that a business is unlawful should exempt it from paying the taxes that if lawful it would have to pay." We fully recognized the correctness of that holding in *Wilcox:*

> Moral turpitude is not a touchstone of taxability. The question, rather, is whether the taxpayer in fact received a statutory gain, profit or benefit. That the taxpayer's motive may have been reprehensible or the mode of receipt illegal has no bearing upon the application of §22(a).

The Court today by implication attributes quite a different meaning or consequence to the *Wilcox* opinion. One opinion argues at length the "well-established principle . . . that unlawful, as well as lawful, gains are comprehended within the term 'gross income.' " *Wilcox* did not deny that; we do not deny that. This repeated theme of our Brethren is wholly irrelevant since the *Wilcox* holding in no way violates the sound principle of treating "gains" of honest and dishonest taxpayers alike. The whole basis of the *Wilcox* opinion was that an embezzlement is not in itself "gain" or "income" to the embezzler within the tax sense, for the obvious reason that the embezzled property still belongs, and is known to belong, to the rightful owner. It is thus a mistake to argue that petitioner's contention is "that all unlawful gains are taxable except those resulting from embezzlement." . . .

. . . The rightful owner who has entrusted his funds to an employee or agent has troubles enough when those funds are embezzled without having the Federal Government step in with its powerful claim that the embezzlement is a taxable event automatically subjecting part of those funds (still belonging to the owner) to the waiting hands of the Government's tax gatherer. We say part of the *owner's* funds because it is on the supposed "gain" from them that the embezzler is now held to be duty-bound to pay the tax and history probably records few instances of independently wealthy embezzlers who have had nonstolen assets available for payment of taxes.

There has been nothing shown to us on any of the occasions when we have considered this problem to indicate that Congress ever intended its income tax

laws to be construed as imposing what is in effect a property or excise tax on the rightful owner's embezzled funds, for which the owner has already once paid income tax when he rightfully acquired them. In our view, the Court today does Congress a grave injustice by assuming that it has imposed this double tax burden upon the victim of an embezzlement merely because someone has stolen his money, particularly when Congress has refused requests that it do so. The owner whose funds have been embezzled has done nothing but entrust an agent with possession of his funds for limited purposes, as many of us have frequent occasion to do in the course of business or personal affairs. Ordinarily the owner is not, and has no reason to be, at all aware of an embezzlement until long after the first misuse occurs. If Congress ever did manifest an intention to select the mere fact of embezzlement as the basis for imposing a double tax on the owner, we think a serious question of confiscation in violation of the Fifth Amendment would be raised. All of us know that with the strong lien provisions of the federal income tax law an owner of stolen funds would have a very rocky road to travel before he got back, without paying a good slice to the Federal Government, such funds as an embezzler who had not paid the tax might, perchance, not have dissipated. An illustration of what this could mean to a defrauded employer is shown in this very case by the employer's loss of some $700,000, upon which the Government claims a tax of $559,000. . . .

In departing from both the *Wilcox* and *Rutkin* decisions today, our Brethren offer no persuasive reasons to prove that their judgment in overruling *Wilcox* is better than that of the Justices who decided that case. It contributes nothing new to the analysis of this problem to say repeatedly that the dishonest man must be subject to taxation just as the honest. As already said, Chief Justice Stone and the others sitting with him on the *Wilcox* Court fully accepted that general principle and we do still. Applying it here, we would say the embezzler should be treated just like the law-abiding, honest borrower who has obtained the owner's consent to his use of the money.[1] It would be unthinkable to tax the borrower on his "gain" of the borrowed funds and thereby substantially impair the lender's chance of ever recovering the debt. The injury that the Government would inflict on the lender by making the borrower less able to repay the loan surely would not be adequately compensated by telling the lender that he can take a tax deduction for the loss, and it is equally small comfort to the embezzlement victim for the Government, after taking part of his property as a tax on the embezzler, to tell the victim that he can take a deduction for his loss if he has any income against which to offset the deduction. There is, of course, one outstanding distinction between a borrower and an embezzler, and that is that the embezzler uses the funds without the owner's consent. This distinction can be of

[1] The analogy between the borrower and the embezzler was lucidly analyzed by Judge Sibley in McKnight v. Commissioner, 127 F.2d 572, 573-574.

The several cases relied on by the Court do not, in our judgment, justify imposing a tax upon embezzled money. Corliss v. Bowers, 281 U.S. 376, involved income accumulating in a trust fund belonging to the taxpayer and over which he retained control. North American Oil Consolidated v. Burnet, 286 U.S. 417; United States v. Lewis, 340 U.S. 590; and Healy v. Commissioner, 345 U.S. 278, were cases in which the taxpayer had asserted a bona fide, though mistaken, claim of right. In *North American Oil*, the taxpayer not only had a bona fide claim to the money taxed, but there had been an adjudication that he was entitled to it, and there was only the tenuous possibility that a competing claimant might later upset that adjudication. The *Lewis* and *Healy* cases involved a tax on payments made and received as a result of mutual mistake, and it was held that the administration of the tax laws on an annual basis need not be upset for the convenience of those who caused the mistaken payments to be made and reported as income. By contrast, the victims do not cause embezzlements, and the Government is not misled or inconvenienced under *Wilcox* because the embezzler is always fully aware that the embezzled funds are not rightfully his and presumably will not report otherwise.

no importance for purposes of taxability of the funds, however, because as a matter of common sense it suggests that there is, if anything, less reason to tax the embezzler than the borrower. But if this distinction is to be the reason why the embezzlement must be taxed just as "the gains of the honest laborer," then the use of this slogan in this case is laid bare as no more than a means of imposing a second punishment for the crime of embezzlement without regard to revenue considerations, the effect on the rightful owner, or the proper role of this Court when asked to overrule a criminal statutory precedent. The double jeopardy implications would seem obvious,[2] and discussion of the serious inadvisability for other reasons of thus injecting the Federal Government into local law enforcement can be found in the dissenting opinion in *Rutkin*. . . .

[Mr. Justice Harlan, joined by Mr. Justice Frankfurter, agreed with the overruling of *Wilcox,* but would have remanded the case for a new trial in which the defendant would be permitted to prove that he relied on, or was misled by, *Wilcox* in failing to report the receipts in question.

Mr. Justice Whittaker, joined by Mr. Justice Black and Mr. Justice Douglas, concurred in part and dissented in part, arguing that the embezzler does not realize income because of his offsetting obligation to make restitution to his victim.

Mr. Justice Clark agreed with the overruling of *Wilcox,* but would have affirmed the conviction because *Wilcox* was overruled sub silentio in the *Glenshaw Glass Co.* case and in any event was not relied on by the defendant.]

NOTE

1. *Scope of Rutkin and James cases.* Are the profits of larceny and robbery taxable? If not, are the federal courts to distinguish between the crimes of embezzlment, larceny by trick and device, and false pretenses on the basis of the "attenuated subtleties" of common law? Does the Court hold that a repayment by an embezzler is deductible in the year of repayment on the theory that it is an "ordinary and necessary expense" of carrying on a "trade or business" within the meaning of §162(a)?

Note the reference in Chief Justice Warren's opinion in *James* to earnings acquired "without the consensual recognition, express or implied, of an obligation to repay." If a bank clerk "borrows" from the bank, intending to repay the funds as soon as his ship (or horse) comes in, is he subject to tax?

2. *Implications of dissenting opinions.* Do the dissenters in the *Rutkin* and *James* cases believe that it is unconstitutional to tax extortioners and embezzlers, or only that Congress did not intend to tax them? Would they tolerate a tax, or a prosecution, if the government had waited until the year in which the statute of limitations (if there is one) ran on a recovery of the embezzled or extorted funds by the victim, or until the victim forgave the wrongdoer? Would such a delay obviate the concern expressed in the *James* dissent about double taxation, double jeopardy, or double punishment or the concern of the dissenting Justices in *Rutkin* about federal encroachment on local criminal jurisdiction?

3. *Competing claims of victim and tax collector.* Would the government's tax claim against Rutkin and James be superior to the claim of the victim if both could not be paid in full? Can the victim protect himself by forgiving the tort and electing to treat the transaction as a loan? See generally Note, Taxation of Misappropriated Property: The Decline and Incomplete Fall of *Wilcox,* 62 Yale L.J. 662 (1953).

---

2 See the dissenting opinion in Bartkus v. Illinois, 359 U.S. 121, 150. It is interesting to note that on July 22, 1959, shortly after the *Bartkus* decision, Illinois, in order to avoid the danger of prosecuting men in both state and federal courts for the same crime, passed a statute making conviction or acquittal in a federal prosecution a defense to a state prosecution for the same criminal act. Illinois Laws, 1959, p. 1893, §1; 38 Ill. Ann. Stat. (Cum. Supp. 1960) §601.1. Thus, while Illinois is moving away from such double prosecutions, this Court is moving even further than *Barthus* in the direction of authorizing such prosecutions.

4. *Impact of Wilcox case in practice.* During the years when the *Wilcox* case was in full force and effect, it was invoked more often by businessmen masquerading as embezzlers than by what might be termed "bona fide embezzlers." The typical situation was a civil or criminal fraud action based on the fact that an officer or shareholder of a one-man or closely held corporation had pocketed some of the corporation's cash receipts and had omitted them from both the corporate and his individual tax returns. If the Internal Revenue Service alleged an understatement of the corporation's taxable income and tax liability, the defense was that the funds had been embezzled from the corporation, so that it was entitled to a deduction for a loss by theft equal to, and hence offsetting, the amount omitted from its gross receipts. If, on the other hand, the Internal Revenue Service alleged a wrongful omission from the officer's personal tax returns of the funds taken from the corporation, he relied on the *Wilcox* case to negate tax liability. On the whole, the courts resisted these attempts to exploit the *Wilcox* case, sometimes on the theory that a shareholder cannot embezzle from his wholly owned corporation, sometimes on finding that the corporation suffered no loss because the shareholder was financially able to make restitution. In one ironic twist of the screw, the Tax Court refused to accept a taxpayer's claim that he was an embezzler partly because his admission that he had engaged in fraud made him unworthy of belief. See Kann v. Commissioner, 18 T.C. 1032 (1952), affirmed by a divided court, 210 F.2d 247 (3d Cir. 1954); Davis v. United States, 226 F.2d 331 (6th Cir. 1955) ("stockholder could not embezzle funds from his wholly owned corporation"); but see Dix v. Commissioner, 223 F.2d 436 (2d Cir. 1955), finding that the president (who was not the sole shareholder and who had deceived the only other responsible executive) had embezzled from a family corporation.

5. *Willfulness.* On the impossibility (as a majority in the *James* case saw it) of proving willfulness, so long "as the statute contained the gloss placed upon it by *Wilcox* at the time the alleged crime was committed": is a Supreme Court decision the only kind of "gloss" that is inconsistent with willfulness? What about a string of decisions by the Tax Court? Could the civil fraud penalty of §6653(b) or the negligence penalty of §6653(a) (infra pp. 948-958) be imposed on the taxpayer in the *James* case? If embezzlement was his only source of income and he did not file a return, was his failure "due to reasonable cause and not due to willful neglect" so that the addition of §6651(a) does not apply?

6. *Disclosure of illegal income and the Fifth Amendment.* Although it was held as long ago as 1927 that illegal income is taxable, United States v. Sullivan, 274 U.S. 259 (1927), involving the income of a bootlegger during Prohibition, the extent to which recipients of such income must keep records and report the details on their tax returns is still uncertain. The taxpayer can not be compelled to give self-incriminating testimony; can he be required to keep books and records or to execute a tax return that will incriminate him? Does disclosure of activities (e.g., gambling; unlawful sale of liquor) that are illegal under state law rest on a different footing from disclosure of federal crimes?

In the *Sullivan* case, Mr. Justice Holmes, writing for a unanimous court, said only:

> If the form of return provided called for answers that the defendant was privileged from making he could have raised the objection in the return, but could not on that account refuse to make any return at all. We are not called on to decide what, if anything, he might have withheld. Most of the items warranted no complaint. It would be an extreme if not an extravagant application of the Fifth Amendment to say that it authorized a man to refuse to state the amount of his income because it had been made in crime. [274 U.S. at 263.]

Investigations in recent years by the Kefauver Committee and others have revealed that when illegal income is reported, it is often designated merely as "commissions," "fees," "other income," and the like, rather than labeled specifically. Must the government tolerate this kind of reporting?

In Shapiro v. United States, 335 U.S. 1 (1948), it was held that the privilege against self-incrimination does not extend so far as to permit the taxpayer to withhold from the government "records required to be kept by a valid regulation under the Price Control Act" at least "when there is a sufficient relation between the activity sought to be regulated and the public concern so that the government can constitutionally regulate or forbid the basic

activity concerned, and can constitutionally require the keeping of particular records, subject to inspection by the Administrator." As to the relation of all this to tax returns and to records kept for tax purposes, see Redlich, Searches, Seizures, and Self-incrimination in Tax Cases, 10 Tax L. Rev. 191 (1954); Meltzer, Required Records, the McCarran Act, and the Privilege Against Self-incrimination, 18 U. of Chi. L. Rev. 687, 708-719 (1951).

In U.S. v. Clancy, 276 F.2d 617 (7th Cir. 1960), involving a prosecution for evasion of federal wagering taxes, the court cited the *Shapiro* case in holding that a seizure of the taxpayer's books and records by federal revenue agents did not violate the Fourth and Fifth Amendments because, inter alia, they were records that he was required by law to keep and make available for official inspection, rather than "private papers." The decision was reversed, but on another ground, 365 U.S. 312 (1961). See also Falsone v. United States, 205 F.2d 734 (5th Cir. 1953), stating that the privilege against self-incrimination does not extend to books kept pursuant to §6001; In re Daniels, 140 F. Supp. 322 (S.D.N.Y. 1956) (contra); United States v. Kahriger, 345 U.S. 22 (1953), sustaining the validity of the excise tax on persons engaged in the business of accepting wagers against objections based on the Fifth Amendment; Lewis v. United States, 348 U.S. 419 (1955), upholding the tax in the District of Columbia, where gambling is a federal crime.

CHAPTER 2

The Individual, Non-business Taxpayer

SECTION A. NON-TAXABLE ITEMS

Chapter 1 is concerned with the "outer limits" of federal income taxation. There we saw, among other things, that not everything that comes in is income. Some of the exempt items were found to be immune on constitutional grounds, though others were protected on the theory that Congress did not intend to tax them and others perhaps only because the rulings or decisions concerning them have not been challenged in recent years. At any rate, Chapter 1's exempt items were not placed beyond the tax collector's reach by any specific statutory exemption.

Now we will examine a variety of specific statutory exemptions. For the most part, these exemptions apply to items that would otherwise be taxable; but in some cases the exemption was originally enacted because the item in question was thought to be constitutionally immune to tax, and the continued existence of the statutory exemption has made it unnecessary for the courts to pass on the constitutional issue.

1. *Gifts*

Section 102 (excluding from gross income "the value of property acquired by gift, bequest, devise, or inheritance") and §1015 (prescribing the basis of property acquired by gift) carry forward the rules of §22(b)(3) and §113(a)(2) of the 1939 Code without substantive change, except for the addition of §1015(d) (taking account, in some circumstances, of federal gift tax paid on the transfer of donated property).

COMMISSIONER v. DUBERSTEIN
363 U.S. 278 (1960)

MR. JUSTICE BRENNAN delivered the opinion of the Court.

These two cases concern [§102(a)] which excludes from the gross income of an income taxpayer "the value of property acquired by gift." They pose the frequently recurrent question whether a specific transfer to a taxpayer in fact amounted to a "gift" to him within the meaning of the statute. The importance to decision of the facts of the cases requires that we state them in some detail.

No. 376, Commissioner v. Duberstein. The taxpayer, Duberstein, was president of the Duberstein Iron & Metal Company, a corporation with headquarters in Dayton, Ohio. For some years the taxpayer's company had done business with Mohawk Metal Corporation, whose headquarters were in New York City. The president of Mohawk was one Berman. The taxpayer and Berman had generally used the telephone to transact their companies' business with each other, which consisted of buying and selling metals. The taxpayer testified, without elaboration, that he knew Berman "personally" and had known him for about seven years. From time to time in their telephone conversations, Berman would ask

Duberstein whether the latter knew of potential customers for some of Mohawk's products in which Duberstein's company itself was not interested. Duberstein provided the names of potential customers for these items.

One day in 1951 Berman telephoned Duberstein and said that the information Duberstein had given him had proved so helpful that he wanted to give the latter a present. Duberstein stated that Berman owed him nothing. Berman said that he had a Cadillac as a gift for Duberstein, and that the latter should send to New York for it; Berman insisted that Duberstein accept the car, and the latter finally did so, protesting however that he had not intended to be compensated for the information. At the time Duberstein already had a Cadillac and an Oldsmobile, and felt that he did not need another car. Duberstein testified that he did not think Berman would have sent him the Cadillac if he had not furnished him with information about the customers. It appeared that Mohawk later deducted the value of the Cadillac as a business expense on its corporate income tax return.

Duberstein did not include the value of the Cadillac in gross income for 1951, deeming it a gift. The Commissioner asserted a deficiency for the car's value against him, and in proceedings to review the deficiency the Tax Court affirmed the Commissioner's determination. It said that "The record is significantly barren of evidence revealing any intention on the part of the payor to make a gift. . . . The only justifiable inference is that the automobile was intended by the payor to be remuneration for services rendered to it by Duberstein." The Court of Appeals for the Sixth Circuit reversed. 265 F.2d 28.

No. 546, Stanton v. United States. The taxpayer, Stanton, had been for approximately 10 years in the employ of Trinity Church in New York City. He was comptroller of the Church corporation, and president of a corporation, Trinity Operating Company, the church set up as a fully owned subsidiary to manage its real estate holdings, which were more extensive than simply the church property. His salary by the end of his employment there in 1942 amounted to $22,500 a year. Effective November 30, 1942, he resigned from both positions to go into business for himself. The Operating Company's directors, who seem to have included the rector and vestrymen of the church, passed the following resolution upon his resignation: "BE IT RESOLVED that in appreciation of the services rendered by Mr. Stanton . . . a gratuity is hereby awarded to him of Twenty Thousand Dollars, payable to him in equal instalments of Two Thousand Dollars at the end of each and every month commencing with the month of December, 1942; provided that, with the discontinuance of his services, the Corporation of Trinity Church is released from all rights and claims to pension and retirement benefits not already accrued up to November 30, 1942."

The Operating Company's action was later explained by one of its directors as based on the fact that, "Mr. Stanton was liked by all of the Vestry personally. He had a pleasing personality. He had come in when Trinity's affairs were in a difficult situation. He did a splendid piece of work, we felt. Besides that . . . he was liked by all of the members of the Vestry personally." And by another: "[W]e were all unanimous in wishing to make Mr. Stanton a gift. Mr. Stanton had loyally and faithfully served Trinity in a very difficult time. We thought of him in the highest regard. We understood that he was going in business for himself. We felt that he was entitled to that evidence of good will."

On the other hand, there was a suggestion of some ill-feeling between Stanton and the directors, arising out of the recent termination of the services of one Watkins, the Operating Company's treasurer, whose departure was evidently attended by some acrimony. At a special board meeting on October 28, 1942, Stanton had intervened on Watkins' side and asked reconsideration of the matter. The minutes reflect that "resentment was expressed as to the 'presumptuous' sug-

gestion that the action of the Board, taken after long deliberation, should be changed." The Board adhered to its determination that Watkins be separated from employment, giving him an opportunity to resign rather than be discharged. At another special meeting two days later it was revealed that Watkins had not resigned; the previous resolution terminating his services was then viewed as effective; and the Board voted the payment of six months' salary to Watkins in a resolution similar to that quoted in regard to Stanton, but which did not use the term "gratuity." At the meeting, Stanton announced that in order to avoid any such embarrassment or question at any time as to his willingness to resign if the Board desired, he was tendering his resignation. It was tabled, though not without dissent. The next week, on November 5, at another special meeting, Stanton again tendered his resignation which this time was accepted.

The "gratuity" was duly paid. So was a smaller one to Stanton's (and the Operating Company's) secretary, under a similar resolution, upon her resignation at the same time. The two corporations shared the expense of the payments. There was undisputed testimony that there were in fact no enforceable rights or claims to pension and retirement benefits which had not accrued at the time of the taxpayer's resignation, and that the last proviso of the resolution was inserted simply out of an abundance of caution. The taxpayer received in cash a refund of his contributions to the retirement plans, and there is no suggestion that he was entitled to more. He was required to perform no further services for Trinity after his resignation.

The Commissioner asserted a deficiency against the taxpayer after the latter had failed to include the payments in question in gross income. After payment of the deficiency and administrative rejection of a refund claim, the taxpayer sued the United States for a refund in the District Court for the Eastern District of New York. The trial judge, sitting without a jury, made the simple finding that the payments were a "gift," and judgment was entered for the taxpayer. The Court of Appeals for the Second Circuit reversed. 268 F.2d 727.

The Government, urging that clarification of the problem typified by these two cases was necessary, and that the approaches taken by the Courts of Appeals for the Second and the Sixth Circuits were in conflict, petitioned for certiorari in No. 376, and acquiesced in the taxpayer's petition in No. 546. On this basis, and because of the importance of the question in the administration of the income tax laws, we granted certiorari in both cases. 361 U.S. 923.

The exclusion of property acquired by gift from gross income under the federal income tax laws was made in the first income tax statute passed under the authority of the Sixteenth Amendment, and has been a feature of the income tax statutes ever since. The meaning of the term "gift" as applied to particular transfers has always been a matter of contention. Specific and illuminating legislative history on the point does not appear to exist. Analogies and inferences drawn from other revenue provisions, such as the estate and gift taxes, are dubious. See Lockard v. Commissioner, 166 F.2d 409. The meaning of the statutory term has been shaped largely by the decisional law. With this, we turn to the contentions made by the Government in these cases.

First. The Government suggests that we promulgate a new "test" in this area to serve as a standard to be applied by the lower courts and by the Tax Court in dealing with the numerous cases that arise.[1] We reject this invitation. We are of opinion that the governing principles are necessarily general and have already been spelled out in the opinions of this Court, and that the problem is one which,

[1] The Government's proposed test is stated: "Gifts should be defined as transfers of property made for personal as distinguished from business reasons."

under the present statutory framework, does not lend itself to any more definitive statement that would produce a talisman for the solution of concrete cases. The cases at bar are fair examples of the settings in which the problem usually arises. They present situations in which payments have been made in a context with business overtones — an employer making a payment to a retiring employee; a businessman giving something of value to another businessman who has been of advantage to him in his business. In this context, we review the law as established by the prior cases here.

The course of decision here makes it plain that the statute does not use the term "gift" in the common-law sense, but in a more colloquial sense. This Court has indicated that a voluntary executed transfer of his property by one to another, without any consideration or compensation therefor, though a common-law gift, is not necessarily a "gift" within the meaning of the statute. For the Court has shown that the mere absence of a legal or moral obligation to make such a payment does not establish that it is a gift. Old Colony Trust Co. v. Commissioner, 279 U.S. 716, 730. And, importantly, if the payment proceeds primarily from "the constraining force of any moral or legal duty," or from "the incentive of anticipated benefit" of an economic nature, Bogardus v. Commissioner, 302 U.S. 34, 41, it is not a gift. And, conversely, "[w]here the payment is in return for services rendered, it is irrelevant that the donor derives no economic benefit from it." Robertson v. United States, 343 U.S. 711, 714.[2] A gift in the statutory sense, on the other hand, proceeds from a "detached and disinterested generosity," Commissioner v. LoBue, 351 U.S. 243, 246; "out of affection, respect, admiration, charity or like impulses." Robertson v. United States, supra, at 714. And in this regard, the most critical consideration, as the Court was agreed in the leading case here, is the transferor's "intention." Bogardus v. Commissioner, 302 U.S. 34, 43. "What controls is the intention with which payment, however voluntary, has been made." Id., at 45 (dissenting opinion).

The Government says that this "intention" of the transferor cannot mean what the cases on the common-law concept of gift call "donative intent." With that we are in agreement, for our decisions fully support this. Moreover, the *Bogardus* case itself makes it plain that the donor's characterization of his action is not determinative — that there must be an objective inquiry as to whether what is called a gift amounts to it in reality. 302 U.S. at 40. It scarcely needs adding that the parties' expectations or hopes as to the tax treatment of their conduct in themselves have nothing to do with the matter.

It is suggested that the *Bogardus* criterion would be more apt if rephrased in terms of "motive" rather than "intention." We must confess to some skepticism as to whether such a verbal mutation would be of any practical consequence. We take it that the proper criterion, established by decision here, is one that inquires what the basic reason for his conduct was in fact — the dominant reason that explains his action in making the transfer. Further than that we do not think it profitable to go.

Second. The Government's proposed "test," while apparently simple and precise in its formulation, depends frankly on a set of "principles" or "presumptions" derived from the decided cases, and concededly subject to various exceptions; and it involves various corollaries, which add to its detail. Were we to promulgate this test as a matter of law, and accept with it its various presuppositions and stated consequences, we would be passing far beyond the requirements of the cases before us, and would be painting on a large canvas with indeed a broad

---

2 The cases including "tips" in gross income are classic examples of this. See, e.g., Roberts v. Commissioner, 176 F.2d 221.

brush. The Government derives its test from such propositions as the following: That payments by an employer to an employee, even though voluntary, ought, by and large, to be taxable; that the concept of a gift is inconsistent with a payment's being a deductible business expense; that a gift involves "personal" elements; that a business corporation cannot properly make a gift of its assets. The Government admits that there are exceptions and qualifications to these propositions. We think, to the extent they are correct, that these propositions are not principles of law but rather maxims of experience that the tribunals which have tried the facts of cases in this area have enunciated in explaining their factual determinations. Some of them simply represent truisms: it doubtless is, statistically speaking, the exceptional payment by an employer to an employee that amounts to a gift. Others are overstatements of possible evidentiary inferences relevant to a factual determination on the totality of circumstances in the case: it is doubtless relevant to the over-all inference that the transferor treats a payment as a business deduction, or that the transferor is a corporate entity. But these inferences cannot be stated in absolute terms. Neither factor is a shibboleth. The taxing statute does not make nondeductibility by the transferor a condition on the "gift" exclusion; nor does it draw any distinction, in terms, between transfers by corporations and individuals, as to the availability of the "gift" exclusion to the transferee. The conclusion whether a transfer amounts to a "gift" is one that must be reached on consideration of all the factors.

Specifically, the trier of fact must be careful not to allow trial of the issue whether the receipt of a specific payment is a gift to turn into a trial of the tax liability, or of the propriety, as a matter of fiduciary or corporate law, attaching to the conduct of someone else. The major corollary to the Government's suggested "test" is that, as an ordinary matter, a payment by a corporation cannot be a gift, and, more specifically, there can be no such thing as a "gift" made by a corporation which would allow it to take a deduction for an ordinary and necessary business expense. As we have said, we find no basis for such a conclusion in the statute; and if it were applied as a determinative rule of "law," it would force the tribunals trying tax cases involving the donee's liability into elaborate inquiries into the local law of corporations or into the peripheral deductibility of payments as business expenses. The former issue might make the tax tribunals the most frequent investigators of an important and difficult issue of the laws of the several States, and the latter inquiry would summon one difficult and delicate problem of federal tax law as an aid to the solution of another. Or perhaps there would be required a trial of the vexed issue whether there was a "constructive" distribution of corporate property, for income tax purposes, to the corporate agents who had sponsored the transfer. These considerations, also, reinforce us in our conclusion that while the principles urged by the Government may, in nonabsolute form as crystallizations of experience, prove persuasive to the trier of facts in a particular case, neither they, nor any more detailed statement than has been made, can be laid down as a matter of law.

Third. Decision of the issue presented in these cases must be based ultimately on the application of the fact-finding tribunal's experience with the mainsprings of human conduct to the totality of the facts of each case. The nontechnical nature of the statutory standard, the close relationship of it to the data of practical human experience, and the multiplicity of relevant factual elements, with their various combinations, creating the necessity of ascribing the proper force to each, confirm us in our conclusion that primary weight in this area must be given to the conclusions of the trier of fact. . . .

This conclusion may not satisfy an academic desire for tidiness, symmetry and precision in this area, any more than a system based on the determinations of

various fact-finders ordinarily does. But we see it as implicit in the present statutory treatment of the exclusion for gifts, and in the variety of forums in which federal income tax cases can be tried. If there is fear of undue uncertainty or overmuch litigation, Congress may make more precise its treatment of the matter by singling out certain factors and making them determinative of the matter, as it has done in one field of the "gift" exclusion's former application, that of prizes and awards.[3] Doubtless diversity of result will tend to be lessened somewhat since federal income tax decisions, even those in tribunals of first instance turning on issues of fact, tend to be reported, and since there may be a natural tendency of professional triers of fact to follow one another's determinations, even as to factual matters. But the question here remains basically one of fact, for determination on a case-by-case basis.

One consequence of this is that appellate review of determinations in this field must be quite restricted. Where a jury has tried the matter upon correct instructions, the only inquiry is whether it cannot be said that reasonable men could reach differing conclusions on the issue. Baker v. Texas & Pacific R. Co., 359 U.S. at 228. Where the trial has been by a judge without a jury, the judge's findings must stand unless "clearly erroneous." Fed. Rules Civ. Proc., 52(a). . . .

Fourth. A majority of the Court is in accord with the principles just outlined. And, applying them to the *Duberstein* case, we are in agreement, on the evidence we have set forth, that it cannot be said that the conclusion of the Tax Court was "clearly erroneous." It seems to us plain that as trier of the facts it was warranted in concluding that despite the characterization of the transfer of the Cadillac by the parties and the absence of any obligation, even of a moral nature, to make it, it was at bottom a recompense for Duberstein's past services, or an inducement for him to be of further service in the future. We cannot say with the Court of Appeals that such a conclusion was "mere suspicion" on the Tax Court's part. To us it appears based in the sort of informed experience with human affairs that fact-finding tribunals should bring to this task.

As to *Stanton,* we are in disagreement. To four of us, it is critical here that the District Court as trier of fact made only the simple and unelaborated finding that the transfer in question was a "gift." To be sure, conciseness is to be strived for, and prolixity avoided, in findings; but, to the four of us, there comes a point where findings become so sparse and conclusory as to give no revelation of what the District Court's concept of the determining facts and legal standard may be. See Matton Oil Transfer Corp. v. The Dynamic, 123 F.2d 999, 1000-1001. Such conclusory, general findings do not constitute compliance with Rule 52's direction to "find the facts specially and state separately . . . conclusions of law thereon." While the standard of law in this area is not a complex one, we four think the unelaborated finding of ultimate fact here cannot stand as a fulfillment of these requirements. It affords the reviewing court not the semblance of an indication of the legal standard with which the trier of fact has approached his task. For all that appears, the District Court may have viewed the form of the resolution or the simple absence of legal consideration as conclusive. While the judgment of the Court of Appeals cannot stand, the four of us think there must be further proceedings in the District Court looking toward new and adequate findings of fact. In this, we are joined by MR. JUSTICE WHITTAKER, who agrees that the find-

[3] I.R.C., §74, which is a provision new with the 1954 Code. Previously, there had been holdings that such receipts as the "Pot O' Gold" radio giveaway, Washburn v. Commissioner, 5 T.C. 1333, and the Ross Essay Prize, McDermott v. Commissioner, 80 U.S. App. D.C. 176, 150 F.2d 585, were "gifts." Congress intended to obviate such rulings. S. Rep. No. 1622, 83d Cong., 2d Sess., p. 178. We imply no approval of those holdings under the general standard of the "gift" exclusion. Cf. Robertson v. United States, supra.

ings were inadequate, although he does not concur generally in this opinion.

Accordingly, in No. 376, the judgment of this Court is that the judgment of the Court of Appeals is reversed, and in No. 546, that the judgment of the Court of Appeals is vacated, and the case is remanded to the District Court for further proceedings not inconsistent with this opinion.

It is so ordered.

MR. JUSTICE HARLAN concurs in the result in No. 376. In No. 546, he would affirm the judgment of the Court of Appeals for the reasons stated by MR. JUSTICE FRANKFURTER.

MR. JUSTICE WHITTAKER, agreeing with *Bogardus* that whether a particular transfer is or is not a "gift" may involve "a mixed question of law and fact," 302 U.S., at 39, concurs only in the result of this opinion.

MR. JUSTICE DOUGLAS dissents, since he is of the view that in each of these two cases there was a gift under the test which the Court fashioned nearly a quarter of a century ago in Bogardus v. Commissioner, 302 U.S. 34.

[Mr. Justice Black concurred in *Duberstein* and dissented in *Stanton,* on the ground that the trial court's finding in each case was "not clearly erroneous."

Mr. Justice Frankfurter said that "in the two situations now before us the business implications are so forceful that I would apply a presumptive rule placing the burden upon the beneficiary to prove the payment wholly unrelated to his services to the enterprise" and that the Court's emphasis on the fact-finding tribunal's "experience with the mainsprings of human conduct" would set them "to sail on an illimitable ocean of individual beliefs and experiences." He concluded that *Duberstein* was properly taxed, and that Stanton's payment should have been taxed because it was not "sheer benevolence but in the nature of a generous lagniappe, something extra thrown in for services received though not legally nor morally required to be given."]

NOTE

1. *Remand of Stanton case.* On the remand of the *Stanton* case, the District Court made detailed findings of fact and again concluded that the payments to Stanton were gifts. On appeal, the Court of Appeals affirmed on the ground that the findings were not "clearly erroneous," Chief Judge Lumbard concurring because of the restricted character of appellate review although he thought a contrary inference should have been drawn from the "undisputed basic facts." 287 F.2d 876 (2d Cir. 1961).

In Pellar v. Commissioner, 25 T.C. 299 (1955), the Commissioner asserted that the difference between the contract price paid by the taxpayer for a house constructed for him and its fair market value was taxable as income. This difference resulted from the fact that the construction company did not include a profit in its calculation of the contract price and, in addition, did not charge for a number of "extras" ordered by the taxpayer during construction; this generosity was attributable to the contractor's desire to preserve and enhance his friendship with the taxpayer's father-in-law, who controlled a large amount of industrial construction business. The court held that the difference was not taxable income and that the *Glenshaw Glass Co.* case, upon which the Commissioner relied, was distinguishable because "it involved the taxation of exemplary damages for fraud and punitive treble damages for antitrust violations." Would the *Duberstein* case require a different result?

See the comments of Dean Griswold on *Duberstein* in his Forward: Of Time and Attitudes — Professor Hart and Judge Arnold, 74 Harv. L. Rev. 81, 88-91 (1960); see also Rothschild, Business Gifts as Income, 19 N.Y.U. Inst. on Fed. Taxation 147 (1961).

2. *Christmas "gifts."* Regs. §1.61-2(a)(1) provides that Christmas bonuses are taxable as compensation. Can an employer make a Christmas "gift" to his employees? In Rev. Rul. 59-58, 1959-1 C.B. 17, the Internal Revenue Service announced a "no income if you can eat it or drink it" doctrine:

It is . . . held that the value of a turkey, ham, or other item of merchandise of similar nominal value, distributed by an employer to an employee at Christmas, or a comparable holiday, as part of a general distribution to employees engaged in the business of the employer as a means of promoting their good will, does not constitute wages subject to income tax withholding or wages for Federal Insurance Contributions Act or Federal Unemployment Tax Act purposes.

In view of the small amounts involved, and since it may reasonably be contended in many cases that such items constitute excludable gifts, it is similarly held that the value of such an item of merchandise need not be treated as taxable income by the employee who receives it.

The foregoing rules will not apply to distributions of cash, gift certificates, and similar items of readily convertible cash value, regardless of the amount involved.

It is further held that the cost to the employer of turkeys, hams, and other merchandise of similar nominal value which are distributed generally to the employees engaged in his business, primarily for the business purpose of promoting good relations with his employees, is deductible by the employer under section 162 of the Code as an ordinary and necessary business expense.

See also Rev. Rul. 131, 1953-2 C.B. 112, stating that amounts contributed by an employer for the rehabilitation of its employees who suffered personal injuries and property damages as the result of a tornado do not constitute taxable income to the employees, the payments being measured by need rather than by services rendered or length of service.

3. *May the donor deduct the cost of his "gifts"?* Note that the Christmas turkey ruling quoted in the preceding paragraph acknowledges that the employer may deduct the cost of a gift as a business expense under §162 even though the recipient is entitled to exclude it from income under §102, a point that is also touched on by the *Duberstein* opinion. In 1962, however, §274(b) was added to the Code to limit the deductibility of business gifts to a maximum of $25 per recipient per year. (See p. 234 infra.) Is this limitation, which embraces "any item excludable from gross income of the recipient under section 102 which is not excludable from his gross income under any other provision," applicable to the rehabilitation payments described in Rev. Rul. 131, cited in the preceding paragraph?

4. *Other business "gifts."* For another area in which taxpayers have argued that a "gift" under §102 is possible in a business context, see Bradford v. Commissioner, supra page 89; see also Capital Coal Corp. v. Commissioner, 250 F.2d 361 (2d Cir. 1957), taxing a cancellation of debt and saying that "a gift . . . would be a most unusual occurrence when made by a company engaged in operating a business for profit."

Suppose the taxpayer is urged by an advertisement to use a tube of toothpaste for one month, on condition that he can keep the tube and get his money back if not entirely satisfied. If he gets his money back, does he realize income? What if he gets double his money back?

5. *The status of tips.* Note the Court's reference (footnote 2) to the *Roberts* case, holding that the tips received by a taxi driver were includible in his gross income. Because many waiters, taxi drivers, etc., fail to keep accurate records of this source of income, the Internal Revenue Service often estimates the amount received by indirect methods, e.g., by determining the total dollar amount of food and drink served by a waiter from the restaurant's records and assuming that his tips equal 10 per cent of this amount. See page 892 infra. In United States v. McCormick, 67 F.2d 867 (2d Cir. 1933), it was held that "contributions" received by a city clerk after marriage ceremonies from bridegrooms who were fearful of being accused of stinginess were taxable; and see Regs. §1.61-2(a)(1), to the effect that "marriage fees and other contributions received by a clergyman for services" are taxable. Does this mean that the groom cannot make a "gift" to the clergyman?

See also Miller v. Commissioner, 327 F.2d 846 (2d Cir. 1964) (distributions from a Christmas Fund contributed by members of a club for its employees held taxable).

Does a professional beggar realize taxable income? What if he "sells" for 10 cents each pencils that are normally sold for 5 cents? See Webber v. Commissioner, 219 F.2d 834 (10th Cir. 1955) (minister conducting nonsectarian religious programs by radio held taxable on amounts received in response to solicitation; although amounts were larger during months of taxpayer's birthday and wedding anniversary, there was "no evidence tending

to show that the contributions were referred to [by the contributors] as gifts; or that any of the contributors knew the petitioners personally or had any personal relationship with them which would form the basis for personal gifts as distinguished from contributions to the perpetuation of the programs which the contributors enjoyed and desired to financially support").

6. *Diamonds are a girl's best friend.* Does a young lady realize taxable income if she receives presents of property or cash from an admirer or is supported by him? What if she has a number of admirers, either successively or simultaneously? The following is from the New Haven Sunday Register for March 8, 1953:

> BRUNETTE HELD ON TAX CHARGES; SELDOM WORKED
>
> Birmingham, Ala. March 7 — (AP) — A pretty, 32-year-old brunette, who said, "I entertained guys," was charged with failing to file income tax returns on an income of almost $50,000.
>
> Miss Jessie Ruth Chesnutt was arraigned before U.S. Commissioner Louise O. Carlton yesterday and released under $500 bond.
>
> Her attorney, Robert Gwin, contended "that Miss Chesnutt's income is not taxable in that the money she has was given to her in the form of gifts."
>
> He later told reporters the funds "were given her by various individuals over a period of years."
>
> Asked if the gifts were from men or women, Miss Chesnutt said: "Gentlemen, naturally."
>
> "I never did any kind of work much," she continued. "I did work in a cotton mill and on a farm and I entertained guys."
>
> Miss Chesnutt said she was a native of Gadsden, Ala., and had also lived in Las Vegas, Reno and Detroit.
>
> A Federal warrant against her charged she failed to file income tax returns on an income of $11,985 in 1949, $25,644 in 1950 and $12,144 in 1951.
>
> The Government filed an $83,000 tax lien against Miss Chesnutt's property. Gwin said $60,000 of her property was in defense bonds.
>
> The solicitor's office here said Miss Chesnutt has been arrested three times on disorderly conduct charges.

See Brizendine v. Commissioner, ¶57,032 P-H Memo T.C. (payments to taxpayer for forbearing from prostitution and granting "her companionship" to payor held taxable); Blevins v. Commissioner, ¶55,211 P-H Memo T.C. (payments from an admirer, which both he and the taxpayer testified were "gifts in contemplation of marriage," held taxable; since he was married and there was no evidence that either he or his wife attempted to get a divorce, court rejected taxpayer's claim for want of proof).

7. *Rewards as gifts.* If a fond and abstemious uncle promises his nephew $5000 if he neither drinks nor smokes before the age of 21, will the payment be income to the nephew?

8. *Strike benefits: the Kaiser case.* In United States v. Kaiser, 363 U.S. 299 (1960), decided on the same day as *Duberstein,* the Supreme Court affirmed a judgment, based on a jury verdict, holding that strike assistance received by a striker from a union of which he was not a member was a "gift" within the meaning of §102(a). An opinion by Mr. Justice Brennan, in which the Chief Justice, Mr. Justice Black, and Mr. Justice Douglas joined, stated:

> The factual inferences to be drawn from the basic facts were here for the jury. They had the power to conclude, on the record, taking into account such factors as the form and amount of the assistance and the conditions of personal need, of lack of other sources of income, compensation, or public assistance, and of dependency status, which surrounded the program under which it was rendered, that while the assistance was furnished only to strikers, it was not a recompense for striking. They could have concluded that the very general language of the Union's constitution, when considered with the nature of the Union as an entity and with the factors to which we have just referred, did not indicate that basically the assistance proceeded from any constraint of moral or legal obligation, of a nature that would preclude it from being a gift. And on all these circumstances, the jury could have concluded that assistance,

rendered as it was to a class of persons in the community in economic need, proceeded primarily from generosity or charity, rather than from the incentive of anticipated economic benefit. We can hardly say that, as a matter of law, the fact that these transfers were made to one having a sympathetic interest with the giver prevents them from being a gift. This is present in many cases of the most unquestionable charity. [363 U.S. at 304.]

Justices Frankfurter and Clark concurred in the result, primarily on the ground that there was evidence that "at the time these benefits were paid, the union had assumed the functions normally exercised by private charitable organizations and governmental relief programs, in view of the excessive difficulty in getting adequate relief from them, so that these benefits were dispensed pursuant to such a charitable relief program in what, because of the strike, was a distressed area" and that "in making these payments the union was exercising a wholly charitable function." Before arriving at this conclusion, Mr. Justice Frankfurter discussed at length a series of rulings by the Internal Revenue Service from which the taxpayer had sought to derive a binding administrative policy of exempting "subsistence relief," and concluded that there was a rational basis for the earlier rulings that was not applicable to the strike benefits before the Court, with the result that the Internal Revenue Service was not denying "equal treatment" in ruling that the benefits were taxable. (So far, at least, there has been virtually no judicial development of the taxpayer's "equal treatment" theory; see pages 916-920 infra.) Although Mr. Justice Douglas joined in Mr. Justice Brennan's opinion, he also filed a separate concurrence, expressing the view that a motion by the taxpayer for a directed verdict would have been in order and should have been granted; since "only the needy got the relief," the payments "were welfare, plain and simple." By contrast, Justices Whittaker, Harlan, and Stewart dissented, concluding that the payments "were made by the union to enable and encourage respondent and other striking workers to continue the strike which had been called or approved by the union, and were not motivated by benevolence." The dissenting Justices rejected Mr. Justice Frankfurter's "charitable agency" theory: "The motivation of a public welfare agency in supplying basic needs to the unemployed is purely charitable in nature, but payments by a private union to striking workers to enable them to continue to successful conclusion a strike called or approved by the union, cannot reasonably be said to have proceeded primarily from any such charitable impulse." 363 U.S. at 332.

In Rev. Rul. 61-136, 1961-2 C.B. 20, the Internal Revenue Service stated that in cases presenting facts substantially like those in *Kaiser*, it will regard strike benefit payments as "gifts" and that other cases will be scrutinized to determine whether the payments will be treated as taxable income, but "the fact that strike benefits are paid only to union members will not, in and of itself, be considered determinative" of taxability.

POYNER v. COMMISSIONER

301 F.2d 287 (4th Cir. 1962)

Before SOBELOFF, Chief Judge, and SOPER and J. SPENCER BELL, Circuit Judges.

SOBELOFF, Chief Judge.

Not the least of the difficulties often faced by a recently widowed woman is the loss of her husband's financial support. However, for many widows of ranking employees in companies, this cause for worry has been alleviated by the practice of the employer making payments to the widow for limited periods following the husband's death, frequently by continuing to pay her the salary her husband would have received had he lived. The Commissioner of Internal Revenue has since 1950 sought to treat such payments as ordinary income to the widow under the general provisions of section 61 of the Internal Revenue Code. The widows, on the other hand, have contended with considerable success in the courts that

the payments were gifts, hence not includible in gross income under section 102. The issue in the present case is of this character. We are asked by a widow to reverse a decision of the Tax Court which treats as ordinary income the payments made to her by a corporation of which for 38 years her husband had been president and majority stockholder.

The statutory definition of a "gift" which is excluded from a person's gross income by section 102 and the function of an appellate court in reviewing the findings of the trier of fact in these cases have recently received extensive attention by the Supreme Court. Commissioner v. Duberstein. A study of this decision indicates that in any given case there are three steps which must be followed in reaching a conclusion. First, the trier of fact must make findings as to the basic facts, the actual happenings. These findings may not be upset if found by a jury unless the reviewing court is convinced that reasonable men could make only contrary findings, or, if found by a judge without a jury, unless clearly erroneous.

Second, the trier of fact must draw from these basic findings his inferences as to the "dominant reason" for the payments — the answer to the question why the payments were made. This determination too is one of fact as to which appellate review is restricted to the clearly erroneous standard where, as in the present case, a judge sat without a jury. The scope of review is therefore limited to ascertaining whether the trier of fact considered the correct criteria in making the factual inferences and whether the finding as to dominant motive is sufficiently supported in the evidence.

Third, the lower court must decide whether the dominant reason, as found, for the payments is such as to require gift treatment and an escape from taxation under section 102, or income treatment and taxation under section 61. This question, involving the proper meaning of the statutory term "gift," is one of law as to which an appellate court may make an independent judgment. To give guidance in the decision of future cases, the majority opinion in *Duberstein* summarized earlier cases, citing specific examples of motives which require as a matter of law either the conclusion that the payments are a gift or that they are income, as those terms are used in the Internal Revenue Code.

Now we shall see how this three-stage approach was followed in the case before us. The basic facts are undisputed since the parties submitted the case to the Tax Court upon stipulation. Over a span of 38 years before his death on January 31, 1956, Mervin G. Pierpont, the taxpayer's husband, served as the president of the Loewy Drug Company, a wholesale drug distributor in Baltimore. Throughout the entire period, he owned two-thirds of the outstanding stock, the rest being owned by Morton L. Lazarus. The company had paid him all amounts owed for his services. On March 22, 1956, the Board of Directors of the company passed a resolution whereby a 1954 Cadillac, valued at $3,245.14, was transferred to his widow. The resolution stated that "in recognition of the services rendered by the late Mervin G. Pierpont, this Corporation pay to his widow as a continuance of his salary the sum of Three Thousand, Two Hundred Forty-Five Dollars and Fourteen Cents . . ." By a similar resolution passed the following month, the company undertook to pay his widow $600 per month either until the payments aggregated $20,000 or until further action by the Board. She received under the two resolutions a total of $9,910.05 in 1956 and $7,800.00 in 1957 when the payments were terminated upon the liquidation of the company. It was stipulated in the Tax Court that the payments were "not made pursuant to any contract, plan, policy, practice, or understanding made or in effect prior to the Decedent's death." However, there is no mention in the stipulation as to who were the di-

rectors who authorized the payments and what were their relationships to the widow; neither are we told to whom Pierpont devised his controlling interest in the company, or what the widow's personal financial status may have been.

In her 1956 tax return the widow reported as a gift the $9,910.05 received in that year. The Commissioner, however, determined that it was income to her, applied the $5,000 exclusion provided for employee death benefits by section 101(b),* and asserted a tax deficiency of $1,376.22 on the remaining $4,910.05. The sums paid the widow had been fully deducted by the company as an expense of doing business.

From the stipulated facts, the Tax Court proceeded to draw factual inferences as to motive. Referring to the two corporate resolutions which authorized the payments, the Tax Court said that they "suggest that the dominant intention of the donor was to pay additional compensation in respect of the decedent's services." In addition, the court found that there was "nothing in the record that would lead us to conclude that the alleged gifts 'proceed[ed] from a detached and disinterested generosity . . . out of affection, respect, admiration, charity or like impulses,' " motives which the Supreme Court recognized in *Duberstein* as indicating gift treatment. The Tax Court then summarized its findings and conclusions by saying that "the payments in controversy were not intended as a 'gift,' " and treated them as income.

We think that the findings of the Tax Court regarding the dominant reason for the payments, based as they are upon the stipulated facts, cannot be sustained. The decisions in the Tax Court prior to the *Duberstein* case established a set of factors to be evaluated in discovering the dominant motive for such payments to widows, and our decision in Bounds v. United States, 262 F.2d 876 (4th Cir. 1958), recognized and followed these criteria. The clearest formulation appears in Florence S. Luntz, 29 T.C. 647, 650 (1958), where the Tax Court listed the following as the five factors to be considered:

> (1) the payments had been made to the wife of the deceased employee and not to his estate; (2) there was no obligation on the part of the corporation to pay any additional compensation to the deceased employee; (3) the corporation derived no benefit from the payment; (4) the wife of the deceased employee performed no services for the corporation; and (5) the services of her husband had been fully compensated.

The stipulated facts directly respond to every one of the five factors, and in each instance the response is favorable to the widow. This being so, we see no justification for the Tax Court's finding that "there is no solid evidence that they [the directors authorizing the payments] were motivated in any part by the widow's needs or by a sense of generosity or the like." In every prior Tax Court case, essentially identical facts were held sufficient to support the conclusion that the dominant motive was sympathy for the taxpayer's widowed position. The only evidence on which the Tax Court specifically relies for its contrary finding is the wording of the authorizing corporate resolutions. While the language of the resolutions certainly merits consideration, never before has such language been deemed sufficient by itself, and in the face of the other above specified factors, to support a finding that the payments were compensation for services rendered. As the facts stipulated in this case do not differ from those deemed conclusive in past cases, a contrary finding seems to us without warrant.

The Supreme Court in *Duberstein* did not destroy the authority of the earlier Tax Court cases and the guides enunciated in them for discovering motivation. The plea addressed by the Government to the Supreme Court in *Duberstein* to establish a new test defining "gift" was expressly rejected. The Court limited itself

---

* See Note following this case. — Ed.

to summarizing earlier decisions as to which particular dominant motivations, when adequately supported by the evidence, result in income treatment, and which result in gift treatment. An enumeration of the criteria, by which the trier of fact shall determine in every type of case what that dominant reason is, was deemed inadvisable, if not futile. The Court preferred to leave the development of such criteria to a case-by-case approach in the lower courts.

On the other hand, *Duberstein* cannot be read as limiting inquiry by the trier of fact solely to the factors recognized by the earlier decisions. The objective is to discover which motive is dominant in a field of co-existing motives. In the task of sorting out the varying motives, the development of more reliable criteria by the triers of fact should not be curtailed. Indeed, the Tax Court since *Duberstein* has considered it necessary to inquire into the widow's stock holdings in the company and the knowledge or lack of it on the part of the Board of her financial status following the death of her husband. The Tax Court in the present case also seems to have thought that the directors' knowledge of "the widow's needs" was an important factor. These subjects are certainly relevant, and inquiry may properly be directed to them, and whatever other factors the trier of fact might think helpful.

Nevertheless, none of the facts stipulated in the present case touches upon those additional factors which since *Duberstein* have been important. The stipulations were made before *Duberstein* and covered only the criteria which had up to that time been formulated and treated by the Tax Court and this circuit as decisive. It would be unfair now to allow findings to stand, which are adverse to the taxpayer because of her silence on matters never deemed pertinent in earlier litigation. While, as we have indicated, it is perfectly proper for the court to broaden the field of inquiry beyond that previously established, this should not be done without affording an opportunity to the taxpayer, and to the Government as well, to amplify the record. Of course, we do not undertake to dictate the result to be reached upon the broadened inquiry. Additional data which the parties will be free to produce may have the effect of confirming or overcoming the result which the five *Luntz* factors, standing alone, were held to require in the earlier cases.

Decision vacated and case remanded for proceedings not inconsistent with this opinion.

NOTE

1. *Exclusion of "employee death benefits" by §101(b).* This much-litigated issue has declined somewhat in importance, since in 1951 the Code was amended to provide that "employee death benefits" (i.e., amounts paid by an employer to the beneficiaries or the estate of a deceased employee, not in excess of $5000) shall be excluded from taxable income. §101(b). The exclusion is not applicable to amounts that the employee could have received during his life, unless paid under a qualified pension, stock bonus, or profit-sharing plan.

As originally enacted, this exclusion was applicable only to amounts paid pursuant to a contract, and the exclusion was apparently granted on the theory that such death benefits are analogous to the proceeds of life insurance, which are receivable tax-free by the beneficiaries of the insured (infra p. 147). (There is, however, this distinction: the premiums paid for the life insurance will have come out of the insured's taxable income, whereas the employee death benefit will not have given rise to any income taxable to the employee during his lifetime.) But in 1954, the requirement of a contractual obligation was eliminated, with the result that payments made voluntarily by the employer qualify—up to the $5000 limit.

In the *Pierpont* case, the Internal Revenue Service allowed an exclusion under §101(b) for the first $5000 received by the widow, and contended before the Tax Court that the

enactment of §101(b) impliedly closed the §102 (gift) route to tax exemption for the excess above $5000. Since the Tax Court held that the payment was not a gift, it did not have to decide whether §102 remains available to recipients of employee death benefits, a question on which there is a split of authority. Compare Reed v. United States, 177 F. Supp. 205 (W.D. Ky. 1959), aff'd per curiam, 277 F.2d 456 (6th Cir. 1960) (§102 remains available as an alternate route to exclusion), with Bounds v. United States, 262 F.2d 876 (4th Cir. 1958) (dictum, contra). The government did not press this point on appeal, and the Internal Revenue Service has announced that hereafter it will argue that the 1954 extension of §101(b) to non-contractual payments was an endorsement of its view that widows' payments are "generally" not gifts, but that it will no longer contend that §101(b) automatically bars recourse to §102. Rev. Rul. 62-102, 1962-2 C.B. 37.

2. *Payments by closely held corporations.* If the widow owns a controlling stock interest in the corporation when the payment is made, how are the *Duberstein* factors of "detached and disinterested generosity" and "affection, respect, admiration, charity, or like impulses" to be tested? If the widow owns all the stock, can she urge that the payment is a gift because charity begins at home — or is a payment under such circumstances to be viewed as a disguised (and taxable) dividend? Can the $5000 exclusion of §101(b) be denied if the widow owns all of the stock on the ground that the payment is "really" a dividend rather than an amount "paid by or on behalf of an employer . . . by reason of the death of the employee"?

See Bacon v. United States, — F. Supp. — (E.D. Ky. 1963) (payments to widow of controlling shareholder; held, taxable as dividends).

3. *Effect of a plan for paying death benefits.* Assuming that the first few widows to whom payments are made by a single employer succeed in excluding them as gifts, will reliance on §102 become increasingly difficult as the company's employees come to expect that their widows will be similarly treated?

4. *The employer's right to deduct death benefits.* Before 1962, most employers probably deducted employee death benefits as business expenses under §162, whether the recipients claimed an exclusion under §102 or not. Fifth Ave. Coach Lines, Inc. v. Commissioner, 31 T.C. 1080, 1092 (1959), rev'd (other issues), 281 F.2d 556 (2d Cir. 1960). But the enactment in 1962 of §274(b), limiting the employer's deduction for business gifts to $25, may discourage payments in excess of $5000. See Regs. §1.274-3(b) (deduction limited to amounts that qualify under §101(b) for exclusion in hands of recipient). If the employer is willing to pay a larger amount only if a business deduction will be permissible, what steps can it take to avoid the $25 limit of §274(b) — and what effect will these steps have on the employee's widow or other heirs?

See generally Baird, Taxability of Payments to Widows of Deceased Employees, 1963 So. Calif. Tax Inst. 775; Note, Payments to Widows of Corporate Executives and Employees, 49 Va. L. Rev. 74 (1963).

5. *Pensions.* According to Regs. §1.61-11(a), "[p]ensions and retirement allowances paid either by the Government or by private persons constitute gross income unless excluded by law." Can a pension received by a retired employee qualify for the exclusion accorded to "gifts" by §102(a)? See Peters v. Smith, 221 F.2d 721 (3d Cir. 1955) ("employer in providing the questioned payments did not indicate unequivocally whether such action was intended as additional compensation for past services, or merely as an expression of a philanthropic attitude, or as a bid for employee good will"; held, exclusion as a gift is a jury issue).

6. *Clergymen.* After losing a series of cases on the taxability of pensions and other payments received by retired clergymen from their congregations, the Internal Revenue Service ruled in 1955 that it would not continue to litigate similar cases:

> In the cited cases the payments were not made in accordance with any enforceable agreement, established plan, or past practice; the recipient did not undertake to perform any further services for the congregation and was not expected to do so; there was a far closer personal relationship between the recipient and the congregation than is found in lay employment relationships; and the available evidence indicated that the amount paid was determined in the light of the financial position of the congrega-

tion and the needs of the recipient, who had been adequately compensated for his past services.

The decisions in the cited cases, to the effect that the amounts involved were exempt gifts rather than taxable income, are accepted by the Service on their particular facts. In other cases involving payments to retired ministers or rabbis under similar circumstances the amounts paid will accordingly be treated as gifts excludable from gross income under section 102 of the 1954 Code. [Rev. Rul. 55-422, 1955-1 C.B. 14.]

In Perkins v. Commissioner, 34 T.C. 117 (1960), the Tax Court held that a pension paid under a large-scale plan of the Baltimore Conference of the Methodist Church was taxable: "the pension payments were made in accordance with the established plan and past practice of The Methodist Church, there was no close personal relationship between the [taxpayer] and the bulk of the contributing congregations, and the amounts paid were not determined in the light of the needs of the individual recipients."

Is the litigation policy announced by Rev. Rul. 55-422 consistent with the *Duberstein* case? With the "no establishment of religion" clause of the First Amendment?

FARID-ES-SULTANEH v. COMMISSIONER

160 F.2d 812 (2d Cir. 1947)

Before SWAN, CHASE, and CLARK, Circuit Judges.

CHASE, Circuit Judge.

The problem presented by this petition is to fix the cost basis to be used by the petitioner in determining the taxable gain on a sale she made in 1938 of shares of corporate stock. She contends that it is the adjusted value of the shares at the date she acquired them because her acquisition was by purchase. The Commissioner's position is that she must use the adjusted cost basis of her transferor because her acquisition was by gift. The Tax Court agreed with the Commissioner and redetermined the deficiency accordingly.

The pertinent facts are not in dispute and were found by the Tax Court as they were disclosed in the stipulation of the parties substantially as follows:

The petitioner is an American citizen who filed her income tax return for the calendar year 1938 with the Collector of Internal Revenue for the Third District of New York and in it reported sales during that year of 12,000 shares of the common stock of the S. S. Kresge Company at varying prices per share, for the total sum of $230,802.36 which admittedly was in excess of their cost to her. How much this excess amounted to for tax purposes depends upon the legal significance of the facts now to be stated.

In December 1923 when the petitioner, then unmarried, and S. S. Kresge, then married, were contemplating their future marriage, he delivered to her 700 shares of the common stock of the S. S. Kresge Company which then had a fair market value of $290 per share. The shares were all in street form and were to be held by the petitioner "for her benefit and protection in the event that the said Kresge should die prior to the contemplated marriage between the petitioner and said Kresge." The latter was divorced from his wife on January 9, 1924, and on or about January 23, 1924 he delivered to the petitioner 1800 additional common shares of S. S. Kresge Company which were also in street form and were to be held by the petitioner for the same purposes as were the first 700 shares he had delivered to her. On April 24, 1924, and when the petitioner still retained the possession of the stock so delivered to her, she and Mr. Kresge executed a written ante-nuptial agreement wherein she acknowledged the receipt of the shares "as a gift made by the said Sebastian S. Kresge, pursuant to this indenture, and as an

ante-nuptial settlement, and in consideration of said gift and said ante-nuptial settlement, in consideration of the promise of said Sebastian S. Kresge to marry her, and in further consideration of the consummation of said promised marriage" she released all dower and other marital rights, including the right to her support to which she otherwise would have been entitled as a matter of law when she became his wife. They were married in New York immediately after the ante-nuptial agreement was executed and continued to be husband and wife until the petitioner obtained a final decree of absolute divorce from him on, or about, May 18, 1928. No alimony was claimed by, or awarded to, her.

The stock so obtained by the petitioner from Mr. Kresge had a fair market value of $315 per share on April 24, 1924, and of $330 per share on or about May 6, 1924, when it was transferred to her on the books of the corporation. She held all of it for about three years, but how much she continued to hold thereafter is not disclosed except as that may be shown by her sales in 1938. Meanwhile her holdings had been increased by a stock dividend of 50 per cent, declared on April 1, 1925; one of 10 to 1 declared on January 19, 1926; and one of 50 per cent, declared on March 1, 1929. Her adjusted basis for the stock she sold in 1938 was $10.66⅔ per share computed on the basis of the fair market value of the shares which she obtained from Mr. Kresge at the time of her acquisition. His adjusted basis for the shares she sold in 1938 would have been $0.159091.

When the petitioner and Mr. Kresge were married he was 57 years old with a life expectancy of 16½ years. She was then 32 years of age with a life expectancy of 33¾ years. He was then worth approximately $375,000,000 and owned real estate of the approximate value of $100,000,000.

The Commissioner determined the deficiency on the ground that the petitioner's stock obtained as above stated was acquired by gift within the meaning of that word as used in [1954 Code, §1015(a)], and, as the transfer to her was after December 31, 1920, used as the basis for determining the gain on her sale of it the basis it would have had in the hands of the donor. This was correct if the just mentioned statute is applicable, and the Tax Court held it was on the authority of Wemyss v. Commissioner, [infra page 1025], and Merrill v. Fahs, [infra page 1027].

The issue here presented cannot, however, be adequately dealt with quite so summarily. The *Wemyss* case determined the taxability to the transferor as a gift, under [1954 Code, §§2511(a) and 2512(b)] of property transferred in trust for the benefit of the prospective wife of the transferor pursuant to the terms of an ante-nuptial agreement. It was held that the transfer, being solely in consideration of her promise of marriage, and to compensate her for loss of trust income which would cease upon her marriage, was not for an adequate and full consideration in money or money's worth within the meaning of [1954 Code, §2512(b)], the Tax Court having found that the transfer was not one at arm's length made in the ordinary course of business. But we find nothing in this decision to show that a transfer, taxable as a gift under the gift tax, is ipso facto to be treated as a gift in construing the income tax law.

In Merrill v. Fahs, supra, it was pointed out that the estate and gift tax statutes are in pari materia and are to be so construed. . . . The estate tax provisions in the Revenue Act of 1916 required the inclusion in a decedent's gross estate of transfers made in contemplation of death, or intended to take effect in possession and enjoyment at or after death except when a transfer was the result of a "bona fide sale for a fair consideration in money or money's worth." Sec. 202(b), 39 Stat. 756, 777. The first gift tax became effective in 1924, and provided inter alia, that where an exchange or sale of property was for less than a fair consideration in money or money's worth the excess should be taxed as a gift. Rev. Act of 1924,

§320, 43 Stat. 314. While both taxing statutes thus provided, it was held that a release of dower rights was a fair consideration in money or money's worth. . . . Following that, Congress in 1926 replaced the words "fair consideration" in the 1924 Act limiting the deductibility of claims against an estate with the words "adequate and full consideration in money or money's worth" and in 1932 the gift tax statute as enacted limited consideration in the same way. Rev. Act 1932, §503. Although Congress in 1932 also expressly provided that the release of marital rights should not be treated as a consideration in money or money's worth in administering the estate tax law, Rev. Act of 1932, §804, and failed to include such a provision in the gift tax statute, it was held that the gift tax law should be construed to the same effect. Merrill v. Fahs, supra.

We find in this decision no indication, however, that the term "gift" as used in the income tax statute should be construed to include a transfer which, if made when the gift tax were effective, would be taxable to the transferor as a gift merely because of the special provisions in the gift tax statute defining and restricting consideration for gift tax purposes. A fortiori, it would seem that limitations found in the estate tax law upon according the usual legal effect to proof that a transfer was made for a fair consideration should not be imported into the income tax law except by action of Congress.*

In our opinion the income tax provisions are not to be construed as though they were in pari materia with either the estate tax law or the gift tax statutes. They are aimed at the gathering of revenue by taking for public use given percentages of what the statute fixes as net taxable income. Capital gains and losses are, to the required or permitted extent, factors in determining net taxable income. What is known as the basis for computing gain or loss on transfers of property is established by statute in those instances when the resulting gain or loss is recognized for income tax purposes and the basis for succeeding sales or exchanges will, theoretically at least, level off tax-wise any hills and valleys in the consideration passing either way on previous sales or exchanges. When Congress provided that gifts should not be treated as taxable income to the donee there was, without any correlative provisions fixing the basis of the gift to the donee, a loophole which enabled the donee to make a subsequent transfer of the property and take as the basis for computing gain or loss its value when the gift was made. Thus it was possible to exclude from taxation any increment in value during the donor's holding and the donee might take advantage of any shrinkage in such increment after the acquisition by gift in computing gain or loss upon a subsequent sale or exchange. It was to close this loophole that Congress provided that the donee should take the donor's basis when property was transferred by gift.† This change in the statute affected only the statutory net taxable income. The altered statute prevented a transfer by gift from creating any change in the basis of the property in computing gain or loss on any future transfer. In any individual instance the change in the statute would but postpone taxation and presumably would have little effect on the total volume of income tax revenue derived over a long period of time and from many taxpayers. Because of this we think that a transfer which would be classed as a gift under the gift tax law is not necessarily to be treated as a gift income-tax-wise. Though such a consideration as this petitioner gave for the shares of stock she acquired from Mr. Kresge might not have relieved him from liability for a gift tax, had the present gift tax then been in ef-

* See the suggestion of Judge Jerome N. Frank that the terms "gift," "gaft," and "geft" be used, depending upon whether the gift, income, or estate tax meaning is implied. Commissioner v. Beck's Estate, infra page 998. — Ed.

† The history of this change is given supra page 101n. — Ed.

fect, it was nevertheless a fair consideration which prevented her taking the shares as a gift under the income tax law since it precluded the existence of a donative intent.

Although the transfers of the stock made both in December 1923, and in the following January by Mr. Kresge to this taxpayer are called a gift in the ante-nuptial agreement later executed and were to be for the protection of his prospective bride if he died before the marriage was consummated, the "gift" was contingent upon his death before such marriage, an event that did not occur. Consequently, it would appear that no absolute gift was made before the ante-nuptial contract was executed and that she took title to the stock under its terms, viz.: in consideration for her promise to marry him coupled with her promise to relinquish all rights in and to his property which she would otherwise acquire by the marriage. Her inchoate interest in the property of her affianced husband greatly exceeded the value of the stock transferred to her. It was a fair consideration under ordinary legal concepts of that term for the transfers of the stock by him. . . . She performed the contract under the terms of which the stock was transferred to her and held the shares not as a donee but as a purchaser for a fair consideration.

As the decisive issue is one of law only, the decision of the Tax Court interpreting the applicable statutory provisions has no peculiar finality and is reviewable. Bingham v. Commissioner, 325 U.S. 365.

Decision reversed.

CLARK, Circuit Judge (dissenting).

The opinion accepts two assumptions, both necessary to the result. The first is that definitions of gift under the gift and estate tax statutes are not useful, in fact are directly opposed to, definitions of gift under the capital-gains provision of the income tax statute. The second is that the circumstances here of a transfer of the stock some months before the marriage showed, contrary to the conclusions of the Tax Court, a purchase of dower rights, rather than a gift. The first I regard as doubtful; the second, as untenable.

It is true that Commissioner v. Wemyss and Merrill v. Fahs, supra, which would require the transactions here to be considered a gift, dealt with estate and gift taxes. But no strong reason has been advanced why what is a gift under certain sections of the Revenue Code should not be a gift under yet another section As a matter of fact these two cases indicate that the donative intent of the common law is not an essential ingredient of a gift for tax purposes. Conversely love, affection, and the promise of future marriage will not be consideration adequate to avoid the gift tax. If that is so, it would seem that these should not be sufficient to furnish new and higher cost bases for computing capital gains on ultimate sale. The Congressional purpose would seem substantially identical — to prevent a gap in the law whereby taxes on gifts or on capital gains could be avoided or reduced by judicious transfers within the family or intimate group.

But decision on that point might well be postponed, since, to my mind, the other point should be decisive. Kresge transferred the stock to petitioner more than three months before their marriage. Part was given when Kresge was married to another woman. At these times petitioner had no dower or other rights in his property. If Kresge died before the wedding, she could never secure dower rights in his lands. Yet she would nevertheless keep the stock. Indeed the specifically stated purpose of the transfer was to protect her against his death prior to marriage. It is therefore difficult to perceive how her not yet acquired rights could be consideration for the stock. Apparently the parties themselves shared this difficulty, for in their subsequent instrument releasing dower rights they referred to the stock transfer as a gift and an ante-nuptial settlement.

If the transfer be thus considered a sale, as the majority hold, it would seem to follow necessarily that this valuable consideration (equivalent to one-third for life in land valued at one hundred million dollars) should have yielded sizable taxable capital gains to Kresge, as well as a capital loss to petitioner when eventually she sold. I suggest these considerations as pointing to the unreality of holding as a sale what seems clearly only intended as a stimulating cause to eventual matrimony.

Since Judge Murdock in the Tax Court found this to be a gift, not a sale, and since this decision is based in part at least upon factual considerations, it would seem binding upon us. At any rate, it should be persuasive of the result we ought to reach.

NOTE

The scope of Farid-es-Sultaneh. Having concluded that the 1924 transaction was not a "gift" under §1015(a), why did the court determine that the taxpayer's basis for the stock was its fair market value in 1924? See §1012. Did the taxpayer realize income in 1924? Did Mr. Kresge engage in a "sale or other disposition" of the stock in 1924, within the meaning of §1001, so as to reckon up his gain or loss then? If so, what was the amount of his gain or loss? See United States v. Davis, infra page 432.

Does a wife realize taxable income when her husband supports her?

2. *Prizes, Scholarships, and Fellowships*

Section 74 (prizes and awards) and §117 (scholarships and fellowship grants) were new in the 1954 Code. Previously, the status of such receipts depended upon whether they came within the more general language of what is now §102(a), excluding "gifts" from gross income.

SIMMONS v. UNITED STATES
308 F.2d 160 (4th Cir. 1962)

Before SOBELOFF, Chief Judge, and HAYNSWORTH and BOREMAN, Circuit Judges.

SOBELOFF, Chief Judge.

Diamond Jim III, a rock fish, was one of millions of his species swimming in the Chesapeake Bay, but he was a very special fish, and he occasions some nice legal questions. Wearing a valuable identification tag, he was placed on June 19, 1958, in the waters of the Bay by employees of the American Brewery, Inc., with the cooperation of Maryland state game officials. According to the well-publicized rules governing the brewery-sponsored Third Annual American Beer Fishing Derby, anybody who caught Diamond Jim III and presented him to the company, together with the identification tag and an affidavit that he had been caught on hook and line, would be entitled to a cash prize of $25,000.00. The company also placed other tagged fish in the Chesapeake, carrying lesser prizes.

Fishing on the morning of August 6, 1958, William Simmons caught Diamond Jim III. At first, he took little notice of the tag, but upon re-examining it a half hour later, he realized that he had caught the $25,000.00 prize fish. After Simmons and his fishing companions appropriately marked the happy event, he hastened to comply with the conditions of the contest. Soon thereafter, in the course of a television appearance arranged by the brewery, he received the cash prize. The record shows that Simmons knew about the contest, but, as an experienced fisherman, he also knew that his chances of landing that fish were minuscule, and he did not have Diamond Jim III in mind when he set out that morning.

Thereupon, an alert District Director of the Internal Revenue Service came forward with the assertion that the cash prize was includable in Simmons' gross income under section 61(a) and section 74(a) of the Internal Revenue Code, and assessed a tax deficiency of $5,230.00. Promptly Simmons paid and filed a claim for refund. . . .

I

We turn first to the taxpayer's contention that the prize money is excluded from his gross income by the terms of section 74(b). . . . We do not understand the taxpayer to claim immunity from the tax on the ground that capture of the fish or the award of the prize had any religious, charitable, scientific, educational, artistic, or literary significance whatever. His argument is that the payment was made in recognition of a civic achievement. He attributes a civic purpose to the American Brewery, Inc., in offering a prize the effect of which, he says, is to popularize the recreation and resort facilities of the state of Maryland. Yet it requires a considerable flight of fancy to romanticize the Fishing Derby into a civic endeavor. A glance at the advertisements announcing first the Derby and later the capture of Diamond Jim III unmistakably reveals that the purpose of the contest and of the prize was to stimulate the sale of American beer.

But even if a civic purpose could be discerned in the company's campaign, we are of the opinion that it is not the motivations of the donor that are legally relevant. The statute and its legislative history speak only of the character of the recipient's achievement, and the crucial test is the nature of the activity being rewarded. For example, if Simmons' achievement cannot be considered one of those enumerated in section 74(b), the exclusion provided in that section would not apply even if the prize were given by the state of Maryland to further a promotional campaign for its facilities. Conversely, if the recipient's achievement were "civic" in the sense of the statute, he would be entitled to its benefits even though the donor had a commercial purpose in making the award.

The taxpayer advances the further argument that a jury could reasonably find that the payment was for a civic achievement since it rewarded his skill as a fisherman, and that it was therefore error to refuse to permit the jury to determine the issue. To agree that these facts present a jury question would distort both the basic concept of the statutory exclusion and the meaning of the language used.

While dictionary definitions are not an infallible guide to the exact meaning of statutory language, they may limit the range of possible meanings. The word "civic" is defined as "[r]elating, pertaining, or appropriate, to a citizen." One may be said to be a civic person if he merely lives in a state and quietly obeys its laws, but a "civic achievement" involves more. It implies positive action, exemplary, unselfish, and broadly advantageous to the community. This interpretation of the phrase is reinforced by a consideration of the other types of achievement singled out in section 74(b). While the class of civic achievements is not limited to the others specifically enumerated, it must resemble them in general character, and they all represent activities enhancing in one way or another the public good. Although the qualifying word "civic" is the last in the enumeration of achievements, it should not be treated as a limitless extension of the previously enumerated classes, for that would erase all distinctions and make the exclusion almost as broad as the taxing provision of subsection (a). Moreover, the statute's legislative history indicates that only awards for genuinely meritorious achievements were to be freed from taxation. Thus, Nobel and Pulitzer prizes were there cited as examples of awards to be within the exclusionary provisions of sec-

tion 74(b), while prizes given in "radio and television giveaway shows, or as door prizes, or in any similar type contest" were to be taxed as income.

Viewing the facts most favorably to the taxpayer, we hold that he was not rewarded for a civic achievement, properly interpreted. There was nothing meritorious in a civic sense in catching this rock fish. Simmons was not even rewarded for an extraordinary display of skill, if that could be considered a civic achievement, for catching Diamond Jim III was essentially a matter of luck. The case might be different if, for example, Simmons had at considerable risk to himself captured and destroyed a killer whale terrorizing the Maryland seashore. That could have been regarded as a genuine civic achievement. But catching this fish cannot reasonably be so denominated, for the only community interest in the event was one of idle curiosity. Innumerable are the rhapsodies uttered in praise of the delights and virtues of the piscatorial pastime, but never to our knowledge has it been seriously called a civic enterprise. The character of this fortuitous event is not raised to a civic level by being linked to an advertising campaign aimed at selling beer. Far from resembling a Nobel or Pulitzer prize-winner, Mr. Simmons fits naturally in the less-favored classification the legislators reserved for beneficiaries of "giveaway" programs.

II

The taxpayer's next point is that he was at least entitled to have a jury decide whether the $25,000.00 payment to him was a gift, excluded from gross income by section 102. The Supreme Court's exposition of this branch of the law in Commissioner of Internal Revenue v. Duberstein, 363 U.S. 278 (1960), is of course controlling, and this court expressed its understanding of that decision in Poyner v. Commissioner, 301 F.2d 287 (4th Cir. 1962). Here it suffices to repeat that it is the function of the trier of fact to determine the basic facts and from these to infer the motivations of the donor. This does not mean, however, that in an appropriate case a district judge may not make a decision on summary judgment. Where, from the facts stipulated and submitted on affidavit, when viewed in the light most favorable to the taxpayer, it plainly appears that a jury could not reasonably infer that the payments were motivated "out of affection, respect, admiration, charity or like impulses," or from a "detached or disinterested generosity," or from similar sentiments, summary judgment for the Government is the correct disposition. Such is the present case.

The established fact is that there was no personal relationship between Simmons and the brewery to prompt it to render him financial assistance. Nor was it impelled by charitable impulses toward the community at large, for the prize was to be paid to whoever caught Diamond Jim III, regardless of need or affluence. Rather, the taxpayer has apparently rendered the company a valuable service, for, by catching the fish and receiving the award amid fanfare, he brought to the company the publicity the Fishing Derby was designed to generate.

Moreover, under accepted principles of contract law on which we may rely in the absence of pertinent Maryland cases, the company was legally obligated to award the prize once Simmons had caught the fish and complied with the remaining conditions precedent. The offer of a prize or reward for doing a specified act, like catching a criminal, is an offer for a unilateral contract. For the offer to be accepted and the contract to become binding, the desired act must be performed with knowledge of the offer. The evidence is clear that Simmons knew about the Fishing Derby the morning he caught Diamond Jim III. It is not fatal to his claim for refund that he did not go fishing for the express purpose of catching one

of the prize fish. So long as the outstanding offer was known to him, a person may accept an offer for a unilateral contract by rendering performance, even if he does so primarily for reasons unrelated to the offer. Consequently, since Simmons could require the company to pay him the prize, the case is governed by Robertson v. United States, 343 U.S. 711, 713-714 (1952). There, the Supreme Court held [under the 1939 Code] that, since the sponsor of a contest for the best symphonies submitted was legally obligated to award prizes in accordance with his offer, the payment made was not a gift to the recipient.

III

Having shown that the payment does not fall within any statutory exclusion, it remains to consider whether it is income within sections 61(a) and 74(a) and whether the Constitution confers upon Congress the power to tax this money. It is necessary first to examine the source of the Congressional taxing power, its scope and its limitations, to demonstrate that the appellant's position is untenable.

[The court decided that the tax was an indirect tax that could be levied by Congress by virtue of Article I, Section 8, Clause 1 of the Constitution, without apportionment among the states; but went on to hold that in any event the Sixteenth Amendment made apportionment unnecessary.]

2. Even if we were to assume that the tax upon Simmons is direct, it comes within the Sixteenth Amendment, which relieved direct taxes upon income from the apportionment requirement. We need look no further than the two most recent Supreme Court cases in this area. In Commissioner of Internal Revenue v. Glenshaw Glass Co., 348 U.S. 426 (1955), the Court upheld the inclusion in gross income of money received by the taxpayers as punitive damages, stating that "[h]ere we have instances of undeniable accessions to wealth, clearly realized, and over which the taxpayers have complete dominion." This test was specifically reaffirmed in James v. United States, 366 U.S. 213 (1961), where the Court considered the taxability of embezzled money. The plunder was held to be income solely because it came into the taxpayer's possession and control and despite the fact that he had no right to it and indeed was under a legal obligation to return it to its rightful owner. This obligation to repay was deemed irrelevant, for a gain "constitutes taxable income when its recipient has such control over it that, as a practical matter, he derives readily realizable economic value from it." As is apparent from the quoted statements, and as illustrated by the diverse factual situations in these cases, it is the status in the recipient's hands of the money being taxed which is the crucial factor, while the source of the money is not relevant.

The $25,000.00 received by Simmons squarely meets these tests laid down by the Supreme Court. The receipt of this sum constitutes an economic gain over which he has complete control and, better than the situation in *James,* complete legal right. Whether the money came to Simmons as a gift, or as a return for services, or for some other reason, it still is income to him.

It might be contended that reliance cannot properly be placed upon the *Glenshaw* and *James* decisions because they purport to interpret the meaning of "income" only as used in section 61 of the Internal Revenue Code and not as used in the Sixteenth Amendment. However, the opinions in both cases show that the Supreme Court was aware of the constitutional issues. In *Glenshaw,* these were dismissed in a single sentence. In *James,* the constitutional issues were unmistakably brought to the Court's notice by the dissent of Mr. Justice Whittaker. His sole objection was that the taxpayer had no legal rights to the money, and therefore, in his opinion, there was no economic gain that could be constitutionally

taxed. This feature of the controversy in *James* is not present in our case because Simmons enjoys a permanent economic benefit, not subject to any claim of restitution. None of the several opinions of the Justices in *James* intimates a doubt of the constitutional validity of a tax upon a true gain.

Moreover, the constitutional and the statutory provisions are closely related. The language of section 61, a paraphrase of the Sixteenth Amendment, "was used by Congress to exert in this field the full measure of its taxing power." [Commissioner v. Glenshaw Glass Co., 348 U.S. at 429.] This means that Congress intended to avail itself to the utmost of the exemption granted it by the Sixteenth Amendment from the requirement of article I, section 8, clause 1, that direct taxes shall be apportioned. Thus, the Court, in upholding taxes on income imposed by section 61 which might also be direct taxes, necessarily decides that such taxes are authorized by the Sixteenth Amendment. And conversely, from our conclusion here that Simmons received income within the meaning of that amendment, it necessarily follows that it is taxed by sections 61(a) and 74(a).

Affirmed.

NOTE

1. *Prizes as excludable "gifts"?* Does the court's discussion of the taxpayer's second point (that the amount received by him was a "gift") imply that *some* prizes and awards can be excluded from income as gifts? What is the relation between the general rule of §74(a) and the exclusion of gifts found in §102(a)? diff between prizes + awards + gift

How should the following amounts be treated:

(a) An award received in a beauty or popularity contest by a girl whose name is entered by an admiring friend without her knowledge? 74(a) - includable

(b) An award to the mother of the first set of twins born after New Year's Eve? Would it matter whether the donor was a diaper laundry service or the Planned Parenthood League? 74(a)

(c) An award by an octogenarian to whichever of his children has the largest family? 102(a)

(d) An award by the New York Times to one of the "Hundred Neediest Cases"? 102(a)

(e) The Stalin (or Lenin) Peace Prize? Paul Robeson's award, received in 1953, was treated by the Internal Revenue Service as an exempt "gift" under the 1939 Code. IR-277 (Feb. 4, 1959).

2. *Valuing the prize or award.* How much must be reported if a taxable prize consists of a trip to Miami, a lifetime supply of fig newtons, or something else that the winner would not have purchased with his own money? See Turner v. Commissioner, ¶54,142 P-H Memo T.C. (cruise tickets; value to the winner, not retail value, controls); Rev. Rul. 57-374, 1957-2 C.B. 69 (winner declined to accept all-expense paid vacation trip; held, no income); see also Rev. Rul. 62-74, 1962-1 C.B. 68 (winner taxed on present discounted value of cash award that was placed in escrow account by contest sponsor to be paid over several years).

REV. RUL. 59-118

1959-1 C.B. 41 (1959)

Advice has been requested whether amounts received from the Veterans Administration by an individual, who is enrolled at a university as a candidate for a doctoral degree in psychology and who is required to serve a training period at Veterans Administration hospitals as a staff assistant, are excludable from gross income under section 117 of the Internal Revenue Code of 1954.

The Veterans Administration conducts a unified psychology training program in cooperation with universities approved for doctoral training in psychology by the American Psychological Association. The dual purpose of the program is to furnish a continuing source of qualified staff psychologists for the Administra-

tion's Department of Medicine and Surgery and to provide needed services for which psychological technicians would otherwise have to be employed. Throughout the training period, trainees pursue their academic studies at the university and give part-time service toward meeting hospital and clinic needs, under the joint jurisdiction and supervision of university and Veterans Administration staffs. While preparing for full-time staff positions, the trainees serve as a part of the work force of the hospitals and render service to patients. The trainees, functioning as junior staff members, constitute an essential part of psychology services at the stations to which they are assigned.

All candidates for such traineeship are initially selected by the department of psychology of an approved university, and such individual must have at least a bachelor's degree from a college or university of recognized standing. The candidate must submit to the university and to the Veterans Administration Standard Form 57, Application for Federal Employment. Individuals who already have an advanced degree in psychology, but lack necessary experience, may apply for training if they are sponsored by one of the participating universities. During the training period the trainees are paid for the number of hours actually worked at Veterans Administration stations to which assigned at such compensation rates as are established with reference to the base full-time applicable pay levels of the Federal civil service. They are employees of the United States Government.

Section 1.117-4(c) of the Income Tax Regulations provides, in part, that if any amount paid or allowed to, or on behalf of, an individual to enable him to pursue studies or research, represents compensation for past, present, or future employment services, or represents either payment for services which are subject to the direction or supervision of the grantor, or research primarily for the benefit of the grantor, such payments or allowances shall not be considered as amounts received as a scholarship or a fellowship grant for the purpose of section 117 of the Code.

The fact that such individuals are also attending graduate school at a university does not change their status as employees of the Veterans Administration. Revenue Ruling 57-386, C.B. 1957-2, 107, holds that stipends received by interns and residents at a training hospital who assisted in the care of patients as a part of their training represented compensation for services and not nontaxable fellowship grants. They were primarily performing services for the hospital even though in the process they were acquiring training and experience in their particular specialties. See also Revenue Ruling 56-101, C.B. 1956-1, 89, and Revenue Ruling 57-385, C.B. 1957-2, 109.

Revenue Ruling 57-560, C.B. 1957-2, 108, holds that amounts received from the Mayo Foundation and Mayo Properties Association as fellowship grants and cost-of-living allowances by doctors of medicine, who are studying for graduate degrees at a clinic or hospital, are excludable from gross income under section 117 of the Code, where the doctors rendered no services to the hospital or clinic, replaced no personnel who would be employed on a salary basis, and performed no functions for the benefit of the grantor or training institution. None of these conditions exist in the instant case.

Accordingly, it is held that the amounts paid by the Veterans Administration to graduate students while serving a training period at Veterans Administration hospitals as staff assistants, as a condition to receiving a doctorate degree in psychology from a university, represent compensation for services rendered and not nontaxable scholarship or fellowship grants. Such amounts are includible in the student-employees' gross income under section 61 of the Code.

Revenue Ruling 57-560, C.B. 1957-2, 108, distinguished.

NOTE

1. *Scholarships and fellowship grants.* Section 117 distinguishes between persons who are candidates for degrees and those who are not. The exclusion is allowed to non-candidates by §117(b)(2) only if the grantor is a tax-exempt institution, government, or similar agency of the types specified by §117(b)(2)(A), and the exclusion is limited to $300 per month for a total period of 36 months. Candidates for degrees are not subject to these restrictions. As to employment, a candidate for a degree is taxable to the extent that his scholarship or fellowship grant "represents payment for teaching, research, or other services in the nature of part-time employment," unless the services are required of all candidates for the degree; in the case of non-candidates, however, there is no explicit statutory prohibition on employment. But Regs. §1.117-4(c) provides that even if an amount is paid to enable the recipient to pursue studies or research, it does not qualify as a scholarship or fellowship grant if it "represents either compensation for past, present, or future employment services or represents payment for services which are subject to the direction or supervision of the grantor" — unless §117(b)(1) (services required of all candidates for a degree) is applicable.

If all candidates for the doctorate in psychology at a particular university were required to serve a training period at a veterans' hospital, would the compensatory character of their stipends be excused by the reference in §117(b)(1) to "services required of all candidates (whether or not recipients of scholarships or fellowship grants) for a particular degree"? Or is the ruling based on the theory that the amounts in question were not "scholarships or fellowship grants"? Does anything turn on the fact that the stipends were paid by the agency that operated the hospitals, rather than by an independent grantor? See Regs. §1.117-4(c)(2), disqualifying amounts received for the pursuit of studies or research pursued "primarily for the benefit of the grantor." If an intern or resident at a hospital receives a grant from the Ford Foundation as support while he completes his medical training, would the fact that his training consists entirely of looking after patients disqualify him for the exclusion? Would a non-teaching member of a university faculty qualify for the exclusion of §117(b)(2), if the university labels his regular stipend as a "fellowship" rather than "salary"? Could a university employ its professors to teach for half their regular salaries and pay the rest to them as "research fellowships"?

For other problems in applying §117, consult any post-doctoral fellow in your university's department of physics or chemistry; see also Bachmura v. Commissioner, 32 T.C. 1117 (1959); Rev. Rul. 61-65, 1961-1 C.B. 17 (Fulbright grants); Ussery v. United States, 296 F.2d 582 (5th Cir. 1961); Woddail v. Commissioner, 321 F.2d 721 (10th Cir. 1963) (physician serving in hospital and receiving training; stipend held taxable).

2. *Relation of §102(a) to §117.* Does the introductory clause of §74(a) imply that a scholarship or fellowship grant that does not meet the standards of §117 is ipso facto includible in gross income? Or is there an alternate route to immunity: the exemption accorded to gifts by §102(a)? In this connection, consider whether a payment received to enable a professor to pursue his research can qualify as a gift under §102(a) even though it fails to qualify for an exclusion under §117 because, e.g., it exceeds the $300-36 month restriction or is paid by a non-qualified grantor. According to Regs. §1.117-3(a) and (c), an amount paid by an individual to aid a relative or friend in pursuing his studies or research does not constitute a "scholarship" or "fellowship grant" if the grantor "is motivated by family or philanthropic considerations."

3. *Expenses defrayed by a grant.* As to the exclusion under §117(a)(2) of amounts "received to cover expenses," Regs. §1.117-1(b)(2)(i) requires that the amount be "specifically designated" for this purpose if the grant was awarded after July 28, 1956 (when this requirement was originally promulgated). For the possibility of deducting such amounts (even if not properly designated) as business expenses, see page 260 infra.

4. *Awards to children of grantor's employees.* If a business corporation establishes a scholarship program for the children of its employees, is it possible that the awards will be excluded from the children's income by §117 but included in the parents' income by §61(a)? What if the employee has a bright child and goes to work for an employer with such a program in the hope that his child will qualify for an award? [illegible] qualify him

5. *Effect of scholarship on dependency claim.* In determining whether a taxpayer has provided more than half of the "support" of a child for whom he claims a dependency exemption under §151(e), an amount received by the child as a "scholarship for study at an educational institution" is disregarded by virtue of §152(d). In Ide v. Commissioner, 40 T.C. 721 (1963), the court apparently accepted the government's theory that the term "scholarship" as used in §152(d) should be given the same meaning as in §117.

6. *References.* Gordon, Scholarship and Fellowship Grants as Income: A Search for Treasury Policy, 1960 Wash. U.L.Q. 144; Mansfield, Income from Prizes and Awards and from Scholarship and Fellowship Grants, 19 N.Y.U. Inst. on Fed. Taxation 129 (1961); Note, Federal Tax Incentives for Higher Education, 76 Harv. L. Rev. 369 (1962).

3. *Bequests*

In addition to excluding gifts from gross income, §102 of the 1954 Code provides for the exclusion of property acquired by bequest, inheritance, or devise. In doing so, it carries forward §22(b)(3) of the 1939 Code without substantive change. Section 1014 provides that the basis to the heir of such property is its fair market value at the date of the decedent's death, unless the decedent's executor elected under §2032 to value the estate as of one year after death, in which event the optional valuation is controlling. This use of the date-of-death value (or, when applicable, the optional date value) was carried forward by §1014 without change from §113(a)(5) of the 1939 Code, but it was extended in 1954 to embrace property that was not acquired by bequest, inheritance, or devise but was nevertheless includible in the decedent's estate for federal estate tax purposes.

NOTE

1. *Acquisition by "bequest, etc."* The exclusion of property received by bequest, devise, or inheritance has produced an occasional conflict between "bequests" and "compensation" analogous to the *Duberstein* problem, supra page 119, of gift vs. compensation. In McDonald v. Commissioner, 2 T.C. 840 (1943), §102(a) was held to apply to property left to the taxpayer by her employer, for whom she had acted as nurse, secretary, dietitian, and driver, "in appreciation of the many years of loyal service and faithful care rendered me." But compare Davies v. Commissioner, 23 T.C. 524 (1954) (amount received in compromise of claim against an estate based upon an oral contract whereby the decedent promised to take care of the taxpayer in his will in exchange for taxpayer's services; held not excludable); Cotnam v. Commissioner, 263 F.2d 119 (5th Cir. 1959) (same).

When a testator names a relative or friend as executor, it is common to provide for a "bequest" in lieu of the statutory commissions to which the executor would be entitled for his services. The Supreme Court has held that if mere qualification as executor (as distinguished from the performance of services) is sufficient to entitle the individual to the payment, it constitutes a bequest rather than taxable compensation. United States v. Merriam, 263 U.S. 179 (1923). See Bank of New York v. Helvering, 132 F.2d 773 (2d Cir. 1943), illustrating the difficulty courts have encountered in applying the Supreme Court's distinction. Query: why should the testator have required the individual to qualify as executor to be eligible for the bequest? Would one really be entitled to the bequest if he qualified and promptly resigned without cause? In the *Bank of New York* case, the amount granted to the executor by the will exceeded the statutory commissions, and the executor (or rather his executors, since in the meantime he had died) treated only the excess as a bequest. Was this too generous to the government?

In Valleskey v. Nelson, 271 F.2d 6 (7th Cir. 1959), the taxpayer sold property that he had purchased from a decedent's estate for less than its fair market value by virtue of an option granted to him by the decedent's will. The court held that the property was acquired by purchase, not by bequest, so that the taxpayer's basis was his cost, not the

property's fair market value at the date of the decedent's death. The court did not explain why the taxpayer could not add the fair market value of the *option* to his cash outlay, on the theory that he acquired the option by bequest; but see Helvering v. San Joaquin Fruit & Investment Co., infra page 450.

2. *Property acquired in settlement of will contest.* In Lyeth v. Hoey, 305 U.S. 188, 195-197 (1938), the Supreme Court held that the grandson of a decedent who had received an amount in settlement of a will contest could exclude it under §102(a):

> Petitioner was concededly an heir of his grandmother under the Massachusetts statute. It was by virtue of that heirship that he opposed probate of her alleged will which constituted an obstacle to the enforcement of his right. Save as heir he had no standing. Seeking to remove that obstacle, he asserted that the will was invalid because of want of testamentary capacity and undue influence. . . . It was in that situation, facing a trial of the issue of the validity of the will, that the compromise was made by which the heirs, including the petitioner, were to receive certain portions of the decedent's estate. . . .
>
> Respondent agrees that the word "inheritance" as used in the federal statute is not solely applicable to cases of complete intestacy. The portion of the decedent's property which petitioner obtained under the compromise did not come to him through the testator's will. That portion he obtained because of his heirship and to that extent he took in spite of the will and as in case of intestacy. The fact that petitioner received less than the amount of his claim did not alter its nature or the quality of its recognition through the distribution which he did receive.

If the taxpayer's status as an heir of the decedent had been in dispute, would a payment in compromise of his claim have been tax-free? In United States v. Gavin, 159 F.2d 613 (9th Cir. 1947), a payment to one claiming as an illegitimate child of the deceased was held tax-free, though as part of the compromise the claimant agreed to refrain from asserting her paternity in the future and consented to a probate decree finding against the relationship.

See also Hopkins v. Commissioner, 13 T.C. 952 (1949) (Lyeth v. Hoey held inapplicable where property used to settle will dispute came from decedent's widow rather than from his estate).

See generally, Schenck, Tax Effects of Will Contests and Compromises, 1961 Tulane Tax Inst. 214.

3. *Income in respect of a decedent.* If a bequest consists of an uncollected claim for salary, commissions, or fees, which was not reported as income by the decedent during his lifetime because he was on the cash basis, the heir is not taxed when he inherits the claim; but he will be taxed on collecting it under §691, relating to "income in respect of a decedent." For more on this troublesome subject, see infra page 1075.

4. *Gift or bequest of income from property.* If A receives property by gift or inheritance, the value of the property itself is tax-exempt under §102(a), but he must report the income of the property thereafter. But if Blackacre is transferred (either inter vivos or on death) to A for life, remainder to B, what is the status of the income during A's life? Note that if both Blackacre itself and the income it produces during A's life were exempt from tax, the exemption for gifts and bequests would be larger when split interests were created than if the property had been given outright. In Irwin v. Gavit, 268 U.S. 161 (1925), the Supreme Court rejected the contention that the income beneficiary of a trust was immune from tax:

> The language quoted [now §102(a)] leaves no doubt in our minds that if a fund were given to trustees for A for life with remainder over, the income received by the trustees and paid over to A would be income of A under the statute. It seems to us hardly less clear that even if there were a specific provision that A should have no interest in the corpus, the payments would be income none the less, within the meaning of the statute and the Constitution and by popular speech. In the first case it is true that the bequest might be said to be of the corpus for life, in the second it might be said to be of the income. But we think that the provision of the act that exempts bequests [i.e., §102(a)] assumes the gift of a corpus and contrasts it with the income arising from

it, but was not intended to exempt income properly so-called simply because of a severance between it and the principal fund. No such conclusion can be drawn from Eisner v. Macomber, 252 U.S. 189, 206, 207. The money was income in the hands of the trustees and we know of nothing in the law that prevented its being paid and received as income by the donee.

The Courts below went on the ground that the gift to the plaintiff was a bequest and carried no interest in the corpus of the fund. We do not regard those considerations as conclusive, as we have said, but if it were material a gift of the income of a fund ordinarily is treated by equity as creating an interest in the fund. Apart from technicalities we can perceive no distinction relevant to the question before us between a gift of the fund for life and a gift of the income from it. The fund is appropriated to the production of the same result whichever form the gift takes. Neither are we troubled by the question where to draw the line. That is the question in pretty much everything worth arguing in the law. . . . Day and night, youth and age are only types. But the distinction between the cases put of a gift from the corpus of the estate payable in instalments and the present seems to us not hard to draw, assuming that the gift supposed would not be income. [268 U.S. at 166-167.]

Section 102(b)(2) was enacted in 1942 to codify the rule of Irwin v. Gavit.

Note that this scheme assigns the entire benefit of the gift exclusion to the remainderman. Congress might, in the alternative, have divided the exclusion between life tenant and remainderman. For example, if the property transferred is worth $100,000 and A is 30 years old, his life estate is worth about $72,000 and B's remainder about $28,000 (Table I, Regs. §20.2031-7). These interests could be exempted from tax, with the excess over them taxed as income, by (a) allowing A to deduct an appropriate portion of his $72,000 each year from the income actually received and (b) requiring B to report the difference between $28,000 and the value of the transferred property as income, either when his remainder fell in or in aliquot portions in the preceding years. Under this alternative approach, the net amount taxed would be the same as under the first sentence of §102(b), but it would be divided between A and B instead of being attributed solely to A. Note that §102(b)'s treatment of A is made more explicit by §273, denying him the right to amortize the value of his life estate.

The second sentence of §102(b), also enacted in 1942, is concerned with a transfer of property, under which A is to receive an annuity (or other periodic payments) payable out of either income or corpus. Burnet v. Whitehouse, 283 U.S. 148 (1931), held that such amounts were excluded from income by §102(a), whether paid from income or not, so long as they could be paid out of corpus if necessary. By virtue of the 1942 change in the statute, these amounts are now taxable to the extent paid or credited from income. If the transfer is in trust, this provision of §102(b) must be considered in conjunction with §663(a)(1) and certain other sections of Subchapter J. The *Whitehouse* case is still applicable to lump sum payments, as distinguished from amounts to be paid "at intervals." Lindau v. Commissioner, 21 T.C. 911 (1954).

5. *Basis of inherited property*. For many years, the heir's basis for property acquired by bequest, inheritance, or devise has been its fair market value on the date of the decedent's death (or on the optional valuation date if the excutor elected under §2032 to use this date in valuing the estate for federal estate tax purposes). Because so much property has increased in value over the years, the date-of-death value is often referred to as a "stepped-up" basis, though a "stepped-down" basis is the result if the property declined in value during the decedent's ownership.

Before 1954, property that had been transferred by the decedent during his lifetime (e.g., property transferred in contemplation of death) was not ordinarily entitled to a date-of-death basis, even though it was included in his estate in computing the federal estate tax. The 1954 Code remedied this disparity in large part by adding paragraphs (2) through (9) of §1014(b). For more on §1014, see infra page 1074.

The value of inherited property on the date of death (or on the optional valuation date) is controlling even though distribution is postponed. See Regs. §1.1014-4(a)(2), providing that "all titles to property acquired by bequest, devise, or inheritance relate back to the death of the decedent, even though the interest of the person taking the title was, at the

date of death of the decedent, legal, equitable, vested, contingent, general, specific, residual, conditional, executory, or otherwise." This regulation was upheld in Helvering v. Reynolds, 313 U.S. 428 (1941), requiring the contingent remainderman under a testamentary trust created on his father's death in 1918 to use as his basis the 1918 value of property distributed to him in 1934. The date-of-death value is sometimes referred to as a "uniform" basis because it is controlling whether the property is sold by the decedent's executor, a trustee under a testamentary trust, a remainderman (as in Helvering v. Reynolds), or a legatee. A similar "uniform basis" rule is applicable to property received by gift, Regs. §1.1015-1(b). For some of the problems that arise when two or more persons (e.g., a life tenant and a remainderman) possess interests in inherited property, see Chirelstein, Some Aspects of Basis and the Proposed Regulations, 35 Taxes 151 (1957); *infra* page 507.

4. *Life Insurance*

Section 101(a)(1) excludes the proceeds of a life insurance policy, paid by reason of the death of the insured, from gross income, a principle that was carried forward from §22(b)(1) of the 1939 Code. Important changes were made in 1954, however, in the treatment of interest paid by the insurance company where the proceeds of the policy are not paid in a lump sum.

Section 101(a)(2), like its predecessor §22(b)(2) of the 1939 Code, ordinarily denies the exclusion if the policy was transferred for a valuable consideration.

JAMES F. WATERS, INC. v. COMMISSIONER
160 F.2d 596 (9th Cir. 1947)

Before GARRECHT, HEALY, and BONE, Circuit Judges.

HEALY, Circuit Judge. . . .

The taxpayer is a dealer in automobiles. In 1938 it acquired certain insurance policies written on the life of its president, who was also its principal stockholder, these policies having been originally taken out by the president in his own right. In 1935 the insured had transferred the policies to another corporation which he controlled, in consideration of their aggregate cash surrender value less the current premiums. In 1938 the transferee corporation merged with the taxpayer and the policies became the latter's property by operation of law. Neither party to the merger recognized any gain or loss thereon. Taxpayer failed to pay premiums becoming due in 1939, and the policies, in conformity with their provisions, became converted into various forms of term insurance. Upon the death of the insured in 1941 taxpayer received a sum in excess of $141,000 upon the policies but did not report the proceeds in its returns. In determining the deficiencies the Commissioner arrived at the taxable net proceeds by deducting all sums paid as premiums since the original transfer, the amounts paid for the policies when originally transferred, and an additional credit unnecessary to describe.

Taxpayer contends that it is entitled to the benefit of [§101(a)(1)], excluding from gross income amounts received under a life insurance policy paid by reason of the death of the insured. Section [101(a)(2)], under which the deficiency in income tax was assessed, is said to be inapposite. This subdivision provides that in the case of a transfer for a valuable consideration, by assignment or otherwise, of a life insurance contract, only the actual value of such consideration and the amount of the premiums and other sums paid by the transferee shall be exempt from taxation under [§101(a)(1)]. Taxpayer points to [§161(a)(2)(A)] which in substance provides that the provision above summarized shall

not apply if the insurance contract has a basis for determining gain or loss in the hands of a transferee determined by reference to such basis thereof in the hands of the transferor.* We think the sentence is not here relevant. The common sense of the limitation and its legislative history alike indicate that the limitation is to be effective only if the transfer by the *original owner* of the policy was one in which the transferee took the transferor's basis — a situation not obtaining here.[1] Had the first transferee collected on the policies the net proceeds would have been includable in gross income; and taxpayer stands in the shoes of its transferor.

As an alternative the taxpayer claims that [§101(a)(2)] is inapplicable because of the lapse of the policies in 1939 for nonpayment of premiums. The argument proceeds on the assumption that the policies were not thereafter the same contracts as those transferred. The assumption is groundless. No new contracts came into existence. The changes in the periods and amounts of insurance were effected by the terms of the insurance contracts as written in the first instance.

As to two of the policies taxpayer argues that they had no cash surrender value when originally transferred, hence their transfer was not for a valuable consideration. However, the value of an insurance policy to the holder is not confined to its cash surrender value; and the record discloses that, in addition to the payment of the surrender value of the remaining policies, a general assignment of all the policies was contemporaneously made by the insured for a recited consideration of ten dollars. There was no direct attempt below to impeach the verity of the recital,† and such evidence as there is on the point is equivocal and inconclusive.

The final argument on this phase is that the insurance proceeds constitute an indemnification of the taxpayer for the loss of its president, and are not income within the intendment of the Sixteenth Amendment. Eisner v. Macomber, 252 U.S. 189, is relied on as authority. While that decision has displayed an unexpected vitality within the limits of its particular facts, the lower federal courts would hardly be justified in extending its doctrine to wider fields. We do not doubt the power of Congress to tax life insurance proceeds as income under the limitations prescribed by this statute. Compare United States v. Supplee-Biddle Co., 265 U.S. 189, 195.[2]

NOTE

1. *Transferees of life insurance policies.* As the court points out, §101(a)(2)(A) (permitting a transferee for a valuable consideration to claim the exclusion if the contract has

* Because the taxpayer corporation had acquired the policies in 1938 in a statutory merger, its basis for them was the same as their basis in the hands of the merged corporation. But the merged corporation had acquired them in 1935 from the insured for their cash surrender value, so that *its* basis was not determined in whole or in part by reference to his basis. — ED.

1 The limitation seems to have been enacted to avoid inequitable results such as those occurring in King Plow Co. v. Commissioner, 5 Cir., 110 F.2d 649, and Stroud & Co. v. Commissioner, 45 B.T.A. 862. Compare result in Hacker v. Commissioner, 36 B.T.A. 659.

[In the King Plow Co. and Stroud & Co. cases, the "transfer for valuable consideration" provision was applied to successor corporations that had received the insurance policies in corporate reorganizations. — ED.]

† In Haverty Realty & Investment Co. v. Commissioner, 3 T.C. 161 (1944), the taxpayer successfully rebutted a formal recital of consideration in a transfer of insurance policies from one corporation to another controlled by the same shareholders, with the result that the "transfer for valuable consideration" restriction was held inapplicable. — ED.

2 For cases in which, without discussion of the constitutionality of the statutory provisions, taxpayers were in analogous circumstances required to include in gross income the proceeds of life insurance policies, see cases cited in footnote 1, supra. Consult also Lambeth v. Commissioner, 38 B.T.A. 351; E. T. Slider, Inc. v. Commissioner, 5 T.C. 263; Premier Products Co. v. Commissioner, 2 T.C. 445.

a "substituted basis" in his hands) was enacted to overrule several judicial decisions which had held that a transfer of a contract by a corporation to its successor in a merger made the proceeds ineligible for the exclusion of §101(a)(1), despite the continuing economic interest of the shareholders of the merged corporation. The result in the *James F. Waters, Inc.* case also met with Congressional disapproval: see §101(a)(2)(B), enacted in 1954 as a substitute for a more drastic proposal to eliminate entirely the "transfer for valuable consideration" restriction. The following extract from the Senate Report on the 1954 Code explains the 1954 amendment:

> Under present law life-insurance proceeds payable by reason of death are exempt from tax. However, where an insurance contract is transferred for a valuable consideration, only the actual value of the consideration and subsequent premiums paid by the transferee are tax exempt and the balance is taxable as income. The House bill grants full exemption to life-insurance proceeds payable at death where the contract is transferred for a valuable consideration.
>
> Your committee believes that the procedure in the House bill may result in abuse in encouraging speculation on the death of the insured and therefore has reinstated present law with respect to contracts transferred for a valuable consideration. However, it is made clear that complete exemption is to be granted to life-insurance proceeds paid under contracts which have been transferred for certain legitimate business reasons rather than for speculation purposes. [S. Rept. No. 1622, 83d Cong., 2d Sess. 14.]

Does §101(a)(2)(B) effectively distinguish between transfers for "legitimate business reasons" and transfers for speculation?

Note that no exemption from the "transfer for valuable consideration" restriction was required for transfers of insurance policies by gift or bequest, since no consideration is paid for such transfers.

2. *Interest when payment of principal sum is postponed.* For some years, the Code has provided that if the proceeds of a policy are held by the insurance company "under an agreement to pay interest" to the beneficiary, the interest is taxable and only the principal qualifies for the exclusion. In Commissioner v. Pierce, 146 F.2d 388 (2d Cir. 1944), it was held that this provision, now §101(c), applies only if the principal sum is held intact by the insurer for a period of time; if the principal sum is to be paid to the beneficiary in installments, the interest component of the installment payments was held to be tax-free to the beneficiary even though the installment option was elected by him rather than imposed on him by the insured. In 1954, however, Congress enacted §101(d), under which the interest component of such post-death payments is taxable to the beneficiary — subject to a $1000 annual exemption for the insured's surviving spouse.

3. *Interest "embedded" in principal sum payable.* If the life insurance policy is an ordinary life policy, rather than term insurance, part of each year's premium is for pure insurance protection and part constitutes savings on which a return is earned. If the insured had purchased term insurance, the premium on which is less because there is no element of savings, and had deposited the balance in a savings account, the interest credited to the account would be taxed to him during his life. The interest component of "ordinary" life insurance, however, is taxed neither to the insured when it is earned nor to the beneficiary when it is paid. Section 101(d), in other words, applies only to the interest earned on the proceeds after the insured's death, not to the part of the proceeds that is attributable to earnings during his life.

In The Case Against the Case for Term Insurance, Fortune 230 (Sept. 1963), the effect of excluding the interest component of life insurance from gross income is summarized as follows:

> The chart at the left [omitted] shows the cumulative cost of two $10,000 policies to an individual who is thirty-five when they are first taken out. On the whole-life policy he pays a total of $4,758 in premiums, but this cost can be reduced by $1,410 if he lets his dividends accumulate, leaving a net cost of $3,348. On the term policy, the net premium cost is $1,146 — a difference of $2,202, or about $111 a year. The chart at the right [omitted] shows that the individual who pays the extra premium will have

> $3,898 [in cash surrender value] at the end of twenty years, and there is virtually no tax on this. To accumulate the same amount by investing $111 a year during that period, he would have to earn 5.1 percent on his money, and any such earnings would be fully taxed either as dividends or as capital gains. Even if he could count on earning an average of 8 percent, all in the form of capital gains, he would be only a little better off than with whole life. An 8 percent return on $111 a year would give him $5,600 after twenty years, but for anyone in the 50 percent (or higher) tax bracket the capital-gains tax would reduce this amount to $4,760.

See Goode, Policyholders' Interest Income from Life Insurance Under the Income Tax (Brookings Institution, 1963).

4. *Tax effect of surrendering policy.* If a life insurance policy is surrendered, the tax status of the cash surrender value is governed by §72(e)(1): the excess of the cash value over the premiums paid is taxable. Is there any reason why the interest which is earned by the investment component of the premiums should be taxed if the policy is surrendered at a profit but excluded if the proceeds of the policy are paid to the beneficiary when the insured dies?

The proceeds of a matured endowment policy (unless paid as an annuity) are also taxed like the cash surrender value of a life insurance policy, that is, the excess of the amount received over the premiums paid is taxable. Why are the earnings on such a contract not excluded in the same manner as the interest component of the proceeds of a life insurance policy?

5. *Annuities*

Section 72 of the 1954 Code, governing the tax treatment of payments under annuity contracts, is a complete revision of its predecessor, §22(b)(2) of the 1939 Code. The case that follows, decided under the old Code, illustrates one of the reasons for the changes.

EGTVEDT v. UNITED STATES
112 Ct. Cl. 80 (1948)

LITTLETON, Judge, delivered the opinion of the court:

Plaintiff purchased four annuities in 1937 for $25,000 each, or a total of $100,000, entitling him to aggregate monthly payments of $407, or $4,884 a year, for the balance of his life. Each contract provided that in case of plaintiff's death prior to the receipt by him of a sum equal to the total premium paid, a further sum equal to the balance of the premium would be paid to his wife or to his estate.

Plaintiff seeks to recover income tax deficiencies and interest assessed and collected for 1938 and 1939 on account of the exaction of a tax on a portion of the annuity payments received in those years, on the asserted ground that Section 22(b)(2) of the [1939 Revenue Code] is unconstitutional. In each of the years mentioned the Commissioner of Internal Revenue, pursuant to the explicit requirements of Section 22(b)(2) of the [1939 Revenue Code] . . . , required that of the annuities totaling $4,884 received under the contracts, the amount of $3,000, being an amount equal to 3 per cent of the consideration paid for the annuity contracts, be included in gross income. Plaintiff paid the deficiencies and interest assessed and his claims for refund thereof were rejected.

It will be seen in this case that, as in other cases where the treatment of annuity payments for tax purposes has received judicial attention, the plaintiff has been required to include in gross income the annuity payments received in each year to the extent of an amount equal to 3 per cent of the aggregate consideration paid

for the annuity contracts, undiminished by any payments made to the annuitant in prior years in excess of such percentage amount. Therefore, so long as Section 22(b)(2) remains unchanged, the plaintiff, aged 45 and with a normal life expectancy, on the basis of mortality tables, of about 28 years at the time he purchased the annuities in August 1937, will be required to include in income not only $3,000 of the $4,884 received in each of the years 1938 and 1939, but a like amount in each of the subsequent years of his life, notwithstanding approximately 53 years (100,000 ÷ 1,884) will be required, on the basis of such table, for the annual amounts received by plaintiff in excess of $3,000 to aggregate the sum of $100,000 paid for the annuity contracts.

Plaintiff takes the position that the taxing of $3,000 of the $4,884 received by him in each of the years 1938 and 1939 (at which times he had received only a small fraction of the amount he had paid for the annuity policies), necessarily constitutes taxation on an amount which was not income within the meaning of the Sixteenth Amendment, and that insofar as the Revenue Act directs or permits such taxation it is unconstitutional because the tax attempted to be imposed is a direct tax on property without the apportionment required by Article I, Section 2, Clause 3, and Article I, Section 9, Clause 4, of the Constitution.

Plaintiff first contends that the full amounts of the annuities received by him in 1938 and 1939 were nothing more than the return to him of a portion of the capital, invested in the purchase of the annuities, and hence that until the full purchase price of the annuities of $100,000 has been returned to him, the tax imposed by Section 22(b)(2) is a tax upon capital and not upon income derived from capital. The evidence offered by plaintiff falls far short of supporting this contention. . . .

The evidence shows that from the standpoint of an insurance company each payment represents in part interest on the investment. We cannot, therefore, say that such part is capital, and nontaxable, in the hands of the annuitant. Klein v. Commissioner, 6 B.T.A. 617; Guaranty Trust Co. v. Commissioner, 15 B.T.A. 20 . . .

Plaintiff next contends that even if it be conceded that some part of each annuity payment was income and, therefore, subject to be taxed, the amount arbitrarily designated by the statute for inclusion in gross income cannot be reconciled with the best evidence available as to what portions of the annuity payments received by him in 1938 and 1939 were, and what portions of the payments received in the future will be, gain derived by plaintiff from his investment of capital in the annuity policies. This contention is based primarily upon the American Annuitants' Male Select Table of Mortality, rated down one year, under which the probability, in August 1937, that plaintiff would survive another 53 years was less than one-half of one per cent. Such mortality tables are used by insurance and annuity companies in determining rates of insurance and annuities for certain groups of people. They are based on a limited number of lives and, while reliable in connection with certain determinations, we think such evidence is not determinative of the question presented. We cannot accept such evidence as sufficient, standing alone, to establish the fact that a substantial portion of the annuity payments received by plaintiff did not constitute income, nor as sufficient evidence to show that the action of Congress in fixing, after a full investigation, the measure of the taxable income in connection with receipt of such annuities was without foundation, wholly arbitrary and, therefore, void under the Sixteenth Amendment. Cf. Helvering v. Midland Mutual Life Insurance Co., 300 U.S. 216. . . .

The provision . . . with which we are here concerned was first enacted in the Revenue Act of 1934 (48 Stat. 680). In its report on H.R. 7835, which became the Revenue Act of 1934, the Ways and Means Committee of the House of Rep-

resentatives gave the following explanation of its investigations and conclusions in support of the change . . . :

Section 22(b)(2). Annuities, etc.: The present law [pre-1934] does not tax annuities arising under contracts until the annuitant has received an aggregate amount of payments equal to the total amount paid for the annuity. Payments to annuitants are, in fact, based upon mortality tables which purport to reflect a rate of return sufficient to enable the annuitant to recover his cost and in addition thereto a low rate of return on his investment. The change continues the policy of permitting the annuitant to recoup his original cost tax-free but requires him to include in his gross income a portion of the annual payments in an amount equal to 3 per cent of the cost of the annuity. While the per cent used is arbitrary, it approximates the rate of return in the average annuity.

Statistics show that an increasing amount of capital is going into the purchase of annuities, with the result that income taxes are postponed indefinitely. The change merely places the return of this form of investment on the same basis as other forms of investment by taxing that portion of each payment which in fact constitutes income.

Thus the formula employed by Congress in Section 22(b)(2) for taxing a portion of the payments received from the investment of funds in annuity contracts does not purport to directly charge with a tax the source from which the payments are derived. On the contrary, as stated in Manne v. Commissioner, 155 Fed. (2) 304, at 307,

Congress, in providing that the return from such annuity contracts should be included in the annuitant's gross income to the extent of three per cent of the sum invested by the annuitant, may be said to have made an approximation of that portion of the annuitant's return which is received by him in the form of income from the capital invested.

In holding that the taxpayer in the *Manne* case was, under the facts in that case, in no position to question the constitutionality of Section 22(b)(2) the court stated, at page 307:

. . . A taxpayer claiming that the section of the Revenue Code in question imposes in a given case a tax upon the return of capital under the guise of a tax on income is under the burden of establishing that no income was in fact received by him from his investment, or at least that the income actually received is less than three percent upon his investment. In this case there is no evidence to show that the earnings on the taxpayer's investment were less than three per cent of its amount during the taxable years in question, or to support the inference that the payments received by him were wholly or even partly a return of capital. . . . A taxpayer alleging unconstitutionality of an act must show not only that the act is invalid, but that he has sustained some injury as a result of its enforcement.

With the above-quoted statement of the court in mind, plaintiff now urges that under the facts presented in this case he has sufficiently sustained the burden of proof suggested in the *Manne* case, to show that Section 22(b)(2), to the extent that it undertakes to define as income and tax without apportionment $3,000 of his annual annuity payments, is unconstitutional as imposing a tax on property which is not income.

We cannot agree, for the reasons already stated, that plaintiff has sufficiently sustained the burden of proof which rests upon him. Moreover, we cannot determine from anything in the evidence what part of the payments periodically made to plaintiff during the taxable years actually represents earnings on the amounts paid by him as consideration for the policies and what part was simply a return of capital. Conceivably, so far as the evidence shows, the earnings on plaintiff's investment may have been, from the standpoint of the insurance companies, adequate to cover those portions of the 1938 and 1939 payments on which the tax in question was imposed. . . .

The weakness of plaintiff's argument lies in the premise that the taxpayer is

constitutionally guaranteed the full return of whatever sums he may invest before any part of the proceeds from his investment may be taxed as income, and that until this is assured Congress does not possess the power to designate as income subject to tax without apportionment, any receipts from his invested property which may in the course of events prove to have been derived from the property itself. Cf. Peabody v. Eisner, 247 U.S. 347; Stanton v. Baltic Mining Co., 240 U.S. 103.

The view we have taken with respect to plaintiff's premise as a ground for declaring an act of Congress to be unconstitutional is not, in our opinion, contrary to the generally accepted view that in the cases of sales of property the capital must be returned before there is any income to be taxed by way of profit, nor to anything which was said by the court in Burnet v. Logan, 283 U.S. 404. In that case the court was not deciding the question of whether the income statute involved sought to impose a tax beyond the constitutional power of Congress, but rather the question whether, under the applicable provisions of the statute before the court, certain receipts from a sale were taxable in part as capital. In stating, at page 414, that

> If a sum equal to the value thus ascertained had been invested in an annuity contract, payments thereunder would have been free from income tax until the owner had recouped his capital investment.

the court quite obviously was speaking of the situation as it would have existed under the Revenue Act of 1916, wherein amounts received as a return of premiums under annuity contracts were excluded from gross income.

Notwithstanding the absence of any showing of a certainty that Section 22(b)(2) levies a direct tax on capital, the plaintiff, on the strength of what was said in Burnet v. Logan, supra, and on the basis of the definition of "income" given in Eisner v. Macomber, 252 U.S. 189, 207, would have us treat the annuity payments to him as, in effect, piecemeal sales of his annuity investments, or as a gradual conversion of a capital asset from one form to another, so as to make it necessary to measure out the return of capital before arriving at any amount as gain derived therefrom. However, we think an investment of funds in an annuity is a transaction which is materially different from an ordinary business transaction entered into for profit where the concept of gain or loss might be applicable. To some extent one who has invested his money in an annuity may be said to have "spent it," that is, to have parted with it in order to obtain contractual rights which are not inherent, in the same degree at least, in the mere ownership of property.

> Elements of value other than the right to receive payments for life are present in an annuity, e.g., security, assurance of income, regularity of payments and relief from responsibility of attending to investment. The experience which actually develops for the annuitant, whatever that may be, extinguishes both the annuity's cost and its expected returns as a capital investment. [Evans v. Rothensies, 114 Fed. (2d) 958, 961.]

We are unwilling to say that the view of Congress, as indicated by the Committee reports on the enactment in question, that a substantial portion of amounts received under annuity contracts represents income and its finding as expressed in the statute that 3 per cent of such annual payments is a fair approximation of the income in the average annuity, were without foundation. . . .

NOTE

1. *Current treatment of annuities.* The taxation of annuities was completely revised by §72 of the 1954 Code. The basic principle of this provision can be illustrated by two examples.

Assume that $10,000 in premiums was paid for an annuity contract, and that upon maturity of the policy the obligor is to pay $1000 annually for 15 years to the annuitant or, should he not survive, to his estate. Under §72, two thirds (i.e., $10,000 "investment in the contract" divided by $15,000 "expected return") of each payment would be excluded from income, and the balance would be taxable. Over the contract period, the cost of the contract would be recovered tax-free, and the rest would be taxed.

If the obligor under the contract promised to pay $1000 annually for life to the annuitant, instead of guaranteeing payment for a specified number of years, the "expected return" would be calculated by reference to the annuitant's life expectancy on the annuity starting date. Assuming that his expectancy was then 18 years, the amount to be excluded from income would be 10/18 (i.e., $10,000 "investment in the contract" divided by $18,000 "expected return") of each payment. Note that in such a situation the amount to be excluded from income over the annuitant's life might be either more or less than the contract's cost. Short-lived annuitants can lose out under the new rule as they could under the 3 per cent rule; long-lived annuitants, who could never exclude more than cost under the 3 per cent rule, now get a chance to beat the government, though this may be of little comfort to those who lose.

In application, §72 may be more complicated than the examples given above. Adjustments will be necessary if (a) amounts have been received under the contract that were tax-free under prior law or under other sections of the 1954 Code, (b) the contract provides for payments that are related to the annuitant's life expectancy but also guarantees that a specific amount will be paid in any event ("refund annuities"), (c) there is more than one annuitant ("joint and several annuities"), or (d) the contract was transferred for a valuable consideration.

An attack on the constitutionality of the 1954 legislation, similar to the unsuccessful attack in the *Egtvedt* case, failed in Waller v. Commissioner, 39 T.C. 665, 678-680 (1963).

2. *Employee annuities.* By virtue of §72(f)(1), the annuitant can include as part of his "investment in the contract" any premiums paid by his employer for the contract, if the payments were includible in his income. See the *Drescher* case, supra page 36; §403(b).

3. *References.* See The Income Tax Treatment of Pensions and Annuities, by the Division of Tax Research, Treasury Department, reprinted in Hearings Before the House Ways and Means Committee, 80th Cong., 1st Sess., on Proposed Revision of the Internal Revenue Code, 1947, Part 5, pp. 4001-4004.

6. *Compensation for Personal Injuries or Sickness*

Section 22(b)(5) of the 1939 Code excluded from gross income compensation for personal injuries or sickness, whether received as damages, as workmen's compensation, as health or accident insurance, or as a military pension or annuity.

Section 104 of the 1954 Code re-enacts §22(b)(5), except as to amounts received by an employee through health or accident insurance attributable to contributions by the employer that were not includible in the employee's gross income. Such amounts are taxed to the employee unless they meet the requirements of §105 of the 1954 Code, which has no counterpart in the 1939 Code.

SIMMS v. COMMISSIONER
196 F.2d 238 (D.C. Cir. 1952)

Before EDGERTON, WILBUR K. MILLER and FAHY, Circuit Judges.

FAHY, Circuit Judge.

Petitioner Joseph B. Simms seeks reversal of a decision of the Tax Court of the United States to the effect that he owes a deficiency of income tax for the year 1945 in the sum of $572.71. His position is that the income which resulted in the tax was in legal contemplation received for physical disability incurred in the line of duty as a member of the Fire Department of the District of Columbia.

Accordingly, he contends, it was no part of his taxable income because [§104(a)(1)] exempts amounts received "under workmen's compensation acts, as compensation for personal injuries or sickness." The respondent, Commissioner of Internal Revenue, ruled that the income was paid to petitioner as a result of his retirement for age and not for disability. If this is right there is no controversy the deficiency is due. The Tax Court agreed with the Commissioner that petitioner was retired for age and therefore his retirement pay is not attributable to disability.

The District of Columbia Code provides that firemen may be retired with compensation to be paid from the Policemen and Firemen's Relief fund (1) by reason of permanent disability incurred in line of duty, or (2) after twenty-five years' service, under certain conditions, or, (3) having reached the age of sixty years, in the discretion of the Commissioners.

Petitioner was retired under an order of the Board of Commissioners of the District, dated January 31, 1942, reciting that he and others of the Fire Department, "having reached or passed the age of 64 years" are retired, and "are granted relief . . . payable from the Policemen and Firemen's Relief of the District of Columbia. . . ." Petitioner's relief was stated to be the sum of $187.50 per month, which petitioner states was 50% of his salary, in which event it was the maximum permitted by law. §4-507, D.C. Code (1940). On April 20, 1948, the Commissioners by a further order recited that at the time of his retirement petitioner, and others,

> were suffering from physical disabilities which were incurred in the line of duty to such an extent that had they not been retired when they were, for age, they would have been retired for physical disability incurred in the line of active Fire Department duty. . . .

It appears independently that prior to retirement petitioner had suffered physical disability in line of duty. The extent of this disability, however, except that it was permanent, has never been ascertained or translated by administrative action into an award of compensation or retirement pay for disability. See footnote 1, infra.

Notwithstanding that both the 1942 and 1948 orders make clear that petitioner was retired not for disability but for age, he contends that since he had become permanently disabled it was the duty of the Commissioners to retire him for disability under §4-507, D.C. Code (1940).[1] Therefore, he continues, a vested right to disability retirement accrued and the determination made in connection with his retirement that he should receive 50% of his salary is in legal effect an award of that amount for disability. We are unable to accept this view for two reasons. In the first place there has been no determination by the Commissioners of the extent of disability as a basis for fixing an amount of relief for disability. See Waller v. United States, 1950, 180 F.2d 194. In the second place, even though, as petitioner argues, the Federal authorities are not bound by the interpretation of the situation made by the District authorities, namely, that he was retired for age, nevertheless it is our view that the correct interpretation for Federal purposes is that petitioner was retired for age. Therefore the income he received as a consequence was not paid to him "under workmen's compensation acts, as compensation for personal injuries or sickness," [1954 Code, §104(a)(1)], and is not

---

[1] This section reads in pertinent part:

"Whenever any member of the . . . fire department of the District of Columbia shall become so permanently disabled through injury received or disease contracted in the line of duty as to incapacitate him for the performance of duty . . . , he shall . . . be retired from the service thereof and be entitled to receive relief from the said policemen and firemen's relief fund, District of Columbia, in an amount not to exceed 50 per centum per year of the salary received by him at the date of retirement. . . ."

excludable from his gross income in the process of arriving at his Federal income tax.

Affirmed.

NOTE

1. *Disability vs. age as the basis of retirement.* In Allen v. Spencer, 214 F.2d 205 (D.C. Cir. 1954), a group of retired District of Columbia police and firemen sued the District Commissioners to substitute for their retirement orders based on age and length of service, new orders based on disability. The court held that any objections to the original orders should have been made in accordance with the prescribed administrative procedures when the orders were issued. In Prince v. United States, 119 F. Supp. 421 (Ct. Cl. 1954), the court held that military retirement pay received by an army officer came within §104(a)(4) of the 1954 Code, where he could have been retired on the same pension for disability in line of duty. Apparently he had chosen (in 1943) to be retired for age so as to be eligible for recall to active duty, whereas a disability retirement would have barred a return to duty.

2. *Is §104(a) necessary?* In view of the rulings and decisions supra pages 79 et seq., on the status of amounts received as compensation for a loss of "personal rights," does §104(a) merely restate the obvious, or does it permit the exclusion of amounts that are not immunized by the rulings and cases? If an injured person recovers a lump sum from a tort-feasor for physical injury, pain and suffering, and loss of past and future earnings, is the entire amount excluded from income by §104(a)? What about a recovery by a husband for loss of corsortium or by a parent for loss of a child's earning capacity?

See Starrels v. Commissioner, supra page 82, on the status of a payment paid in advance of a personal injury for the "victim's" consent to and release of liability for the injury.

Do punitive damages imposed on a reckless or willful tort-feasor qualify for the exclusion of §104(a)?

3. *Reimbursement of deductible medical expenses.* The significance of §104's introductory clause, relating to §213, will become apparent when §213 is encountered, infra page 170.

KAUFMAN'S ESTATE v. COMMISSIONER

35 T.C. 663, (1961), affirmed per curiam, 300 F.2d 128 (6th Cir. 1962)

Bruce, Judge: This proceeding involves a deficiency in income tax for the year 1955 in the amount of $1,255.89. The sole issue is whether an amount of $5,200 is properly excludible as "sick pay" under section 105(d), I.R.C. 1954.

[Findings of fact omitted.]

After suffering a stroke in June 1953 decedent did not return to his job as managing officer of the Louisville Home Federal Savings and Loan Association, but continued to receive the same annual salary until his death in January 1958. During the year 1955 decedent received the sum of $8,700 from his employer, of which amount decedents* excluded $5,200 from their gross income as "sick pay." Respondent has determined that said amount of $5,200 does not qualify for the sick pay exclusion under section 105, I.R.C. 1954.

Section 105(a) provides that amounts received by an employee through accident or health insurance for personal injuries or sickness are includible in his gross income to the extent that such amounts are attributable to contributions by the employer which were not includible in the gross income of the employee, or are paid by the employer, unless such amounts are excluded from gross income by section 105(b), (c), or (d).

* Following the husband's death in 1958, his wife died, and the case was prosecuted by their executors. — Ed.

Under the provisions of section 105(d), wages or payments in lieu of wages received by an employee through accident or health insurance for a period during which the employee is absent from work on account of personal injuries or sickness are excludible from gross income, subject to certain limitations which are not here under contention. For purposes of section 105(d) amounts received under an accident or health plan for employees are treated as amounts received through accident or health insurance. Sec. 105(e).

For wage continuation payments to an employee to qualify for the sick pay exclusion provided by section 105(d), such payments must be received by the employee: (1) Through accident or health insurance or under an accident or health plan for employees, (2) for a period during which the employee is absent from work on account of personal injuries or sickness.

Respondent's position is that petitioners have failed to meet their burden of proving that the amounts received by decedent in 1955 from the association were received in accordance with the terms of an accident or health plan of the association, or that the decedent's absence from work in 1955 was due to a personal injury or sickness.

There is considerable doubt whether an accident or health *plan* existed within the meaning of section 105. We are not unmindful of the liberalizing intent indicated by the legislative history of that section. See, generally, Comment, "Taxation of Employee Plans," 64 Yale L.J. 222 (1954). Likewise, a liberal construction is evidenced by the Treasury regulations promulgated under section 105 which speak in terms of an "arrangement" and "program, policy, or custom having the effect of a plan." Sec. 1.105-5. However, the recurrent statutory use of the term "plan" or "plans," as well as the comment in the Senate Finance Committee's report (S. Rept. No. 1622, 83d Cong., 2d Sess., p. 185 (1954)), that section 105, as adopted, "specifies that the exemption is to be granted only to benefits paid out under an arrangement which constitutes a plan," indicates that the use of "plan" signifies something more than merely one or more ad hoc benefit payments. Had Congress intended to exclude from gross income all ad hoc benefit payments arbitrarily made at the complete discretion of the employer in the absence of any sort of prior arrangement or practice, the use of the term "plan" would scarcely have been necessary.

The evidence that the association had an arrangement or plan for the payment of sick pay to its employees is, to say the least, meager. Burkholder, the managing officer of the association, in answer to the question, "Did your company have any policy or plan with respect to sick pay of its employees?" testified: "It's always been the policy of our board or the Association to continue the pay of employees when they are ill." He testified to only one other specific instance, however, where payments were made to a sick employee and apparently that occurred after decedent's stroke, since Burkholder made the arrangements. We are not convinced that this testimony, without more, is sufficient to establish that a "plan" existed within the meaning of section 105.

In any event, petitioners have not, in our opinion, established that the payments in question were made pursuant to any accident or health plan it may have had. After his stroke decedent continued as an officer of the association until his death, as executive vice president and treasurer. He also served as chairman of the board of directors. Although he visited the office of the association only once after his stroke, he was frequently consulted as to the affairs of the association. From the time of his stroke until at least a couple of months before his death, Burkholder visited decedent from once a week to two or three times a month to discuss association business. The letter which the association's board of directors sent to the decedent after his stroke evidences an intent to retain the

benefit of his advice, business acumen, and prestige. It speaks in terms of retaining and commanding decedent's services and states that "Regardless of your present incapacity to attend meetings it is the desire of the Board that you remain one of its active members and your consultation on vital matters should always be at the command of the institution's officers and directors."

In our opinion, the payments in question constituted compensation for decedent's services. It is true that, after his stroke, decedent no longer served the association full time. However, as the organizer and long-time managing officer of the association, his counsel and advice were undoubtedly valuable to the association. As was stated in Smoky Mountain Beverage Co., 22 T.C. 1249, 1254, "A part-time officer, having exceptional ability, wide contacts, and a reputation for financial responsibility, might well be worth more to a corporation than a full-time officer lacking these desired qualities." See also Miller Mfg. Co. v. Commissioner, 149 F.2d 421.

Considering the evidence as a whole, we hold that petitioners have not established that any part of the payments made to decedent in the year 1955 is excludible from gross income under the provisions of section 105(d).

Decision will be entered for the respondent.

NOTE

1. *Background of §105.* Before 1954, the status of wage continuation payments received by a sick employee depended upon whether they constituted "amounts received through accident or health insurance for personal injuries or sickness" as this phrase is used in §104(a)(3). (The parenthetical limitation of §104(a)(3), as well as §§105 and 106, was not added until 1954.) Under pre-1954 law, the Court of Appeals for the Seventh Circuit held in Epmeier v. United States, 199 F.2d 508 (7th Cir. 1952), that an elaborate wage continuation plan for the employees of a life insurance company was "accident or health insurance," and this interpretation of pre-1954 law was endorsed by the Supreme Court in Haynes v. United States, 353 U.S. 81 (1957), involving the employees of the Southern Bell Telephone & Telegraph Company. Fearful that the *Epmeier* case would encourage closely held corporations to allow their executives and shareholder-employees to go to Florida on "sick leave" every winter without reducing their regular compensation, the Internal Revenue Service announced in 1953 that it would not follow *Epmeier* "in the absence of further clarification from the Congress." Congress responded in 1954 by adding the parenthetical restriction to §104(a)(3), and by enacting §§105 and 106.

Section 105(b), (c), and (d) sets out the extent of the exclusion of amounts received through health or accident insurance, if paid by the employer or attributable to contributions by him that were not includible in the employee's gross income. Amounts that are not within these exclusions are taxable, §105(a). But what is the relation between §105(a) and §104(a)(2)?

The "sick pay" exclusion of §105(d) was somewhat restricted in 1964 by reducing the amount that qualifies for exclusion from $100 per week to $75 in certain circumstances, and by increasing the waiting period.

With *Kaufman's Estate,* cf. Andress v. United States, 198 F. Supp. 371 (N.D. Ohio, 1961) (on a change in management, decedent's employer agreed to pay him and his brother $15,000 a year for life, whether they worked or not and regardless of their health, in exchange for relinquishing rights under a profit-sharing plan; decedent received the agreed salary for a 5-year period during which he was totally incapacitated by illness; held, payments qualify for exclusion under §105(d) even though no other employees were included in the "plan").

2. *Payment received after retirement age.* See Regs. §1.105-4(a)(3)(i), providing that wage continuation payments qualify for the exclusion of §105(d) until the normal retirement age, but not thereafter, because the employee is no longer "absent from work on account of personal injuries or sickness." This limitation is discussed in Commissioner v. Winter, 303 F.2d 150 (3d Cir. 1962). involving a retirement scheme under which retire-

ment was optional with the employee at 60 but compulsory at 65; see also Corkum v. United States, 204 F. Supp. 471 (D. Mass. 1962). Note that disability pensions that qualify under §104(a)(1) (workmen's compensation), §104(a)(2) (damages), or §104(a)(4) (military, etc., pensions) may be excluded from gross income regardless of amount or duration.

3. *Employer's contributions for accident or health plans.* Note that §106 does not discriminate between amounts paid by an employer for individual accident and health insurance policies and amounts paid for group policies. Previously, the Internal Revenue Service took the position that payments for individual policies constituted additional compensation to the employees, but that payments for group policies did not.

4. *Employee death benefits.* Recall that §101(b) exempts "employee death benefits" up to $5000 per employee. Supra page 131. If such benefits are paid pursuant to a formal plan, could they be treated as "amounts received . . . under a life insurance contract," so as to be exempt under §101(a)(1) regardless of amount? In Moholy v. United States, 235 F.2d 562 (9th Cir. 1956), the court argued that §101(b) was necessary because such death benefits did not constitute "insurance," and relied on this analogy in arriving at the conclusion that a similar provision would be necessary to exempt sick leave benefits. But the Supreme Court in the *Haynes* case, supra paragraph 1, adopted a more expansive view of the term "accident or health insurance." Does this presage a similarly liberal view of the term "life insurance"?

5. *References.* Pyle, Accident and Sickness Insurance Under Code Sections 104, 105, 106, and 213, 34 Taxes 363 (1956); Comment, Taxation of Employee Accident and Health Plans Before and After the 1954 Code, 64 Yale L.J. 222 (1954); Schlenger, Disability Benefits Under Section 22(b)(5), 40 Va. L. Rev. 549 (1954).

7. *Tax-free Interest and Other Intergovernmental Tax Immunities*

Section 22(b)(4) of the 1939 Code, excluding interest on federal, state, and municipal obligations from gross income, was reenacted without substantive change by §103 of the 1954 Code.

NOTE

1. *Source and economic effect of tax immunity for state and local bond interest.* Must the federal government grant an exemption for interest from state and municipal bonds? Rottschaefer, Federal Taxation of State and Municipal Bond Interest, 20 N.C.L. Rev. 141 (1942); Rakestraw, The Reciprocal Rule of Governmental Tax Immunity — A Legal Myth, 3 Okla. L. Rev. 131 (1950). If the exemption is a matter of grace, can it be defended? Note first that high bracket taxpayers can derive an unusual benefit by investing in "tax-exempts." The following table shows the rate of *taxable* income that would be required to produce a "take-home" or after-tax yield of 2, 3, 4, and 5 per cent for a married couple at various levels of taxable income under the 1965 rates:

Taxable Income *	*Rate of Return Required to Produce After-Tax Yield of:*			
	2%	*3%*	*4%*	*5%*
$24,000-28,000	3.12	4.69	6.25	7.81
$40,000-44,000	3.85	5.77	7.69	9.62
$100,000-120,000	5.26	7.89	10.53	13.16
$180,000-200,000	6.45	9.68	12.90	16.13

* Married couple filing joint return.

For the higher brackets, it is clear that no industrial or other private bonds can compete with the tax-exempts in net yield. By the same token, however, the state or municipality is enabled to sell its securities at a lower interest cost. Whether these issuers gain as much as the federal government loses is an open question. One writer has pointed out the possibility that federal taxation of state and municipal bond interest, while increasing the

progressivity of the federal tax, might cause state and municipal agencies to rely more heavily on regressive taxes or to reduce services to lower income groups. Bronfenbrenner, Economic Effects of the Taxation of Government Securities, 35 Ill. L. Rev. 293 (1940). The questions of policy were vigorously debated in 1942 before the House Committee on Ways and Means, when the Treasury campaigned unsuccessfully for a repeal of §103. Hearings on Revenue Revision of 1942, House Committee on Ways and Means, 77th Cong., 2d Sess., Vol. 2, pp. 1479-1610; Vol. 3, pp. 3079-3160; see also Hearings on H.R. 7378, Senate Finance Committee, 77th Cong., 2d Sess., Vol. 1, pp. 539-673; Simons, Personal Income Taxation 170-184 (1938). More recent discussion by several authors may be found in Tax Revision Compendium, House Committee on Ways and Means 679-791 (1959); Ott and Meltzer, Federal Tax Treatment of State and Local Securities (Brookings Institution, 1963); and a brief history of the question may be found in Lent, The Origin and Survival of Tax-exempt Securities, 12 Nat. Tax J. 301 (1959).

Butters, Thompson, and Bollinger, Effects of Taxation: Investments by Individuals (1953), after a study of the holdings of tax-exempt securities by wealthy investors, conclude (p. 298) that the tax structure provides a strong incentive for such individuals to invest in tax-exempt securities but that their holdings were (in 1949) substantially smaller than might have been anticipated:

> Among the factors responsible for the failure of top bracket individuals to exploit fully this opportunity of receiving tax-exempt income, the following appear to have been important: the failure of these securities as a class to offer much opportunity for capital appreciation in recent years; their low yield at 1949 interest rates; the specialized knowledge which is required for intelligent investments in state and local bonds; and fear of capital loss from such investments.

See also Lent, The Ownership of Tax-exempt Securities, 1913-1953 (Nat. Bureau of Econ. Res. Occasional Paper 47 (1955)).

2. *Indirect restrictions on immunity.* At several points the Code strikes indirectly at tax-exempt bonds. Interest on loans to buy or carry such securities may not be deducted, infra page 190. Other expenses (such as safe-deposit box rentals, fees for investment advice, etc.) related to such securities are disallowed by §265(1). See National Life Ins. Co. v. United States, 277 U.S. 508 (1928); Powell, The Remnant of Intergovernmental Tax Immunities, 58 Harv. L. Rev. 757, 796-803 (1945).

Moreover, it has long been established that the gain realized on a sale of tax-exempt securities is subject to income tax: Willcuts v. Bunn, 282 U.S. 216 (1931).

3. *"Industrial" municipal bonds.* In recent years there has been some use of "industrial" municipal bonds — issued to finance the construction of factories that are then rented to private industries. Often the municipality's credit is not pledged, the bonds being payable from the rentals. An unusual provision of one such issue is that the bonds may be converted by the holder into the common stock of the lessee enterprise. Can tax immunity be defended for such bonds? See Note, 66 Harv. L. Rev. 898, 904-906 (1953). Private real estate investors may find it hard to compete with real estate developments that are financed by tax-exempt bonds, especially since the rentals paid to the municipality (out of which the interest and principal are to be paid) are also tax exempt. A somewhat analogous attempt to exploit the tax exemption of charitable organizations was eliminated by the Revenue Act of 1950. See Brown, The New Restrictions on Charitable Exemptions and Deductions for Federal Tax Purposes, 13 U. of Pitt. L. Rev. 623 (1952). The House version of the 1954 Code included a provision prohibiting the deduction of rent paid for the use of property acquired or improved by the issue of so-called industrial development revenue bonds (where the credit of the issuing authority was not pledged), but the Senate would not agree and the provision was eliminated. The Conference Report states that "it is recognized that a serious abuse may be developing where the Federal income tax exemption granted interest on State and local governmental obligations is used for purposes of attracting new industry," but that the proposal might "have had the unintended result of affecting adversely certain proper governmental functions, such as the operation of municipal wharf and storage facilities, municipal airports, and similar operations." H.R. Rept. No. 2543, 83d Cong., 2d Sess. 33. See Ratchford, Revenue Bonds and Tax Immunity, 7 Nat. Tax J. 40 (1954).

4. *Salaries of public officials.* In Helvering v. Gerhardt, 304 U.S. 405 (1938), it was held that employees of the Port of New York Authority (created by a compact of New York and New Jersey, see Commissioner v. Shamberg's Estate, 144 F.2d 998 (2d Cir. 1944)) were subject to the federal income tax:

> A nondiscriminatory tax laid on their net income, in common with that of all other members of the community, could by no reasonable probability be considered to preclude the performance of the function which New York and New Jersey have undertaken, or to obstruct it more than like private enterprises are obstructed by our taxing system. Even though, to some unascertainable extent, the tax deprives the states of the advantage of paying less than the standard rate for the services which they engage, it does not curtail any of those functions which have been thought hitherto to be essential to their continued existence as states. At most it may be said to increase somewhat the cost of the state governments because, in an interdependent economic society, the taxation of income tends to raise (to some extent which economists are not able to measure, see Indian Motorcycle Co. v. United States, 283 U.S. 570, 581, footnote 1) the price of labor and materials. The effect of the immunity if allowed would be to relieve respondents of their duty of financial support to the national government, in order to secure to the state a theoretical advantage so speculative in its character and measurement as to be unsubstantial. A tax immunity devised for protection of the states as governmental entities cannot be pressed so far. [304 U.S. at 420.]

Thereafter the federal income tax was levied on all state and municipal officers and employees; at the same time Congress consented (by Title I, §4 of the Public Salary Tax Act of 1939, 53 Stat. 575) to state taxation of its officers and employees. Shaw, The Public Salary Tax Act of 1939, 27 Calif. L. Rev. 705 (1939). There has never been an attempt, however, to tax the state's *own* income. See §115. Could any part of such income be constitutionally taxed? See New York v. United States, 326 U.S. 572 (1946). Section 511(a)(B) imposes a tax on the "unrelated business income" (e.g., that derived from industrial or commercial activity) of state colleges and universities. See page 176 infra.

5. *Interest on federal obligations.* The interest on all obligations of the United States and its instrumentalities issued after March 1, 1941, when the Public Debt Act of 1941 was enacted, is fully subject to federal income tax. Some federal obligations issued before 1941 contained a covenant that the interest would be free from income taxation, however, and some of these obligations are still outstanding. Moreover, post-1941 obligations of the District of Columbia and of territories and possessions of the United States are not subject to the Public Debt Act of 1941. See Regs. §1.103-4(b).

In addition, many pre-1941 federal obligations contained a covenant that the interest would be free from the normal tax but not the surtax. At the time these obligations were issued, the federal income tax structure consisted of a normal tax at a relatively flat rate, applicable to all income above a relatively modest personal exemption, and a more steeply graduated surtax, which started at a higher income level because a higher personal exemption was granted. During this period, the surtax was thought of as a temporary tax, to be repealed when financial conditions permitted, and only the normal tax was regarded as a permanent part of the federal tax structure. But these hopes were abandoned long ago; and in 1934, the personal exemptions for normal tax and surtax were made uniform. Until 1954, however, the Code continued to distinguish between "normal tax net income" (upon which the normal tax was levied) and "surtax net income" (upon which the surtax was levied), but the only difference between the two was that partially tax-free interest on federal obligations was excluded from "normal tax net income" but included in "surtax net income." The 1954 Code achieves the same result with greater simplicity by combining the normal tax and surtax and imposing both upon "taxable income" (including partially tax-exempt interest), and then allowing a credit of 3 per cent (the normal tax rate) for such interest. §35. To satisfy the terms of the partially tax-exempt obligations, it is still necessary to designate part of the income tax as normal tax (from which the obligations are exempt) and the rest as surtax. This is done in §1(a). The consequence is that a taxpayer does not have to concern himself with the distinction between normal tax and surtax unless he has received some partially tax-exempt interest.

6. *Salaries of federal judges.* An interesting, but minor, episode in the constitutional

area is the taxability of the salaries of federal judges. The last sentence of §22(a) of the 1939 Code explicitly included all judicial salaries. (The clause was omitted from §61 of the 1954 Code as unnecessary.) Article III, Section 1 of the Constitution provides that federal judges "shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office." This injunction, it was held in 1920, prohibited the levy of a federal income tax on a judge's salary; the judge in question had been appointed in 1899, but the Court did not rest its decision on the fact that his appointment antedated the income tax. Evans v. Gore, 253 U.S. 245 (1920). The subsequent litigation on this subject is reviewed in Baker v. Commissioner, 149 F.2d 342 (4th Cir. 1945), cert. denied, 326 U.S. 746, holding that "a judge who takes office under an established Congressional policy of taxing his salary becomes entitled only to the salary prescribed by statute less income taxes . . ." Such a policy was established by Congress in the Revenue Act of 1918; the court also held that a post-1918 increase of rates, or a restoration of tax after a reduction, did not improperly diminish the salary. Evans v. Gore, therefore, could have continued vitality only for the vanishing tribe of pre-1918 judges. Referring to that case, Holmes once wrote:

> This morning brings a surprise — I was notified some time ago that prepayment of tax by companies issuing bonds counted as part of my income [see p. 185 infra] and that a small additional tax was due from me for two past years. I wrote back that I should pay as soon as I received my bill and that I didn't know it made any difference that by the decision of our court (I dissenting) I had overpaid by some thousands, as my salary was taxed. Answer comes that if I apply for a refund of it I shall receive prompt attention — I don't quite know whether to or not. The wiley [sic] Brandeis has had overpayment credited on a tax, I believe. [1 Holmes-Laski Letters 335-336 (1953).]

Judge L. Hand has also written on Evans v. Gore:

> Again I have pondered on what it is to be a Bolshevik, and once I learned. There was a time when Congress thought it could reach the salaries of my brothers and myself by an income tax, until the Supreme Court manfully came to our rescue. A judge of much experience was talking with me one day about it; I was wrong enough in my law, as it afterwards turned out, and disloyal enough in temper to my class, to say that I thought the tax valid. "Do you know anything about it?" he asked with some asperity. "No," said I, "not a thing." "Have you ever read Taney's letter? *" "No," said I again, for I was innocent of any learning. "Why, they can't do that," said he; "they can't do that, that's Bolshevism." And so it turned out, to my personal gratification, since when, freed from that Red Peril, I have enjoyed an immunity which the rest of you, alas, cannot share. [This was written in 1930.] Far be it from me to suggest that there are graver thrusts at the structure of society than to tax a Federal judge. Properly instructed, I have recanted my heresy, and yet there hangs about "Bolshevism" a residual vagueness, a lack of clear outline, as of a mountain against the setting sun; which only goes to show, I suppose, that a fundamentally corrupt nature can never be wholly reformed. [L. Hand, The Spirit of Liberty 77-78 (Dillard ed. 1953).]

Section B. Personal Deductions

Chapter 1 and Section A of this chapter have set the stage for determining the taxpayer's *gross* income. Chapter 1 demonstrates how broad is the definition of §61 and how diverse are the events that may give rise to income; it also shows that there are constitutional boundaries to what may be taxed. Section A of this chapter is concerned primarily with certain receipts that Congress has chosen to exclude from gross income, notwithstanding its power to tax them, or most of

* In 1863, Chief Justice Taney wrote to the Secretary of the Treasury to protest against an application of the Civil War federal income tax to federal judges, stating that the levy would be unconstitutional but that the question could not be decided in a judicial proceeeding because of the judges' own interest in it. 157 U.S. 701. — Ed.

them, if it chose. Both Chapter 1 and Section A of this chapter are illustrative rather than exhaustive.

Once the taxpayer's *gross* income is ascertained, it becomes necessary to tabulate his deductions in order to arrive at *taxable* income. For it is *taxable* income upon which the tax itself is levied.

In listing the taxpayer's deductions, the student should always keep in mind that deductions are permissible only when authorized by statute or regulations. One of the most common errors into which the tyro can fall is to assume that expenses and losses are deductible unless explicitly denied, just as all income is caught up by §61 unless excluded by statute or Constitution. If you sell your home at a loss, you will look in vain for a statute forbidding you — at least in terms more specific than §262 — to deduct the loss. The loss is nevertheless non-deductible, because a deduction is not specifically authorized. This is an illustration of the old stereotype of the German attitude toward liberty: whatever is not permitted by law is forbidden.

Even when a deduction is found in the Code, the taxpayer will often be confronted by the adage that deductions are to be strictly construed against him. Why? Would it be more appropriate to apply the canon of construction advocated by Mr. Justice Holmes (on circuit) in Johnson v. United States, 163 Fed. 30, 32 (1st Cir. 1908):

> The Legislature has the power to decide what the policy of the law shall be, and if it has intimated its will, however indirectly, that will should be recognized and obeyed. The major premise of the conclusion expressed in a statute, the change of policy that induces the enactment, may not be set out in terms, but it is not an adequate discharge of duty for courts to say: We see what you are driving at, but you have not said it, and therefore we shall go on as before.

See Griswold, An Argument Against the Doctrine that Deductions Should Be Narrowly Construed as a Matter of Legislative Grace, 56 Harv. L. Rev. 1142 (1943).

For purposes of pedagogical convenience, the deductions allowed by the Code have been divided into two groups:

(1) *Personal deductions.* These deductions (including such items as medical expenses, alimony, interest, certain taxes, and others) are taken up in the pages that immediately follow this Note. This group is characterized by the fact that the taxpayer need not be engaged either in business or in a profit-making transaction to qualify for the deduction.

Another point of importance about this first group of deductions is that the taxpayer is granted an option with respect to them. He can either itemize them on the tax return or elect instead to take the "standard deduction" provided by §§141-144. (Election of the standard deduction also entails a waiver of certain credits. See §36.) This optional deduction is 10 per cent of the taxpayer's "adjusted gross income" (roughly speaking, gross income less most business and similar expenses; see p. 328 infra) but not to exceed $1000 or, in the unusual case of a married person filing a separate return, $500. (Under a 1964 amendment, moreover, the standard deduction is not less than $300, plus $100 for each exemption over one.) Thus, if the taxpayer's personal deductions are small, or if he does not wish to trouble himself with an itemization, he may elect the standard deduction. The standard deduction was adopted in 1944 as a means of simplifying the tax return; it does that, and for many taxpayers who are convinced that to itemize will be profitless it does away with the need to keep a record of these personal expenses. There is some risk in such a calculus, however, since one cannot be sure until the end of the year how great one's personal deductions will be. If the Christmas tree starts a fire, giving rise to a deduction for the property loss, a tax-

payer who had planned to take the standard deduction may find out — too late to substantiate personal expenses paid in earlier months — that an itemization would be more advantageous.

The standard deduction was used in 1960 on about 60 per cent of the individual tax returns filed (37 million returns out of 61 million); the remaining 40 per cent itemized the personal deductions, as against only 28 per cent who itemized their deductions in 1954 and 18 per cent in 1944 when the standard deduction was first made generally available. The use of the standard deduction is especially common on the smaller returns; since it cannot exceed $1000, its use declines as income rises. Thus the standard deduction was used in 1960 on 62 per cent of the returns with adjusted gross income of $3000-$5000, on 30 per cent of those with adjusted gross income of $10,000-$20,000, on 12 per cent of those with adjusted gross income of $20,000-$50,000, and on only 3 per cent of those with adjusted gross income of over $50,000.

It should be noted that the availability of the standard deduction depreciates the value of the personal deductions. Before it was adopted, the taxpayer who made charitable contributions or paid interest on a mortgage or real property taxes on his home received a tax concession that another taxpayer with equal income who made no contributions and rented a home did not get. Now, however, the two taxpayers will be on a par if the former one does not have personal deductions exceeding the standard deduction; and even if his deductions do exceed the standard deduction, the disparity between them is not as great as it was. To the extent that the personal deductions are a conscious instrument of policy, designed to encourage home ownership or philanthropy, their effect is less pronounced than before the standard deduction was created.

Finally — and perhaps most important — it should be noted that these personal deductions constitute exceptions to the general rule of §262 that "no deduction shall be allowed for personal, living, or family expenses." In studying these exceptions, the student should ask himself why these particular "personal, living, or family expenses" should be singled out for deductibility. See Pechman, Erosion of the Individual Income, 10 Nat. Tax J. 1, 6 et seq. (1957); articles by various authors in 1959 Tax Revision Compendium (House Committee on Ways and Means) 365-472; Kahn, Personal Deductions in the Federal Income Tax (1960).

(2) *Business deductions.* These deductions, which are taken up in Chapter 3, arise in the course of the taxpayer's "trade or business" (a phrase that includes professions and other occupations) or in a transaction entered into for profit. Roughly speaking, the taxpayer is allowed to deduct all ordinary expenses and losses that grow out of his business and his transactions for profit. The standard deduction mentioned above may be elected in addition to the taxpayer's business deductions (with some minor exceptions to be noted infra p. 328). As already seen, election of the standard deduction displaces all personal deductions.

1. *Extraordinary Medical Expenses*

Section 213, allowing a deduction for extraordinary medical expenses, was carried over, with a number of modifications in detail, from §23(x) of the 1939 Code.

OCHS v. COMMISSIONER
195 F.2d 692 (2d Cir. 1952)

Before Augustus N. Hand, Chase and Frank, Circuit Judges.

A. N. Hand, Circuit Judge.

The question raised by this appeal is whether the taxpayer, Samuel Ochs, was entitled under [§213] to deduct the sum of $1,456.50 paid by him for maintaining his two minor children in day school and boarding school as medical expenses incurred for the benefit of his wife. . . .

The Tax Court made the following findings:

"During the taxable year petitioner was the husband of Helen H. Ochs. They had two children, Josephine age six and Jeanne age four.

"On December 10, 1943, a thyroidectomy was performed on petitioner's wife. A histological examination disclosed a papillary carcinoma of the thyroid with multiple lymph node metastases, according to the surgeon's report. During the taxable year the petitioner maintained his two children in day school during the first half of the year and in boarding school during the latter half of the year at a cost of $1,456.50. Petitioner deducted this sum from his income for the year 1946 as a medical expense under [§213].

"During the taxable year, as a result of the operation on December 10, 1943, petitioner's wife was unable to speak above a whisper. Efforts of petitioner's wife to speak were painful, required much of her strength, and left her in a highly nervous state. Petitioner was advised by the operating surgeon that his wife suffered from cancer of the throat, a condition which was fatal in many cases. He advised extensive X-ray treatment after the operation. Petitioner became alarmed when, by 1946, his wife's voice had failed to improve, and believed that the irritation and nervousness caused by attempting to care for the children at a time when she could scarcely speak above a whisper might cause a recurrence of the cancer. Petitioner and his wife consulted a reputable physician and were advised by him that if the children were not separated from petitioner's wife she would not improve and her nervousness and irritation might cause a recurrence of the cancer. Petitioner continued to maintain his children in boarding school after the taxable year here involved until up to the end of five years following the operation of December 10, 1943, petitioner having been advised that if there was no recurrence of the cancer during that time his wife could be considered as having recovered from the cancer.

"During the taxable year petitioner's income was between $5,000 and $6,000. Petitioner's two children have not attended private school but have lived at home and attended public school since a period beginning five years after the operation of December 10, 1943. Petitioner's purpose in sending the children to boarding school during the year 1946 was to alleviate his wife's pain and suffering in caring for the children by reason of her inability to speak above a whisper and to prevent a recurrence of the cancer which was responsible for the condition of her voice. He also thought it would be good for the children to be away from their mother as much as possible while she was unable to speak to them above a whisper.

"Petitioner's wife was employed part of her time in 1946 as a typist and stenographer. On account of the impairment which existed in her voice she found it difficult to hold a position and was only able to do part-time work. At the time of the hearing of this proceeding in 1951, she had recovered the use of her voice and seems to have entirely recovered from her throat cancer."

The Tax Court said in its opinion that it had no reason to doubt the good faith and truthfulness of the taxpayer and that his devotion and consideration for his wife were altogether admirable, but it nevertheless held that the expense of sending the children to school was not deductible as a medical expense under the provisions of [§213].

In our opinion the expenses incurred by the taxpayer were non-deductible family expenses within the meaning of [§262] rather than medical expenses. Concededly the line between the two is a difficult one to draw, but this only reflects

the fact that expenditures made on behalf of some members of a family unit frequently benefit others in the family as well. The wife in this case had in the past contributed the services — caring for the children — for which the husband was required to pay because, owing to her illness, she could no longer care for them. If, for example, the husband had employed a governess for the children, or a cook, the wages he would have paid would not be deductible. Or, if the wife had died, and the children were sent to a boarding school, there would certainly be no basis for contending that such expenses were deductible. The examples given serve to illustrate that the expenses here were made necessary by the loss of the wife's services, and that the only reason for allowing them as a deduction is that the wife also received a benefit. We think it unlikely that Congress intended to transform family expenses into medical expenses for this reason. The decision of the Tax Court is further supported by its conclusion that the expenditures were to some extent at least incurred while the wife was acting as a typist in order to earn money for the family. We do not think that the decisions discussed in the opinion of the Tax Court and the briefs of the parties have any real bearing upon the issues involved in this appeal.

The decision is affirmed.

FRANK, Circuit Judge (dissenting).

Humane considerations in revenue laws are undeniably exceptional. But there is no good reason why, when, for once, Congress, although seeking revenue, shows it has a heart, the courts should try to make it beat feebly. Here is a man earning between $5,000 and $6,000 a year. His wife was operated on for cancer three years earlier and has still not regained the use of her voice. The doctor says that she will not get any better — may indeed have a recurrence of the cancer, this time surely fatal — unless she is separated from her two children, aged six and four. The children are young, healthy, active and irrepressible; their mother cannot speak above a whisper without pain. She becomes ever more nervous and irritable when they are around; her voice does not improve when it should. The father (instead of sending her to a sanitarium) sends the children away to school and seeks to deduct the cost therefor as a "medical expense."

The Commissioner, the Tax Court, and now my colleagues, are certain Congress did not intend relief for a man in this grave plight. The truth is, of course, no one knows what Congress would have said if it had been faced with these facts. The few paltry sentences of Congressional history for [§213] do not lend strong support — indeed any support at all — to a strict construction theory:

> This allowance is granted in consideration of the heavy tax burden that must be borne by industry during the existing emergency [1942] and of the desirability of maintaining the present high level of public health and morale. . . . The term "medical care" is broadly defined to include amounts paid for the diagnosis, cure, mitigation, treatment, or prevention of disease, or for the purpose of affecting any structure or function of the body. It is not intended, however, that a deduction should be allowed for any expense that is not incurred primarily for the prevention or alleviation of a physical or mental defect or illness.[1]

I think that Congress would have said that this man's expense fell within the category of "mitigation, treatment, or prevention of disease," and that it was for the "purpose of affecting [a] structure or function of the body." The Commissioner argued, successfully in the Tax Court, that, because the money spent was only indirectly for the sake of the wife's health and directly for the children's maintenance, it could not qualify as a "medical expense." Much is made of the fact that the children themselves were healthy and normal — and little of the

[1] Sen. Rep. 1631, 77th Cong., 2d Sess. (1942) 95-96.

fact that it was their very health and normality which were draining away the mother's strength. The Commissioner seemingly admits that the deduction might be a medical expense if the wife were sent away from her children to a sanitarium for rest and quiet, but asserts that it never can be if, for the very same purpose, the children are sent away from the mother — even if a boarding-school for the children is cheaper than a sanitarium for the wife. I cannot believe that Congress intended such a meaningless distinction, that it meant to rule out all kinds of therapeutic treatment applied indirectly rather than directly — even though the indirect treatment be "primarily for the . . . alleviation of a physical or mental defect or illness." [2] The cure ought to be the doctor's business, not the Commissioner's.

The only sensible criterion of a "medical expense" — and I think this criterion satisfies Congressional caution without destroying what little humanity remains in the Internal Revenue Code — should be that the taxpayer, in incurring the expense, was guided by a physician's bona fide advice that such a treatment was necessary to the patient's recovery from, or prevention of, a specific ailment.

Indeed, a test for [§213's] applicability, much akin to the one I have in mind, was adopted by the Tax Court in Havey v. Commissioner, 12 T.C. 409, 412:

> In determining allowability, many factors must be considered. Consideration should be accorded the motive or purpose of the taxpayer, but such factor is not alone determinative. To accord it conclusive weight would make nugatory the prohibition against allowing personal, living, or family expenses. Thus also it is important to inquire as to the origin of the expense. Was it incurred at the direction or suggestion of a physician; did the treatment bear directly on the physical condition in question; did the treatment bear such a direct or proximate therapeutic relation to the bodily condition as to justify a reasonable belief the same would be efficacious; was the treatment in proximate time so near to the onset or recurrence of the disease or condition as to make one the true occasion of the other, thus eliminating expense incurred for general, as contrasted with some specific physical improvement.

This taxpayer can, I think, meet every requirement of the *Havey* test. (1) *Motive:* Ochs could have no motive but his wife's health in sending the children away. They had never attended before — nor have they attended since — private schools. A man earning less than $6,000 with three dependents would not normally send his children to boarding-school. The four-year-old would most likely have stayed home; the six-year-old, if she went to school at all, would have gone to a free public school. Day school and boarding-school were indispensable only because they filled up the children's play and leisure hours — when they would have harassed their mother. The Commissioner doesn't argue that Ochs chose a more expensive school than he had to; nor even that the wife might have been more economically sent away from home. He does suggest, however, that, since the change benefitted the children as well as the mother, it cannot be considered a medical expense because not incurred solely for the mother's recovery. Con-

---

2 The Commissioner has, in the past, shown more liberal tendencies in sanctioning somewhat unorthodox kinds of treatment as contemplated by the statute: He has allowed the deduction of fees paid to chiropractors and Christian Science practitioners. I.T. 3598, 1943 C.B. 157. He should not, in this context, lag behind the progress of the medical art. Especially in this case should the Commissioner realize the growing emphasis placed by medical practitioners upon peace of mind as a major factor in the recovery of patients from what were formerly thought to be entirely organic diseases. If the wife here had been recovering from a nervous breakdown, it could not be sensibly argued that the cure did not fit the disease. Are we ready now to discount the uncontroverted evidence of the doctor in this case that peace of mind and body (it takes not only mental but physical gymnastics to keep up with two children aged four and six) was essential to recovery from, and prevention of, a throat cancer?

[See Ring v. Commissioner, 23 T.C. 950 (1955) (disallowing cost of trip to shrine at Lourdes).]

gress required only that medical expenses be "primarily" for the patient's recovery. The evidence here, moreover, establishes (and the Tax Court so found) that the effect on the wife's health was the sole consideration inducing her husband's action even if it was not the sole result. (2) *Doctor's advice:* Ochs' action was precipitated by the strong warning of a physician. The doctor predicted that the wife might not recover if the children stayed at home. (3) *Relation between illness and treatment:* The physician advised sending the children away because their presence required vocal exertion on the mother's part — strain and pain in the vulnerable throat region. The advice was aimed to aid the mother's specific throat condition and not just her general well-being or disposition. The physician's warning was certainly ominous enough to instill in the taxpayer a "reasonable belief that the 'treatment' would be efficacious." (4) *Proximity in time of treatment to illness:* The children were sent away as soon as possible after the doctor's advice. They were kept in schools until the five-year danger period of cancer recurrence was over. Then they were brought home, and have never been to private schools since. It is true that the children were kept at home for three years after the cancer operation. But the doctor who counseled their separation was not consulted until 1946, when Mrs. Ochs' lack of improvement became very noticeable.

In the final analysis, the Commissioner, the Tax Court and my colleagues all seem to reject Mr. Ochs' plea because of the nightmarish spectacle of opening the floodgates to cases involving expense for cooks, governesses, baby-sitters, nourishing food, clothing, frigidaires, electric dish-washers — in short, allowances as medical expenses for everything "helpful to a convalescent housewife or to one who is nervous or weak from past illness." I, for one, trust the Commissioner to make short shrift of most such claims. The tests should be: Would the taxpayer, considering his income and his living standard, normally spend money in this way regardless of illness? Has he enjoyed such luxuries or services in the past? Did a competent physician prescribe this specific expense as an indispensable part of the treatment? Has the taxpayer followed the physician's advice in the most economical way possible? Are the so-called medical expenses over and above what the patient would have to pay anyway for his living expenses, i.e., room, board, etc.? Is the treatment closely geared to a particular condition and not just to the patient's general good health or well-being?

My colleagues are particularly worried about family expenses, traditionally non-deductible, passing as medical expenses. They would classify the children's schooling here as a family expense, because, they say, it resulted from the loss of the wife's services. I think they are mistaken. The Tax Court specifically found that the children were sent away so they would not bother the wife, and not because there was no one to take care of them. Ochs' expenditures fit into the Congressional test for medical deductions because he was compelled to go to the expense of putting the children away primarily for the benefit of his sick wife. Expenses incurred solely because of the loss of the patient's services and not as a part of his cure are a different thing altogether. Wendell v. Commissioner, 12 T.C. 161, for instance, disallowed a deduction for the salary of a nurse engaged in caring for a healthy infant whose mother had died in childbirth. The case turned on the simple fact that, where there is no patient, there can be no deduction.

Thus, even here, expense attributed solely to the education, at least of the older child, should not be included as a medical expense. See Stringham v. Commissioner [12 T.C. 580, aff'd per curiam, 183 F.2d 579 (6th Cir. 1950)]. Nor should care of the children during that part of the day when the mother would be away, during the period while she was working part-time. Smith v. Commissioner, 40

B.T.A. 1038, affirmed 2 Cir., 113 F.2d 114. The same goes for any period when the older child would be away at public school during the day. In so far as the costs of this private schooling are thus allocable, I would limit the deductible expense to the care of the children at the times when they would otherwise be around the mother. If my views prevailed, this might require a remand to the Tax Court for such allocation.

Line-drawing may be difficult here as everywhere, but that is what courts are for. See Lavery v. Purssell, 399 Ch. D. 508, 517: ". . . courts of justice ought not to be puzzled by such old scholastic questions as to where a horse's tail begins and where it ceases. You are obliged to say, this is a horse's tail at some time."

NOTE

1. *Other borderline expenses.* If the taxpayer spends the winter in Florida for the general improvement of his health, the Regulations deny any deduction; there must be a closer connection between the climate and his health (e.g., alleviation of a specific chronic ailment) to support a deduction. See Regs. §1.213-1(e)(1)(iv); Dobkin v. Commissioner, 15 T.C. 886 (1950). Before 1954, a taxpayer who could establish a sufficiently persuasive need for a trip to another part of the country could deduct not only the cost of transportation, but also his meals and lodging. But the enactment in 1954 of §213(e)(1)(B), defining the term "medical care" to include the cost of necessary transportation, excluded by implication the cost of meals and lodging. Commissioner v. Bilder, 369 U.S. 499 (1962). If the taxpayer is in a hospital, however, the cost of his meals and lodging is deductible; the deductibility of meals and lodging in other types of institutions (e.g., nursing homes) depends upon whether the taxpayer is institutionalized primarily for medical care. See Regs. §1.213-1(e)(1)(v); Lichterman v. Commissioner, 37 T.C. 586 (1961).

Regs. §1.213-1(e)(1)(iii) provides that "a capital expenditure for a permanent improvement or betterment of property shall not be deductible as an expenditure for medical care, even though it may have some relation to medical case," citing swimming pools, additions to the first floor of a house, and home elevators as examples of non-deductible items. The cases are reviewed in Riach v. Frank, 302 F.2d 374 (9th Cir. 1962), involving the cost of "Hil-A-Vator" installed to transport the taxpayer, suffering from a cardiac condition, up and down a steep hillside on which his home was constructed, in which the taxpayer was allowed to deduct the difference between the cost of the device and the increase in the value of his home attributable to its installation.

For other borderline items, see Regs. §1.213-1(e)(1); Rev. Rul. 55-261, 1955-1 C.B. 307 (treatment of cost of remedial reading programs, health institutes, air-conditioning equipment, specially equipped automobiles, maternity clothing, wigs, special foods and beverages, etc.); Rev. Ruls. 58-8 and 58-280, 1958-1 C.B. 154 and 157.

2. *Medicine and drugs.* In 1954, §213(b) was enacted to permit the cost of medicine and drugs to be "taken into account" only to the extent that they exceed 1 per cent of adjusted gross income. The Senate Report (p. 219) states:

> While some question has been raised under present law by taxpayers as to whether the expenditures for toiletries and sundry items may be taken into account this provision makes it clear that expenditures for medicine and drugs (whether or not requiring a prescription) are taken into account but expenditures for toiletries and sundries are not.

See Regs. §1.213-1(e)(2), allowing drugs to be deducted only if "legally procured" and excluding entirely toothpaste, shaving lotions, face creams, deodorants, etc. See also Regs. §1.213-1(e)(1)(ii), disallowing amounts paid for illegal operations or treatments.

In 1964, the 1 per cent limit on drugs and medicine was eliminated for certain expenses attributable to the taxpayer and his wife, if either is 65 or older, or to a dependent parent who is 65 or older.

3. *Limitations on the deduction.* When the medical expense deduction was first enacted, it was intended to relieve the taxpayer whose medical expenses (for himself, his

spouse, and his dependents) were "extraordinary" in amount — a deduction was permitted only if, and to the extent that, the expenses for the taxable year exceeded 5 per cent of the taxpayer's "adjusted gross income." (For the meaning of this term, see p. 329 infra.) In 1954, the non-deductible limit was lowered from 5 per cent to 3 per cent, and it was abolished for expenses incurred for the care of the taxpayer or his spouse if either is over 65. By a later amendment, the limit was also made inapplicable to expenses incurred for the care of a dependent parent over the age of 65.

Although the expenses must be "extraordinary" (at least ordinarily!), they must not be too extraordinary: the deduction may not exceed certain maximum amounts that vary from $5000 (single taxpayer without dependent) to $40,000 (joint return, if both taxpayers are over 65 and disabled). The various limits have become so intricate with successive amendments to §213 that the Internal Revenue Service has published a special form (Form 2948) to assist in the computation.

Despite their intricacies, the limits can be avoided to a certain extent by postponing payments, since §213(a) speaks of expenses "paid during the taxable year." This possibility is illustrated by a story from the New Yorker (April 4, 1953, p. 26):

> During the third week of December, a baby girl was delivered at the New York Hospital — everything O.K. The father had a chat with the officiating obstetrician and emerged from his office looking annoyed. He visited his wife and child daily during the prescribed week of confinement, but then, instead of picking them up the next day, he failed to show. The interne asked the obstetrician if there were any complications; he said no. A couple more days passed, and no husband. The wife, pressed by the staff for an explanation, looked glum, smoked, and offered none. Finally, on New Year's Day — five days after his family should have been home — he appeared, beaming, settled the hospital bill, and whisked his wife and child to the elevator. The nurse who was holding the baby ventured to ask him what was going on. "Young woman," he said, "I was told when the baby was born that the obstetrician's bill couldn't possibly be made up and presented for payment until sometime in January. I was damned if I'd split the medical deductions on my income tax between two years, so I waited until 1953 to take care of the hospital charges." And off he and his little family went, into a deductible taxi. [Reprinted by permission. Copyrighted 1953, The New Yorker Magazine, Inc.]

A prepayment of a hospital bill, however, was held to be non-deductible in Bassett v. Commissioner, 26 T.C. 619 (1956), on the ground that it was not a payment of an "expense" since the care had not yet been rendered and no duty to pay had arisen.

4. *Effect of reimbursement of medical expenses.* Note that expenses may be deducted only if "not compensated for by insurance or otherwise."

Although §104 (supra p. 154) provides for the exclusion from income of amounts received as compensation for personal injuries or sickness, note that it is inapplicable "in the case of amounts attributable to (and not in excess of) deductions allowed under section 213 . . . for any prior taxable year." This prevents a doubling up of tax benefits.

Section 105 (exempting certain amounts received under employee accident and health plans) also contains cross references to §213. Amounts received by the employee under §105(c) (payments for permanent injury) or under §105(d) (compensation during sick leave) are not to be treated as compensation for medical expenses; the employee may exclude these amounts and also may deduct his medical expenses under §213. Where the employee is reimbursed for his medical expenses, however, §§105(a) and 105(b) operate to prevent double deductions: if the expenses were previously deducted, the reimbursement is includible in gross income; otherwise, the reimbursement is excluded from gross income, but the expenses cannot be deducted because they have been "compensated for by insurance or otherwise."

5. *Medical expenditures as business expenses.* On rare occasions, medical expenses have been held deductible under §162 as "ordinary and necessary expenses" of carrying on the taxpayer's occupation. Thus, Reginald Denny was allowed to deduct the cost of replacing teeth knocked out in the course of making a prize fight movie, Denny v. Commissioner, 33 B.T.A. 738 (1935). But Madge Evans' tonsillectomy was held not a deductible business expense. Evans v. Commissioner, 1939 B.T.A. ¶39,101 P-H Memo. Here

the court said: "The operation was performed for the purpose of correcting petitioner's susceptibility to colds. There has been no showing that these colds resulted from petitioner's business activities." No doubt many individuals could prove that various ailments resulted from their occupation. Would the expenses then be deductible? What of a lawyer's hypertension? To the extent that medical expenses are deductible as business expenses under §162, they are not subject to the 3 per cent and dollar limitations of §213 and may be deducted in addition to the optional "standard deduction" (infra p. 328). See Rev. Rul. 57-461, 1957-2 C.B. 116, ruling that the expense of maintaining a "seeing-eye" dog used daily in the conduct of the taxpayer's business can be deducted only as a medical expense under §213 and not as a business expense under §162.

Taxation 169 (1963); Jensen, Medical Expenditures and Medical Deduction Plans, 60 J. Pol. Econ. 503 (1952); Jensen, Rationale of the Medical Expense Deduction, 7 Nat. Tax J. 274 (1954).

2. *Charitable Contributions*

Section 170 is a consolidation, with some modifications, of §23(o), §120, and §23(q) of the 1939 Code.

HAVEMEYER v. COMMISSIONER

98 F.2d 706 (2d Cir. 1938)

Before L. Hand, Swan, and Chase, Circuit Judges.

Chase, Circuit Judge. . . .

The question presented is whether the petitioner was entitled, under the provisions of [§170], to a deduction for contributions he made in that year to an unincorporated association known as the United Special Aid Association. The Commissioner decided that he was not entitled to the deduction and determined the deficiency by adding the amount claimed to his gross income. The Board of Tax Appeals upheld the action of the Commissioner.

The United Special Aid Association was formed in 1918 by the petitioner, members of his family, and a close business associate. It was organized in compliance with the law regulating the formation of unincorporated associations and, to quote from its articles of association, "in order to unify and co-ordinate the charitable activities of themselves and other persons who may hereafter become members of this Association" and "to be operated exclusively for charitable purposes." Its members comprised the original signers of the articles of association to whom might be added such other persons as might be elected by a majority vote of the Board of Managers. A member was bound to pay annual dues of five dollars and was otherwise free to contribute or not as desired. The Board of Managers consisted of five persons to be elected at each annual meeting of the Association since its formation. Under a provision making three a quorum of the Board of Managers, the petitioner and two others have been in actual charge of its affairs. From the time it was formed and up to the year 1932, the Association had received $47,975.87 and had distributed the sum of $46,992.23. In 1932 it had nine members who contributed $3,618.85 of which the petitioner gave $2,257.60. That is the deduction he claimed which was disallowed. During 1932, the Association assisted nine indigent and deserving individuals. None of them were related to any of the members by blood or marriage and no member was under any legal or equitable obligation to contribute to the support of any of the beneficiaries who, though it was customary for a contributor to suggest the person to be aided, were all designated by the Board of Managers. They

were mainly, though not entirely, old family retainers and all were needy and worthy.

The constitution of the Association provided in part that:

> The purpose of this Association shall be to collect funds and therefrom to give relief to such indigent and deserving persons as the Board of Managers may from time to time consider to be in especial need of the bounty of the Association. No payment shall be made from the funds of the Association to or for the use of any officer, manager, or member of the Association.

The provisions of the constitution have at all times been carried out in good faith and the books and records of the Association have always been kept without expense to it. The meetings of its Board of Managers have been held in the offices of Havemeyer & Elder, Inc., which is a corporation of which the members of the board who have been in active charge are officers. . . .

No claim is made that the contribution made by the petitioner to the Association exceeded the proportion of his income deductible under [§170(b)] if made to a charitable organization therein designated but the theory on which the deduction was disallowed and its disallowance upheld by the Board was that this Association served but as a means for facilitating the bestowal of private bounties and could not be classed as a charitable association within the meaning of [§170 (c)(2)].

It is true that the beneficiaries who were actually designated by the Board of Managers were all personally known to one or more members of the Association and were people who might perhaps have been given aid by one or more of them had the Association not been in existence but that does not change the character of the Association itself. That was as extensive in charitable scope within the ranks of the indigent and deserving public as its means and the discretion of its Board of Managers might make it. Its activities were exclusively charitable within the statutory meaning of that term. Harrison v. Barker Annuity Fund, 7 Cir., 90 F.2d 286, 289; Gimbel v. Commissioner, 3 Cir., 54 F.2d 780; Bok v. McCaughn, 3 Cir., 42 F.2d 616. And they were all of the kind it was organized to conduct as shown by the articles of association and within the limitations of its constitution. Having been organized to perform exclusively acts of charity and having performed such acts and no others, this Association in form and fact was a charitable association of the kind named in [§170(c)(2)]. It had no net earnings so far as appears and certainly no part of them, if it had any, inured to the benefit of any private shareholder or individual having a personal and private interest in the activities of the Association. . . . Consequently gifts made by individuals to the Association within the taxable year were deductible in computing the net income of the petitioner.

Reversed.

L. HAND, Circuit Judge (dissenting).

It seems to me that this was not the kind of charitable association that the statute had in mind. Practically, it was a pool of the charitable contributions of the Havemeyer family, distributed by two of them — the petitioner being one — helped by a business associate. True, it does not expressly appear that any member of the family could insist upon his contributions going to an especial person, and in law no doubt he could not; but I cannot believe that practically this was not the case. I am not altogether clear that a taxpayer might deduct a contribution even to a standard charitable association, if in advance he were to exact an agreement that it should be devoted to a particular person. If the association asks him for special funds, of course, he may; but I am speaking of a case where

he uses it merely as a conduit. However that may be, it was an inference which the Board might make that here this association was nothing else but a conduit. While the family was to manage the pot through three managers, of whom the petitioner was only one, I cannot take seriously the possibility that, at least as to his own contributions, his two associates would have attempted to gainsay any distribution he wished. It is significant for example that his and his wife's distributions for 1932 just used up his contributions. As to him anyway and to the extent of the deductions now claimed, I think this association was pro hac vice merely a conduit. In general I believe that we ought not to countenance avoidance of taxes by the perpetual device of a corporation, organized only in form, and not in reality, for the purposes intended by a statute.

NOTE

1. *Aid to deserving individuals vs. contributions to charities.* Why does the Code require that a contribution, to be deductible, go to a charitable organization rather than to a needy or deserving individual? With the *Havemeyer* case, see Waller v. Commissioner, 39 T.C. 665 (1963) (organization qualifies although trustees were directed to give preference in their benefactions to donors' relatives, former employees, and children of employees); DeJong v. Commissioner, 309 F.2d 373 (9th Cir. 1962) (portion of contribution to tax-exempt educational institution treated as payment of tuition for donor's children; no regular tuition charge was established, but parents were advised of school's financial requirements and asked to contribute to the best of their ability); Tripp v. Commissioner, ¶63,244 P-H Memo T.C. (contribution to college in expectation that it would be credited to the account of a student designated by donor, initiative having come from donor rather than college; held, not deductible); Rev. Rul. 58-303, 1958-1 C.B. 61 (payment to home for aged where taxpayer's father lived; no deduction).

Does Judge L. Hand's dissenting opinion in *Havemeyer* imply that a deduction should not be allowed if a gift is made on condition that it be used for a purpose designated, or originated, by the donor: e.g., the construction of a building to house a collection of Old Icelandic literature, or to be named after the donor's favorite aunt?

Section 170(d), enacted in 1960, permits the taxpayer to deduct the cost of maintaining a grade school student in his home under certain institutional programs to provide educational opportunities, especially for foreign students. The maximum deduction is $600 per student per year.

2. *Scope of term "charitable contribution."* While the term "charitable contribution" is commonly used and, indeed, is sanctioned by §170(a) itself, it is defined by §170(c) to embrace contributions for public, religious, scientific, literary, educational, and humane, as well as charitable, purposes and to include certain gifts to organizations of war veterans, fraternal societies, and cemetery companies. Note, however, the qualification of §170(c)(2), permitting certain contributions to be deducted *by a corporation* only if they are to be used within the United States or its possessions. As to individuals, §170(c)(2)(A) requires the organization to be "created or organized in the United States," etc., but no geographical restriction is imposed on the use of the contribution. See Rev. Rul. 63-252, 1963-2 C.B. 101.

Does the inclusion of religious organizations in the qualified categories raise any First Amendment problems? Must contributions to agnostic and atheist societies be accorded the same treatment as contributions to religious groups?

3. *Restrictions on the donee organization's activities.* Section 170(c)(2) (religious, charitable, scientific, literary, educational, and humane organizations), §170(c)(3) (organizations of war veterans), and §170(c)(5) (cemetery companies) state expressly that no part of the net earnings of the organization may inure to the benefit of private shareholders or individuals; and this restriction is implicit in §170(c)(1) ("exclusively public purposes") and in §170(c)(4). Do the net earnings of an otherwise qualified organization inure "to the benefit of any private shareholder or individual" if its capital or income is used to pay the creator of the organization (a) wages, (b) indebtedness incurred in acquiring the assets, or (c) an annuity or other charge to which the assets were subject

when conveyed to the organization? See Commissioner v. Orton, 173 F.2d 483 (6th Cir. 1949); Mabee Petroleum Corp. v. United States, 203 F.2d 872 (5th Cir. 1953); W. L. Powell Foundation v. Commissioner, 222 F.2d 68 (7th Cir. 1955); Boman v. Commissioner, 240 F.2d 767 (8th Cir. 1957).

These prohibitions on private benefit are buttressed by §503, enacted in 1950, which disqualifies certain charitable organizations if they engage in a "prohibited transaction" (roughly speaking, a non-arm's-length transaction with a substantial contributor or other related person). Some of these transactions might violate the more general language of §170, but §503 arms the Internal Revenue Service with a more explicit statutory weapon. Section 504 goes on to disqualify such organizations if they unreasonably accumulate income, use income for non-exempt purposes, or invest income so as to jeopardize their tax-exempt function. The cases in this area are reviewed in Erie Endowment v. United States, 316 F.2d 151 (3d Cir. 1963). Both §503 and §504 are designed primarily to regulate "private" charitable foundations that, by reason of their continuing relations with their grantors, may serve private interests more effectively than the public interest.

Section 170(c)(2) also disqualifies the recipient of a contribution if a "substantial part" of its activities is "carrying on propaganda, or otherwise attempting, to influence legislation." Seasongood v. Commissioner, 227 F.2d 907 (6th Cir. 1955); Dulles v. Johnson, 273 F.2d 362 (2d Cir. 1959). Section 11 of the Internal Security Act of 1950 similarly disqualifies "communist-action" organizations, a policy which the Treasury Department had previously followed as to organizations on the Attorney General's list of subversive organizations. Treasury Department, Press Service, Release No. S-613, Feb. 4, 1948. Cf. Joint Anti-Fascist Refugee Committee v. McGrath, 341 U.S. 123 (1951).

4. *Contributions of services and facilities.* Because §170(a)(1) requires "payment" of the contribution, the Internal Revenue Service takes the position that the gift must consist of money or other "property," and has ruled that a deduction cannot be taken for the rental value of property that a charity is allowed to occupy. I.T. 3918, 1948-2 C.B. 33; but see Passailaigue v. United States, 224 F. Supp. 682 (M.D. Ga. 1963) (rental value of property occupied by charity under lease for indefinite period, terminable by taxpayer on 15 days' notice, held deductible). See also Rev. Rul. 162, 1953-2 C.B. 127 (taxpayer contributed blood to a charity; held, non-deductible because "analogous to the rendering of a personal service by the donor rather than a contribution of 'property' "). A related issue is the performance of services under an arrangement by which the charity receives a fee or makes a profit. See G.C.M. 27026, infra page 344.

Since a contribution "for the use of," as well as "to," a charitable organization is permissible by virtue of §170(c), however, the Internal Revenue Service acknowledges that a taxpayer who incurs out-of-pocket unreimbursed expenses in rendering services to a charity (e.g., transportation expenses) may deduct them. Regs. §1.170-2(a)(2); see also Orr v. United States, 226 F. Supp. 809 (M.D. Ala. 1963) (layman active in church affairs; held, out-of-pocket expenses do not include prorated depreciation, insurance, or repairs on his automobile and airplane).

5. *Percentage limits on charitable contributions.* For many years, an individual taxpayer could not deduct more than 15 per cent of his "adjusted gross income" (infra p. 329) for charitable contributions. In 1952, this ceiling was raised to 20 per cent. Since 1954, an additional 10 per cent allowance, bringing the aggregate up to 30 per cent, has been available for contributions to a specially favored group of charitable donees; the list of "30 per cent charities" originally included only churches, schools and colleges, and hospitals, but it has been expanded to include any charitable organization that normally receives a substantial part of its support from the general public (as distinguished from "private" foundations and similar agencies), medical research organizations, and governmental units. In 1964, in addition to enlarging the list of "30 per cent charities," Congress authorized individuals to carry forward their "excess" contributions to such donees for a 5-year period.

The 30 per cent limit is not applicable if the taxpayer meets the standard of generosity specified by §170(b)(1)(C), which grants an unlimited charitable contribution if the taxpayer's contributions plus his income taxes exceed 90 per cent of his taxable income for 8 out of the 10 preceding years. Section 170(b)(1)(C) is sometimes called the "Philadelphia nun" provision, because it is said to have been enacted for the benefit of a

woman who joined a religious order under an oath of poverty but could not make an assignment of her interest in a family trust that would be effective for tax purposes because of a spendthrift clause. (See I.T. 4035, 1950-2 C.B. 60.) However specialized its origin, §170(b)(1)(C) appears to have attracted more general interest, judging from the esoteric limitations imposed on it in 1964 by the enactment of §170(g).

In the case of corporations, the limit on the deductions is 5 per cent of taxable income (as defined). A corporation whose contributions exceed the 5 per cent limit may carry over the excess and use it as a deduction in the next five years, if its contributions then fall short of the allowable 5 per cent. §170(b)(2).

The impact of the percentage limits can be mitigated by spreading a charitable contribution over a period of years. See, for example, Rev. Rul. 57-293, 1957-2 C.B. 153 (fractional undivided interests in a work of art donated to a museum in successive years); Andrus v. Burnet, 50 F.2d 332 (D.C. Cir. 1931) (sale of property to charity, followed by cancellation of indebtedness in equal amounts each year for a series of years; held, amount forgiven is a charitable contribution in year of forgiveness). A 1964 amendment, however, restricts this practice in the case of tangible personal property (e.g., works of art): if the contribution consists of a future interest, it is to be treated as made only when the intervening rights to possession or enjoyment have expired or are held by someone other than the taxpayer or a person or entity related to him. Thus, a gift of a painting subject to a retained life estate in the taxpayer does not give rise to a current deduction; the contribution is deductible only when his intervening right terminates as a result of his death or is transferred by him to an unrelated person (including the charity itself). The contribution is to be valued as of the time it becomes deductible.

6. *Transfer to charity as a business expense.* Section 162(b) is designed to prevent avoidance of the percentage limits of §170(b) by a claim that the gifts were business expenses. But if the taxpayer is able to show that the payment to the charitable organization was not a "contribution or gift," it may be deducted as a business expense. For an example, see Regs. §1.162-15(b). Presumably moderately selfish motives (such as the desire to improve employee morale or to build goodwill) are not enough; the payment must be motivated by direct business advantages. The prohibition of §162(b) is also inapplicable if the recipient, though having a charitable purpose, does not meet the requirements of §170(b). See B. Manischewitz Co. v. Commissioner, 10 T.C. 1139 (1948); I.T. 3580, 1942-2 C.B. 95. Before 1954, §162(b) was applicable only to corporations; the 1954 Code extended it to individuals as well.

7. *Estate and gift tax deductions for charitable contributions.* In addition to the income tax deduction granted by §170 for charitable contributions, §2522 provides that the donor is not subject to federal gift tax on such contributions and §2055 provides that charitable bequests by a decedent may be deducted in computing the federal estate tax. There are minor variations in the three statutory definitions of qualified donees (e.g., a gift to a cemetery company gives rise to an income tax deduction by virtue of §170(c)(5), but not to a gift or estate tax deduction), but these discrepancies are of minor importance.

8. *Tax exemption of charitable organization itself.* Section 170(c) specifies the organizations that qualify as recipients of deductible contributions; whether these organizations will enjoy immunity from taxation on their investment and other income is not determined by §170(c), however, but by §501. For some organizations, the same characteristics that permit their donors to deduct contributions under §170 also serve to confer tax exemption on the organization itself under §501. Thus, the charitable, religious, and educational organizations that are described by §170(c)(2) will also enjoy tax exemption by virtue of §501(c)(3) — unless the prohibition in §501(c)(3) on intervention in political campaigns is an added requirement, not implicit in §170(c)(2). The overlap is far from complete, however, since posts of war veterans and fraternal lodges may be qualified donees under §170(c) without meeting all of the standards for tax exemption prescribed by §501. Conversely, many organizations that are tax-exempt under §501 (e.g., foreign charities, labor unions, chambers of commerce, etc.) do not meet the requirements of §170(c).

In 1950, the Code was amended (a) to deny tax-exempt status to "feeder organizations" (organizations operated primarily to carry on a trade or business for profit, for

the benefit of a tax-exempt organization), and (b) to tax the "unrelated business income" of many tax-exempt organizations (including rents resulting from certain sales and lease-backs and similar transactions). The 1951 amendments, which appear as §502 and §§511-515 of the 1954 Code, were enacted after a Congressional inquiry in which New York University's acquisition of the Mueller macaroni business and similar ventures into commerce and industry by other universities figured prominently. The fear that tax-exempt organizations would undersell and then buy up or crowd out their competitors was frequently voiced in the hearings. But is it possible that other macaroni makers might *prefer* to compete with a company operated by, or responsible to, trustees whose training and responsibility incline them to caution, rather than with an independent corporation operated in the interest of private stockholders? If the price charged by the Mueller Company for macaroni before its acquisition by New York University was calculated to return it the most profit, would the removal of income tax liability in itself make a lower price more profitable? Underselling aside, does the tax-exempt organization's power to borrow to buy a business, repaying the loan as well as financing expansion out of tax-exempt earnings, constitute a threat to the continuation of private enterprise? Note that investment income (interest, rentals, dividends, etc.) is left untaxed by the 1950 amendments. Is there a danger that universities will drive out competition in this area by cutting interest rates, etc.?

See Sugarman and Pomeroy, Business Income of Exempt Organizations, 46 Va. L. Rev. 424 (1960); Latcham, Private Charitable Foundations: Some Tax and Policy Implications, 98 U. of Pa. L. Rev. 617 (1950); Comment, Colleges, Charities, and the Revenue Act of 1950, 60 Yale L.J. 851 (1951).

REV. RUL. 55-410

1955-1 C.B. 297

Advice has been requested whether the satisfaction of a pledge made in terms of dollars to an organization described in [§170(c)], by the donation or gift of property which has either appreciated or depreciated in value will be considered a taxable event giving rise to a gain or loss for Federal income tax purposes.

[Section 170(a)] allows as a deduction in the case of an individual, subject to prescribed limitations, [charitable contributions] "payment of which is made within the taxable year" to or for the use of certain specified organizations.

[Regulations §1.170-1(a)] provides, in part, that a deduction is allowable [to individuals] only with respect to contributions or gifts which are actually paid during the taxable year, regardless of when pledged and regardless of the method of accounting employed by the taxpayer in keeping his books and records. If the contribution or gift is in a medium other than money, the basis for calculating the amount of the gift is the fair market value of the property at the time of the contribution or gift.

It follows that for purposes of [§170(a)] of the Code the event which gives rise to the deduction is the actual payment of money or the transfer of property. It would be inconsistent to treat such payment or transfer as a "contribution or gift" and at the same time as a satisfaction of a debt with the tax consequences which would ordinarily follow from the use of appreciated property or depreciated to pay a debt.

In view of the foregoing it is held that the satisfaction of a pledge to an organization described in [§170(c)], by means of a donation or gift of property which has either appreciated or depreciated in value, does not give rise to a taxable gain or a deductible loss. Such contribution is deductible to the extent of the fair market value thereof at the time of the contribution or gift. . . .

NOTE

1. *Gifts of "appreciation" alone.* If the taxpayer owns 100 shares of stock which cost him \$25 per share but are worth \$100 per share, which would be the better way to contribute \$7500 to a charitable organization: a gift of 75 shares, or a sale of 100 shares to the charity for \$2500? As an alternative route to the same end, consider a non-recourse loan of \$2500 secured by a pledge of the shares, followed by a gift of the pledged shares (subject to the debt) to the charity. For hazards in this area, see Friedman v. Commissioner, 41 T.C. No. 42 (1963), involving a taxpayer who sold several endowment insurance policies that were about to mature to charitable organizations for amounts equal to his cost for the policies, thus enabling the charities to benefit from the appreciation in value over his cost. The court held that the taxpayer should be treated as though he had collected the proceeds of the policies upon maturity from the insurance company and had thereafter made the gifts, as to three policies that were transferred in the year they matured; but that no income was realized by him in respect of another policy that was transferred the year before its maturity.

2. *Valuation problems.* In Rebay v. Commissioner, ¶63,041 P-H Memo T.C., a non-objective painter deducted \$170,000 over a 5-year period on donating 7 of her paintings to two college art galleries. She had apparently sold only one of her paintings during a long career as an artist; although the price was \$15,000, the sale was made to a business associate of her attorney, who was not an art collector, sought no expert advice before buying, and had never before paid more than \$50 for a painting. After listening to the evidence of experts on market value, and without intending "to reflect any opinion as to the artistic, aesthetic or intrinsic merits of the paintings in issue," the court upheld the Internal Revenue Service in reducing the deduction to \$7000 for 4 of the paintings, and allowed \$2300 for 3 others which the Service had held to lack any market value. It is interesting to reflect on the estate tax problem that would have arisen if the taxpayer had won this income tax case, and then had died with a studio full of unsold paintings.

Since 1962, the individual income tax return has called for information about the cost or other basis, date of acquisition, and method of valuation of property contributed to charities.

3. *Gifts of property held for sale to customers.* A charitable contribution of agricultural, manufactured, or other products held for sale presents a special problem: in addition to claiming a charitable deduction for the fair market value of the property, the taxpayer may seek either to deduct the cost of raising or manufacturing the property as a business expense or to treat the inventory value thereof as part of the cost of goods sold. At one time, the Internal Revenue Service sought to meet this problem by ruling that the fair market value of such property at the time of the contribution was taxable as income, and that it was deductible as a charitable contribution only to the extent of the percentage limitations of §170(b). I.T. 3910, 1948-I C.B. 15. Under this ruling, a contribution would have produced the same tax result as a sale of the property, followed by a donation of the sales proceeds to the charity. See articles by Griswold, Bittker, and Roehner, supra page 103.

After losing several cases in the courts, however, the Service revoked I.T. 3910, but ruled (a) that the taxpayer must make appropriate adjustments (either to inventory or to business expense) to prevent a double deduction and (b) that the charitable deduction is limited to "the replacement cost to the donor in his most favorable market." Rev. Rul. 55-138, 1955-1 C.B. 223. The substance of this ruling is now embodied in Regs. §1.170-1(c)(1), which also provides that the wholesale, rather than the retail, value of the donated property may sometimes be controlling. If a manufacturer's mark-up is high enough, however, the tax reduction attributable to deducting the wholesale value of the goods may exceed their out-of-pocket cost, in which event a "profit" results from the gift. Some of the drug manufacturers who contributed to the Cuban Families Committee for the Liberation of Prisoners of War in 1962 realized such a profit, which in some cases was in turn contributed to charities. See Time, Jan. 4, 1963, p. 1.

Regulations §1.170-1(c)(1) is concerned only with the "double deduction" that may result from deducting both the value of the property (as a charitable contribution) and

the costs and expenses of acquiring or producing it (as business expenses or cost of goods sold). Similar double deduction problems can arise with other types of property (e.g. depreciable property that has given rise to depreciation deductions in prior years, bonds that have been acquired at a premium and amortized, etc.). In some instances, a double deduction is forestalled by a statutory provision, but others are left to the case law. See §170(b)(4) and §170(e); Maysteel Products, Inc. v. Commissioner, 287 F.2d 429 (7th Cir. 1961).

3. *Alimony*

Section 71 (taxing the wife on certain alimony and separate maintenance payments) and §215 (permitting the husband to deduct his payments if they are taxable to the wife) are based, with some modifications, upon §22(k) and §23(u) of the 1939 Code.

Section 682, relating to alimony trusts, is similarly based, with corresponding changes, on §171 of the 1939 Code.

MAHANA v. UNITED STATES

88 F. Supp. 285 (Ct. Cl. 1950), cert. denied, 339 U.S. 978, rehearing denied, 340 U.S. 847 (1950)

Before JONES, Chief Judge, and MADDEN, HOWELL, WHITAKER and LITTLETON, JJ.

MADDEN, Judge.

The plaintiff sues to recover income taxes paid by her for the years 1943, 1944 and 1945. She filed timely claims for refund which were denied by the Commissioner of Internal Revenue. The money received by her, the taxability of which receipt she contests, came to her, partly directly, and partly through payments by a trustee or depositary, from her husband whom she had divorced.

The plaintiff and George S. Mahana were married in 1893. They separated in 1922. In 1923 she brought an action in New York, where they both resided, for a legal separation and separate maintenance. While this suit was pending, the spouses on November 12, 1923, made a written agreement that the husband would transfer certain named securities to the Guaranty Trust Company of New York, in trust to pay the income to the plaintiff during her lifetime "by way of alimony and in lieu thereof and for her separate maintenance and support." If the income from the securities did not amount to $17,500 per year, the husband would make up the deficit by payments to the trustee for transmission to the plaintiff. If there was an excess of income, it was to be paid to the husband. If the plaintiff's mother survived her, she was to be paid $6,000 per year for life. Upon the death of the survivor of the plaintiff and her mother, the trust was to terminate and the securities were to be returned to the husband. If the securities did not in any one year yield at least $15,000, the husband agreed to add sufficient securi-

ties to bring the yield up to $17,500. The parties mutually released to each other all interest in the other's property and in any rights growing out of their marital relation. The agreement provided that it should in no wise prejudice any right which either party might have to institute divorce proceedings for misconduct theretofore committed, and that the payments to be made under the agreement were to be in no way affected by any decree of divorce, or by any subsequent marriage of either of the parties to a third party.

On December 1, 1923, the plaintiff signed a complaint in a New York court asking for an absolute divorce on the ground of her husband's adultery. An interlocutory decree was granted on March 8, 1924, which became final on November 6, 1924. On November 26, 1924, the former husband, George Mahana, transferred his residuary interest in the trust which he had set up for the plaintiff, in irrevocable trust for his second wife and his infant child by her.

In 1929 disputes arose between the plaintiff and her former husband as to which one should pay the state and federal income tax on the payments which the plaintiff was receiving under the 1923 agreement. The plaintiff instituted a suit in a New York court to construe and enforce the agreement of 1923 according to what she claimed to have been the intent of the parties. Her complaint alleged that her husband was to have paid the income taxes upon the payments to her to the extent that they would have been payable "if said $17,500 would have been her sole income." Her complaint raised other questions concerning the trust. This suit was settled by an agreement of June 28, 1933. By this agreement, the former husband agreed to pay the plaintiff the amounts by which her state and federal income taxes were increased by reason of her receipt of the $17,500 pursuant to the 1923 agreement. In connection with the new agreement, he deposited additional securities with the trustee, but he did not put them into the trust created in 1923. The income from them was to be used to supplement the income from the securities in the 1923 trust, if necessary, but he was to have complete power, so long as he was not in default under his agreement, to order the securities so deposited to be sold or exchanged.

The plaintiff paid federal income taxes for the year 1924 upon her income under the agreement, but these taxes were refunded to her by the Government, upon her claim for refund. She paid no such taxes from 1932 to 1942. The record does not show what happened between 1924 and 1932. . . .

[Section 71(a)(1)], enacted in 1942, provides:

If a wife is divorced or legally separated from her husband under a decree of divorce or of separate maintenance, the wife's gross income includes periodic payments (whether or not made at regular intervals) received after such decree in discharge of (or attributable to property transferred, in trust or otherwise, in discharge of) a legal obligation which, because of the marital or family relationship, is imposed on or incurred by the husband under the decree or under a written instrument incident to such divorce or separation.

[Section 215 permits the husband to deduct alimony payments which are includible in the wife's income under §71. Section 682 provides that the income of certain alimony trusts is taxable to the wife.]

As shown by our findings . . . , the $17,500 received by the plaintiff in each of the years in question, 1943, 1944, and 1945, consisted of (1) money paid by the trust company out of the income of securities held by it under the 1923 agreement; (2) money similarly paid out of the income of securities held by it under the 1933 agreement; (3) money paid by George Mahana to the trust company to make up the deficit of income from the first two sources, which money was then paid by the trust company to the plaintiff. In addition, in each of the years George Mahana paid directly to the plaintiff the amounts by which the plaintiff's

income taxes had been increased by her receipt of the $17,500. Since some of these payments were made directly by the former husband, and some were made from a trust created by him for that purpose, both [§71(a)(1)] and [§682] are involved.

The plaintiff's first contention is that the legislation referred to, imposing an income tax on alimony, is unconstitutional. She says that it is not income; therefore the Sixteenth Amendment does not authorize its taxation. The argument is, at first, surprising. A large sum of money comes into the plaintiff's hands. One wonders why it is not "income" in the sense of the Sixteenth Amendment. It is income to spend, to live on, to save. Is it not also income to tax, if Congress sees fit, as it has, to tax it? But there is something to be said for the plaintiff's contention. In the case of Gould v. Gould, 245 U.S. 151, the court held that alimony paid to a divorced wife was not taxable to her as income. The legislation then in force was the Income Tax Act of 1913. It did not expressly either include or exclude alimony from its definition of what income should be taxed. The court used language which indicated that it thought that alimony was not income. The court did not purport to be deciding a constitutional question, but only a question of the interpretation of the Income Tax Act of 1913. It would have been hard to believe that Congress intended to tax the receipt of alimony by the divorced wife, when the law had already taxed the husband upon his receipt of the income from which he paid the alimony, except in the infrequent case when alimony was paid out of the husband's capital.

The plaintiff points to cases such as Douglas v. Willcutts, 296 U.S. 1, and Helvering v. Clifford, 309 U.S. 331, in which the Supreme Court has said that Congress, in the various revenue acts, has manifested its intention to use to its fullest extent the power granted it by the Sixteenth Amendment. If we take these expressions literally, then Gould v. Gould, supra, would have to be regarded as a decision that alimony could not be taxed because it was not income in the sense of the Sixteenth Amendment. But we think that even the Supreme Court should not be taken so literally when the consequence would be to nullify an act of Congress, the intention of which is clear. The Supreme Court has also said that the meaning of the word "income" in the Sixteenth Amendment and in the acts of Congress pursuant to the amendment, is that given it in common speech and every-day usage. Old Colony Railway Co. v. Commissioner, 284 U.S. 552; United States v. American Trucking Association, 310 U.S. 534. In every-day usage the plaintiff, receiving large sums of money currently from a man who ceased to be her husband more than twenty years ago, would be regarded as having an income.

We come then to the question whether the statutes, properly interpreted, tax the plaintiff's income. The plaintiff concedes that, so far as concerns the money received by her as the yield of the securities placed in trust under the 1923 agreement, Section [682] is applicable, if it is constitutional. We have quoted the section, and it requires only that there be a divorce, a trust, and the receipt from the trust of income which would have been taxable to the husband if it had not been made taxable to the wife by the section. As the plaintiff properly concedes, these conditions are fulfilled as to the yield of the 1923 trust. We think they are fulfilled also as to the yield from the additional securities deposited with the trustee in 1933, to supplement the income of those previously deposited. The plaintiff says that they were not placed in trust, but only "deposited." But they were deposited "pursuant to the agreement dated November 12, 1923, . . . to be held, sold, exchanged or otherwise disposed of by you, and in case of sale, the proceeds thereof invested. . . ." The trust company was directed to pay the income from the securities to the plaintiff, if necessary to make up the agreed $17,500. The deposit of these securities was a deposit in trust. The apparent

reason why they were not added to the 1923 trust was that, in the meantime, the plaintiff's former husband had conveyed his residuary interest in that trust to his second wife and his infant child by her, and he did not want the additional securities to be covered by that conveyance. The new securities were in a different trust, but it was a trust to pay alimony and was covered by Section [682].

As to the money which the former husband paid to the trustee to make up the deficit left when the two trusts did not yield $17,500, we think that although this money came to the plaintiff from the trustee, it was not "the income of any trust" within the meaning of Section [682]. The trustee was a mere intermediary who accepted a deposit and paid out a similar amount to the plaintiff, not as income of a trust but merely pursuant to the agreement to perform this service. If, then, these payments were taxable to the plaintiff, it was because they were covered by [§71(a)(1)] which we have quoted above. The plaintiff urges several reasons why they should not be regarded as covered by that section. The section applies to "periodic payments (whether or not made at regular intervals)." Although this language is somewhat self-contradictory, we think that it is complied with when the payments are agreed to be made and are made whenever specified external or objective conditions occur. Here the payments were to be made whenever the income of the trust was less than $17,500.

Section [71(a)(1)] requires that the payments, to be taxable, must be made:

> . . . in discharge of . . . a legal obligation, which, because of the marital or family relationship, is imposed on or incurred by the husband under the decree or under a written instrument incident to such divorce or separation.

The plaintiff says that the written instrument by which her then husband agreed to make the payments here in question was not "incident to such divorce." We think it was so incident. The plaintiff had pending a suit for legal separation and separate maintenance at the time of the agreement. The agreement said that it was for her separate maintenance and support, that it was not to be affected by any decree of divorce obtained by her, and that it was not to prejudice the right of either party to seek a divorce for misconduct which antedated the agreement. Thirteen days after the agreement was executed, the plaintiff signed her complaint asking for a decree of divorce for her husband's adultery. We have no doubt, from the timing and circumstances of the agreement, that it was the usual settlement out of court of the property rights of the parties when a divorce is contemplated. Both the plaintiff and her former husband testified in this case and neither denied what the circumstances indicate to have been the fact. The payments made by the former husband to make up the deficit were, then, periodic payments, made pursuant to an agreement incident to the parties' divorce. The payments were taxable income to the plaintiff, under the provisions of [§71(a)(1)].

The question remains as to whether the former husband's payments to the plaintiff by way of reimbursement to her of the amounts which she was obliged to pay as income tax on her alimony, after the enactment in 1942 of [§71(a)(1)], were also taxable to her under [§71(a)(1)]. The plaintiff contends that they were not, because they were paid pursuant to the 1933 agreement, which was made nine years after the divorce and was not, the plaintiff says, "incident to such divorce" in the sense of the statute. We think that the 1933 agreement was incident to the divorce. We have held above that the 1923 agreement was incident to the divorce. The 1933 agreement was, as we have seen, made in settlement of a suit by the plaintiff for the construction and enforcement of the 1923 agreement. She contended, in that suit, that her former husband was, under the 1923 agreement, obligated to reimburse her for income taxes paid "as if said $17,500 would have been her sole income." In the 1933 agreement, her former husband

promised to do more than that; he promised to reimburse her by the amount which her income taxes were actually increased by her receipt of the $17,500. For this concession, he received concessions from her which made him willing to enter into the 1933 agreement. But the whole agreement was made to clarify the 1923 agreement, so that the disputes as to its meaning which had, in 1933, been going on for some years, could be avoided. The plaintiff had no rights against her former husband in 1933 except those that were given her by the 1923 agreement. The rights which she got under the 1933 agreement were, with mutually satisfactory additions and subtractions, those to which she was entitled under the 1923 agreement. We think, therefore, that the reimbursements to her of her income taxes paid by her on her alimony were made pursuant to a written instrument which was incident to her divorce.

The Government urges, as an additional reason for reaching the same conclusion, that we interpret the language of [§71(a)(1)] as meaning that the written instrument referred to need only be incident to the fact that there had been a divorce, and not to the decree of divorce. The Tax Court, in Dauwalter v. Commissioner, 9 T.C. 580, has rejected this interpretation. Compare Commissioner v. Murray, 2 Cir., 174 F.2d 816. See also Cox v. Commissioner, 3 Cir., 176 F.2d 226, for a treatment of this question, and of the history and purpose of the 1942 legislation relating to the taxation of alimony. In view of our conclusion that the 1933 agreement, through its connection with the 1923 agreement, was incident to the decree of divorce, we do not pass upon this contention of the Government as to the interpretation of [§71(a)(1)].

The plaintiff's petition will be dismissed. It is so ordered.

JONES, Chief Judge, and HOWELL, WHITAKER, and LITTLEJOHN, JJ., concur.

NOTE

1. *History.* As the foregoing case indicates, prior to the statutory revision of 1942, Gould v. Gould, 245 U.S. 151 (1917), had held that alimony payments were not taxable to the wife. Nor were the payments deductible by the husband, since there was no statutory authorization for a deduction. If the husband transferred property to a trust to pay the income as alimony, the trust income continued to be taxable to him because applied to pay his debts. The husband's only escape was to make a lump sum transfer of property to discharge his obligation of support once and for all; if under local law the husband's support obligation could be terminated in this manner, the income from the property would thereafter be taxed to the ex-wife. Helvering v. Fuller, 310 U.S. 69 (1940). If local law, a want of capital, the ex-wife's resistance, or other reasons made such a termination of his obligation of support impossible, the husband under the impact of rising tax rates might be left with little or no income of his own, especially if his misalliances had been lavish in number or in cost. These facts led to the 1942 revision.

In Twinam v. Commissioner, 22 T.C. 83 (1954), the Tax Court agreed with the reasoning of the *Mahana* case on the constitutional issue, and added two arguments of its own: (a) Gould v. Gould held in 1917 that alimony was not taxable to the wife on statutory grounds; Congress did not change the statute during the following eighteen years; hence Douglas v. Willcuts should not be read as a comment on the constitutional question. (b) By analogy to Poe v. Seaborn, infra page 330, the ex-wife can be properly taxed on that part of the husband's income that is paid to and enjoyed by her, at least if he receives a corresponding deduction for the payments.

2. *Husband's right to deduct payments.* Under §215, the husband may deduct alimony payments only when they are taxed to the wife under §71. (The terms "husband" and "wife" are interchangeable in the alimony sections, by virtue of §7701(a)(17), so that if the wife is paying alimony, she may deduct the payments and the husband is taxed on them.)

If the husband uses appreciated property to discharge his obligations to his ex-wife, he may realize gain on the transfer. See the *Davis* case, infra page 432.

3. *Pre-1954 requirement of "decree" of divorce or separate maintenance.* Until 1954,

payments were deductible by the husband and taxable to the wife only if they were divorced or legally separated under a "decree" of divorce or of separate maintenance; an out-of-court separation agreement would not suffice. The requirement of a legal decree was adopted to prevent collusive separation agreements for the purpose of splitting income between husband and wife. Even if this dismal view of human nature was correct, it became irrelevant with the enactment of the Revenue Act of 1948, permitting married couples to split their income for tax purposes by filing a joint return (infra p. 334). Moreover, the income-splitting provisions of the 1948 Act created a dilemma for many taxpayers who were living apart from their spouses under informal separation agreements: although they can file joint returns because they are not divorced or separated under a legal decrees — see §6013(a) and (d) — it is often not feasible for them to do so because both must sign the return and assume liability for payment of the entire tax and of any deficiency that may be assessed subsequently.* Since collusive separation agreements were no longer a threat to the revenue, therefore, in 1954 Congress enacted §71(a)(2), permitting payments under a "written separation agreement" to qualify as alimony, even though there is no decree of divorce or of separate maintenance. Because the pre-1954 tax law may have been taken into account in fixing the amount of support to be paid by the husband, however, §71(a)(2) applies only to agreements executed after the 1954 Code was enacted. See Regs. §1.71(b)(2) on the effect of a post-1954 material modification of a pre-1954 agreement.

When §71(a)(1) rather than §71(a)(2) is controlling, note that the payments must discharge a legal obligation arising "under the decree" or "under a written instrument incident to such divorce or separation." If the husband's obligation is imposed by a decree, the payments will qualify. They will also qualify if an agreement between the spouses is incorporated in the decree. But sometimes the amount of support is fixed by a separation or other agreement that makes no mention of divorce (possibly to avoid a charge of collusion) and, because of the agreement, the actual decree makes no provision for support. As the last paragraph of the *Mahana* case indicates, some cases have held that the written instrument must be incident to the decree of divorce or legal separation, others that it need only be incident to the status of the parties. A series of cases in the Court of Appeals for the Second Circuit supporting the "status" theory has been endorsed by other appellate courts and by the Regulations, and the Tax Court — the principal exponent of the "decree" theory — has now fallen in line. Holt v. Commissioner, 226 F.2d 757 (2d Cir. 1955), cert. denied, 350 U.S. 982; Regs. §1.71-1(b); Cramer v. Commissioner, 36 T.C. 1136 (1961). The issue is now less important than it was before 1954, since if the payments are made under a post-1954 written separation agreement, they can qualify under §71(a)(2) even if they are not "incident" to divorce or separate maintenance.

As to post-divorce amendments to pre-divorce agreements, see Rev. Ruls. 60-140, 60-141, and 60-142, 1960-1 C.B. 31, 33, and 34.

4. *Support paid under court order.* Section 71(a)(3), enacted in 1954, taxes the wife on support payments received under a court order, and §215 allows the husband a correlative deduction. In the alternative, they may file a joint return; but the enactment of §71(a)(3) acknowledges that if relations have so deteriorated that a judicial support order is necessary they are unlikely to meet amicably to sign a joint return.

5. *Periodic vs. lump sum payments.* Section 71(a) applies only to "periodic payments (whether or not made at regular intervals)" and §71(c)(1) provides that this term does not include "installment payments discharging a part of an obligation the principal sum of which is, either in terms of money or property, specified in the decree, instrument, or agreement," subject to the exception in §71(c)(2) for a principal sum that is to be paid over a period of more than ten years. If the parties agree on a lump sum settlement of $50,000 in lieu of annual payments for support, it is not taxed to the wife or deductible by the husband. Why does §71(a) make this distinction between such settlements and periodic payments? Note that the same result would follow if the husband agreed to pay $5000 per year for ten years, unless the installment payments were to terminate upon a change in the economic status or the death of either spouse, or on the wife's remarriage. See Regs. §1.71-1(d)(3)(i).

* For an agreement between estranged spouses for the filing of a joint return, replete with protective clauses, see Herrmann v. Commissioner, ¶64,061 P-H Memo TC.

It has been held that a lump sum non-recurring payment by the husband to defray the wife's legal expenses incident to the divorce or the medical expenses for which she would become liable in the following year is not a "periodic payment," but the Internal Revenue Service has ruled that if the husband agrees to defray his wife's medical expenses until her remarriage or death, the payments are deductible. Rev. Rul. 62-106, 1962-2 C.B. 21.

For some other problems in this area, see Spicknall's Estate v. Commissioner, 285 F.2d 561 (8th Cir. 1961); Furrow v. Commissioner, 292 F.2d 604 (10th Cir. 1961); Rev. Rul. 60-250, 1960-2 C.B. 435.

6. *Payment of insurance premiums.* Alimony decrees and agreements often require the husband to keep insurance on his life in force by regular payments of premiums directly to the insurance company. The ex-wife may be the beneficiary of the policy and have all the incidents of ownership, in which event the husband's payments of premiums will be deductible by him and taxable to her (assuming the other statutory requirements are satisfied), or she may have only a limited, contingent, or security interest in the policy, in which event the premiums will ordinarily not constitute payments within the meaning of §71. For applications of these principles, see Hyde v. Commissioner, 301 F.2d 279 (2d Cir. 1962), and the cases there cited.

7. *Property settlements.* Section 71(a)(1) speaks of "a legal obligation which, because of the marital or family relationship, is imposed on or incurred by the husband," etc., and a similar phrase is to be found in §71(a)(2). The Regulations provide that §71(a) is concerned with "payments made because of the family or marital relationship in recognition of the general obligation to support," and that it does not include a payment which serves, for example, to discharge a bona fide loan made previously by the husband to the wife or a payment in discharge of the wife's interest in jointly owned property. The distinction may be difficult to apply, especially in community property jurisdictions. Riddell v. Guggenheim, 281 F.2d 836 (9th Cir. 1960); Soltermann v. United States, 272 F.2d 387 (9th Cir. 1959); Blate v. Commissioner, 34 T.C. 121 (1960); Bardwell v. Commissioner, 318 F.2d 786 (10th Cir. 1963).

8. *Support of children.* Amounts "payable for the support of minor children" are not taxed to the wife or deductible by the husband. Regs. §1.71-1(e) speaks of an amount "specifically designated" as payable for minor children, and the Supreme Court in Commissioner v. Lester, 366 U.S. 299 (1961), held that this restriction applies only to amounts that are "specifically earmarked" for the children. If the husband is required to pay $500 monthly to the wife, with a reduction to $400 when a minor child reaches his majority or dies, he can deduct the entire amount; before the *Lester* case, there was some authority for allowing him to deduct only $400 on the ground that $100 was intended for the child, especially if local law imposed an obligation on the wife to use that part of the payment for the child's benefit.

What is the status of amounts which the husband must pay for the support of persons other than his minor children? Note that in the *Mahana* case, the husband was to provide support for the taxpayer's mother; see also Faber v. Commissioner, 264 F.2d 127 (3d Cir. 1959) (stepchild who had not been adopted by taxpayer).

While the husband cannot deduct amounts fixed for the support of minor children, he can use them as the basis for a dependency deduction under §151(e). But such a deduction requires proof that he furnished more than half of the child's support, §152(a), and the husband's claim sometimes fails for lack of proof, especially if the ex-wife is uncooperative in supplying the financial information. See, e.g., Sijan v. Commissioner, ¶55,287 P-H Memo T.C. ("Petitioner [the ex-husband] is in the unfortunate position of having to rely upon the testimony of his divorced wife for proof of the total amount expended in maintaining the children, who lived with her. Even granting [that her] testimony may have been exaggerated and unreliable . . . if we discard it the record is barren of any evidence in this vital area"); Lagomarcino, The Divorced Husband and the Dependency Exemption Mirage: An Outline of the Problem and of a Statutory Corrective Procedure, 12 Tax L. Rev. 85 (1956); infra page 338.

9. *Tax-reimbursement agreements.* As the *Mahana* case demonstrates, if the husband is to pay a stated sum annually, plus the ex-wife's tax thereon, the latter amount, as well as the former, will be alimony, deductible by the husband and taxable to the wife. See Old Colony Trust Co. v. Commissioner, 279 U.S. 716 (1929). Under the 1933 agreement, would

the husband have to pay the tax caused by the ex-wife's receipt of $17,500 no matter how much other income she received? Note that if the agreement or decree is construed to require the husband to discharge the wife's tax on the amount he paid to discharge her tax on the primary payment, there will be one more deduction for the husband and item of income for the wife. And so on. The same problem can arise, and the same principle is applicable, when an employer agrees to pay his employee's income taxes, when a lessee of property agrees to pay the lessor's taxes on the rent, etc. The Internal Revenue Service has announced that it will not concern itself with the mechanics by which the parties settle such obligations inter sese; i.e., it will accept their determination of the number of rounds for which the computation of reimbursement is made. Mim. 6779, 1952-1 C.B. 8, as modified by IR-Mim. 51, 1952-2 C.B. 65; Connecticut Ry. & Lighting Co. v. United States, 142 F. Supp. 907 (Ct. Cl. 1956); Safe Harbor Water Power Corp. v. United States, 303 F.2d 928 (Ct. Cl. 1962). See Brown, Shifting the Burden of Income Taxes by Contract, 96 U. of Pa. L. Rev. 822 (1948); Kades, Phantom Income: Net Leases and the Clark Case, 5 Syracuse L. Rev. 18 (1953). Section 110, new in the 1954 Code, alters the rule as to pre-1954 net leases.

10. *Impact of federal tax rules.* The alimony sections are a good example of how an entire area of legal practice may become tax-dominated. The negotiations for alimony, especially in the higher brackets, will be governed in an important degree by the tax status of each party, and the agreement itself must be drafted with §71's technical requirements in sight.

4. *Interest*

Section 163(b), permitting interest on the taxpayer's indebtedness to be deducted, is a re-enactment of §23(b) of the 1939 Code.

Section 163(b) (relating to interest on certain installment purchases) is new in the 1954 Code.

KNETSCH v. UNITED STATES
364 U.S. 361 (1960)

MR. JUSTICE BRENNAN delivered the opinion of the Court.

This case presents the question of whether deductions from gross income claimed on petitioners' 1953 and 1954 joint federal income tax returns, of $143,465 in 1953 and of $147,105 in 1954, for payments made by petitioner, Karl F. Knetsch, to Sam Houston Life Insurance Company, constituted "interest paid . . . on indebtedness" within the meaning of §23(b) of the Internal Revenue Code of 1939 and §163(a) of the Internal Revenue Code of 1954. The Commissioner of Internal Revenue disallowed the deductions and determined a deficiency for each year. The petitioners paid the deficiencies and brought this action for refund in the District Court for the Southern District of California. The District Court rendered judgment for the United States, and the Court of Appeals for the Ninth

Circuit affirmed, 272 F.2d 200. Because of a suggested conflict with the decision of the Court of Appeals for the Fifth Circuit in United States v. Bond, 258 F.2d 577, we granted certiorari, 361 U.S. 958.

On December 11, 1953, the insurance company sold Knetsch ten 30-year maturity deferred annuity savings bonds, each in the face amount of $400,000 and bearing interest at 2½% compounded annually. The purchase price was $4,004,000. Knetsch gave the Company his check for $4,000, and signed $4,000,000 of nonrecourse annuity loan notes for the balance. The notes bore 3½% interest and were secured by the annuity bonds. The interest was payable in advance, and Knetsch on the same day prepaid the first year's interest, which was $140,000. Under the Table of Cash and Loan Values made part of the bonds, their cash or loan value at December 11, 1954, the end of the first contract year, was to be $4,100,000. The contract terms, however, permitted Knetsch to borrow any excess of this value above his indebtedness without waiting until December 11, 1954. Knetsch took advantage of this provision only five days after the purchase. On December 16, 1953, he received from the company $99,000 of the $100,000 excess over his $4,000,000 indebtedness, for which he gave his notes bearing 3½% interest. This interest was also payable in advance and on the same day he prepaid the first year's interest of $3,465. In their joint return for 1953, the petitioners deducted the sum of the two interest payments, that is $143,465, as "interest paid . . . within the taxable year on indebtedness," under §23(b) of the 1939 Code.

The second contract year began on December 11, 1954, when interest in advance of $143,465 was payable by Knetsch on his aggregate indebtedness of $4,099,000. Knetsch paid this amount on December 27, 1954. Three days later, on December 30, he received from the company cash in the amount of $104,400, the difference less $1,000 between his then $4,099,000 indebtedness and the cash or loan value of the bonds of $4,204,000 on December 11, 1955. He gave the company appropriate notes and prepaid the interest thereon of $3,640. In their joint return for the taxable year 1954 the petitioners deducted the sum of the two interest payments, that is $147,105, as "interest paid . . . within the taxable year on indebtedness," under §163(a) of the 1954 Code.

The tax years 1955 and 1956 are not involved in this proceeding, but a recital of the events of those years is necessary to complete the story of the transaction. On December 11, 1955, the start of the third contract year, Knetsch became obligated to pay $147,105 as prepaid interest on an indebtedness which now totalled $4,203,000. He paid this interest on December 28, 1955. On the same date he received $104,000 from the company. This was $1,000 less than the difference between his indebtedness and the cash or loan value of the bonds of $4,308,000 at December 11, 1956. Again he gave the company notes upon which he prepaid interest of $3,640. Petitioners claimed a deduction on their 1955 joint return for the aggregate of the payments, or $150,745.

Knetsch did not go on with the transaction for the fourth contract year beginning December 11, 1956, but terminated it on December 27, 1956. His indebtedness at that time totalled $4,307,000. The cash or loan value of the bonds was the $4,308,000 value at December 11, 1956, which had been the basis of the "loan" of December 28, 1955. He surrendered the bonds and his indebtedness was canceled. He received the difference of $1,000 in cash.

The contract called for a monthly annuity of $90,171 at maturity (when Knetsch would be 90 years of age) or for such smaller amount as would be produced by the cash or loan value after deduction of the then existing indebtedness. It was stipulated that if Knetsch had held the bonds to maturity and continued annually to borrow the net cash value less $1,000, the sum available for the annuity

at maturity would be $1,000 ($8,388,000 cash or loan value less $8,387,000 of indebtedness), enough to provide an annuity of only $43 per month.

The trial judge made findings that "[t]here was no commercial economic substance to the . . . transaction," that the parties did not intend that Knetsch "become indebted to Sam Houston," that "[n]o indebtedness of [Knetsch] was created by any of the . . . transactions," and that "[n]o economic gain could be achieved from the purchase of these bonds without regard to the tax consequences. . . ." His conclusion of law, based on this Court's decision in Deputy v. du Pont, 308 U.S. 488, was that "[w]hile in form the payments to Sam Houston were compensation for the use or forbearance of money, they were not in substance. As a payment of interest, the transaction was a sham."

We first examine the transaction between Knetsch and the insurance company to determine whether it created an "indebtedness" within the meaning of §23(b) of the 1939 Code and §163(a) of the 1954 Code, or whether, as the trial court found, it was a sham. We put aside a finding by the District Court that Knetsch's "only motive in purchasing these 10 bonds was to attempt to secure an interest deduction." [1] As was said in Gregory v. Helvering, 293 U.S. 465, 469: "The legal right of a taxpayer to decrease the amount of what otherwise would be his taxes, or altogether avoid them, by means which the law permits, cannot be doubted. . . . But the question for determination is whether what was done, apart from the tax motive, was the thing which the statute intended."

When we examine "what was done" here, we see that Knetsch paid the insurance company $294,570 during the two taxable years involved and received $203,000 back in the form of "loans." What did Knetsch get for the out-of-pocket difference of $91,570? In form he had an annuity contract with a so-called guaranteed cash value at maturity of $8,388,000, which would produce monthly annuity payments of $90,171, or substantial life insurance proceeds in the event of his death before maturity. This, as we have seen, was a fiction, because each year Knetsch's annual borrowings kept the net cash value, on which any annuity or insurance payments would depend, at the relative pittance of $1,000.[2] Plainly, therefore, Knetsch's transaction with the insurance company did "not appreciably affect his beneficial interest except to reduce his tax. . . ." Gilbert v. Commissioner, 248 F.2d 399, 411 (dissenting opinion). For it is patent that there was nothing of substance to be realized by Knetsch from this transaction beyond a tax deduction. What he was ostensibly "lent" back was in reality only the rebate of a substantial part of the so-called "interest" payments. The $91,570 difference retained by the company was its fee for providing the façade of "loans" whereby the petitioners sought to reduce their 1953 and 1954 taxes in the total sum of $233,297.68. There may well be single-premium annuity arrangements with nontax substance which create an "indebtedness" for the purposes of §23(b) of the 1939 Code and §163(a) of the 1954 Code. But this one is a sham.

The petitioners contend, however, that the Congress in enacting §264 of the 1954 Code authorized the deductions. They point out that §264(a)(2) denies a deduction for amounts paid on indebtedness incurred to purchase or carry a single-premium annuity contract, but only as to contracts purchased after March 1, 1954. The petitioners thus would attribute to Congress a purpose to allow

---

1 We likewise put aside Knetsch's argument that, because he received ordinary income when he surrendered the annuities in 1956, he has suffered a net loss even if the contested deductions are allowed, and that therefore his motive in taking out the annuities could not have been tax avoidance.

2 Petitioners argue further that in 10 years the net cash value of the bonds would have exceeded the amounts Knetsch paid as "interest." This contention, however, is predicated on the wholly unlikely assumption that Knetsch would have paid off in cash the original $4,000,000 "loan."

the deduction of pre-1954 payments under transactions of the kind carried on by Knetsch with the insurance company without regard to whether the transactions created a true obligation to pay interest. Unless that meaning plainly appears we will not attribute it to Congress. "To hold otherwise would be to exalt artifice above reality and to deprive the statutory provision in question of all serious purpose." Gregory v. Helvering, supra, p. 470. We, therefore, look to the statute and materials relevant to its construction for evidence that Congress meant in §264(a)(2) to authorize the deduction of payments made under sham transactions entered into before 1954. We look in vain.

Provisions denying deductions for amounts paid on indebtedness incurred to purchase or carry insurance contracts are not new in the revenue acts. A provision applicable to all annuities, but not to life insurance or endowment contracts, was in the statute from 1932 to 1934, 47 Stat. 179. It was added at a time when Congress was developing a policy to deny a deduction for interest allocable to tax-exempt income; the proceeds of annuities were excluded from gross income up to the amount of the consideration paid in by the annuitant. See H.R. Rep. No. 708, 72d Cong., 1st Sess., p. 11. The provision was repealed by the Revenue Act of 1934, 48 Stat. 688, when the method by which annuity payments were taken into gross income was changed in such way that more would be included. 48 Stat. 687. See S. Rep. No. 558, 73d Cong., 2d Sess., p. 24.

Congress then in 1942 denied a deduction for amounts paid on indebtedness incurred to purchase single-premium life insurance and endowment contracts. This provision was enacted by an amendment to the 1939 Code, 56 Stat. 827, "to close a loophole" in respect of interest allocable to partially exempt income. See Hearings before Senate Finance Committee on H.R. 7378, 77th Cong., 2d Sess., p. 54; §22(b)(1) of the 1939 Code. . . .

The 1954 provision extending the denial to amounts paid on indebtedness incurred to purchase or carry single-premium annuities appears to us simply to expand the application of the policy in respect of interest allocable to partially exempt income. The proofs are perhaps not as strong as in the case of life insurance and endowment contracts, but in the absence of any contrary expression of the Congress, their import is clear enough. There is *first* the fact that the provision was incorporated in the section covering life insurance and endowment contracts, which unquestionably was adopted to further that policy. There is *second* the fact that Congress' attention was directed to annuities in 1954; the same 1954 statute again changed the basis for taking part of the proceeds of annuities into gross income. See §72(b) of the 1954 Code. These are signs that Congress' long-standing concern with the problem of interest allocable to partially exempt income, and not any concern with sham transactions, explains the provision.*

Moreover the provision itself negates any suggestion that sham transactions were the congressional concern, for the deduction denied is of certain interest payments on actual "indebtedness." And we see nothing in the Senate Finance and House Ways and Means Committee Reports on §264, H.R. Rep. No. 1337, 83d Cong., 2d Sess., p. 31; S. Rep. No. 1622, 83d Cong., 2d Sess., p. 38, to suggest that Congress in exempting pre-1954 annuities intended to protect sham transactions.

Some point is made in an amicus curiae brief of the fact that Knetsch in enter-

* In 1964, Congress acted again in this field, by enacting §264(a)(3), which disallows (subject to certain exceptions) any deduction for interest on indebtedness incurred or continued to purchase or carry a life insurance, endowment, or annuity contract pursuant to a plan which "contemplates the systematic direct or indirect borrowing of part or all of the increases in the cash value of such contract." — ED.

ing into these annuity agreements relied on individual ruling letters issued by the Commissioner to other taxpayers. This argument has never been advanced by petitioners in this case. Accordingly, we have no reason to pass upon it.

The judgment of the Court of Appeals is

Affirmed.

MR. JUSTICE DOUGLAS, with whom MR. JUSTICE WHITTAKER and MR. JUSTICE STEWART concur, dissenting.

I agree with the views expressed by Judge Moore in Diggs v. Commissioner, 281 F.2d 326, 330-332, and by Judge Brown, writing for himself and Judge Hutcheson, in United States v. Bond, 258 F.2d 577.

It is true that in this transaction the taxpayer was bound to lose if the annuity contract is taken by itself. At least the taxpayer showed by his conduct that he never intended to come out ahead on that investment apart from this income tax deduction. Yet the same may be true where a taxpayer borrows money at 5% or 6% interest to purchase securities that pay only nominal interest; or where, with money in the bank earning 3%, he borrows from the selfsame bank at a higher rate. His aim there, as here, may only be to get a tax deduction for interest paid. Yet as long as the transaction itself is not hocus-pocus, the interest charges incident to completing it would seem to be deductible under the Internal Revenue Code as respects annuity contracts made prior to March 1, 1954, the date Congress selected for terminating this class of deductions. 26 U.S.C. §264. The insurance company existed; it operated under Texas law; it was authorized to issue these policies and to make these annuity loans. While the taxpayer was obligated to pay interest at the rate of 3½% per annum, the annuity bonds increased in cash value at the rate of only 2½% per annum. The insurance company's profit was in that 1-point spread.

Tax avoidance is a dominating motive behind scores of transactions. It is plainly present here. Will the Service that calls this transaction a "sham" today not press for collection of taxes[1] arising out of the surrender of the annuity contract? I think it should, for I do not believe any part of the transaction was a "sham." To disallow the "interest" deduction because the annuity device was devoid of commercial substance is to draw a line which will affect a host of situations not now before us and which, with all deference, I do not think we can maintain when other cases reach here. The remedy is legislative. Evils or abuses can be particularized by Congress. We deal only with "interest" as commonly understood and as used across the board in myriad transactions. Since these transactions were real and legitimate in the insurance world and were consummated within the limits allowed by insurance policies, I would recognize them tax-wise.

NOTE

1. *Bona fide "indebtedness."* Until recent years, most of the litigation over the bona fides of the alleged indebtedness concerned intra-family transactions. See, for example, Mercil v. Commissioner, 24 T.C. 1150 (1955) (monthly payments to taxpayer's elderly father as "interest" on alleged indebtedness growing out of father's payment for taxpayer's education many years earlier; held, not deductible); Gilman v. Commissioner, 53 F.2d 47 (8th Cir. 1931) (payments on promissory notes given by taxpayer to his wife and children; held, not deductible). Another area of continuing friction is the payment of "interest" by a one-man or closely held corporation to its owners, where the issue is whether their

[1] Petitioners terminated this transaction in 1956 by allowing the bonds to be cancelled and receiving a check for $1,000. The termination was reflected in their tax return for 1956. It might also be noted that the insurance company reported as gross income the interest payments which it received from petitioners in 1953 and 1954.

advances to the corporation constitute loans (the interest on which is deductible) or equity investments (dividends on which are not deductible); see page 642 infra.

In the *Knetsch* case, the taxpayer was charged interest at the rate of 3½ per cent on his loan while his investment grew at the rate of only 2½ per cent. Unless a drastic change in economic conditions made it possible for him to borrow funds at less than 2½ per cent and pay off the outstanding loan, he could not achieve an economic gain. But the transaction could nevertheless produce a profit *if* the interest paid was deductible from high-bracket income and *if* the increase in cash surrender value was taxable at the capital gains rate. (On the latter assumption, see footnote 1 of the *Knetsch* opinion.) On these assumptions, the result for which the taxpayer hoped is thus explained by Blum, Knetsch v. United States: A Pronouncement on Tax Avoidance, 1961 Supreme Court Review 135, also in 40 Taxes 296 (1962):

> For the almost four years covered by the transaction, the taxpayer paid in cash interest totalling $441,315, and he received in cash $308,000 through loans against the cash surrender value and the sum received upon surrender of the bonds. He thus was out of pocket (1) the difference between these two amounts, $133,315, plus (2) his initial $4,000 cash investment, a total of $137,315. If, for purposes of illustration, it is assumed that all of the income to be offset by the interest deduction would otherwise have been taxed in the 90% bracket, the net cost to the taxpayer would have been the initial cash investment ($4,000) plus 10% of the interest (10% of $441,315 = $44,131.50), a total of $48,131.50. And if further it is assumed that the increase in cash value could have been realized as a long-term capital gain, bearing a maximum tax of 25%, the net received after tax would have been $231,000 (75% of $308,000). The taxpayer's net profit after tax then would have been $192,868.50 — or better than 140% of his total cash outlay of $137,315.

Although the amounts would have been different if the arrangement had been kept alive for a longer period, the same principle would have been applicable. There have been a great many other cases in recent years involving transactions that offered little or no hope of profit unless a claimed deduction for interest was allowed and a partially offsetting future gain would be taxable as capital gain. The transactions are so complex, however, that even a summary would be very lengthy. See Bridges v. Commissioner, 39 T.C. 1064 (1963), and cases there cited; Eustice and Lyon, Federal Income Taxation, 36 N.Y.U.L. Rev. 642, 643 et seq. (1961).

Transactions of this type are sometimes devised by brokers, insurance agents, and promoters who derive a commission from acting as middleman in the purchase or sale of the insurance policies or securities involved. In Miles v. Livingstone, 301 F.2d 99 (1962), a civil action against a dealer in government securities, brought by a customer who failed to attain the tax advantages he had anticipated, was dismissed; the court agreed that the transactions were "spurious and without substance," but held that the plaintiff knew this as well as the defendant. In Anderson v. Knox, 297 F.2d 702 (9th Cir. 1961), however, the court affirmed a judgment against an insurance agent for breaching a warranty that an elaborate plan for bank-financed insurance "was a suitable program for plaintiff and his family and suited their needs," in which the plaintiff recovered his out-of-pocket expenses plus punitive damages of $10,000 and $2500 for emotional distress. See also Martin v. Livingstone Securities Corp., 219 F. Supp. 200 (D. Mass. 1963).

2. *Indebtedness to buy or carry tax-exempt securities.* Section 265(2) disallows the deduction for interest on indebtedness "incurred or continued" to purchase tax-exempt securities. Note that it is applicable only if the interest received is *wholly* tax exempt; the interest on some federal obligations is exempt from the normal tax but not from the surtax. (Supra p. 161.) How is the causal connection to be established, especially as to indebtedness "continued" for the forbidden purpose? See Jacobson v. Commissioner, 28 T.C. 579 (1957).

The prohibition of §265(2) was attacked in Denman v. Slayton, 282 U.S. 514 (1931), on the ground that it defeated the immunity of tax-exempt securities and discriminated against persons of limited means who had to borrow to purchase them. The Court upheld the provision, saying (282 U.S. at 519-520):

The respondent here was not in effect required to pay more upon his taxable receipts than was demanded of others who enjoyed like incomes solely because he was the recipient of interest from tax free securities. . . . Under the theory of the respondent, A, with an income of $10,000 arising from non-exempt securities by the simple expedient of purchasing exempt ones with borrowed funds and paying $10,000 interest thereon, would escape all taxation upon receipts from both sources. It was proper to make provision to prevent such a possibility.

3. *Debt on cooperative apartment.* The Code was amended in 1942 to allow the tenant-stockholder of a cooperative apartment building to deduct his share of the corporation's interest and taxes and in 1954 the provision, now §216, was broadened to include cooperative housing developments. See Holden v. Commissioner, 27 B.T.A. 530 (1933), holding that the tenant could not take an interest deduction for a pre-1942 year, because the interest and taxes were the obligation of the cooperative corporation that owned the building; the tenant's obligation to defray his share of the corporation's expenses did not convert his payments into payments of "interest" and "taxes."

4. *Hidden interest on installment purchases.* Section 163(b) allows a deduction for "hidden" interest on installment purchases. Before 1954, this area was in some doubt. See McKenzie v. Commissioner, ¶52,126 P-H Memo T.C.; cf. Hundahl v. Commissioner, 118 F.2d 349 (5th Cir. 1941).

For problems in allocating a lump sum payment on account of an existing debt between principal and interest, see Rev. Rul. 63-57, 1963-1 C.B. 103; see also §483, enacted in 1964 to require interest to be imputed in certain sales of property where payment is deferred (infra page 521).

5. *The rationale of §163(a).* Interest may be incurred in business or in a transaction entered into for profit; and the deduction in such circumstances rests upon the same footing as any other expense of business or investment; see page 204n infra. But it may also be a purely personal expense, as when paid to finance the purchase of one's private residence or car. Why should such expenses be deductible when the cost of rent, food, and clothing is not?

5. *Taxes*

Section 164, allowing certain taxes to be deducted, was derived from §23(c) of the 1939 Code, but it was substantially amended in 1964.

Before 1964, most state and local and some federal taxes were deductible by virtue of §164, but in 1964 this provision was amended to permit only the following taxes to be deducted:

1. State, local, and foreign real property taxes.
2. State and local personal property taxes.
3. State, local, and foreign income taxes (including war profits and excess profits taxes).
4. State and local general sales taxes. For the meaning of the term "general sales tax," see §164(b)(2).
5. State and local taxes on the sale of gasoline and other motor fuels.

These taxes may be deducted even though incurred in connection with the taxpayer's personal residence or other living expenses. In addition, taxes that are incurred in his trade or business or other profit-seeking activities may be deducted under §162 (ordinary and necessary business expenses) or §212 (property held for production of income).

NOTE

1. *Apportionment of real property taxes.* Suppose the real property tax on A's home for the calendar year 1965 is based on its assessed value as of June 30, 1964, and must be

paid in full before June 30, 1965. A pays the tax on June 1, 1965, but sells his house on July 1, 1965, the buyer paying the agreed price plus 50 per cent of the 1965 tax. See §164(d), which, when applicable, overrules Magruder v. Supplee, 316 U.S. 394 (1942); Cannon, The Apportionment of Real Estate Taxes Between Purchaser and Seller Under Section 164(d) of the 1954 Code, 12 Tax L. Rev. 433 (1957).

2. *Taxes on exempt income.* If state or foreign income taxes are imposed on income that is exempt from federal taxation, is a deduction for the state or foreign taxes denied by §265(1)? Note that this provision uses the term "expenses" in its title, but that its language embraces "any amount otherwise allowable as a deduction." A series of Tax Court cases has held that taxes may be disallowed under §265(1); they are cited in Hawaiian Trust Co. Ltd. v. United States, 291 F.2d 761 (9th Cir. 1961), which also discusses whether gains that are not "recognized" for federal tax purposes are "exempt" within the meaning of §265 so as to result in disallowance of state taxes allocable to such gains.

3. *Recovery of taxes after deduction.* If the taxpayer succeeds in obtaining a refund of taxes that he deducted under §164, he must report the refund as income, unless he derived no tax benefit from the deduction. See Perry v. United States, supra page 75; §111.

6. *Casualty Losses*

Section 165(a) and (c)(3), allowing a deduction for casualty losses sustained by individuals, and §165(b), prescribing the method of determining the amount of a loss deduction, are derived from §23(e)(3) and §23(i) of the 1939 Code.

Section 165(e), prescribing the time for deducting losses by theft, and §165(h), relating to the time for deducting disaster losses, are new.

KEENAN v. BOWERS
91 F. Supp. 771 (E.D.S.C. 1950)

WYCHE, Chief Judge. . . .

On March 15, 1945, the taxpayers, husband and wife, filed a joint federal income tax return for the tax year 1944, and in their computation of net taxable income claimed a deduction of $1,300 under [§165(c)(3)], for the loss of two diamond rings not compensated for by insurance, which deduction was disallowed by the Commissioner, and an assessment made for additional taxes in the amount of $972.02, plus $180.38 interest, which was paid under protest by plaintiffs. A claim for refund was duly filed by plaintiffs and disallowed.

The stipulation by the parties and the affidavit of Mrs. Keenan, which was agreed to be considered as testimony for the plaintiff, disclose the following facts: On or about May 4, 1944, Mr. and Mrs. W. J. Keenan, the plaintiffs herein, were en route to visit their son at Grenada, Mississippi, prior to his departure overseas with the 94th Infantry, and they stopped and spent the night at the Bankhead Hotel in Birmingham, Alabama; they had never spent the night in said hotel before and the surroundings were strange to both of them; their hotel room had single beds with a small lamp table between the beds. This arrangement differed from that in their home where they had bed tables on each side. On this night, Mr. Keenan prepared for bed, and being bothered with a nose irritation, placed a box of kleenex tissues on his side of the bed table and went to sleep prior to Mrs. Keenan. Subsequent to this, his wife retired. Customarily, when retiring at home, Mrs. Keenan removed her rings and placed them on or in her bureau, but this night she did not do so. However, during the night, she found her rings uncomfortable, and recalling the box of kleenex on the table, she reached out in the

dark and unbeknown to her husband, took a piece of kleenex and wrapped her rings in it, and placed them wrapped on her side of the small table; she wrapped them in kleenex tissue with the thought in mind that this would be a possible precaution against the theft of the rings; during the night, Mr. Keenan awoke several times, used pieces of kleenex tissues to blow his nose, and having no convenient waste basket at hand, placed these balls of tissue on the table, intending to dispose of them upon rising; the next morning, Mr. Keenan arose early and prior to his wife's awakening, hastily preparing for an early departure, swept the used tissues up, not knowing that some of them contained the rings, balled them up, went to the bathroom and disposed of them in the toilet, flushing it forthwith; about a half an hour after Mr. Keenan's actions, Mrs. Keenan realized what had happened and immediately communicated with the hotel manager who called in the hotel engineer. A search of the trap was to no avail and then later the City of Birmingham's engineer went into the large trap in the sewer into which the hotel refuse emptied but all efforts to recover the rings were unavailing. The value of these rings, less the maximum amount of insurance which could be collected, was $1,300. . . .

The question for decision is whether or not the phrase "other casualty" in [§165(c)(3)] can be construed so as to cover the loss of jewelry under the foregoing agreed statement of facts. . . .

Generally, the words "other" and "any other" following an enumeration of particular classes of things in a statute, must be read as meaning "other such like" and include only words of like kind or character. . . .

The word "casualty" has been defined as follows:

> An accident or casualty, according to common understanding, proceeds from an unknown cause or is an unusual effect of a known cause. Either may be properly said to occur by chance and unexpectedly. Chicago, St. Louis & N.O.R. Co. v. Pullman Co., 139 U.S. 79.

See also, Alice P. Bachofen Von Echt, 21 B.T.A. 702, 709. "Casualty" has also been defined as "an event due to some sudden, unexpected, or unusual cause," Matheson, Exec. v. Comm., 2 Cir., 54 F.2d 537, 539; and embraces losses arising through the action of natural physical forces and which occur suddenly, unexpectedly, and without design on the part of the one who suffers the loss. However, it is now recognized that a human agency can constitute or cause the sudden turn of events resulting in the loss. Ray Durden et al., 3 T.C. 1; Robert L. Stephens v. Commissioner, 3 T.C. 1.

The words "other casualty" were added by the 1916 Act, and the Treasury at first took the view that "other casualty" must be an incident similar to fires, storms or shipwreck arising from a natural cause and not due to negligence. In Shearer v. Anderson, 2 Cir., 16 F.2d 995, 996, this construction was held to be erroneous and the court, in allowing a deduction for damage to the taxpayer's pleasure automobile sustained when it overturned on an icy road, stated: ". . . as 'casualty' expresses rather the result than the cause of the damage, that is, the wreck itself rather than the lightning, storm, or the negligence or fault of some person, so the 'other casualty' is at least as clearly ejusdem generis (of the same kind) with shipwreck as with fire or storm." The court's modification of the Treasury Regulations in the case of Shearer v. Anderson, 2 Cir., 16 F.2d 995, does not change the Treasury's construction that the phrase means *or other like casualty,* because the court, in allowing a deduction for the damages resulting from the automobile wreck, held that the wreck of the automobile was similar to a shipwreck and was a casualty of the same kind.

Some of the losses which have been held to be deductible as from "other casu-

alty" are as follows: loss occasioned by freezing and bursting of water pipes in a residence during the absence of the occupant; loss occasioned by the bursting of a boiler used in heating a taxpayer's residence; damage to a factory from an earthquake; an extensive deep sinking of land caused by a subterranean disturbance; damage to trees caused by a sleet and ice storm; loss from violent quarry blasting operations.

Examples of losses that have been held not to be from "other casualty" are as follows: damage to buildings caused by termites; loss of a ring when there was no evidence or testimony establishing that the ring was stolen rather than mislaid, and the taxpayer did not attempt to establish the fair market value of the ring as of the date of disappearance; loss of a ring when it slipped from taxpayer's finger and was lost in muddy water when he was trying to retrieve a decoy while duck hunting; damage to a residence caused by excavations on property adjoining that of the taxpayer; loss occasioned by rusting and corrosion of the re-enforcing steel used in the cement floor beams of a house built on an island; damage on account of injuries caused to one who trips over a wire stretched in front of the taxpayer's residence; loss of household goods either in storage or in transit; and loss of a bird dog which disappeared when released for exercise by its handler and was never seen again. . . .

The case nearest in point is Stevens v. Commissioner, ¶47,191 P-H Memo T.C., where the taxpayer, while duck hunting and in the act of retrieving a decoy, a ring belonging to him, slipped off his finger and dropped into muddy water several feet deep. Although he was conscious of the fact at the moment the ring slipped from his finger, it disappeared into the muddy water making all efforts to recover it futile. In this case the Tax Court disallowed the deduction and said:

> The loss here was not like that resulting from the collision of an automobile, Shearer v. Anderson, supra; W. S. Bronson, 9 B.T.A. 1008; or a flood, Ferguson v. Commissioner, 10 Cir., 59 F.2d 893; or an ice storm, Frederick H. Nash, 22 B.T.A. 482; or subterranean disturbances, Harry Johnston Grant, 30 B.T.A. 1028. The petitioner merely permitted his ring to drop from his finger, by his own carelessness, we must presume, without the intervention of any sudden or destructive force. It was much the same kind of loss as might result from the loss of one's purse, or any other article of value. Certainly, if Congress had intended to allow the deduction of such losses it would have expressed its aim in language much simpler and more appropriate to that end than is to be found in [§165(c)(3)].

In the instant case it may be conceded that the loss of the rings was due to an unexpected and unusual cause and was not an intentional act on the taxpayer's part, but the loss lacks the element of suddenness. The primary cause of the loss was the placing of the rings in the kleenex tissue. The loss was caused by a chain of events on the part of Mrs. Keenan and Mr. Keenan. There was no intervening sudden force, cause or occurrence which brought on the event such as would ever be present in a casualty arising from fires, storms or shipwreck. I cannot say that the event or accident resulting in the loss was of the same kind as would be caused by fire, storm or shipwreck.

Therefore, judgment must be entered for the defendant, and it is so ordered.

NOTE

1. *Meaning of "casualty."* If the rings had been left in the hotel room when the taxpayers departed, and could not be found by the management when the taxpayers inquired about them a day later, would the loss be deductible? See Jones v. Commissioner, 24 T.C. 525 (1955). What if the rings had been left on a window sill and had been damaged or lost on being accidentally brushed off by a maid? Can the damage to the taxpayer's

own automobile in a collision or upset be deducted if he was driving negligently? Regs. §1.165-7(a)(3).

Does §165(c) allow the taxpayer to deduct the damage done by one snowstorm but not the damage done by a cold winter? If so, why? In ruling that a drought might be a "casualty," the Internal Revenue Service has said:

> Court decisions and Internal Revenue Service rulings . . . have developed the over-all concept that the term "casualty" . . . refers to an identifiable event of a sudden, unexpected, or unusual nature. . . . Under this concept, an identifiable event which would give rise to a casualty loss is not necessarily limited to an event of a sudden nature such as a flood, hurricane or earthquake, since it can also be of an unexpected or unusual nature. Thus, in the case of an unprecedented and unusual drought in an area which normally does not have prolonged and continued dry spells, a drought of such nature would be both unexpected and unusual and, therefore, would meet the above-mentioned test of an identifiable event. . . . On the other hand, a dry spell which is normal and usual in the particular area involved, would not meet the test indicated above since a drought of that nature would be neither "unexpected or unusual" for such area. Any loss resulting under such circumstances would be attributable to progressive deterioration of the property through a steadily operating cause and therefore would not constitute a "casualty" loss. [Special Ruling addressed to Senator T. C. Hennings, Jr., printed in 1954 P-H Federal Tax Service ¶76,570; see also Rev. Rul. 54-85, 1954-1 C.B. 58; Maurer v. United States, 178 F. Supp. 223 (D. Kan. 1959), rev'd on another ground, 284 F.2d 122 (10th Cir. 1960).]

Among the many misfortunes for which §165(c)(3) has been held to provide no balm are these: Scholhoff v. Commissioner, ¶63,213 P-H Memo T.C. (taxpayer paid $8800 to a dancing studio on implied representation he could "date" the instructors; held, no casualty loss even though he made no dates); Vance v. Commissioner, 36 T.C. 547 (1961) (taxpayer's household furniture was repossessed by finance company when his ex-wife failed to keep up the payments, and she wrongfully took certain fixtures from his house on her departure; held, neither event was a casualty); Powers v. Commissioner, 36 T.C. 1191 (1961) (taxpayer's Volkswagen was confiscated, 3 days after purchase, by East German authorities; held, a despotic act but not a casualty); Smith v. Commissioner, 10 T.C. 701 (1948) (taxpayer's thoroughbred bird dog disappeared; although court had "never seen [a photograph of] a more beautiful and intelligent looking dog" and believed "he would be a tempting prize for someone who was criminal-minded enough to steal a fine dog," mere disappearance is not sufficient evidence of theft; held, no deduction); Dyer v. Commissioner, ¶61,141 P-H Memo T.C. (taxpayer's cat broke a vase; taxpayer claimed that loss was attributable to cat's neurotic behavior, viz., a fit, rather than to her "ordinary perambulations"; held, not a casualty); Rev. Rul. 55-327, 1955-1 C.B. 25 (damage to fur coat by moths not deductible).

2. *Amount deductible.* Section 165(b) provides that the basis "for determining the amount of any loss shall be the adjusted basis provided in section 1011 for determining the loss from the sale or other disposition of property." Section 1011, in turn, provides that the property's adjusted basis is to be determined by starting with its unadjusted basis (e.g., cost in the case of property purchased by the taxpayer; the date-of-death value in the case of inherited property), and then making the adjustments prescribed by §1016 (e.g., adding the cost of improvements and betterments, deducting depreciation if the property is depreciable business property, etc.). In Helvering v. Owens, 305 U.S. 468 (1939), the Supreme Court was called upon to apply these provisions to a taxpayer whose automobile, used for pleasure only, had been damaged in a collision. Its cost when new was $1825, its fair market value before the collision was $225, and its value after the collision was $190. The taxpayer claimed a deduction of $1635 — the difference between the car's cost and its value after the collision — arguing that its adjusted basis was $1825 because no depreciation is allowable on a pleasure car and that §165(b) requires the use of adjusted basis in determining the amount of the deduction. The Court of Appeals for the Second Circuit thought that this result was so obviously required by the language of the statute that "we should have to disregard the words, and should not be interpreting them, if we refused to take them just as they read." The Supreme Court reversed, holding

that the proper deduction was $35 (the difference between the property's value before the accident and its value immediately thereafter):

> As the income tax laws call for accounting on an annual basis; as they provide for deductions for "losses sustained during the taxable year"; as the taxpayer is not allowed annual deductions for depreciation of non-business property; as section [165(b)] requires that the deduction shall be on "the adjusted basis provided in section [1011]," thus contemplating an adjustment of value consequent on depreciation; and as the property involved was subject to depreciation and of less value in the taxable year, than its original cost, we think [§1016(a)(2)] must be read as a limitation upon the amount of the deduction so that it may not exceed cost, and in the case of depreciable nonbusiness property may not exceed the amount of the loss actually sustained in the taxable year, measured by the then depreciated value of the property. [305 U.S. at 471.]

Does this mean merely that the "loss sustained during the taxable year," within the meaning of §165(a), is the loss in value attributable to the accident — the rest of the decline in value being attributable to the taxpayer's use of the property in prior years? Since the loss on a *sale* of property that is dedicated to personal use cannot be deducted (supra p. 163), does such property lack an adjusted basis "for determining . . . loss" with the result that §165(b) has no relevance in determining the amount of the casualty loss allowable with respect to such property?

If by reason of inflation property damaged by casualty is worth, even after the accident, more than its cost, has the taxpayer suffered a "loss"? Suppose an imported camera purchased by the taxpayer for $150 is stolen from him when it is still as good as new. What is the amount of his loss if he is able to replace it for $100 because (a) its regular retail price has declined, (b) he happens to be in the country of manufacture and need not pay the United States duty, or (c) his uncle's brother-in-law gets one for him wholesale? If in any of these circumstances his loss is limited to $100, would it matter that instead of replacing the camera he decided to do without? What if when the camera was stolen from the taxpayer its value because of wear and tear was $100, but because the taxpayer was on an expedition and had immediate need for a camera, he was compelled to have a replacement shipped to him by chartered plane? What is the deduction if when the camera is stolen its "fair market value" is $100 if sold by a store but only $75 if offered for sale by a private individual?

For the conditions under which the cost of repairs may be used to establish the loss of value suffered by the taxpayer, see Regs. §1.165-7(a)(2)(ii).

After a struggle, the Treasury has agreed that a casualty loss on business property is to be computed in the same way as a loss of non-business property, except that if business property is totally destroyed, the taxpayer may deduct its pre-accident adjusted basis if it exceeds the pre-accident fair market value. Regs. §1.165-7(b)(1); Alcoma Assn., Inc. v. United States, 239 F.2d 365 (5th Cir. 1956). Why this residual difference between business and non-business property?

3. *The $100 deductible "floor."* By virtue of a 1964 amendment to §165(c)(3), non-business casualty losses are deductible only to the extent that they exceed $100 per casualty.

4. *When is the "loss" sustained?* Sometimes the amount of a loss caused by storm or similar casualty is not known in the year of the catastrophe, either because the extent of the damage is not immediately ascertainable or because the taxpayer does not yet know how fully he will be compensated by insurance. In several cases, the loss has been held deductible when finally measured. Barret v. United States, 202 F.2d 804 (5th Cir. 1953); Commissioner v. Harwick, 184 F.2d 835 (5th Cir. 1950).

Ascertaining the date of a loss resulting from embezzlement by an employee is sometimes especially difficult, because the pilferage may not be discovered until years after it occurred; indeed, the taxpayer may even be unable to determine who was responsible or when the funds were taken. Under pre-1954 law, the Regulations provided that a loss from theft or embezzlement was "ordinarily" deductible for the year in which it was "sustained." Saying that "ordinarily does not mean always," the Supreme Court allowed a taxpayer to deduct his loss in the year the embezzlement was discovered where he was

unable, despite a painstaking investigation, to establish either the identity of the embezzler or the years of the defalcations, and held that a deduction in the year of discovery was also proper for a taxpayer whose discovery of the embezzlement came after the statute of limitations had run on filing amended returns for some of the years in which the funds had been taken. Alison v. United States, 344 U.S. 167 (1952). Without indicating what was unsatisfactory about this flexible approach, except that it was uncertain, in 1954 Congress enacted §165(e) to provide that a loss arising from "theft" (which according to the Senate Report on the 1954 Code, p. 198, includes "embezzlement, larceny, etc.") shall be "treated as sustained during the taxable year in which the taxpayer discovers such loss." Does a taxpayer "discover" a "loss" when he finds that an employee took money from the cash register or only when he finds that the employee is unable to pay it back? In order to claim the deduction, must the taxpayer show that the embezzled funds cannot be recovered from the employee? G. M. Still, Inc. v. Commissioner, 218 F.2d 639 (2d Cir. 1955). If the employer decides not to press the embezzler for payment because this would — for example — require a foreclosure of his home, has the employer sustained a loss? If the embezzler gives the taxpayer a promissory note equal to the amount he has taken, and the taxpayer refrains from pressing a complaint against him, what are the tax consequences to the taxpayer? To the embezzler? See *James*, supra page 110.

Section 165(h), enacted in 1962, permits a "disaster" loss (if occurring within a qualified geographical area) to be deducted, at the taxpayer's election, in the taxable year before its occurrence. Why?

5. *Adjustment to basis.* Assume that Jones pays $2000 for an automobile and that when it is damaged in a collision he takes a (properly computed) $500 casualty loss deduction. Thereafter he spends $200 to repair part of the damage and, because of an inflation in automobile prices, sells the car the next year for $2300. What is his profit on the sale? Does the answer depend on whether the casualty deduction produced a tax benefit?

5. *References.* Caplin, Casualty Losses: Recent Developments, 12 N.Y.U. Inst. on Fed. Taxation 525 (1954); Deming, Establishing Casualty and Disaster Losses, 21 N.Y.U. Inst. on Fed. Taxation 143 (1963).

ALSOP v. COMMISSIONER

290 F.2d 726 (2d Cir. 1961)

Before MEDINA, MOORE and FRIENDLY, Circuit Judges.

FRIENDLY, Circuit Judge.

Petitioner is a well-known author, residing in Connecticut. She kept her records and filed her tax returns on a cash basis. She had a literary agent, named — somewhat inappropriately as things turned out — Rowe Wright. From January 1, 1942 to June 6, 1952, Rowe Wright received royalties aggregating $65,623.58 for petitioner's account from various foreign publishers. In five of the years Wright reported and remitted nothing to petitioner; in the other six she reported and remitted sums aggregating $8,580.88. The balance, $57,042.00, she embezzled, without petitioner having known the payments had been received. None of the royalties so unreported and embezzled were ever returned by petitioner as taxable income.

In 1952, petitioner discovered that certain foreign royalties due her had not been received. She dismissed Wright and obtained a judgment against her for $46,962.98, representing embezzled royalties paid by an English firm. In 1953, petitioner obtained a second judgment for $10,079.72 against Wright; this represented royalties from publishers on the Continent that Wright had embezzled.

In petitioner's return for 1952, she deducted the 1952 judgment as a "Loss due to embezzlement and defalcation of funds by agent"; this resulted in a net loss for the year. In her 1953 return, as amended, she deducted the 1953 judgment, as well as a net operating loss carry-over from 1952. In her amended return for 1954, she claimed a further deduction of the net operating loss carry-over.

In 1954, petitioner recovered $10,879.54 on account of the judgments. She did not include this as 1954 income.

The Commissioner issued a notice of deficiencies for 1952, 1953 and 1954. He disallowed the amounts claimed as embezzlement losses and the net operating loss carry-overs resulting therefrom, as well as a carry-back claimed for 1951 not directly here in issue. He also determined that the amount received by petitioner in 1954 in partial satisfaction of the judgments was taxable income of that year. . . .

. . . Petitioner was on a cash receipts and disbursements basis. Section [165] can hardly be read as permitting a deduction for the deprivation of income taxpayer has not received. . . .

Normally, indeed, "receipt of income by an agent is equivalent to receipt by the principal and such income is either actually or constructively received by him," 2 Mertens, Law of Federal Income Taxation (1955), p. 19; Maryland Casualty Co. v. United States, 1920, 251 U.S. 342, 345. But this rule can hardly apply where the agent of a cash basis taxpayer spirits away income of whose receipt the taxpayer never knew. Cf. Stoumen v. C.I.R., 3 Cir., 1953, 208 F.2d 903, 906; Ismert-Hincke Milling Co. v. United States, 10 Cir., 1957, 246 F.2d 754. What Rowe Wright did was to transform taxpayer's accounts receivable from the publishers into a claim in tort against the agent. That this was an economic loss to taxpayer is undeniable; but it was not the kind of loss that would appear in a cash receipts and disbursements system of income accounting.

Alison v. United States, [344 U.S. 167], does not fill the gap. There no one denied a loss had been sustained; the only question was whether it could be taken in the year of discovery as the Court held, or only in the year of occurrence as a more literal reading of the statute would have demanded.* The record in one of the two cases there decided, Stevenson-Chislett, Inc. v. United States, D.C.W.D. Pa. 1951, 98 F. Supp. 252, shows that the embezzling employee had made proper entries of receipts of income in the accounts, which, at least inferentially, had been reported, only the piracy being hidden. The facts in Mrs. Alison's case, D.C.W.D. Pa. 1951, 97 F. Supp. 959, are somewhat less clear. The thefts included, and presumably consisted predominantly of, principal; if any of them were of income for which the agent had never accounted, the record does not show this and the parties did not question, either in the District Court or in the Supreme Court, that taxpayer had suffered a loss. We find it difficult to believe the Supreme Court would have sanctioned a liberalizing of the statutory language as to the year when a theft loss is to be taken so as "to prevent hardships and injustice," 344 U.S. at page 169, in order to provide a deduction for theft of income of whose existence the taxpayer had never known and which she had never reported.

With respect to the $10,879.54 recovered in 1954, taxpayer's argument is that this represented income of the years when the royalties were received and is excluded from 1954 income under §111 of the 1954 Code, providing that "Gross income does not include income attributable to the recovery during the taxable year of a bad debt, prior tax, or delinquency amount, to the extent of the amount of the recovery exclusion with respect to such debt, tax or amount" since, if the embezzlement losses are disallowed, the recovery would come within the definition of "recovery exclusion" in [§111(b)(4)]. If the first step in taxpayer's argument were correct, the second would follow; but it is not. These payments constitute 1954 income not because they are attributable to a "recovery" but be-

* As stated in paragraph 4 of the preceding Editor's Note, §165 was amended after the *Alison* case by the addition of §165(e). — Ed.

cause they became income to this cash basis taxpayer in 1954 for the first time.
Affirmed.

NOTE

If the taxpayer had known of the royalties but had inadvertently failed to report them, would a loss by embezzlement of the funds be deductible? What if an automobile purchased with unreported income is damaged by fire or collision?

7. Bad Debts

Section 23(k) of the 1939 Code, dealing with bad debts, was carried over, with some changes, by §§166 and 165(g) of the 1954 Code.

SMYTH v. BARNESON

181 F.2d 143 (9th Cir. 1950)

Before: STEPHENS, HEALY and POPE, Circuit Judges.

STEPHENS, Circuit Judge.

The Collector of Internal Revenue is appealing from a judgment of the district court decreeing a refund to a taxpayer. The controversy arises out of the disallowance by the Commissioner of Internal Revenue of a $150,000 bad debt deduction taken by appellee on her 1941 individual federal income tax return.

The case comes to us upon stipulation of facts supplemented by the testimony of one witness for appellee and one, an Internal Revenue agent, for the Collector. The refund was decreed upon the finding that the questioned debt existed on January 1, 1941, and was then of value and that it became worthless during the ensuing year. Internal Revenue Code [§166 (a)(1)].

The Collector thinks the alleged debt never existed but that if it ever existed the sum of the loss cannot be taken as a bad debt deduction because the taxpayer failed to take reasonable steps to collect it.

In order to rule with appellant Collector as to the non-existence of the debt, we must determine that the court's contrary finding was clearly erroneous. In determining this point we consider all of the evidence giving the written evidence the weight we deem it entitled to de novo and applying the oral evidence with "due regard . . . to the opportunity of the trial court to judge of the credibility of the witnesses." Rule 52(a), Federal Rules of Civil Procedure.

The facts, in brief, are: In 1928 and 1929 the taxpayer advanced to her father $150,000. He used the money, and a like amount secured from his wife, taxpayer's mother, together with some of his own personal funds, to invest in a brokerage firm. The amounts so advanced were entered in the father's books in individual loan accounts. Yearly returns from such investment were received by the father up until 1932, and divided by him with his wife and daughter in the ratio of their advancements to him. On taxpayer's tax returns for the years thus involved, such monies as she received from her father were reported as income from partnership except for one year in which it was reported as interest. In 1932 the firm failed, and the father took on his tax return for that year a loss for the total amount invested although he derived no tax benefit therefrom. Taxpayer had income tax liability for that year which would have been eliminated if she had taken as a loss the amount advanced to her father. Thereafter, the father paid nothing to taxpayer. Taxpayer was adjudged incompetent in 1936 and a brother was appointed her guardian. Shortly thereafter in 1936 the mother died and the brother was appointed executor of the mother's estate. In the same year

the father voluntarily informed the executor that he owed his deceased wife $150,000 and that he owed a like amount to taxpayer, and that he intended to pay both debts. The $150,000 thus stated by the father to be owing to his deceased wife he paid to her estate in 1937, and the loan account as to her on his books was closed out. The father died in 1941, and a claim for the $150,000 filed against his estate by taxpayer's guardian was rejected in 1941 as being barred by the statute of limitations. The father, at all material times, was financially able to pay such amount to the taxpayer. The alleged debt was never listed as an asset on any of the inventories filed with any court by taxpayer's guardian. No note or other evidence ever indicated an obligation on the part of taxpayer's father to repay to her the $150,000.

All the above facts were stipulated to except for the testimony of taxpayer's brother, her guardian, as to the conversation had with the father in 1936 in which the latter stated that he owed taxpayer $150,000.

If the trial court assumed, which it evidently did, that taxpayer's guardian spoke the truth, the father's declaration against interest as to his indebtedness to his daughter was amply sufficient to sustain the finding that the debt was existent at the time. Upon the whole record, we hold that the trial court's finding was not clearly erroneous. Compare Orvis v. Higgins, 2 Cir., 180 F.2d 537.

As a basis for argument only and after making it plain that he believes the alleged debt never existed, the Collector assumes that the debt did exist and that it became worthless in 1941. He then contends that the "taxpayer is nevertheless not entitled to a bad debt deduction . . . unless she had made a reasonable effort to collect the debt." This she did not do.

Section [166(a)(1)] of the Internal Revenue Code authorizes a deduction for "any debt which becomes worthless within the taxable year." [1] The statute requires, as the basis for a deduction, that a debt actually existed and that it became worthless within the taxable year in which the deduction is claimed. Appellant would have us add a third requisite, i.e., that a reasonable effort must have been made to collect the debt.

It is true that the evidence as to efforts to collect is relevant as to the time a debt actually becomes worthless but, by and of itself, effort to collect is not an element of worthlessness. Authorities cited by the Collector do not hold contrariwise. In the instant case the death of taxpayer's father and the rejection of her claim against his estate in 1941 established its noncollectibility and therefore worthlessness. This fact alone is not conclusive of when it became noncollectible or worthless. But the trial court after consideration of all the evidence was of the opinion that the debt existed and that it might well have been paid at any time before the father's death. Notwithstanding the fact that the statute of limitations could have been pleaded as a complete bar prior to 1941, the debt was existent and at any time might have been paid voluntarily by the debtor [he paid $150,000 into his wife's estate] and could have been collected through court action up to the moment of the debtor's death, except for a special plea setting up the statute of limitations in bar. After the debtor's death, the law, California Probate Code, §708, prevented the payment of any debt as to which the statute of limitations had run. . . .

Affirmed.

---

[1] [Section 23(k)(1), 1939 Code] as in effect in 1941 authorized a deduction for "Debts *ascertained* to be worthless and charged off within the taxable year. . . ." By the Revenue Act of 1942, §124(a) and (d), 56 Stat. 820, 822, this section was amended to read "Debts which *become* worthless within the taxable year . . ." and as amended was made applicable retroactively to taxable years beginning after December 31, 1938.

NOTE

1. *Intra-family loans.* Whether an intra-family transaction is a gift or a loan is frequently litigated; the Tax Court has said that transfers from husband to wife are presumed, though not irrebutably, to be gifts. Van Anda v. Commissioner, 12 T.C. 1158 (1949), aff'd per curiam, 192 F.2d 391 (2d Cir. 1951). Section 166(d), which came into the Code in 1942, provides that "non-business" bad debts give rise to capital loss rather than to ordinary loss. The significance of this provision is made clear in Chapter 6, but it may be noted here that capital losses are of restricted deductibility. Section 166(d) will apply to many intra-family transactions, but it embraces other non-business debts as well.

2. *Loans to political organizations.* In 1952, Congress enacted §271, providing that uncollectible loans to political organizations shall not be deductible, except by banks. Political *contributions* are not deductible (why not?), and §271 puts *loans*, which might be used as disguised contributions, on a par with contributions.

3. *Date debt becomes bad.* As the footnote in the principal case indicates, the statute formerly permitted the deduction only if the debt was "ascertained to be worthless and charged off within the taxable year." If the taxpayer kept no books, a "mental charge-off" might do. Where books were kept, however, it was possible that the deduction would be lost altogether. For the debt might become worthless in one year but (because of unwarranted optimism) the taxpayer's ascertainment of worthlessness and charge-off might have occurred in a later year. Then the year of charge-off would be incorrect, while the earlier year of actual worthlessness could not be used because in it there was no ascertainment of worthlessness and charge-off. Since 1942 the statute has provided that the deduction shall be taken for the year of worthlessness, objectively determined. The selection of the proper year is still something of a guessing game, but since 1942 the taxpayer has been allowed seven years for claiming a refund based on a bad debt, instead of the usual three years. §6511(d)(1). Thus if he finds that he was unduly optimistic in waiting until a given year to take the deduction, he will ordinarily be able to file a refund claim for an earlier year without being met by a statute of limitations defense. See also §1311, infra pages 877-879.

4. *Business bad debts.* Business bad debts are taken up infra pages 285 et seq.

SECTION C. PERSONAL AND DEPENDENCY EXEMPTIONS

By §151, the taxpayer is allowed a $600 personal exemption for himself and, if he files a joint return with his wife, a $600 exemption for her. An additional exemption of $600 is allowed if either of them is blind or has attained the age of 65 before the end of the taxable year. These exemptions are cumulative, i.e., if *both* the taxpayer *and* his wife are 65 or over *and* blind, they are entitled to 6 personal exemptions, for a total of $3600.

Section 151 also provides an exemption of $600 for each qualified dependent of the taxpayer. To qualify, the person must (1) be related to the taxpayer by blood, marriage, or adoption within the degrees specified by §151(a)(1)-(8) or meet the special requirements of §151(a)(9) or (10); (2) derive more than one half of his support from the taxpayer; and (3) have a gross income of less than $600 for the year in which dependency is claimed. The gross income restriction is inapplicable, however, if the dependent is the taxpayer's child, is either under the age of 19 or a student, and (if married) does not file a joint return with his spouse.

The rationale of these exemptions and the legal problems that they create are discussed infra pages 337 et seq.

SECTION D. CREDITS AGAINST TAX

After the tax has been computed, it is reduced by certain credits. The most important is the credit for taxes withheld from wages. §31. Any amounts paid

as "estimated tax" (supra p. 20) are also credited against the tax liability reported on the return, though these amounts are, strictly speaking, not credits but payments on account of the tax itself. If the taxpayer had any partially tax-exempt interest, he is allowed a credit of 3 per cent thereof. §35; supra page 161. Taxes paid to foreign countries and possessions of the United States are also allowed, to a limited extent, as credits against the federal income tax. See §§33 and 901.

Section 37 of the 1954 Code introduced a new credit for "retirement income." A qualified taxpayer may credit against his tax liability 17 per cent (15 per cent in 1965 and later years) of his "retirement income" (pensions, annuities, interest, rents, and dividends). To qualify, the individual must be over 65 (except that pensions and annuities under a public retirement system qualify even though the recipient is under 65); and he must have received "earned income" in excess of $600 in each of any ten earlier years. In computing the credit, not more than $1,524 of retirement income ($2,286 for certain married persons) is taken into account, and even this amount must be reduced by any tax-free pensions or annuities (such as social security benefits) and, in some cases, by any earned income over specified amounts in the taxable year. The announced purpose of the credit (S. Rept. 8) was to adjust the differential that previously existed between persons who receive federal social security benefits, which have always been tax exempt, and those who receive taxable pensions or who have provided independently for old age. The parallel to social security is responsible for the 10-year earned income qualification and for the reduction of retirement income by earned income in certain circumstances, as well as for the 65-year age requirement.

The 1954 Code also introduced a 4 per cent credit for dividends received by individual taxpayers, which was reduced in 1964 to 2 per cent for 1964 dividends and eliminated for 1965 and later years. See infra pages 604-606.

CHAPTER 3

The Business Taxpayer

SECTION A. GROSS INCOME

The determination of a business taxpayer's gross income is not radically different from determining the gross income of a non-business taxpayer. The exclusions (gifts, bequests, life insurance proceeds, etc.) already examined for the non-business taxpayer are equally available to the taxpayer engaged in business, although the nature of some of the exclusions means that they will ordinarily be of principal interest to non-business taxpayers. This is especially true of bequests and annuities. Gifts to business corporations (or to individuals in their business rather than personal capacity) are also uncommon, of course, though there are a few cases dealing with subsidies by municipalities and other government agencies to attract or encourage local business. Brown Shoe Co. v. Commissioner, 339 U.S. 583 (1950); see United States v. Maryland Jockey Club, 210 F.2d 367 (4th Cir. 1954), cert. denied, 347 U.S. 1014; Freeman and Speiller, Tax Consequences of Subsidies to Induce Business Location, 9 Tax L. Rev. 255 (1954); Note, Tax Consequences of Non-shareholder Contributions to Corporate Capital, 66 Yale L.J. 1085 (1957); §118 (contributions to corporate capital not includible in gross income); §621 (certain federal subsidies not includible in gross income).

Perhaps the most striking difference between the business and the non-business taxpayer in calculating gross income lies in accounting methods. Non-business income is almost always reported on the cash receipts and disbursements basis — that is, income is reported only as cash or its equivalent is received, and deductions are taken as the taxpayer pays his debts with cash or property. On the other hand, the gross income of a business (whether carried on by an individual, a partnership, or a corporation) is often calculated on the accrual basis: income is reported as the customers are charged for goods or services rather than when they pay, and expenses are deducted as obligations are incurred, even though payment is postponed. Moreover, if the business enterprise's inventory is significant in size, account must be taken of the goods on hand at the beginning and at the end of the taxable year in ascertaining gross income, and income must ordinarily be computed on the accrual method. §471; Regs. §1.446-1(c)(2)(i). The use of inventories has the effect of charging the cost (or other valuation) of goods that are sold against income in the year in which they are disposed of, rather than in the year when they were purchased or manufactured. Both the cash and accrual methods of computing income and the use of inventories are examined in more detail in Chapter 9.

SECTION B. DEDUCTIONS

In Chapter 2 we saw that the taxpayer has been authorized by Congress to deduct certain of his expenses whether they were incurred in the pursuit of income or not. Thus the taxpayer can deduct medical expenses, charitable contributions, interest, taxes, and bad debts, for example, even when they are exclusively personal expenses. But most personal expenses — food, clothing, and shelter; wine, women, and song — are not deductible.

Now we turn to an area in which Congress has chosen to allow the deduction of substantially all expenses: those incurred in the taxpayer's trade or business or in his profit-seeking transactions. Unlike the cost of living, then, the cost of *earning* a living is ordinarily fully deductible. If Congress had chosen instead to deny or narrowly restrict the deductibility of *business* expenses, it would have imposed a sales or gross receipts tax rather than an income tax. This would have been constitutional, supra page 8n, but its impact would have been very different from the income tax. What we do have is an income — more exactly, a *net* income — tax.

The statutory framework for allowing the cost of making a living to be deducted consists primarily of these three provisions:

(1) Section 162(a), authorizing the deduction of all the ordinary and necessary *expenses* paid or incurred during the taxable year in carrying on any trade or business.*

(2) Section 212, authorizing, in the case of an individual, the deduction of all the ordinary and necessary *expenses* paid or incurred during the taxable year for the production or collection of income, or for the management, conservation, or maintenance of property held for the production of income. These are commonly referred to as "nonbusiness expenses," but this term is misleading: it means not that these expenses are personal living expenses, but only that they result from profit-oriented transactions that do not constitute the carrying on of a "trade or business" under §162(a).

(3) Section 165(a), authorizing the deduction of any *losses* sustained during the taxable year and not compensated for by insurance or otherwise. In the case of an individual, §165(c)(1) and (2) restrict the deduction of losses to those incurred in trade or business or in a transaction entered into for profit. Section 165(c) also permits the deduction of casualty losses, even though unconnected with trade or business or transactions for profit. Supra page 192.

These statutory provisions, and others that are less fundamental, are examined in this chapter.

A historical note may first be in order.

Section 212 — allowing an individual (including trusts, estates, and partners) to deduct the expenses of producing or collecting income or of managing, conserving, or maintaining property held for the production of income — was enacted in 1942. Previously, §23(a) of the 1939 Code (the predecessor of §162(a) of the 1954 Code) had permitted only the expenses of "carrying on any trade or business" to be deducted. In 1941, the Supreme Court upheld a decision of the Board of Tax Appeals that this phrase was not broad enough to cover the expenses of a wealthy investor who lived in Paris but maintained an office and staff in New York City (at an expense of $16,000 in one year and $20,000 in another)

---

* Since §162(a) allows the taxpayer to deduct "all the ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business," it partially overlaps several provisions that authorize items to be deducted whether they are incurred in the taxpayer's business or not, e.g., §163 (interest) and §164 (certain taxes). Ordinarily it makes no difference whether a deduction is supported by reference to the specific provision or by reference to the more general language of §162(a). (In any event, the same item may not be deducted twice.) For some purposes, however, a taxpayer is required to treat his business expenses differently from other deductions; thus, in determining whether a corporation is a "personal holding company," the gross amount of "the deductions allowable under section 162" is relevant. In general, the courts have held that interest, taxes, etc. may constitute business expenses under §162 even though they also qualify for deduction under other provisions. McNutt-Boyce Co. v. Commissioner, 38 T.C. 462 (1962), and cases there cited. This case was affirmed per curiam, 324 F.2d 957 (5th Cir. 1963).

The fact that §162(a) may partially overlap these specific provisions should not be allowed to obscure the fact that §162 is sometimes broader in its scope: thus, taxes that do not come within §164 may be deducted under §162(a) if they meet its requirements.

to manage under his own direction his investments in stocks and bonds. Higgins v. Commissioner, 312 U.S. 212 (1941). Section 23(e)(2) of the 1939 Code (see §165(c)(2) of the 1954 Code), however, had for many years allowed an individual to deduct *losses* incurred "in any transaction entered into for profit," even though not connected with a trade or business. Higgins, then, could have deducted any *loss* on the sale of his securities, even though he could not deduct the *expense* of investment advice, safe-deposit rental, and bookkeeping service related to the same securities. Moreover, it was admitted by the Treasury that Higgins' *real estate* activities *did* constitute a trade or business, so that the expenses of those activities were deductible, and some cases have since held that ownership of any rental property constitutes a trade or business, no matter what the taxpayer's main occupation is. Infra p. 551. Since only the *net* income from renting real estate was taxable, it was not surprising that Congress decided to tax only the *net* income from investing (or speculating) in stocks or bonds or from other profit-seeking activities. Section 212 was the result.

Section 212 applies only "in the case of an individual." A similar statutory change was not required for corporations, since corporate expenses for the production or collection of income or for the management, conservation, or maintenance of property held for the production of income were presumably already deductible as expenses of the corporation's trade or business. This is not to say that a corporation's expenses are necessarily deductible: they are not. A corporation may own property for the convenience of its stockholders rather than to make money. See, for example, Savarona Ship Corp. v. Commissioner, ¶42,596 P-H Memo T.C., involving a yacht, and Black Dome Corp. v. Commissioner, ¶46,130 P-H Memo T.C., involving a country estate. When the corporation's activities are profit-directed, however, §162(a) is broad enough to accomplish what it required both §162(a) and §212 to accomplish for individuals.

The issues that arise under §162(a), §165, and §212 — the principal business expense and loss sections — are considered in the pages that immediately follow. Thereafter, certain other business deductions are examined.

1. *Expenses and Losses Incurred in Business or Profit-seeking Activities*

Section 162(a), relating to trade and business expenses, corresponds to §23(a)(1)(A) of the 1939 Code.

Section 212(1) and (2), relating to an individual's expenses for the production of income, corresponds to §23(a)(2) of the 1939 Code. Section 212(3) was added in 1954.

Section 165(a) and (c), relating to losses, was derived from §§23(f), 23(e)(1), and 23(e)(2) of the 1939 Code.

Section 262, relating to personal, living, and family expenses, was formerly §24(a)(1) of the 1939 Code.

The issues that arise under these sections have been grouped together in the pages that follow under these heads:

(a) Was the expense or loss incurred in business or profit-seeking, on the one hand, or in the pursuit of pleasure, on the other?

(b) Did the taxpayer incur an expense or loss, or did he make a capital investment?

(c) Was the expense, if there was one, "ordinary and necessary"?

These compartments are not watertight, but they are satisfactory if one does not put too much pressure on them.

a. BUSINESS OR PLEASURE?

SMITH v. COMMISSIONER
9 T.C. 1150 (1947)

HILL, Judge: The question is whether petitioner operated the farm as a trade or business or for profit, on the one hand, or for recreational purposes or as a hobby, on the other. As is implicit or stated in the cases cited by both petitioner and respondent, the answer to this question lies in determining petitioner's intention from all of the evidence. We have concluded that the facts show that the petitioner's intent in operating the farm was primarily for the purpose of making a profit.

Respondent bases his argument that petitioner had no intent to operate the farm as a trade or business or for profit on the following points: (1) That the operation of the farm resulted in a series of uninterrupted losses, (2) that petitioner's purchase of the farm was essentially motivated by his desire to have a country estate for his home, and (3) that petitioner operated the farm in order to supply his family with food for home consumption.

It is true that the petitioner has experienced continuous annual losses from the operation of his farm since its acquisition in 1933 and through the taxable years in question. Moreover, the record discloses that after the taxable years involved here there were further losses in 1944, 1945, and 1946.* The fact that the operation of the farm has resulted in a series of losses, however, is not controlling if the other evidence shows there is a true intention of eventually making a profit. See Israel O. Blake, 38 B.T.A. 1457. Respondent cites the case of Thacher v. Lowe, 282 Fed. 944, to support his argument. The court in that case stated:

> . . . it is difficult to imagine how a farm which has been running the number of years which this had could be thought capable of turning a deficiency of 90 per cent into a profit.

On the facts in the instant case, however, we can not say that there is no reasonable expectation of realizing a profit.

We do not agree with the respondent that petitioner purchased the farm primarily to satisfy his desire to live on a country estate. It may be true that petitioner experienced pleasure from residing in a country home, but this fact alone does not negative his intent to operate the farm for profit. Wilson v. Eisner, 282 Fed. 38. Nor is such intent negatived by the fact assumed by respondent that petitioner, as a business executive, has received an annual salary sufficiently high to indicate no need to supplement his income by the farm operation.

We are convinced from the record that it has at all times been petitioner's intention to operate the farm for profit, and that he had reasonable expectations of accomplishing that result. His efforts to make a profit have included increasing the land in cultivation and in pasturage from 75 to 95 acres, renting the farm, employing an experienced farmer to operate it under his supervision, improving the land by reclamation practices and fertilization and soil conservation methods, and engaging at various times in a number of diversified types of farming. He spends most of his week ends working on the farm, performing such odd jobs as repairing buildings or equipment, feeding poultry, and spraying orchards. On week days he usually consults with his employee for 10 or 15 minutes each morn-

* For the years 1940 through 1946, the net losses ranged from about $390 to $2800 per year. The taxpayer's compensation as a business executive was $65,000 in 1942 and $74,000 in 1943. — ED.

ing in connection with problems related to the operation of the farm. In addition he has expended a great deal of money in repairing farm buildings and buying farm equipment, all of which was for utilitarian rather than beautification purposes. He has always considered the farm separate from his home, he has segregated the capital and operating expenses of the residence from the farm expenses, and he has not used the farm for any social or recreational purposes, nor does it have any such facilities.

This leaves for our consideration respondent's argument that petitioner operated the farm primarily for the purpose of providing wholesome food for his family. It should be noted, first, that petitioner and his family consumed at the most only 10 per cent of the farm products on the average and that all of those used were included and reported in the farm income at regular prices. The other approximately 90 per cent of the farm produce was sold by the petitioner to local butchers and grocerymen, to purchasers stopping by the farm, and occasionally to the Delaware Packing Co. at Trenton. In addition to that, the types of products raised by petitioner included poultry, eggs, cattle, sheep, wheat, corn and hay, many of which are not readily adaptable to home consumption, and such of them as were so adaptable were produced in far greater quantities than his home consumption requirements. The petitioner's primary intention, therefore, was not to produce good food for home consumption. Consequently, the case of Louise Cheney, 22 B.T.A. 672, cited by respondent, is not in point.

We hold that petitioner's farm operations during the taxable period here involved were a business regularly carried on by him for profit and that the losses in question resulted from ordinary and necessary expenses paid during such taxable period in carrying on such business and, therefore, are deductible for income tax purposes.

NOTE

1. *Tax treatment of hobbies.* If the court had found that the farm was operated as a hobby, would the expenses or only the net loss have been disallowed — was this a §162(a) or a §165(c) case? If §162(a) is controlling, could the expenses of a hobby farm be disallowed even though it was operated at a profit? See the last sentence of Regs. §1.162-12 (taxpayer may ignore both receipts and expenses of unsuccessful hobby farm), with which compare Regs. §1.212-1(c) (expenses of hobbies not deductible under §212, receipts not being mentioned).

In the principal case, the taxpayer reported as income the value, "at regular prices," of farm produce consumed at home. Assume that the cost of raising home-consumed produce is $1000, that the wholesale value of the produce is $600, and that the retail value is $900. How should the taxpayer account for the produce? What if the wholesale and retail values were $1200 and $1500 respectively?

2. *Results in litigated cases.* Commenting on the country estate and racing stable cases, Randolph Paul has said:

> The American businessman has never appeared so indefatigably optimistic as in some of the cases on this point; taxpayers have earnestly contended (sometimes successfully) that they expected to reap an ultimate profit even though operating losses exceeded receipts with depressing regularity over a long period of years. [Paul, Motive and Intent in Federal Tax Law, in Selected Studies in Federal Taxation 281-282 (Second Series, 1938).]

Horse breeding and racing, though the sport of kings, have been held in a surprising number of cases to be the business of taxpayers. See, for example, Commissioner v. Widener, 33 F.2d 833 (3d Cir. 1929) (losses of more than $300,000 in four years); Whitney v. Commissioner, 73 F.2d 589 (3d Cir. 1934); Farish v. Commissioner, 103 F.2d 63 (5th Cir.

1939). In the last case, the possibility of geographical and occupational discrimination was suggested:

> The intention of the taxpayer at the outset is the dominant factor in determining whether he engaged in the venture merely for pleasure or for profit. Of course, the Board could rest its decision on the circumstantial evidence, as opposed to the sworn testimony of the taxpayer. But we think the Board was psychologically wrong in concluding that the Farishes, as men of sound business judgment, would not have engaged in the ventures with any expectation of profit. Both are actively engaged in the oil business. It is common for a man in the oil business, of sound judgment, to expend thousands of dollars in exploring the land and drilling for oil in "wild cat" territory. Sometimes this results in dry holes and the costs of drilling and development are totally lost. On other occasions, producing wells are brought in and the profits are enormous. The breeding of horses would not be considered merely a fad in Texas. It is not at all improbable that men in the oil business, having ample capital, would engage in the enterprises here involved with the hope and expectation of ultimately making a fair return on the investment. [103 F.2d at 65.]

See also Ellsworth v. Commissioner, ¶62,032 P-H Memo T.C., in which the government relied on 13 years of uninterrupted losses aggregating almost $700,000 in the operation of a livestock breeding farm and on the taxpayer's scientific interest in cattle breeding as establishing that he was engaged in a hobby, not a business; despite the taxpayer's bravado in naming the enterprise "Folly Farm," it was held a business.

Gentlemen authors seem to lose money as regularly as gentlemen farmers, but have been less successful in proving their acquisitive intentions. Chaloner v. Helvering, 69 F.2d 571 (D.C. Cir. 1934); Purdy v. Commissioner, 12 T.C. 888 (1949); Lamont v. Commissioner, ¶64,002 P-H Memo TC; but see Vanderbilt v. Commissioner, ¶57,235 P-H Memo T.C. See also Ewing v. Commissioner, 213 F.2d 438 (2d Cir. 1954).

In Hempel v. Commissioner, ¶47,183 P-H Memo T.C., a formerly successful concert singer seeking to make a comback was held to be engaged in a trade or business although she claimed expenses of $10,000-$15,000 annually for 12 years with only nominal earnings; the Tax Court rejected the government's ungallant argument that the expenses were personal expenses to continue "the illusion of a famous prima donna who could not bear to slip out of the public eye."

What are the prospects for a collector of art, rare books, or postage stamps who claims a deduction under §165(c)(2) on the ground that though he enjoyed looking at his collection, his primary aim was to build up a hedge against inflation and eventually to sell at a profit?

See Howell v. Commissioner, 41 T.C. No. 2 (1963), in which the taxpayer's participation as a silent partner in a partnership engaged in the theatrical agency business was held to be a method of providing financial assistance to the other partner, the taxpayer's sister-in-law, rather than a trade or business or transaction entered into for profit.

3. *Section 270's restriction on the deductions of a consistently unprofitable business.* Even if the taxpayer succeeds in establishing that he is engaged in a trade or business, §270 denies him the right to deduct more than $50,000 per year from his other income (salary, interest, dividends, etc.) if the trade or business in question results in losses of $50,000 or more each year for 5 consecutive years. The statute of limitations is extended so as to permit the Commissioner to recompute the tax for earlier years after the trade or business has produced the required series of loss years.

By virtue of §270(b), enacted in 1954, a number of "specially treated" deductions are disregarded in determining whether the requisite losses have been incurred, primarily to protect farmers and mineral businesses from §270. If the taxpayer carries on two or more businesses, each must be examined separately in applying the 5-year consecutive loss test. See Collins v. Commissioner, 34 T.C. 592 (1960), the taxpayer in which owned the Boston Yanks from 1943 through 1948 and the New York Bulldogs from 1949 through 1951, suffering losses in excess of $50,000 per year during the years 1947-1951. The court held that he was engaged in two separate and independent businesses, so that the 5-year requirement of §270 was not satisfied.

Section 270, which is applicable to individual taxpayers but not to corporations, has

become known as the "Marshall Field" amendment. As explained by Senator Clark on the floor of the Senate:

> The idea has been that [Marshall Field III] was engaged in the activity of starting newspapers and other publications around the country [presumably the primary reference is to the now defunct left-of-center New York newspaper PM] for the purpose of influencing and, as some of us think, corrupting, the public mind, simply as a device to reduce his income taxes. I may say that I voted for the amendment in the committee, under the impression that it would have some effect on Mr. Field's activities. It was on that basis that the amendment was carried in the committee.

Senator Barkley then expressed his understanding that §270 would be inapplicable to Mr. Field because his newspaper enterprises were incorporated, and Senator Clark responded, "Then, of course, I would be against the amendment." Seidman, 1 Legislative History of Federal Income and Excess Profits Tax Laws 1983 (1954). Despite this, the provision was enacted, but whether this was because Senator Barkley's understanding was thought to be erroneous does not appear. By a curious coincidence, Mr. Field's father was the taxpayer in a "racing stable" case, Field v. Commissioner, 26 B.T.A. 116 (1932), and would have been adversely affected by §270 if it had been enacted 20 years earlier.

4. *Wagering losses.* See §165(d), providing that losses from "wagering transactions" shall be allowed only to the extent of the gains from such transactions. It has been held (by a divided court) that this provision dispenses with the need to prove that the losses were incurred in the taxpayer's trade or business or in transactions entered into for profit, i.e., that §165(c) is inapplicable to gambling losses. Humphrey v. Commissioner, 162 F.2d 853 (5th Cir. 1947). Ordinarily, of course, the gambling taxpayer has a profit-seeking motive. But what if he is a tourist in Las Vegas, looking only for excitement and convinced that he will lose?

SMITH v. COMMISSIONER

40 B.T.A. 1038 (1939), affirmed without opinion, 113 F.2d 114 (2d Cir. 1940)

OPPER: Respondent determined a deficiency of $23.62 in petitioners' 1937 income tax. This was due to the disallowance of a deduction claimed by petitioners, who are husband and wife, for sums spent by the wife in employing nursemaids to care for petitioners' young child, the wife, as well as the husband, being employed. The facts have all been stipulated and are hereby found accordingly.

Petitioners would have us apply the "but for" test. They propose that but for the nurses the wife could not leave her child; but for the freedom so secured she could not pursue her gainful labors; and but for them there would be no income and no tax. This thought evokes an array of interesting possibilities. The fee to the doctor, but for whose healing service the earner of the family income could not leave his sickbed; the cost of the laborer's raiment, for how can the world proceed about its business unclothed; the very home which gives us shelter and rest and the food which provides energy, might all by an extension of the same proposition be construed as necessary to the operation of business and to the creation of income. Yet these are the very essence of those "personal" expenses the deductibility of which is expressly denied. I.R.C. [§262].

We are told that the working wife is a new phenomenon. This is relied on to account for the apparent inconsistency that the expenses in issue are now a commonplace, yet have not been the subject of legislation, ruling, or adjudicated controversy. But if that is true it becomes all the more necessary to apply accepted principles to the novel facts. We are not prepared to say that the care of children, like similar aspects of family and household life, is other than a personal concern. The wife's services as custodian of the home and protector of its chil-

dren are ordinarily rendered without monetary compensation. There results no taxable income from the performance of this service and the correlative expenditure is personal and not susceptible of deduction. Rosa E. Burkhart, 11 B.T.A. 275. Here the wife has chosen to employ others to discharge her domestic function and the services she performs are rendered outside the home. They are a source of actual income and taxable as such. But that does not deprive the same work performed by others of its personal character nor furnish a reason why its cost should be treated as an offset in the guise of a deductible item.

We are not unmindful that, as petitioners suggest, certain disbursements normally personal may become deductible by reason of their intimate connection with an occupation carried on for profit. In this category fall entertainment, Blackmer v. Commissioner, 70 Fed. (2d) 255 (C.C.A. 2d Cir.), and traveling expenses, Joseph W. Powell, 34 B.T.A. 655; affd., 94 Fed. (2d) 483 (C.C.A., 1st Cir.), and the cost of an actor's wardrobe, Charles Hutchison, 13 B.T.A. 1187. The line is not always an easy one to draw nor the test simple to apply. But we think its principle is clear. It may for practical purposes be said to constitute a distinction between those activities which, as a matter of common acceptance and universal experience, are "ordinary" or usual as the direct accompaniment of business pursuits, on the one hand; and those which, though they may in some indirect and tenuous degree relate to the circumstances of a profitable occupation, are nevertheless personal in their nature, of a character applicable to human beings generally, and which exist on that plane regardless of the occupation, though not necessarily of the station in life, of the individuals concerned. See Welch v. Helvering, 290 U.S. 111.

In the latter category, we think, fall payments made to servants or others occupied in looking to the personal wants of their employers. David Sonenblick, 4 B.T.A. 986. And we include in this group nursemaids retained to care for infant children.

NOTE

1. *Deduction of child care expenses under §214.* If a married man's income is $10,000, and his wife has an opportunity to earn $3000, the additional tax (at the 1964 rate and assuming two dependent children) will be about $650. Domestic help and other expenses can of course easily take the lion's share of what is left. If the husband's income is $40,000, about half of the wife's earnings will be consumed by taxes. Is the case of the working wife different from that of the small town lawyer who moves to the big city, and makes more in cash, but spends it to maintain his new station in life?

A measure of relief is extended by §214, added by the 1954 Code and somewhat expanded in 1964, which allows a deduction (not to exceed $900) for the expenses of caring for children under thirteen and for certain other dependents "for the purpose of enabling the taxpayer to be gainfully employed." The deduction is available to women, whether married or not, to widowers, and to married men whose spouses are incapacitated or institutionalized. In the case of a married couple, a joint return must be filed, and the deduction is to be reduced by the amount by which their adjusted gross income exceeds $6000 (unless the husband is incapable of self-support because mentally or physically defective or the wife is institutionalized). Note §214(b)(3): neighbors can get the deduction if they employ each other's teen-age children to baby-sit, but not if they employ their own children.

2. *Uniforms and work clothes.* Regs. §1.262-1(b)(8) provides that the cost of a military uniform used by a reserve officer on temporary duty is deductible, but that a regular officer cannot deduct the cost of his uniforms because they merely take the place of clothing that would be required in civilian life. Although this suggests that clothing used during regular working hours cannot be deducted because the taxpayer must clothe himself anyway, the Service has ruled that clothing that must be worn as a condition of em-

ployment and that is not suited for off-duty wear (e.g., the uniforms of police officers, nurses, etc.) can be deducted. Mim. 6463, 1950-1 C.B. 29; but see Rev. Rul. 57-143, 1957-1 C.B. 89 (painter's work clothing, consisting of white cap, shirt, and overalls, not deductible — possibly because items were prescribed by his union rather than employer). Special boots, gloves, protective clothing, and the like are also deductible, but not work clothes that can be worn off duty and are not required by the employer. Roth v. Commissioner, 17 T.C. 1450, 1455 (1952). See also Yeomans v. Commissioner, 30 T.C. 757 (1958) (high-fashion clothing bought by "fashion coordinator" employed by a shoe manufacturer and used only in her work; held, deductible); Jackson v. Commissioner, ¶54,341 P-H Memo T.C. (cost of fur coat, bought by advertising agent for his wife before a business trip where they would "mingle" with potential clients; held, not deductible). See Comment, Income Tax: Deductibility of Uniform and Clothing Expenses by Employees, 36 Calif. L. Rev. 452 (1948).

3. *Other borderline items.* A few of the many other items that have both a personal and a business quality are: medical expenses caused by business activities (supra p. 170); transportation expenses incurred in traveling from home to work (infra p. 224); legal expenses incurred in lawsuits affecting the taxpayer's personal and business reputation (infra p. 266); education expenses (infra p. 258); and residences that are acquired both for occupancy by the taxpayer and as an investment (infra p. 244).

As to property that is acquired for personal use but later dedicated to a profit-making or business purpose, see page 244 infra.

4. *Effect of §262.* Section 262 provides that *"Except as otherwise expressly provided in this chapter,* no deduction shall be allowed for personal, living, or family expenses" (emphasis supplied). Does this merely restate the obvious: viz., that deductions are allowed only to the extent that expenditures can be brought within the scope of a deduction provision? If the baby-sitting expenses in the *Smith* case had been found to be business expenses under §162, would they be disallowed by §262? Would the taxpayer in *Smith* have had a stronger case if §262 had not been enacted?

COMMISSIONER v. FLOWERS

326 U.S. 465, rehearing denied, 326 U.S. 812 (1946)

MR. JUSTICE MURPHY delivered the opinion of the Court.

This case presents a problem as to the meaning and application of the provision of [§162(a)(2)] of the Internal Revenue Code allowing a deduction for income tax purposes of "traveling expenses (including the entire amount expended for meals and lodging) while away from home in the pursuit of a trade or business."

The taxpayer, a lawyer, has resided with his family in Jackson, Mississippi, since 1903. There he has paid taxes, voted, schooled his children and established social and religious connections. He built a house in Jackson nearly thirty years ago and at all times has maintained it for himself and his family. He has been connected with several law firms in Jackson, one of which he formed and which has borne his name since 1922.

In 1906 the taxpayer began to represent the predecessor of the Gulf, Mobile & Ohio Railroad, his present employer. He acted as trial counsel for the railroad throughout Mississippi. From 1918 until 1927 he acted as special counsel for the railroad in Mississippi. He was elected general solicitor in 1927 and continued to be elected to that position each year until 1930, when he was elected general counsel. Thereafter he was annually elected general counsel until September, 1940, when the properties of the predecessor company and another railroad were merged and he was elected vice president and general counsel of the newly formed Gulf, Mobile & Ohio Railroad.

The main office of the Gulf, Mobile & Ohio Railroad is in Mobile, Alabama, as was also the main office of its predecessor. When offered the position of gen-

eral solicitor in 1927, the taxpayer was unwilling to accept it if it required him to move from Jackson to Mobile. He had established himself in Jackson both professionally and personally and was not desirous of moving away. As a result, an arrangement was made between him and the railroad whereby he could accept the position and continue to reside in Jackson on condition that he pay his traveling expenses between Mobile and Jackson and pay his living expenses in both places. This arrangement permitted the taxpayer to determine for himself the amount of time he would spend in each of the two cities and was in effect during 1939 and 1940, the taxable years in question.

The railroad company provided an office for the taxpayer in Mobile but not in Jackson. When he worked in Jackson his law firm provided him with office space, although he no longer participated in the firm's business or shared in its profits. He used his own office furniture and fixtures at this office. The railroad, however, furnished telephone service and a typewriter and desk for his secretary. It also paid the secretary's expenses while in Jackson. Most of the legal business of the railroad was centered in or conducted from Jackson, but this business was handled by local counsel for the railroad. The taxpayer's participation was advisory only and was no different from his participation in the railroad's legal business in other areas.

The taxpayer's principal post of business was a the main office in Mobile. However, during the taxable years of 1939 and 1940, he devoted nearly all of his time to matters relating to the merger of the railroads. Since it was left to him where he would do his work, he spent most of his time in Jackson during this period. In connection with the merger, one of the companies was involved in certain litigation in the federal court in Jackson and the taxpayer participated in that litigation.

During 1939 he spent 203 days in Jackson and 66 in Mobile, making 33 trips between the two cities. During 1940 he spent 168 days in Jackson and 102 in Mobile, making 40 trips between the two cities. The railroad paid all of his traveling expenses when he went on business trips to points other than Jackson or Mobile. But it paid none of his expenses in traveling between these two points or while he was at either of them.

The taxpayer deducted $900 in his 1939 income tax return and $1,620 in his 1940 return as traveling expenses incurred in making trips from Jackson to Mobile and as expenditures for meals and hotel accommodations while in Mobile.[1] The Commissioner disallowed the deductions, which action was sustained by the Tax Court. But the Fifth Circuit Court of Appeals reversed the Tax Court's judgment, 148 F.2d 163, and we granted certiorari because of a conflict between the decision below and that reached by the Fourth Circuit Court of Appeals in Barnhill v. Commissioner, 148 F.2d 913.

The portion of [§162(a)] authorizing the deduction of "traveling expenses (including the entire amount expended for meals and lodging) while away from home in the pursuit of a trade or business" is one of the specific examples given by Congress in that section of "ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business." It is to be contrasted with the provision of [§262] of the Internal Revenue Code, . . . disallowing any deductions for "personal, living, or family expenses." And it is to be read in light of the interpretation given it by Sec. 39.23(a)-2 of Treasury Regs.

---

1 No claim for deduction was made by the taxpayer for the amounts spent in traveling from Mobile to Jackson. He also took trips during the taxable years to Washington, New York, New Orleans, Baton Rouge, Memphis and Jackson (Tenn.), which were apparently in the nature of business trips for which the taxpayer presumably was reimbursed by the railroad. No claim was made in regard to them.

118, promulgated under the [1939] Internal Revenue Code. This interpretation, which is precisely the same as that given to identical traveling expense deductions authorized by prior and successive Revenue Acts, is deemed to possess implied legislative approval and to have the effect of law. . . . In pertinent part, this interpretation states that

> Traveling expenses, as ordinarily understood, include railroad fares and meals and lodging. If the trip is undertaken for other than business purposes, the railroad fares are personal expenses and the meals and lodging are living expenses. If the trip is solely on business, the reasonable and necessary traveling expenses, including railroad fares, meals, and lodging, are business expenses. . . . Only such expenses as are reasonable and necessary in the conduct of the business and directly attributable to it may be deducted. . . . Commuters' fares are not considered as business expenses and are not deductible.*

Three conditions must thus be satisfied before a traveling expense deduction may be made under [§162(a)(2)]:

> (1) The expense must be a reasonable and necessary traveling expense, as that term is generally understood. This includes such items as transportation fares and food and lodging expenses incurred while traveling.
> (2) The expense must be incurred "while away from home."
> (3) The expense must be incurred in pursuit of business. This means that there must be a direct connection between the expenditure and the carrying on of the trade or business of the taxpayer or of his employer. Moreover, such an expenditure must be necessary or appropriate to the development and pursuit of the business or trade.

Whether particular expenditures fulfill these three conditions so as to entitle a taxpayer to a deduction is purely a question of fact in most instances. . . . And the Tax Court's inferences and conclusions on such a factual matter, under established principles, should not be disturbed by an appellate court. . . .

In this instance, the Tax Court without detailed elaboration concluded that "The situation presented in this proceeding is, in principle, no different from that in which a taxpayer's place of employment is in one city and for reasons satisfactory to himself he resides in another." It accordingly disallowed the deductions on the ground that they represent living and personal expenses rather than traveling expenses incurred while away from home in the pursuit of business. The court below accepted the Tax Court's findings of fact but reversed its judgment on the basis that it had improperly construed the word "home" as used in the second condition precedent to a traveling expense deduction under [§162(a)(2)]. The Tax Court, it was said, erroneously construed the word to mean the post, station or place of business where the taxpayer was employed — in this instance, Mobile — and thus erred in concluding that the expenditures in issue were not incurred "while away from home." The Court below felt that the word was to be given no such "unusual" or "extraordinary" meaning in this statute, that it simply meant "that place where one in fact resides" or "the principal place of abode of one who has the intention to live there permanently." 148 F.2d at page 164. Since the taxpayer here admittedly had his home, as thus defined, in Jackson and since the expenses were incurred while he was away from Jackson, the deduction was permissible.

The meaning of the word "home" in [§162(a)(2)] with reference to a taxpayer residing in one city and working in another has engendered much difficulty and litigation. 4 Mertens, Law of Federal Income Taxation (1942) §25.82. The Tax

---

* The Regulations promulgated under the 1954 Code are similar to the old Regulations, except for new provisions governing attendance at conventions and expenses of wives who accompany their husbands on business trips. Regs. §1.162.2. — Ed.

Court and the administrative rulings have consistently defined it as the equivalent of the taxpayer's place of business. See Barnhill v. Commissioner, supra, 4 Cir. On the other hand, the decision below and Wallace v. Commissioner, 9 Cir., 144 F.2d 407, have flatly rejected that view and have confined the term to the taxpayer's actual residence. See also Coburn v. Commissioner, 2 Cir., 138 F.2d 763.

We deem it unnecessary here to enter into or to decide this conflict. The Tax Court's opinion, as we read it, was grounded neither solely nor primarily upon that agency's conception of the word "home." Its discussion was directed mainly toward the relation of the expenditures to the railroad's business, a relationship required by the third condition of the deduction. Thus even if the Tax Court's definition of the word "home" was implicit in its decision and even if that definition was erroneous, its judgment must be sustained here if it properly concluded that the necessary relationship between the expenditures and the railroad's business was lacking. Failure to satisfy any one of the three conditions destroys the traveling expense deduction.

Turning our attention to the third condition, this case is disposed of quickly. There is no claim that the Tax Court misconstrued this condition or used improper standards in applying it. And it is readily apparent from the facts that its inferences were supported by evidence and that its conclusion that the expenditures in issue were non-deductible living and personal expenses was fully justified.

The facts demonstrate clearly that the expenses were not incurred in the pursuit of the business of the taxpayer's employer, the railroad. Jackson was his regular home. Had his post of duty been in that city the cost of maintaining his home there and of commuting or driving to work concededly would be non-deductible living and personal expenses lacking the necessary direct relation to the prosecution of the business. The character of such expenses is unaltered by the circumstance that the taxpayer's post of duty was in Mobile, thereby increasing the costs of transportation, food and lodging. Whether he maintained one abode or two, whether he traveled three blocks or three hundred miles to work, the nature of these expenditures remained the same.

The added costs in issue, moreover, were as unnecessary and inappropriate to the development of the railroad's business as were his personal and living costs in Jackson. They were incurred solely as the result of the taxpayer's desire to maintain a home in Jackson while working in Mobile, a factor irrelevant to the maintenance and prosecution of the railroad's legal business. The railroad did not require him to travel on business from Jackson to Mobile or to maintain living quarters in both cities. Nor did it compel him, save in one instance, to perform tasks for it in Jackson. It simply asked him to be at his principal post in Mobile as business demanded and as his personal convenience was served, allowing him to divide his business time between Mobile and Jackson as he saw fit. Except for the federal court litigation, all of the taxpayer's work in Jackson would normally have been performed in the headquarters at Mobile. The fact that he traveled frequently between the two cities and incurred extra living expenses in Mobile, while doing much of his work in Jackson, was occasioned solely by his personal propensities. The railroad gained nothing from this arrangement except the personal satisfaction of the taxpayer.

Travel expenses in pursuit of business within the meaning of [§162(a)(2)] could arise only when the railroad's business forced the taxpayer to travel and to live temporarily at some place other than Mobile, thereby advancing the interests of the railroad. Business trips are to be identified in relation to business demands and the traveler's business headquarters. The exigencies of business rather than

the personal conveniences and necessities of the traveler must be the motivating factors. Such was not the case here.

It follows that the court below erred in reversing the judgment of the Tax Court.

Reversed.

MR. JUSTICE JACKSON took no part in the consideration or decision of this case.

MR. JUSTICE RUTLEDGE, dissenting.

I think the judgment of the Court of Appeals should be affirmed. When Congress used the word "home" in [§162(a)(2)], I do not believe it meant "business headquarters." And in my opinion this case presents no other question. . . .

Because the taxpayer elected to keep his home in Jackson, rather than move to Mobile, and because his employer did not undertake to pay these expenses, [the Tax Court] viewed the case as being the same as if he had moved to Mobile. In that event, it said, he would have been required to bear the expenses of his own meals and lodging. This is obvious, even though the "as if" conclusion does not follow. The court went on, however, to give the further reason for it: "The situation . . . is, in principle, no different from that in which a taxpayer's place of employment is in one city and for reasons satisfactory to himself he resides in another." It seems questionable whether, in so ruling, the Tax Court has not confused the taxpayer's principal place of employment with his employer's. For on the facts Jackson rather than Mobile would seem more appropriately to be found *his* business headquarters. But, regardless of that, the authorities cited and the Government's supporting argument show that the case was regarded as in essence the commuter's, excepted by the regulations.

Apart from this ruling, the Tax Court made no finding, of fact or law, that respondent was not engaged "in the pursuit of a trade or business"; that he was not "away from home"; that the expenses were not "business expenses" or "business traveling expenses"; or that they were not "ordinary and necessary." Yet by a merry-go-round argument which always comes back to rest on the idea that "home" means "business headquarters," the Government seeks to inject such issues and findings, including a Dobson v. Com'r, 320 U.S. 489, contention, into the Tax Court's determination. I think there was only one issue, a question of law requiring construction of the statute as to the meaning of the word "home" and, if that is resolved against the Government, the Tax Court's judgment has no other foundation on which to stand. Every other contention falls when this one does. All stand if it is valid.

I agree with the Court of Appeals that if Congress had meant "business headquarters," and not "home," it would have said "business headquarters." When it used "home" instead, I think it meant home in everyday parlance, not in some twisted special meaning of "tax home" or "tax headquarters." . . .

Congress gave the deduction for traveling away from home on business. The commuter's case, rightly confined, does not fall in this class. One who lives in an adjacent suburb or city and by usual modes of commutation can work within a distance permitting the daily journey and return, with time for the day's work and a period at home, clearly can be excluded from the deduction on the basis of the section's terms equally with its obvious purpose. But that is not true if "commuter" is to swallow up the deduction by the same sort of construction which makes "home" mean "business headquarters" of one's employer. If the line may be extended somewhat to cover doubtful cases, it need not be lengthened to infinity or to cover cases as far removed from the prevailing connotation of commuter as this one. Including it pushes "commuting" too far, even for these times of rapid transit. . . . The arm of the tax-gatherer reaches far. In my judgment

it should not go the length of this case. Congress has revised [§162(a)(2)] once to overcome niggardly construction.[1] It should not have to do so again.

WRIGHT v. HARTSELL

305 F.2d 221 (9th Cir. 1962)

Before POPE, HAMLEY and KOELSCH, Circuit Judges.

KOELSCH, Circuit Judge.

This is another of those numerous cases involving the question whether a construction worker, in computing his income subject to tax, is entitled to deduct expenses incurred in traveling to and from work. The facts are undisputed. Richard V. Hartsell is a non-itinerant journeyman pipe-fitter and plumber. Beginning in 1950 he has continuously maintained his regular place of abode in Pocatello, Idaho. He is a member of the local union for his trade and has secured employment solely through the hiring hall that the union maintains at Pocatello. He has not been continuously employed by any one concern, nor has he worked in any particular locality. Rather, he has had numerous jobs with different employers and has worked not only in and near Pocatello, but also at other places, as far away as 90 miles. His rate of pay was not affected by the distance of the work from Pocatello, but whenever he was required to travel more than five miles then the job was regarded as outside the so-called "free-zone" and he was paid a fixed sum as compensation for the extra travel.

All Hartsell's jobs from June 1954 until June 1956 were at the Atomic Energy Commission site in Southeastern Idaho, where the Federal Government is conducting atomic research. He was a construction worker and was employed by contractors who were engaged in various construction projects. In this two-year period he had four jobs with three different contractors. His first job was with J. F. Pritchard and Company and lasted from June 1954 until April 1955; he next worked three weeks for Morrison-Knudsen Co., Inc.; then from July to September 1955 he again worked for Pritchard and finally from October until the following June, he was employed by Kaiser Engineers.

Each time, save the last when he voluntarily quit, his "lay-off" was due to the reduction of the size of the crew or the completion of the particular project; and on each occasion, when he found himself out of work, he reported to the union hiring hall and after some interval of unemployment was referred to a new job.

The AEC site encompasses an area of more than 1,500 square miles situated in a vast desert remote from any town or place of habitation. It is 70 miles from Pocatello and 46 miles from the town of Arco. No one is allowed there except on business, and access into the grounds is gained by a single road with a control gate at the entrance. No living accommodations were provided and no transportation was furnished for construction workers.

Hartsell traveled back and forth from Pocatello to his work each day. Some of the times he rode with others, and on other occasions he drove his own automobile. During 1955, the tax year in question, he made a total of 132 round trips to and from Pocatello, for which he received from his employers a travel allowance of $1,356. In his income tax return for that year filed jointly with his wife, Hartsell treated this sum as travel expense and deducted it from gross income, but the Commissioner disallowed the deduction. Thereupon the Hartsells paid the deficiency and commenced this action for a refund.

---

1 The Treasury Regulations in force in 1920 allowed deduction of only the excess of the cost of meals and lodging away from home over the cost at home; and under earlier regulations none of this expense was allowed. Congress inserted the words "all" and "entire" in the 1921 Act to overcome this ruling.

The district court found, in substance, that the Hartsells in fact maintained their home in Pocatello; that the nearest "habitable" community to the AEC site was Arco; that Hartsell's employment with Morrison-Knudsen Co. was "temporary" in nature; that his three jobs with the other two firms were each of "indefinite" duration, and that his travel allowance reflected no more than ordinary and reasonable cost of operating his automobile to and from Pocatello.

The court approved the deduction of the entire expense arising from the "temporary" job with Morrison-Knudsen Co., but limited the deduction in connection with the three jobs that were "indefinite" to the cost of driving from Arco to the work sites. It rendered judgment in favor of the Hartsells but for an amount less than they had sought. The Government alone appealed; the Hartsells filed no cross-appeal. . . .

The Commissioner contends that the word "home" as it appears in section 162(a), connotes the regular post of duty of a taxpayer as well as his place of abode and that therefore, Hartsell's travel expenses were not deductible because they were not incurred away from "home." A number of courts have given the statute this construction and have said "home" is the equivalent of work home or principal place of duty. See Barnhill v. Commissioner, 148 F.2d 913 (4th Cir. 1945); Bixler v. Commissioner, 5 B.T.A. 1181 (1927); Lindsay v. Commissioner, 34 B.T.A. 840 (1936). But in Wallace v. Commissioner, 144 F.2d 407 (9th Cir. 1944), this court unequivocally declared that "home" as it is used in this statute should be given its ordinary and usual meaning, and held that the expenses of a taxpayer who regularly lived in San Francisco but visited Los Angeles on business, met the statutory requirement that she incur the expense while away from home. Accord, Coburn v. Commissioner, 138 F.2d 763 (2 Cir. 1943); Flowers v. Commissioner, 148 F.2d 163 (5th Cir. 1945), rev'd on other grounds, 326 U.S. 465 (1946).

The Commissioner argues that a literal application of the *Wallace* doctrine would permit the use of commuting and other non-deductible personal expense to reduce taxable income, but we think that the third condition imposed by the statute clearly serves to prevent such a wrong result. By virtue of that requirement the cost of transportation, food and lodging is deductible only if directly related to the pursuit of a trade or business. This means that "[t]he exigencies of business rather than the personal conveniences and necessities of this taxpayer must be the motivating factors." Flowers v. Commissioner; or stated even more succinctly, "[t]he job, not the taxpayer's pattern of living, must require the travel." Carragan v. Commissioner, 2 Cir., 197 F.2d 246 (1952).

Some of the circuits appear to read the Supreme Court's opinion in *Flowers* as extending the deduction only to expenses incurred by a taxpayer while pursuing an employer's business, and not to those due to the prosecution of his own trade or occupation. Commissioner v. Puerifoy, 254 F.2d 483 (4th Cir. 1957), aff'd 358 U.S. 59 (1958); Commissioner v. Janss, 260 F.2d 99 (8th Cir. 1958). But we see no warrant for such a construction and conclude both types of expenses are embraced by the statute. See Chandler v. Commissioner, 226 F.2d 467 (1st Cir. 1955); Rev. Rul. 189, 1960-1 Cum. Bull. 60, 62. The statute expressly refers to "trade" as well as "business" expenses and states both may be deducted; and although the Supreme Court held that the expenses under consideration were not allowable because they were not necessitated by the employer's business, nevertheless, the Court also recognized that the third condition was met if there was "a direct connection between the expenditure and the carrying on of the trade or business of the taxpayer or of his employer." Moreover, in *Flowers* the expenses were clearly non-deductible personal expenses whether considered with reference to the employer's business or the taxpayer's profession.

Where it appears probable that a taxpayer's employment outside the area of

his regular abode will be for a "temporary" or "short" period of time, then his travel expenses are held to be deductible; conversely, if the prospects are that his work will continue for an "indefinite" or "intermediate" or "substantially long" period, then the deduction is disallowed. Compare Burns v. Gray, 287 F.2d 698 (6th Cir. 1961); Claunch v. Commissioner, 264 F.2d 309 (5th Cir. 1959); Commissioner v. Peurifoy; with Harvey v. Commissioner, [283 F.2d 491.][1] The Commissioner has acquiesced in the distinction between "indefinite" and "temporary" employment and has permitted deductions in the latter instance. Rev. Rul. 189, 1960-1 Cum. Bull. 60, 65.

Similarly, deductions are allowed to a public official who is required by law to maintain his actual residence in his home district, but perform his official duties elsewhere. United States v. LeBlanc, 278 F.2d 571 (5th Cir. 1960); Moss v. United States, 145 F. Supp. 10 (W.D.S.C. 1956); Emmert v. United States, 146 F. Supp. 322 (S.D. Ind. 1955). Likewise, a taxpayer who is employed in two widely separated localities is allowed his expenses in traveling to one for the reason that he would be unable to perform his duties without such travel. Chandler v. Commissioner, 226 F.2d 467 (1st Cir. 1955); Sherman v. Commissioner, 16 T.C. 332 (1951); Brown v. Commissioner, 13 B.T.A. 832 (1928). Here again the Commissioner has acquiesced. Rev. Rul. 189, 1960-1 Cum. Bull. 60, 62; Rev. Rul. 604, 1955-2 Cum. Bull. 49; Rev. Rul. 147, 1954-1 Cum. Bull. 51.

The Commissioner, however, argues that the above instances are the only ones in which the deduction can be allowed, and urges that in this case it is immaterial that the expenses were incurred because Hartsell was unable to live at or near the AEC site. We are unable to agree. The fundamental question in determining if an expense claimed as travel expense is dictated by the "exigencies of business" is whether it would be reasonable to expect the particular taxpayer to move his home nearer to the place where he is working. Harvey v. Commissioner, 283 F.2d 491 (9th Cir. 1960); Barnhill v. Commissioner, 148 F.2d 913 (4th Cir. 1945). It is difficult to conceive of a situation which makes it more necessary for a taxpayer to incur travel expenses than the unfitness of the work area for civilized habitation. Such a taxpayer has less choice with respect to his place of abode than the taxpayer who prefers not to live in his work area simply because of the temporary nature of his employment there; his situation is similar to that of the public official who must maintain his home elsewhere, or of the taxpayer with two widely separated jobs, who obviously cannot live simultaneously in both localities. We conclude that a taxpayer's inability to live near his job site is a valid ground for deduction as travel expense of the resulting cost of his transportation, food and lodging. See Crowther v. Commissioner, 269 F.2d 292 (9th Cir. 1959). This is

---

1 More precisely, the distinction has customarily been drawn between "temporary" and "indefinite" employment, and in *Harvey* we drew the distinction between "substantially long" and "substantially short" employment. The *Harvey* decision did not reject the distinction which had been developed by other courts, but rather rejected the restrictive method in which it had been applied. Other courts have engaged in the practice of basing the deductibility question on whether the taxpayer was away from home for an "indefinite" period of time, thus assuming that the taxpayer should be expected to change his residence unless he could foresee the termination of his job within a reasonably short period of time. In *Harvey*, we held that the taxpayer should not be expected to change his residence unless he expects to be employed elsewhere for a reasonably long period of time. Thus, the difference between the positions proceeds from a conception of the human instincts which most reasonably govern the members of our society, and perhaps more than other courts, we regarded these instincts as ones of stability rather than mobility.

The present case was decided by the district court before we reached our decision in *Harvey*, and thus the district court relied on the distinction between "temporary" and "indefinite" employment in individually classifying the duration of taxpayer's jobs. But we cannot reconsider the validity of these findings because the question is not before us on this appeal. . . .

not to suggest that a taxpayer need not mitigate his expense by moving as near to the job site as is reasonable; the amount of the deduction must be guaged in that light. Here the district court followed this rule in assessing the refund and its finding that Arco was the nearest habitable community to the AEC site and is supported by the record.

The Commissioner's final point is directed toward the trial court's action in separately classifying each of Hartsell's four jobs either as indefinite or temporary. He argues that the trial court should have made but one finding to the effect that Hartsell's employment at the site was of indefinite duration and that the court's error in not viewing the entire employment was prejudicial because on the basis of the finding that the job with Morrison-Knudsen Co. was temporary, Hartsell was allowed to deduct the entire travel expense incurred in pursuing that job.

We agree with the Commissioner that the determination of a taxpayer's employment in a particular geographical area requires the consideration of all the taxpayer's job prospects. But it does not follow that the court, as finder of fact, must make a single finding regarding the duration of his employment and that the travel expense must be either denied or allowed in its entirety. The crucial problem, we reiterate, is whether a taxpayer's job prospects make it feasible for him to maintain his home near his job site. It is conceivable that these prospects may change from time to time and this is particularly true in the case of the construction worker. Here the court, in effect, found that Hartsell had no prospect of employment beyond the period of the termination of his then current job and on this record such a finding is amply supported. There was no continuity in Hartsell's employment; it was composed of several separate jobs; he performed work on different parts of the projects and was employed at various times by different contractors. Moreover, after each lay-off Hartsell was available for work anywhere throughout Southeastern Idaho; in every instance following a "lay-off" Hartsell was unemployed for an appreciable period of time before securing another job; in every instance he was referred to a job through the union hiring hall; it is true that he was sent back to the AEC site, but he might equally have been directed to any of a number of different localities. It simply appears fortuitous that his work during the period in question was at the AEC site.

The judgment is affirmed.

RUDOLPH v. UNITED STATES

370 U.S. 269 (1962)

PER CURIAM.

The petition for certiorari in this case was granted because it was thought to present important questions involving the definition of "income" and "ordinary and necessary" business expenses under the Internal Revenue Code. 368 U.S. 913. An insurance company provided a trip from its home office in Dallas, Texas, to New York City for a group of its agents and their wives. Rudolph and his wife were among the beneficiaries of this trip, and the Commissioner assessed its value to them as taxable income. It appears to be agreed between the parties that the tax consequences of the trip turn upon the Rudolphs' "dominant motive and purpose" in taking the trip and the company's in offering it. In this regard the District Court, on a suit for a refund, found that the trip was provided by the company for "the primary purpose of affording a pleasure trip . . . in the nature of a bonus, reward, and compensation for a job well done" and that from the point of view of the Rudolphs it "was primarily a pleasure trip in the nature of a vacation. . . ." 189 F. Supp. 2, 4-5. The Court of Appeals approved these findings. 291 F.2d 841. Such ultimate facts are subject to the "clearly erroneous"

rule, cf. Commissioner v. Duberstein, 363 U.S. 278, 289-291 (1960), and their review would be of no importance save to the litigants themselves. The appropriate disposition in such a situation is to dismiss the writ as improvidently granted. See Rice v. Sioux City Memorial Park Cemetery, 349 U.S. 70, 78 n.2 (1955).

MR. JUSTICE FRANKFURTER took no part in the decision of this case.

MR. JUSTICE WHITE took no part in the consideration or decision of this case.

Separate opinion of MR. JUSTICE HARLAN.

Although the reasons given by the Court for dismissing the writ as improvidently granted should have been persuasive against granting certiorari, now that the case is here I think it better to decide it, two members of the Court having dissented on the merits. . . .

The basic facts, found by the District Court, are as follows. Petitioners, husband and wife, reside in Dallas, Texas, where the home office of the husband's employer, the Southland Life Insurance Company, is located. By having sold a predetermined amount of insurance, the husband qualified to attend the company's convention in New York City in 1956 and, in line with company policy, to bring his wife with him. The petitioners, together with 150 other employees and officers of the insurance company and 141 wives, traveled to and from New York City on special trains, and were housed in a single hotel during their two-and-one-half-day visit. One morning was devoted to a "business meeting" and group luncheon, the rest of the time in New York City to "travel, sightseeing, entertainment, fellowship or free time." The entire trip lasted one week.

The company paid all the expenses of the convention-trip which amounted to $80,000; petitioner's allocable share being $560. When petitioners did not include the latter amount in their joint income tax return,[1] the Commissioner assessed a deficiency which was sustained by the District Court, 189 F. Supp. 2, and also by the Court of Appeals, one judge dissenting, in a per curiam opinion, 291 F.2d 841, citing its recent decision in Patterson v. Thomas, 289 F.2d 108, where the same result had been reached. The District Court held that the value of the trip being "in the nature of a bonus, reward, and compensation for a job well done," was income to Rudolph, but being "primarily a pleasure trip in the nature of a vacation," the costs were personal and nondeductible.

I

Under §61 of the 1954 Code was the value of the trip to the taxpayer-husband properly includible in gross income? . . .

In light of the sweeping scope of §61 taxing "all gains except those specifically exempted," Commissioner v. Glenshaw Glass Co., 348 U.S. 426, 430; see Commissioner v. LoBue, 351 U.S. 243, 246; James v. United States, 366 U.S. 213, 219, and its purpose to include as taxable income "any economic or financial benefit conferred on the employee as compensation, whatever the form or mode by which it is effected," Commissioner v. Smith, 324 U.S. 177, 181, it seems clear that the District Court's findings, if sustainable, bring the value of the trip within the reach of the statute.

Petitioners do not claim that the value of the trip is within one of the statutory exclusions from "gross income" . . . as did the taxpayer in Patterson v. Thomas, 289 F.2d 108, 111-112; rather they characterize the amount as a "fringe benefit" not specifically excluded from §61 by other sections of the statute, yet not in-

1 As I see this case, there is no need to explore whether the proper reporting procedure for a *deductible* expense is not to include it in income in the first place, cf. Treas. Reg. §1.162-17(b), or to "run it through" the taxpayer's income with an offsetting deduction in the same amount.

tended to be encompassed by its reach. Conceding that the statutory exclusions from "gross income" are not exhaustive, as the Government seems to recognize is so under *Glenshaw*, it is not now necessary to explore the extent of any such nonstatutory exclusions.[2] For it was surely within the Commissioner's competence to consider as "gross income" a "reward, or a bonus given to . . . employees for excellence in service," which the District Court found was the employer's primary purpose in arranging this trip. I cannot say that this finding, confirmed as it has been by the Court of Appeals, is inadequately supported by this record.[3]

II

There remains the question whether, though income, this outlay for transportation, meals, and lodging was deductible by petitioners as an "ordinary and necessary" business expense under §162. . . .

Where, as here, it may be arguable that the trip was both for business and personal reasons, the crucial question is whether, under all the facts and circumstances of the case, the purpose of the trip was "related primarily to business" or was, rather, "primarily personal in nature." That other trips to other conventions or meetings by other taxpayers were held to be primarily related to business is of no relevance here; that certain doctors, lawyers, clergymen, insurance agents or others have or have not been permitted similar deductions only shows that in the circumstances of those cases, the courts thought that the expenses were or were not deductible as "related primarily to business."

The husband places great emphasis on the fact that he is an entrapped "organization man," required to attend such conventions, and that his future promotions depend on his presence. Suffice it to say that the District Court did not find any element of compulsion; to the contrary, it found that the petitioners regarded the convention in New York City as a pleasure trip in the nature of a vacation. Again, I cannot say that these findings are without adequate evidentiary support.

The trip not having been primarily a business trip, the wife's expenses are not deductible. It is not necessary, therefore, to examine whether they would or would not be deductible if, to the contrary, the husband's trip was related primarily to business. . . .

I would affirm.

MR. JUSTICE DOUGLAS, with whom MR. JUSTICE BLACK joins, dissenting.

I

It could not, I think, be seriously contended that a professional man, say a Senator or a Congressman, who attends a convention to read a paper or conduct a seminar *with all expenses paid* has received "income" within the meaning of

---

2 Petitioners rely on §3401 of the 1954 Code, relating to withholding taxes, and more especially on Treas. Reg. §31.3401(a)-1(b)(10) providing that certain fringe benefits are not considered "wages" subject to withholding. The Government admits that not all "fringe benefits" have been taxed as income, but it is enough to point out here that the withholding tax analogy is not perfect, for payments to laid-off employees from company-financed supplemental unemployment benefit plans are "taxable income" to the employees although not "wages" subject to withholding. Rev. Rul. 56-249, 1956-1 Cum. Bull. 488, as amplified by Rev. Rul. 60-330, 1960-2 Cum. Bull. 46.

3 . . . It is pertinent to note that in addition to the facts referred to supra, the record shows that company-sponsored conventions of the same kind have in recent years been held in Canada, Mexico City, Havana, Colorado and California, places well known for their appeal to tourists, and far removed from the home office in Dallas. While this factor alone does not render the expenses nondeductible, see I.R.S. News Rel. No. IR-394, August 3, 1961, it certainly was a relevant circumstance for the District Court to consider.

the Internal Revenue Code. Nor would it matter, I assume, that he took his wife and that her expenses were also paid. Income has the connotation of something other than the mere payment of expenses. The statute, 26 U.S.C. §61, speaks in terms of financial gain, of compensation for services, "including fees, commissions, and similar items." The form of payment for services covers a wide range. Treasury Regulations §1.61-1 provide:

> Gross income includes income realized in any form, whether in money, property, or services. Income may be realized, therefore, in the form of services, meals, accommodations, stock, or other property, as well as in cash.

The formula "all expenses paid" might be the disguise whereby compensation "for services" is paid. Yet it would be a rare case indeed where one could conclude that a person who gets only his expenses for attendance at one convention gets "income" in the statutory sense. If this arrangement were regular and frequent or if it had the earmarks of a sham device as a cloak for remuneration, there would be room for fact-finders to conclude that it was evasive. But isolated engagements of the kind here in question have no rational connection with compensation "for services" rendered.

It is true that petitioner was an employee and that the expenses for attending the convention were paid by his employer. He qualified to attend the convention by selling an amount of insurance that met a quota set by the company. Other salesmen also qualified, some attending and some not attending. They went from Dallas, Texas, to New York City, where they stayed two and a half days. One day was given to a business session and a luncheon; the rest of the time was left for social events.

On this record there is no room for a finding of fact that the "expenses paid" were "for services" rendered. They were apparently a proper income tax deduction for the employer. The record is replete with evidence that from management's point of view it was good business to spend money on a convention for its leading agents — a convention that not only kept the group together in New York City, but in transit as well, giving ample time for group discussions, exchanges of experience, and educational training. It was the exigencies of the employment that gave rise to the convention. There was nothing dishonest, illegitimate, or unethical about this transaction. No services were rendered. New York City may or may not have been attractive to the agents and their wives. Whether a person enjoys or dislikes the trip that he makes "with all expenses paid" has no more to do with whether the expenses paid were compensation "for services" rendered than does his attitude toward his job.

In popular understanding a trip to a convention "with all expenses paid" may be an award. Yet the tax laws are filled with exemptions for "awards" which are not considered to be income. The exemption of gifts is one example. Others are the exemptions of the proceeds of life insurance payable at death, disability benefits, the rental values of parsonages, scholarship and fellowship grants, allowances of U.S. employees abroad, mustering-out payments to members of the Armed Forces, etc. Employees may receive from their employers many fringe benefits that are not income. Treasury Regulations §31.3401(a)-1(b)(10) provide:

> Ordinarily, facilities or privileges (such as entertainment, medical services, or so-called "courtesy" discounts on purchases), furnished or offered by an employer to his employees generally, are not considered as wages subject to withholding if such facilities or privileges are of relatively small value and are offered or furnished by the employer merely as a means of promoting the health, good will, contentment, or efficiency of his employees.

The fringe benefits of this one convention trip are less obviously income than the fringe benefits listed in the Regulations. For the latter are constantly recur-

ring — day after day, week after week. Moreover, on this record the convention promotes the "efficiency" of the agents as much as the other fringe benefits enumerated in the Regulations.

II

The expenses, if "income," are plainly deductible. The Government, however, says that our problem is to determine "whether it is consistent with the ends of an equitable and workable tax system" to make them such. The problem of designing an "equitable" tax system is, however, for Congress, not for the Court.

The test of deductibility to be applied here is whether the expenses are "ordinary and necessary" in the carrying on of petitioner's business. . . .

Insurance conventions go back at least to 1924 (Report No. 15, Life Insurance Sales Research Bureau, Nov. 1924) and are premised on the idea that agents and companies benefit from the knowledge and increase in morale which result from them. Why they should be treated differently from other conventions is a mystery. It cannot be, as the district judge thought and as the Government seems to argue, because going to New York City is, as a matter of law, a "pleasure trip." If we are in the field of judicial notice, I would think that some might conclude that the weekend in New York City was a chore and that those who went sacrificed valuable time that might better have been spent on the farm, in the woods, or along the seashore.

Moreover, federal revenue agents attending their convention are given a deduction for the expenses they incur. We are advised that

> . . . the Commissioner has recently withdrawn his objections in two Tax Court cases to the deduction of convention expenses incurred by two IRS employees in attending conventions of the National Association of Internal Revenue Employees.
>
> No explanation has been given publicly for the Tax Court action of the Commissioner, it being generally presumed that the IRS employees met the tests of Reg. §1.162-2(d) by showing a sufficient relationship between the trade or business of being an IRS employee and attendance at conventions of the NAIRE. The National Association of Internal Revenue Employees has hailed the Commissioner's actions as setting a precedent which can be cited by IRS employees when taking deductions for expenses incurred in attending NAIRE conventions. [CCH Standard Federal Tax Reports No. 23, April 19, 1961, pt. 1, p. 2.]

It is odd, indeed, that revenue agents need make no accounting of the movies they saw or the nightclubs they attended, in order to get the deduction, while insurance agents must.

III

The wife's expenses are, on this record, also deductible. The Treasury Regulations state in §1.162-2(c):

> Where a taxpayer's wife accompanies him on a business trip, expenses attributable to her travel are not deductible unless it can be adequately shown that the wife's presence on the trip has a bona fide business purpose. The wife's performance of some incidental service does not cause her expenses to qualify as deductible business expenses. The same rules apply to any other members of the taxpayer's family who accompany him on such a trip.

The civil law philosophy, expressed in the community property concept, attributes half of the husband's earnings to the wife — an equitable idea that at long last was reflected in the idea of income splitting under the federal income

tax law. The wife's contribution to the business productivity of the husband in at least some activities is well known. . . . Business reasons motivated the inclusion of wives in this particular insurance convention. An insurance executive testified at this trial:

Q. I hand you Plaintiff's Exhibit 15, and you will notice it is a letter addressed to "John Doe"; also a bulletin entitled "A New Partner Has Been Formed."

Will you tell us what that consists of?

A. This is a letter addressed to the wife of an agent, a new agent, as we make the contact with him. This letter is sent to his wife within a few days after the contract, enclosing this booklet explaining to her how she can help her husband in the life insurance business. . . . Q. Please tell us, as briefly as you can and yet in detail, how you as agency director for Southland attempt to integrate the wives' performance with the performance of agents in the life insurance business.

A. One of the important functions we have in mind is the attendance at these conventions. In addition to that communication, occasionally there are letters that will be written to the wife concerning any special sales effort that might be desired or promoted. The company has a monthly publication for the agents and employees that is mailed to their homes so the wife will have a convenient opportunity to see the magazine and read it.

At most of our convention program[s], we have some specific reference to the wife's work, and in quite a few of the convention programs we have had wives appear on the program.

Q. Suppose you didn't have the wives and didn't seek to require their attendance at a convention, would there be some danger that your meetings and conventions would kind of degenerate into stag affairs, where the whole purpose of the meeting would be lost?

A. I think that would definitely be a tendency.

I would reverse the judgments below and leave insurance conventions in the same category as conventions of revenue agents, lawyers, doctors, businessmen, accountants, nurses, clergymen and all others, until and unless Congress decides otherwise.

NOTE

1. *Commuting expenses.* As the court in *Flowers* points out (supra p. 214), the cost of driving or commuting to work has long been treated as non-deductible; see Regs. §1.162-2(e). In Bruton v. Commissioner, 9 T.C. 882 (1947), this principle was applied to disallow the deduction of taxi fares paid by a partially paralyzed lawyer to get from his home to his office. See also Marot v. Commissioner, 36 T.C. 238 (1961) (hospital technician on call 24 hours a day; expenses of getting from her home, beaches, theaters, homes of friends, etc. to hospital held non-deductible); Heuer v. Commissioner, 32 T.C. 947 (1959), aff'd per curiam, 283 F.2d 865 (5th Cir. 1960) (river pilot who was assigned daily to work at different docks and wharves; expenses of traveling from home to various locations held non-deductible); Crowther v. Commissioner, 269 F.2d 292 (9th Cir. 1959) (similar facts, except that the taxpayer transported the tools of his trade; deduction allowed).

Since the expense of driving to work is not deductible, does a taxpayer realize income if a group of employees who ride with him reimburse him for their share of the automobile expense? In Rev. Rul. 55-555, 1955-2 C.B. 20, the Internal Revenue Service ruled that the reimbursement is not includible in gross income, so long as the taxpayer cannot "be said to have established a trade or business of transporting workers for hire from which a profit is derived."

2. *Living expenses at place of "temporary" employment.* Is Wright v. Hartsell (supra p. 216) consistent with the *Flowers* case? In Peurifoy v. Commissioner, 27 T.C. 149 (1956), the Tax Court held that the employment of three construction workers who plied their callings at one location after another while their families remained permanently at still another location was "temporary" in the taxable years in question, so that their living expenses at the job (for 20, 12, and 9 months respectively) and in returning to their families were deductible. The Court of Appeals assumed (without conceding) that the

rule applied by the Tax Court was consistent with *Flowers*, but found that the taxpayers had not established that they fell on the "temporary" rather than "indefinite" side of the dividing line. 254 F.2d 483 (4th Cir. 1957). The Supreme Court, in turn, stated that application of the *Flowers* doctrine of "the exigencies of business" would prohibit the deductions, but that the Tax Court "has engrafted an exception which allows a deduction . . . when the taxpayer's employment is 'temporary' as contrasted with 'indefinite' or 'indeterminate.' . . ." Since the government had not challenged the validity of this exception to the general rule, the Court held that the issue was "a narrow question of fact" upon which the Court of Appeals (in reversing the Tax Court finding as "clearly erroneous") made a fair assessment of the record so that Supreme Court intervention was not appropriate. Three Justices dissented, on the ground that construction workers of this type are "away from home" for the duration of their jobs; a contrary view, they said, "means that the taxpayer who is forced to travel from place to place to pursue his trade must carry his home on his back regardless of the fact that he maintains his family at an abode which meets all accepted definitions of 'home.'" 358 U.S. 59 (1958). For more on the traveling construction worker, see Rev. Rul. 60-189, 1960-1 C.B. 60, which contains a discussion, unusually full for a ruling, of the travel expense cases. See also Claunch v. Commissioner, 264 F.2d 309 (5th Cir. 1959), a characteristically tart opinion by Chief Judge Hutcheson on the same subject.

Although the Internal Revenue Service apparently does not intend to use *Peurifoy* as an excuse to jettison the "temporary" employment principle, it argued in Burns v. Gray, 287 F.2d 698 (6th Cir. 1961), involving the travel expenses of an itinerant race track starter whose family stayed behind, that "one must consider all the different places of [his] employment during that year, ascertain the place where he has been employed for the longest period during that time and then construe that place as his 'home' within the meaning of the statute." The argument failed and the deductions were allowed.

What is the status of the taxpayer who has a regular employer (unlike the construction worker in Wright v. Hartsell) but takes a temporary job with another employer in another city, where he is accompanied by his family (e.g., a college professor who teaches for the summer at another college, or a businessman who accepts a short-term government assignment in Washington)? On Fulbright grantees, see Dowd v. Commissioner, 37 T.C. 399 (1961) (Fulbright lecturer is "away from home" while in Japan for two academic years with family); Rev. Rul. 62-2, 1962-2 C.B. 9.

3. *Permanent or indefinite post without housing facilities for taxpayer's family.* The *Flowers* case has been applied to disallow the living expenses of a taxpayer even though it was difficult or impossible for him to bring his family to his business or occupational headquarters. Bercaw v. Commissioner, 165 F.2d 521 (4th Cir. 1948) (army officer living on post; no quarters for family); Warren v. Commissioner, 13 T.C. 205 (1949) (wartime housing shortage at taxpayer's occupational headquarters); Rev. Rul. 55-571, 1955-2 C.B. 44 (army officer overseas; family not permitted to accompany him); Formel v. Commissioner, ¶50,221 P-H Memo T.C. (engineer in Soviet Russia).

Does Wright v. Hartsell reject these cases?

4. *Homeless taxpayers.* In James v. United States, 308 F.2d 204 (9th Cir. 1962), a traveling salesman who spent the entire year "on the road" and had no permanent place of abode was denied a deduction for his living expenses in Reno, which he regarded as his headquarters because there he maintained bank and brokerage accounts, stored personal belongings, filed his income tax return, and made major purchases; although the court said that he could deduct "that *portion* of the cost of his meals and lodging, in Reno or elsewhere, which was in fact attributable to the exigencies of business," no criteria were suggested for making such an allocation and the court may have had in mind only the added cost of his meals when he was entertaining customers. Similar cases are: Fisher v. Commissioner, 230 F.2d 79 (7th Cir. 1956) (itinerant musician whose family traveled with him); Martin v. Commissioner, 44 B.T.A. 185 (1941) (seaman with no home ashore). In Gustafson v. Commissioner, 3 T.C. 998 (1944), however, an unmarried salesman who traveled continuously as a national representative of his employer was allowed to deduct his entire living expenses for the taxable year; his married sister maintained a room in her house for him, which he occupied on occasional weekends, and this was held to be his "home."

5. *Public officials.* In LeBlanc v. Commissioner, cited by the court in Wright v. Hartsell, a judge of the Louisiana Supreme Court was held to be "away from home" while in New Orleans, where the court sat; he was required by law to maintain a residence in the district from which he was elected. Query: could he have deducted the cost of living in his district rather than the cost of living in New Orleans?

The final sentence of §162(a) provides that a member of Congress shall be considered to have his "home" in the election district he represents, but that his living expenses (presumably in Washington) shall not be deductible beyond $3000 per year. This provision was enacted after it was held in Lindsay v. Commissioner, 34 B.T.A. 840 (1936), that a Congressman's "home" was Washington, so that his living expenses there were non-deductible, and that the cost of trips to his district to keep in touch with constituents were non-deductible campaign expenses. As to members of state legislatures, see I.T. 3842, 1947-1 C.B. 11.

6. *Two places of employment or business.* What if the taxpayer in the *Flowers* case had continued to practice law in Jackson after he took the Mobile railroad job? The Tax Court would apparently permit his expenses in Mobile to be deducted if the business activity in Jackson was substantial, even though the income therefrom was less than the Mobile income. Sherman v. Commissioner, 16 T.C. 332 (1951) (four judges dissenting); see also Chandler v. Commissioner, 226 F.2d 467 (1st Cir. 1955). The Internal Revenue Service, however, takes the position that the "home" of a taxpayer having two widely separated posts of duty is his principal business post, so that he is not "away from home" while there, but that he may deduct his living expenses while at the minor post even if his family is located there. Rev. Rul. 55-604, 1955-2 C.B. 49; see also Rev. Rul. 54-147, 1954-1 C.B. 51 (professional baseball players). Rev. Rul. 55-604 is concerned with an employee whose employer assigned him to two posts of duty, but it seems applicable to an employee with two employers and to a self-employed person having two headquarters as well. Does the *Flowers* case shed any light on this issue? Is there — or should there be — any distinction between transportation expenses and the cost of meals for the taxpayer with two posts?

A related problem is whether, if husband and wife work in different localities, either of them can deduct the expenses of being away from the "home." In Wallace v. Commissioner, 144 F.2d 407 (9th Cir. 1944), an actress domiciled in San Francisco (where her husband worked) was allowed to deduct the expenses of a six months' stay in Hollywood. The court's reasoning is somewhat weakened by the subsequently decided *Flowers* case, but in Stairwalt v. Commissioner, ¶52,261 P-H Memo T.C., the Tax Court hinted (though deciding the case before it on another ground) that the wife should be allowed to deduct such expenses because of "the possible considerations of public policy inherent in creating as few inducements as possible to the maintenance of separate domiciles for husband and wife." In Hammond v. Commissioner, 213 F.2d 43 (5th Cir. 1954), however, where the husband worked in Baton Rouge but the wife worked and maintained the home in New Orleans, the husband's expenses were disallowed; see also Coerver v. Commissioner, 36 T.C. 252 (1961).

7. *Function of §162(a)(2).* Since "all the ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business" are deductible by virtue of the opening clause of §162(a), what is added by the specific reference in §162(a)(2) to "traveling expenses . . . while away from home in the pursuit of a trade or business"? In at least one respect, the former phrase is broader than the latter: a taxpayer who is not "away from home" (e.g., a salesman who travels only in his home town; a traveling salesman who has no home) can deduct his automobile expenses and railroad fares as "business expenses" though they do not fit the terms of §162(a)(2).

How far must a taxpayer travel to be "away from home"? Can the taxpayer in Wright v. Hartsell deduct the cost of his lunches at the job site? What about lunches bought by a New York attorney who flies to Washington on business and flies back the same day? See Hanson v. Commissioner, 298 F.2d 391 (1962) (taxpayer need not be away overnight to be "away from home"); Rev. Rul. 61-221, 1961-2 C.B. 34 (taxpayer must be away for a period substantially longer than normal working hours so that sleep or rest is necessary); Rev. Rul. 63-239, 1963-2 C.B. 87 (non-acq. in *Hanson* case).

Note that §212, relating to the expenses of an individual in profit-seeking activities that

do not constitute a trade or business, contains no specific reference to traveling expenses. If an investor goes to another city to inspect his income-producing property, can he deduct his expenses in the same way as a businessman who makes a trip to inspect his business property?

8. *Business conventions.* With the opinions in *Rudolph*, compare Patterson v. Thomas, 289 F.2d 108 (5th Cir. 1961), in which the field representative of an insurance company was held to have realized additional income when his company paid for his attendance at its annual convention for 3½ days, during which 5 hours, at most, were spent in formal business meetings, most of the time being devoted to sightseeing, golf, and other recreational activities. The taxpayer was allowed to deduct a portion of his expenses, proportionate to the time devoted to business meetings, but his transportation expenses were disallowed in toto. (The taxable year before the court was 1956; §274, discussed below, was not enacted until 1962.) The court found that the presence of wives served no business purpose, rejecting the theory of the District Court that they served a "business" purpose in keeping the men from the "misconduct" that may occur at "stag affairs." One judge dissented, primarily on the ground that the "organization" man dare not refuse an invitation from his employer that is in reality a command: "[The organization man] weds a wife, but he marries a corporation too. Every waking hour the company's needs, the company's business, the company's welfare is drummed into this person whose inner satisfactions are likewise warped into the corporate image through status symbols of job assignments, titles and prerogatives." The dissenting judge, though evidently not much of an organization man himself, did not discuss whether the deduction should have been disallowed on the ground that the system contravened public policy, perhaps because he found it to be "as American as Bedloe's Island, hot dogs, Grand Canyon, Rhapsody in Blue, Chautauqua, P.T.A., Golden Gate, Rose Bowl or Wagon Train." Patterson v. Thomas, 289 F.2d 108 (5th Cir. 1961); see also 11 A.F.T.R.2d 722 (opinion on remand, allocating expenses between business and non-business time).

9. *The 1962 legislation: lavish expenses and combined business-personal trips.* The Revenue Act of 1962 imposed a number of restrictions on the deduction of travel and entertainment expenses (known in the trade as "T and E"), discussed infra page 230. Note at this point, however, that the parenthetical phrase in §162(a)(2) was amended to exclude "amounts which are lavish or extravagant under the circumstances." This language — what does it mean? — was substituted by the Senate for a provision in the House bill that had restricted the taxpayer to a "reasonable allowance for meals and lodging."

Note also the enactment in 1962 of §274(c), disallowing travel expenses to the extent that they are allocable to personal activities rather than to the taxpayer's trade or business or §212 activities — a result that was reached without explicit legislative authority in Patterson v. Thomas, supra. Since §274(c) applies only to individual taxpayers, what is the status of expenses paid by the employer for an employee who is on a combined business-personal trip? Section 274(c) is inapplicable if the trip lasts less than a week or if less than 25 per cent of the time is devoted to personal activities.

In 1964, §274(c) was amended (retroactively) to exclude travel within the United States; it remains in effect, however, for foreign travel.

The substantiation rules discussed infra page 234 are applicable to travel as well as entertainment expenses.

10. *Moving expenses.* In Rev. Rul. 54-429, 1954-2 C.B. 53, the Internal Revenue Service ruled that if an employer transfers an employee from one post to another, the employer's payment or reimbursement of the cost of moving the employee and his family is "not compensatory in nature," and hence not taxable as income, but that if the expense is paid by the employee, §262 bars a deduction. If the employee moved to take a job with a new employer, the Service's position was that the employee realized income if he was reimbursed, and could not deduct his expenses. Rev. Rul. 55-140, 1955-1 C.B. 317; see also Ferebee v. Commissioner, 39 T.C. 801 (1963), and cases there cited.

Section 217, enacted in 1964, alters these rules by allowing the employee to deduct "moving expenses" (as defined) even though he is taking a post with a new employer, provided (a) his new principal place of work is at least twenty miles farther from his former residence than was his old principal place of work, and (b) he is a full-time employee for at

least thirty-nine weeks during the twelve-month period immediately following his arrival at the new principal place of work. These conditions mean that a disparity will continue between the expenses of moving to enter the service of a new employer and those incurred on a transfer to a different office of the same employer; but the disparity is substantially narrowed.

Frequently the employee who is transferred by his employer to a new post of employment or who moves to take a new job will receive assistance in disposing of his home (e.g., payment by the employer of the real estate commission, guarantee against loss on the sale, etc.). The Tax Court holds that such payments are added compensation to the employee; see the *Ferebee* case, supra; Bradley v. Commissioner, 324 F.2d 610 (4th Cir. 1963) (accord).

SCHULZ v. COMMISSIONER
16 T.C. 401 (1951)

ARUNDELL, Judge: The respondent has disallowed as a deduction from the petitioner's 1945 taxable income the sum of $9,304.40 claimed as entertainment expense, and a $400 item claimed as advertising expense. There is no serious dispute as to whether either of these sums was spent; the issue is whether they are deductible.

Entertainment expenses are allowed as a deduction from gross income only to the extent that they are "ordinary and necessary" in carrying on a trade or business. Section [162(a)] of the Internal Revenue Code. The requirements that the expense must be both ordinary and necessary must be strictly complied with, Helvering v. Welch, 290 U.S. 111, and whether contested expenditures are ordinary and necessary is primarily a question of fact. Commissioner v. Heininger, 320 U.S. 467. Proof is required that the purpose of the expenditure was primarily business rather than social or personal, and that the business in which taxpayer is engaged benefited or was intended to be benefited thereby. Louis Boehm, 35 B.T.A. 1106.

During 1945 petitioner elaborately entertained buyers and others connected with the jewelry business, personally spending about $7,000. In addition thereto approximately $2,000 was expended by his wife and employees on luncheons, drinks, weekend visits, conventions, suppers, theaters, and nightclubs. Approximately $3,400 of the $7,000 expended by petitioner personally was spent on suppers, theaters, and nightclubs and other forms of evening entertainment. On these occasions petitioner would bring his wife and the party or parties he was entertaining would also bring their wives. There is little to distinguish these occasions from the usual social gatherings among friends to renew acquaintanceship and enjoy a pleasant evening. They bear little semblance to the usual gatherings of business people at restaurants or other places of entertainment which serve primarily as congenial meeting places for the discussion or negotiation of business matters. Petitioner made no attempt to show that the evening entertainment he offered his guests served this purpose or that all of it was directly related to the operations of his business.

These gatherings may have been desirable and helpful to the present and future success of petitioner's business, but this is usually true of all entertaining done by business or professional people for the purpose of acquiring or retaining the favor of patrons and clients. Such expenditures are nonetheless nondeductible absent a showing that they were ordinary and necessary to the taxpayer's business within

the meaning of [§162(a)] of the Internal Revenue Code. In Louis Boehm, supra, we stated:

We do not think the burden of proof is met by the petitioner's argument that in general, membership in social, political, and fraternal organizations is helpful in obtaining clients through contacts made thereby or the citing of one instance of gaining a client through acquaintance made at a political club. No evidence has been introduced to show that any part or all of the expenditures in question were so closely related to the conduct of the petitioner's business as to have been appropriate, helpful, usual, or necessary. It is noted that in cases where expenditures of a social nature have been held to be deductible business expenses proof was presented to show that such expenditures had a direct relation to the conduct of a business or the business benefits expected. Such proof has not been presented here to show that the expenditures are deductible under [§162(a)].

After taking into consideration the nature of the entertainment provided by the petitioner and the fact that it was undertaken at a time when he had more business than he could handle, we are not convinced that all of the expenditures in issue were made for purely business reasons or that the entire cost of such entertainment may be characterized as ordinary and necessary expense incident to the carrying on of the petitioner's business. An expense is deductible only if it complies with the strict requirements of [§162(a)] and does not constitute a personal expense expressly disallowed by [§262].

Moreover, the petitioner's attempt to deduct such nondeductible items as the cost of repairing an automobile, the cost of hotel rooms, tips, and meals on two occasions when, after a night of entertaining customers, he remained in New York after missing the train home, and the inclusion of $200 which had been placed in the petty cash fund but was not expended on entertainment, all create doubt as to the accuracy of the total deduction.

On the other hand, we are convinced that some part of the expenditures was prompted by strictly business considerations and should be characterized as ordinary and necessary expenses. Applying the rule of Cohan v. Commissioner,* we have reached an approximation after a careful consideration of the testimony of petitioner and his wife and a close examination of the memoranda and other ex-

* In Cohan v. Commissioner, 39 F.2d 540, 543 (2d Cir. 1930), the court (per Judge L. Hand) made an approximation of the business expenses incurred by George M. Cohan under these circumstances: "In the production of his plays Cohan was obliged to be free-handed in entertaining actors, employees, and, as he naively adds, dramatic critics. He had also to travel much, at times with his attorney. These expenses amounted to substantial sums, but he kept no account and probably could not have done so. At the trial before the Board [of Tax Appeals] he estimated that he had spent eleven thousand dollars in this fashion during the first six months of 1921, twenty-two thousand dollars, between July first, 1921, and June thirtieth, 1922, and as much for his following fiscal year, fifty-five thousand dollars in all. The Board refused to allow him any part of this, on the ground that it was impossible to tell how much he had in fact spent, in the absence of any items or details. The question is how far this refusal is justified, in view of the finding that he had spent much and that the sums were allowable expenses. Absolute certainty in such matters is usually impossible and is not necessary; the Board should make as close an approximation as it can, bearing heavily if it chooses upon the taxpayer, whose inexactitude is of his own making." See also Walet v. Commissioner, 31 T.C. 461, 471 (1958), aff'd per curiam, 272 F.2d 694-695 (5th Cir. 1959): "Nor does the evidence show whether there was any proximate relationship between the expenditures and the alleged business. Certainly, the word 'entertainment' is not a magic formula entitling one to deduction without inquiry as to whether the entertainment in question really had a significant bearing upon the conduct of the alleged business. The situation is one that is susceptible of gross abuse, and it is not too much to ask that one claiming such deductions show that the expenditures in question were genuinely related to the conduct of a business. We cannot say on the record before us that any of the claimed expenditures could qualify for deduction; accordingly, there is no occasion to make an approximation such as was indicated in Cohan v. Commissioner."

As indicated infra, the scope of the *Cohan* doctrine was much reduced by the enactment of §274(d) (relating to substantiation of travel and entertainment expenses) in 1962. — Ed.

hibits received in evidence. From all this evidence, we have concluded that $5,500 fairly represents the amount spent by the petitioner for ordinary and necessary business entertainment in 1945 and that amount is properly deductible under [§162(a)] of the Internal Revenue Code.

The petitioner has included in his advertising expense the sum of $400 spent in entering his horse named "Schulztime" in a horse show and for such items as horse show programs and trophies. Petitioner has not satisfactorily shown how these expenditures were calculated to advertise or publicize his business. There is no evidence that the petitioner called the attention of those persons attending the horse shows to the fact that he was a dealer in watches by advertising in the horse show program. Cf. Rodgers Dairy Co., 14 T.C. 66. There is an inference in the record that the name "Schulztime" was relied on by petitioner to publicize his business but if this be true the name chosen was so subtle and the entry of a horse in a show so far removed from the petitioner's business that it could not reasonably have been expected to publicize the business. In our opinion, the $400 so expended was not an ordinary and necessary business expense within the meaning of section [162(a)] of the Code and the Commissioner's disallowance of the deduction is sustained.

NOTE

1. *The background of the 1962 legislation.* In 1962, Congress enacted §274, which restricts or disallows entirely certain expenses for entertainment, amusement, recreation, and business gifts. The immediate impetus for this legislation was President Kennedy's Tax Message of April 20, 1961, urging that "The slogan — 'It's deductible' — should pass from our scene." But proposals for administrative or legislative restrictions on "T and E" (travel and entertainment) deductions have a longer history, having been advanced with increasing frequency as descriptions of the "expense account society" like the following became more common in the years after World War II:

> In cities like New York, Washington and Chicago it is safe to say that at any given moment well over half of all the people in the best hotels, the best nightclubs and the best restaurants are charging the bill as an expense account item to their companies, which in turn are charging it to the government in the form of tax deductions. [Life, March 9, 1953, p. 140.]

In "Europe's Lighter Side," in the New York Herald-Tribune, July 20, 1954, p. 21, Art Buchwald reported that many Europeans had been puzzled by promising business deals that, after being discussed with them by vacationing Americans, had never been closed. He states:

> The only way we've been able to appease the Europeans is to explain that the Americans weren't being malicious. They were just trying to deduct their trip from their income tax. After it's explained, the European is always mollified. If there's one thing a European understands, it's tax evasion.

Another source of dissatisfaction with the growing amount of travel and entertainment deductions was the degree of discretion vested in the subordinate employees of the Internal Revenue Service who pass on the propriety of such deductions. After an extended investigation in 1951-1952, a subcommittee of the House Committee on Ways and Means, headed by Congressman Cecil R. King, reported:

> A second way to reduce possible corrupt practices in the Bureau [of Internal Revenue] is to minimize the opportunities and temptation. For example, under a leading judicial decision [the *Cohan* case], a taxpayer who claims large business de-

ductions but has not kept any records to substantiate the claim is entitled to a reasonable allowance for the claimed expenses, which must be estimated by the Revenue Agent. Stricter requirements for keeping of reasonably detailed records by taxpayers would eliminate the necessity for discretionary determination of the proper expense deduction, and with it, any possible temptation for the Revenue Agent to allow an improperly large deduction in exchange for some private benefit extended to him by the taxpayer.

This record-keeping proposal, aside from its tendency to eliminate opportunities for corruption in the Bureau, should reduce the risk that the great multitude of taxpayers who have no substantial business deductions may feel that some persons having such opportunity to claim deductions are not paying their fair share of taxes. . . .

Recent high tax rates have resulted in attempts by some business organizations to reward key personnel with tax-free personal benefits. These may take the form of free automobiles, airplanes, vacations, housing, or servants, all theoretically for the benefit of the employer. Of like character is the practice of allowing overly liberal expense accounts to employees whose duties involve travel or business entertainment; sometimes the employer may tolerate padding of the expense account by the employee as a way of giving him tax-free income. The opportunity for a limited segment of the taxpaying population to receive such tax-free benefits jeopardizes public confidence in the impartial imposition of taxes. As a basis for possible legislation, the subcommittee recommends that definite information be obtained as to the prevalence of these practices and as to the amount of revenue lost thereby. Your subcommittee has been advised that the Treasury Department will obtain these statistics and report to the Congress on the problem. [Report to House Committee on Ways and Means, Subcommittee on Administration of the Internal Revenue Laws 29 (1952).]

An extended report made to Congress in 1961 in support of President Kennedy's proposals was summarized by Secretary of the Treasury Dillon as follows:

Turning now to expense accounts, much has been said and written about the abuses in this area. Abuses through expense accounts take a variety of forms. Tax deductible entertainment allowances frequently are a means by which business provides tax-free compensation to favored employees or business associates. The seller invites the buyer to his yacht or hunting lodge, the buyer may reciprocate with lavish parties and nightclub entertainment, and both then charge it off as a business expense. Some of this is done because of the businessman's own desire to obtain such luxuries tax free; much of it is done in response to a competitive pressure which has in large measure been created by our tax law and not by the dictates of business. As a result, therefore, there are few of the luxuries of life, such as vacations at fancy resorts, club memberships, and cruises which a large number of taxpayers cannot in some way deduct on tax returns as business expenses. As the President stated, the time has come when our tax laws should cease to encourage luxury spending as a charge on the Federal Treasury.

I have here a four-part document illustrating the abuses in the entertainment area. This document demonstrates that tighter enforcement of present law will not suffice; corrective legislation is necessary.

Part One of this document summarizes the result of a recent audit by the Internal Revenue Service. This audit was undertaken last September by the Treasury Department as a step in meeting the directive of the Congress, set forth in the Public Debt and Tax Rate Extension Act of 1960, that the Secretary of the Treasury make a report as soon as practicable during the 87th Congress on the progress of an enforcement program, initiated by the Internal Revenue Service in 1960, relating to expenses for entertainment, travel, yachts, hunting lodges, club dues, and similar items. Although this audit covered only 38,000 returns, it shows that these returns claimed deductions totaling $5.7 million for club dues, $2 million for theater tickets and similar amusements, over $1 million for hunting lodges and fishing camps, $2.6 million for yachts,

and $11.5 million for business gifts. Most significantly, the audit shows that only a small portion of these expenses can be disallowed under existing law.

The difficulty in administering present law is shown by the fact that, even though most of the claimed expenditure for entertainment was allowed under the existing generous standards, almost 50 percent of the returns had to be adjusted by Internal Revenue agents. These adjustments resulted in the disallowance of $28.3 million of claimed travel and entertainment expense. In addition, it was determined that $29.5 million of the claimed deductions constituted unreported income in the nature of dividends or additional compensation to stockholders, officers, or employees.

Part Two of the document consists of a report by the Commissioner of Internal Revenue on the very serious problems encountered in administering present law relating to travel and entertainment expenses.

Part Three contains a summary of some court decisions and administrative cases illustrative of the type of entertainment expenditure which is deductible under existing law. As the introduction to this part states, when judicial decisions permit the cost of a safari to Africa undertaken by a hunting enthusiast and his wife to be deducted as an expense for advertising dairy milk [Sanitary Farms Dairy, Inc. v. Commissioner, 25 T.C. 463 (1955)], one cannot expect revenue agents to question successfully the business necessity for duck hunting or nightclubbing with business associates.

Part Four of the document contains a compilation of recent comments on expense accounts and business gifts appearing in newspapers and other periodicals. These comments illustrate the widespread public concern, shared by many in the business community, with expense account abuses.

The supplemental statement contains detailed proposals for carrying out the President's recommendation to disallow certain entertainment expenses. The characteristic feature of all of these expenses is that they confer substantial personal benefits which are in large measure a substitute for personal living expenses. Under these detailed proposals, expenses for entertaining guests at such functions as parties, nightclubs, theaters, country clubs and fishing trips would be disallowed in full. So also would be expenses for luxury entertainment facilities such as yachts, hunting lodges, and swimming pools, as well as for such items as country club dues. The cost of so-called business gifts would be disallowed to the extent it exceeds an annual limitation of $10 for each recipient.

Expenditures for food and beverages generally would be disallowed, although several exceptions are made. One exception relates to food or beverages provided primarily to employees on business premises. Another exception covers the cost of food and beverages consumed in the course of conducting business, but not in excess of a fixed amount per day for each individual involved. This figure could be somewhere in the range of $4 to $7. A deduction for the cost of food and lodging while on business trips would be limited to twice the maximum per diem rate authorized to be paid to Federal employees. At the present time this rate for travel in the United States is $12 per day, but the Bureau of the Budget has recommended to the Congress that this figure be raised to $15. Therefore, the per diem limitation applicable to business travel would be $30 if the Congress accepts the recommendation of the Bureau of the Budget. Finally, where a business trip is combined with a vacation, a portion of the cost of travel to the business destination would be disallowed.

I believe that these are realistic recommendations which recognize the legitimate needs of business while at the same time eliminating the lavish expenditure for personal benefit which has, in the past, been charged off to the American taxpayer. They would increase revenues by at least $250 million per year.

The legislative proposals described by Secretary Dillon were pruned substantially as they passed through successive stages of congressional action. See Lipoff, Entertainment and Related Expenses Under Legislative Attack, 17 Tax L. Rev. 183 (1962).

As enacted, the provisions consist of the amendment to §162(a)(2) (the prohibition on "lavish and extravagant" travel expenses), described supra page 227, and of the enactment of a new provision, §274, which is described below. Hereafter, "T and E" deductions

must not only qualify as business expenses under §162 (or as "non-business" expenses under §212), but also meet the requirements of §274.

2. *Entertainment expenses.* Section 274(a) provides that the cost of "an activity which is of a type generally considered to constitute entertainment, amusement, or recreation" is deductible only if it was (a) "directly related to" the "active conduct" of the taxpayer's trade or business, or (b) "associated with" the active conduct of his business and directly preceded or followed "a substantial and bona fide business discussion." The Regulations cite, as examples of entertainment that is "directly related" to active conduct of the taxpayer's business, the entertainment of business representatives and civic leaders at the opening of a hotel, the maintenance of a "hospitality suite" at a business convention where the taxpayer's products are displayed or discussed, and the award of vacation trips as prizes to the taxpayer's dealers. By contrast, entertainment at theaters, night clubs, and sporting events, or at country clubs and cocktail lounges in groups that include persons other than business associates, is said by the Regulations not to be "directly related" (unless the taxpayer clearly proves the contrary).

If not "directly related" to the "active conduct" of the taxpayer's business, entertainment expenses are deductible only if the entertainment directly preceded or followed a substantial business discussion and was "associated with" the active conduct of the taxpayer's business. The Regulations cite only two instances of "associated" entertainment: entertainment at business conventions and similar meetings if a business program is the principal activity of the meeting; and entertainment on the day of a business discussion or, if the persons entertained are from out of town, on the preceding or following evening.

If the expense is attributable to a "facility" used for entertainment, amusement, or recreation (e.g., rent, maintenance, or depreciation of a yacht, hunting lodge, or swimming pool; or dues paid to a social or athletic club), §274(a)(1)(B) permits a deduction only if the expense was "directly related" to active conduct of the business and the facility was used "primarily for the furtherance" of the business. The latter requirement is interpreted by the Regulations (in keeping with the Senate Report) as requiring a more than 50 per cent business use of the facility. Regs. §1.274-2(e)(4). Note, however, §274(f), providing that §274 does not prohibit a deduction that does not depend on §162 or §212; thus the owner of a hunting lodge may deduct interest on the mortgage, real estate taxes, and damage caused by casualty even though it is not used primarily for business purposes.

A number of exceptions to the rules just summarized are given in §274(e), of which the most important are food and drink furnished under circumstances "generally considered to be conducive to a business discussion" or furnished to the taxpayer's employees on his business premises; expenses treated as compensation to employees; recreation for the benefit of rank and file employees; and certain reimbursed expenses. Out of what might seem an excess of caution, §274(e)(9) exempts "entertainment sold to customers," thus making it clear that the owner of a night club or theater can deduct the cost of providing entertainment for his customers.

The student should spend an hour or two with the Regulations under §274, observing the effort to give meaning to such terms as "directly related to," "associated with," "active conduct," "directly preceding or following," "substantial and bona fide business discussion," and "primarily for the furtherance" of business. If Congress had simply added a statutory warning that expenses for entertainment are deductible only if "clearly essential" to the conduct of the taxpayer's business or to his §212 activities, would it have accomplished substantially less — or more — than §274(a)?

What is the effect of §274(a), or of §162(a) itself, on a businessman's entertainment expenses if his customers become his friends, or his friends become his customers? Consider the following extract from Challenge Manufacturing Co. v. Commissioner, 37 T.C. 650, 659 (1962), disallowing deductions claimed by a corporation for entertaining business associates on its yacht:

> In the second place, even when guests having some "business" connection with Challenge [the corporate taxpayer] were aboard, it is far from clear to us that their presence on the yacht in any particular instance was proximately related to the business of Challenge so as to form the basis for deduction. It is entirely normal for

friendships to develop with some of those that one meets in business transactions, and we cannot say on this record that a number of the so-called "business" guests were not also social friends of Castendyck [the corporation's sole shareholder] and were not invited on the yacht because Castendyck found them companionable and congenial, wholly apart from business reasons. The mere fact that they may have been "business" contacts as well would not render deductible the cost of entertainment if it in fact was furnished primarily for social or personal reasons. The deduction is one that is peculiarly susceptible of abuse, and it has been decided that the one claiming it must show a proximate relationship between the entertainment and the business of the taxpayer. Ralph E. Larrabee, 33 T.C. 838, 843; Eugene H. Walet, Jr., 31 T.C. 461, 471, affirmed 272 F.2d 694 (C.A. 5). The possible fact that some of the persons aboard may have been helpful to Challenge in some circumstances hardly establishes that they were invited solely for business reasons, or that their entertainment was in any significant way responsible for any benefits accruing to the corporation. We are far from convinced by the evidence that all of the alleged "business" visitors were entertained for business rather than social reasons.

Section 274(a)(1)(A) speaks of "an activity which is of a type generally considered to constitute entertainment, amusement, or recreation," and Regs. §1.274-2(b)(ii) states that:

> This objective test precludes arguments such as that "entertainment" means only entertainment of others or that an expenditure for entertainment should be characterized as an expenditure for advertising or public relations.

Is this so clear? See U.S. Equipment Co. v. Commissioner, ¶63,261 P-H Memo T.C. (cost of operating hydroplane racing boats for dominant purpose of advertising a business held deductible, for pre-1962 years, as business expenses).

3. *"Lavish and extravagant" expenses.* Although a statutory prohibition on "lavish and extravagant" expenses is to be found only in §162(a)(2) (relating to travel expenses away from home), the Regulations impose this limitation on all expenses for entertainment. Regs. §1.274-1. Does this restriction, which also appears in the Senate Report (S. Rept. No. 1881, 87th Cong., 2d Sess. 30 (1962)), emerge from the final clause of §274(a)(1), providing that the deduction "shall in no event exceed the portion of such [expense] directly related to, or . . . associated with" active conduct of the business?

4. *Business gifts.* Section 274(b) provides that "gifts" (defined as items that are excluded from the recipient's gross income under §102 and not under any other provision) are deductible only to the extent of $25 per donee per year. Exceptions are made for certain advertising and promotional material, as well as for gifts of tangible personal property costing not more than $100 and awarded to employees for length of service or safety achievement. (Query: would a safety award be excluded from the recipient's income by §74, without regard to §102, and hence be deductible regardless of amount?)

On the deductibility of Christmas presents, etc., see Regs. §1.162-9, providing that "donations made to employees and others, which do not have in them the element of compensation . . . are not deductible from gross income"; Arc Realty Co. v. Commissioner, 34 T.C. 484, 494 (1960). How did the Internal Revenue Service reconcile Rev. Rul. 59-58, quoted supra pages 124-125, with Regs. §1.162-9?

5. *Substantiation.* By virtue of §274(d), no deduction may be taken for traveling expenses, entertainment, or business gifts unless the taxpayer "substantiates by adequate records or by sufficient evidence corroborating his own statement" the amount, the time and place of the travel or entertainment or the date and description of the gift, the business purpose of the expense, and his business relationship to the person entertained or the donee. This requirement of substantiation is intended to overrule the *Cohan* case in this area. The Treasury is authorized to dispense with some or all of these requirements, and this power has been exercised as to some expenditures (e.g., expenditures under $25 other than for lodging; mileage allowances not exceeding 15 cents per mile and per diem allowances up to $25 per day for meals and lodging used by an employer to reimburse his employees). Regs. §1.274-5(c)(2)(iii); Rev. Rul. 63-13, 1963-1 C.B. 69.

6. *Entertainment expenses as income to recipient.* Section 274(e)(3) acknowledges that

an employer's expenditures for entertainment may constitute additional income to an employee; but this possibility antedates, and according to the Regulations is not affected by, the enactment of §274. Regs. §1.274-1. In Rev. Rul. 57-130, 1957-1 C.B. 108, the Internal Revenue Service, moved by advertisements "describing a tax-deductible executive rehabilitation plan which certain hotels have instituted to assist in keeping an individual fit," announced that an employer's expenditures for "reconditioning and health-restoring services" provided to its executives would be deductible — but only by the employer — as additional compensation to the executive. See also Williams v. United States, 245 F.2d 559 (5th Cir. 1957); Rev. Rul. 57-502, 1957-2 C.B. 118. It should also be noted that a corporation's expenditures for entertainment may constitute a disguised dividend to its shareholders (infra p. 647), if they are the persons who use the yacht or occupy the Florida hotel suite.

A related question is whether the taxpayer who takes a customer to lunch or the theater under circumstances permitting a deduction for the customer's entertainment can also deduct his own share of the bill. In Sutter v. Commissioner, 21 T.C. 170, 173 (1953), the court spoke of:

> the stubborn thread of a single problem which has never apparently been squarely and expressly passed upon. . . . When a taxpayer in the course of supplying food or entertainment or making other outlays customarily regarded as ordinary and necessary includes an amount attributable to himself or his family such as the payment for his own meals, is that portion of the expenditure an ordinary and necessary business expense on the one hand or a nondeductible personal item on the other? . . . [W]e think the presumptive nondeductibility of personal expenses may be overcome only by clear and detailed evidence as to each instance that the expenditure in question was different from or in excess of that which would have been made for the taxpayer's personal purposes.

In Rev. Rul. 63-144, 1963-30 I.R.B. 23, the Service summarized the decisions as holding that "a taxpayer canot obtain a deduction for the portion of his meal cost which does not exceed an amount he would normally spend on himself" and said that it did not intend to depart from its practice of applying this rule "largely to abuse cases where taxpayers claim deductions for substantial amounts of personal living expenses." No reference was made to the cost of theater tickets and other entertainment expenses.

7. *Payment by employee of expenses attributable to employer's business.* If the taxpayer is an employee, entertainment expenses may be disallowed because they were paid in carrying on his employer's, rather than his own, trade or business. An example is Roach v. Commissioner, 20 B.T.A. 919 (1930) (where the dichotomy was especially formal because the taxpayer and his wife owned all the stock of the corporation by which he was employed); see also Jergens v. Commissioner, 17 T.C. 806 (1951). This barrier can be hurdled by the taxpayer who shows that part of *his* job is the entertainment, at his own expense, of his employer's customers. In Henricks v. Commissioner, ¶49,269 P-H Memo T.C., the taxpayer, an advertising solicitor for Time, Inc., was able to rely upon a memorandum from his employer stating:

> Mr. Luce and other Management officers have often emphasized that TIME salesmen are paid high salaries because selling is not a routine job and makes demands on a man's time and money that cannot be accounted for minute-by-minute or penny-by-penny. There are many expenses incidental to selling which the salesman is not expected to recover from the Company on top of his salary.

Often, however, less formal evidence of the employee's obligation to pay some expenses himself is sufficient. See, e.g., Schmidlapp v. Commissioner, 96 F.2d 680 (2d Cir. 1938).

This rule — permitting a deduction to be taken only if the expense or other item is the taxpayer's own — has been encountered previously, Holden v. Commissioner, supra page 191, and it is of general applicability. See Note, Deductibility of Expenses Incurred for the Benefit of Another, 66 Harv. L. Rev. 1508 (1953); Lempert, Who Can Deduct a Business Expense? 11 Tax L. Rev. 433 (1956).

If the employee who makes an expenditure that would normally be discharged by

the employer is employed by a corporation of which he is the principal or sole shareholder, the deduction might be disallowed on the ground that he is making a capital contribution, or a gift, to the employer. See Kahn v. Commissioner, 26 T.C. 273 (1956). But what is the rationale for denying the deduction if the employee has no such proprietary interest in the employer?

8. *Entertainment expenses incurred by attorneys, etc.* In Handelman v. Commissioner, ¶61,171 P-H Memo T.C. (1961), an attorney argued that the publicity he obtained from winning, or merely from entering, yachting races was of sufficient benefit to his law "business" to justify deducting part of the cost of maintaining his yacht under §162(a). The government had allowed one fourth of the maintenance expenses, either on this theory or because the taxpayer entertained clients aboard, and the court refused to increase the allowance. The taxpayer and his partner had partnership income of $46,000; the partnership deducted $13,000 of this for "promotion and entertainment" and the taxpayer deducted another $2500 on his personal return. Query: does entertainment on this scale by lawyers, doctors, and other professionals raise a special question of propriety under §162? See page 281 infra.

See also Tonkoff v. United States, 219 F. Supp. 16 (E.D. Wash. 1963) (estimating entertainment expenses of lawyer who was active in National Association of Claimants' Counsel of America; judge commented that "while I should be hesitant to liken the business of a lawyer such as taxpayer to that of the producer and entrepreneur Cohan, I have, nevertheless, witnessed some formidable courtroom productions by the devotees of NACCA — they are of a demonstrative and outgoing type").

UNITED STATES v. GILMORE
372 U.S. 39 (1963)

MR. JUSTICE HARLAN delivered the opinion of the Court.

In 1955 the California Supreme Court confirmed the award to the respondent taxpayer of a decree of absolute divorce, without alimony, against his wife Dixie Gilmore. The case before us involves the deductibility for federal income tax purposes of that part of the husband's legal expense incurred in such proceedings as is attributable to his successful resistance of his wife's claims to certain of his assets asserted by her to be community property under California law. The claim to such deduction, which has been upheld by the Court of Claims, 290 F.2d 942, is founded on [§212(2)], which allows as deductions from gross income

> . . . ordinary and necessary expenses . . . incurred during the taxable year . . . for the . . . conservation . . . of property held for the production of income.

Because of a conflict of views among the Court of Claims, the Courts of Appeals, and the Tax Court regarding the proper application of this provision,[1] and the continuing importance of the question in the administration of the federal income tax laws, we granted certiorari on the Government's petition. The case was first argued at the last Term and set for reargument at this one.

At the time of the divorce proceedings, instituted by the wife but in which the husband also cross-claimed for divorce, respondent's property consisted primarily of controlling stock interests in three corporations, each of which was a franchised General Motors automobile dealer. As president and principal managing officer

1 Compare Lewis v. Commissioner, 253 F.2d 821 (C.A. 2d Cir.), and Douglas v. Commissioner, 33 T.C. 349, with Gilmore v. United States, 290 F.2d 942 — the present case — and Baer v. Commissioner, 196 F.2d 646 (C.A. 8th Cir.).

of the three corporations, he received salaries from them aggregating about $66,800 annually, and in recent years his total annual dividends had averaged about $83,000. His total annual income derived from the corporations was thus approximately $150,000. His income from other sources was negligible.

As found by the Court of Claims the husband's overriding concern in the divorce litigation was to protect these assets against the claims of his wife. Those claims had two aspects: *first,* that the earnings accumulated and retained by these three corporations during the Gilmores' marriage (representing an aggregate increase in corporate net worth of some $600,000) were the product of respondent's personal services, and not the result of accretion in capital values, thus rendering respondent's stockholdings in the enterprises pro tanto community property under California law; *second,* that to the extent that such stockholdings were community property, the wife, allegedly the innocent party in the divorce proceeding, was entitled under California law to more than a one-half interest in such property.

The respondent wished to defeat those claims for two important reasons. *First,* the loss of his controlling stock interests, particularly in the event of their transfer in substantial part to his hostile wife, might well cost him the loss of his corporate positions, his principal means of livelihood. *Second,* there was also danger that if he were found guilty of his wife's sensational and reputation-damaging charges of marital infidelity, General Motors Corporation might find it expedient to exercise its right to cancel these dealer franchises.

The end result of this bitterly fought divorce case was a complete victory for the husband. He, not the wife, was granted a divorce on his cross-claim; the wife's community property claims were denied in their entirety; and she was held entitled to no alimony.

Respondent's legal expenses in connection with this litigation amounted to $32,537.15 in 1953 and $8,074.21 in 1954 — a total of $40,611.36 for the two taxable years in question. The Commissioner of Internal Revenue found all of these expenditures "personal" or "family" expenses and as such none of them deductible. [§262.] In the ensuing refund suit, however, the Court of Claims held that 80% of such expense (some $32,500) was attributable to respondent's defense against his wife's community property claims respecting his stockholdings and hence deductible under [§212(2)] as an expense "incurred . . . for the . . . conservation . . . of property held for the production of income." In so holding the Court of Claims stated:

> Of course it is true that in every divorce case a certain amount of the legal expenses are incurred for the purpose of obtaining the divorce and a certain amount are incurred in an effort to conserve the estate and are not necessarily deductible under [§212(2)], but when the facts of a particular case clearly indicate [as here] that the property, around which the controversy evolves, is held for the production of income and without this property the litigant might be denied not only the property itself but the means of earning a livelihood, then it must come under the provisions of [§212(2)]. . . . The only question then is the allocation of the expenses to this phase of the proceedings. [290 F.2d, at 947.]

The Government does not question the amount or formula for the expense allocation made by the Court of Claims. Its sole contention here is that the court below misconceived the test governing [§212(1) and (2)] deductions, in that the deductibility of these expenses turns, so it is argued, not upon the *consequences* to respondent of a failure to defeat his wife's community property claims but upon the *origin* and *nature* of the claims themselves. So viewing Dixie Gilmore's claims, whether relating to the existence or division of community property, it is contended that the expense of resisting them must be deemed nondeductible "per-

sonal" or "family" expense under [§262], not deductible expense under [§212(1) and (2)]. For reasons given hereafter we think the Government's position is sound and that it must be sustained.

I

For income tax purposes Congress has seen fit to regard an individual as having two personalities: "one is [as] a seeker after profit who can deduct the expenses incurred in that search; the other is [as] a creature satisfying his needs as a human and those of his family but who cannot deduct such consumption and related expenditures." [2] The Government regards [§212(1) and (2)] as embodying a category of the expenses embraced in the first of these roles.

Initially, it may be observed that the wording of [§212(2)] more readily fits the Government's view of the provision than that of the Court of Claims. For in context "conservation of property" seems to refer to operations performed with respect to the property itself, such as safeguarding or upkeep, rather than to a taxpayer's retention of ownership in it. But more illuminating than the mere language of [§212(1) and (2)] is the history of the provision.

Prior to 1942 [the Code] allowed deductions only for expenses incurred "in carrying on any trade or business," the deduction presently authorized by [§162(a)]. In Higgins v. Commissioner, 312 U.S. 212, this Court gave that provision a narrow construction, holding that the activities of an individual in supervising his own securities investments did not constitute the "carrying on of a trade or business," and hence that expenses incurred in connection with such activities were not tax deductible. Similar results were reached in United States v. Pyne, 313 U.S. 127, and City Bank Co. v. Helvering, 313 U.S. 121. The Revenue Act of 1942 (56 Stat. 798, §121), by adding what is now [§212(1) and (2)], sought to remedy the inequity inherent in the disallowance of expense deductions in respect of such profit-seeking activities, the income from which was nonetheless taxable.

As noted in McDonald v. Commissioner, 323 U.S. 57, 62, the purpose of the 1942 amendment was merely to enlarge "the category of incomes with reference to which expenses were deductible." And committee reports make clear that deductions under the new section were subject to the same limitations and restrictions that are applicable to those allowable under [§162(a)]. Further, this Court has said that [§212(1) and (2)] "is comparable and in pari materia with [§162(a)]," providing for a class of deductions "coextensive with the business deductions allowed by [§162(a)], except for" the requirement that the income-producing activity qualify as a trade or business. Trust of Bingham v. Commissioner, 325 U.S. 365, 373, 374.

A basic restriction upon the availability of a [§162(a)] deduction is that the expense item involved must be one that has a business origin. That restriction not only inheres in the language of [§162(a)] itself, confining such deductions to "expenses . . . incurred . . . in carrying on any trade or business," but also follows from [§262], expressly rendering nondeductible "in any case . . . [p]ersonal, living, or family expenses." In light of what has already been said with respect to the advent and thrust of [§212(1) and (2)], it is clear that the "[p]ersonal . . . or family expenses" restriction of [§262] must impose the same limitation upon the reach of [§212(1) and (2)] — in other words that the only kind of expenses deductible under [§212(1) and (2)] are those that relate to a "business," that is, profit-seeking, purpose. The pivotal issue in this case then becomes: was this part of respondent's litigation costs a "business" rather than a "personal" or "family" expense?

[2] Surrey and Warren, Cases on Federal Income Taxation, 272 (1960).

The answer to this question has already been indicated in prior cases. In Lykes v. United States, 343 U.S. 118, the Court rejected the contention that legal expenses incurred in contesting the assessment of a gift tax liability were deductible. The taxpayer argued that if he had been required to pay the original deficiency he would have been forced to liquidate his stockholdings, which were his main source of income, and that his legal expenses were therefore incurred in the "conservation" of income-producing property and hence deductible under [§212(2)]. The Court first noted that the "deductibility [of the expenses] turns wholly upon the nature of the activities to which they relate" (343 U.S., at 123), and then stated:

> Legal expenses do not become deductible merely because they are paid for services which relieve a taxpayer of liability. That argument would carry us too far. It would mean that the expense of defending almost any claim would be deductible by a taxpayer on the ground that such defense was made to help him keep clear of liens whatever income-producing property he might have. For example, it suggests that the expense of defending an action based upon personal injuries caused by a taxpayer's negligence while driving an automobile for pleasure should be deductible. Section [212(1) and (2)] never has been so interpreted by us. . . .
>
> While the threatened deficiency assessment . . . added urgency to petitioner's resistance of it, neither its size nor its urgency determined its character. It related to the tax payable on petitioner's gifts. . . . The expense of contesting the amount of the deficiency was thus at all times attributable to the gifts, as such, and accordingly was not deductible.
>
> If, as suggested, the relative size of each claim, in proportion to the income-producing resources of a defendant, were to be a touchstone of the deductibility of the expense of resisting the claim, substantial uncertainty and inequity would inhere in the rule. . . . It is not a ground for . . . [deduction] that the claim, if justified, will consume income-producing property of the defendant. [343 U.S., at 125-126.]

In Kornhauser v. United States, 276 U.S. 145, this Court considered the deductibility of legal expenses incurred by a taxpayer in defending against a claim by a former business partner that fees paid to the taxpayer were for services rendered during the existence of the partnership. In holding that these expenses were deductible even though the taxpayer was no longer a partner at the time of suit, the Court formulated the rule that "where a suit or action against a taxpayer is directly connected with, or . . . proximately resulted from, his business, the expense incurred is a business expense. . . ." 276 U.S., at 153. Similarly, in a case involving an expense incurred in satisfying an obligation (though not a litigation expense), it was said that "it is the origin of the liability out of which the expense accrues" or "the kind of transaction out of which the obligation arose . . . which [is] crucial and controlling." Deputy v. du Pont, 308 U.S. 488, 494, 496.

The principle we derive from these cases is that the characterization, as "business" or "personal," of the litigation costs of resisting a claim depends on whether or not the claim *arises in connection with* the taxpayer's profit-seeking activities. It does not depend on the *consequences* that might result to a taxpayer's income-producing property from a failure to defeat the claim, for, as *Lykes* teaches, that "would carry us too far" [3] and would not be compatible with the basic lines of expense deductibility drawn by Congress.[4] Moreover, such a rule would lead to ca-

[3] The Treasury Regulations have long provided: "An expense (not otherwise deductible) paid or incurred by an individual in determining or contesting a liability asserted against him does not become deductible by reason of the fact that property held by him for the production of income may be required to be used or sold for the purpose of satisfying such liability." Treas. Reg. (1954 Code) §1.212-1(m); see Treas. Reg. 118 (1939 Code) §39.23(a)-15(k).

[4] Expenses of contesting tax liabilities are now deductible under §212(3) of the 1954 Code. This provision merely represents a policy judgment as to a particular class of expenditures otherwise nondeductible, like extraordinary medical expenses, and does not cast any doubt on the basic tax structure set up by Congress.

pricious results. If two taxpayers are each sued for an automobile accident while driving for pleasure, deductibility of their litigation costs would turn on the mere circumstance of the character of the assets each happened to possess, that is, whether the judgments against them stood to be satisfied out of income- or non-income-producing property. We should be slow to attribute to Congress a purpose producing such unequal treatment among taxpayers, resting on no rational foundation.

Confirmation of these conclusions is found in the incongruities that would follow from acceptance of the Court of Claims' reasoning in this case. Had this respondent taxpayer conducted his automobile-dealer business as a sole proprietorship, rather than in corporate form, and claimed a deduction under [§162(a)], the potential impact of his wife's claims would have been no different than in the present situation. Yet it cannot well be supposed that [§162(a)] would have afforded him a deduction, since his expenditures, made in connection with a marital litigation, could hardly be deemed "expenses . . . incurred . . . in carrying on any trade or business." Thus, under the Court of Claims' view expenses may be even less deductible if the taxpayer is carrying on a trade or business instead of some other income-producing activity. But it was manifestly Congress' purpose with respect to deductibility to place all income-producing activities on an equal footing. And it would surely be a surprising result were it now to turn out that a change designed to achieve equality of treatment in fact had served only to reverse the inequality of treatment.

For these reasons, we resolve the conflict among the lower courts on the question before us (note 1, supra) in favor of the view that the origin and character of the claim with respect to which an expense was incurred, rather than its potential consequences upon the fortunes of the taxpayer, is the controlling basic test of whether the expense was "business" or "personal" and hence whether it is deductible or not under [§212(1) and (2)]. We find the reasoning underlying the cases taking the "consequences" view unpersuasive.

Baer v. Commissioner, 196 F.2d 646, upon which the Court of Claims relied in the present case, is the leading authority on that side of the question. There the Court of Appeals for the Eighth Circuit allowed a [§212(2)] expense deduction to a taxpayer husband with respect to attorney's fees paid in a divorce proceeding in connection with an alimony settlement which had the effect of preserving intact for the husband his controlling stock interest in a corporation, his principal source of livelihood. The court reasoned that since the evidence showed that the taxpayer was relatively unconcerned about the divorce itself "[t]he controversy did not go to the question of . . . [his] liability [for alimony] but to the manner in which . . . [that liability] might be met . . . without greatly disturbing his financial structure"; therefore the legal services were "for the purpose of conserving and maintaining" his income-producing property. 196 F.2d, at 649-650, 651.

It is difficult to perceive any significant difference between the "question of liability" and "the manner" of its discharge, for in both instances the husband's purpose is to avoid losing valuable property. Indeed most of the cases which have followed *Baer* have placed little reliance on that distinction, and have tended to confine the deduction to situations where the wife's alimony claims, if successful, might have completely destroyed the husband's capacity to earn a living. Such may be the situation where loss of control of a particular corporation is threatened, in contrast to instances where the impact of a wife's support claims is only upon diversified holdings of income-producing securities. But that rationale too is unsatisfactory. For diversified security holdings are no less "property held for the production of income" than a large block of stock in a single company. And as was pointed out in *Lykes,* supra, at 126, if the relative impact of a claim on the

income-producing resources of a taxpayer were to determine deductibility, substantial "uncertainty and inequity would inhere in the rule."

We turn then to the determinative question in this case: did the wife's claims respecting respondent's stockholdings arise in connection with his profit-seeking activities?

II

In classifying respondent's legal expenses the court below did not distinguish between those relating to the claims of the wife with respect to the *existence* of community property and those involving the *division* of any such property. Nor is such a break down necessary for a disposition of the present case. It is enough to say that in both aspects the wife's claims stemmed entirely from the marital relationship, and not, under any tenable view of things, from income-producing activity. This is obviously so as regards the claim to more than an equal division of any community property found to exist. For any such right depended entirely on the wife's making good her charges of marital infidelity on the part of the husband. The same conclusion is no less true respecting the claim relating to the existence of community property. For no such property could have existed but for the marriage relationship.[5] Thus none of respondent's expenditures in resisting these claims can be deemed "business" expenses, and they are therefore not deductible under [§212(2)].

In view of this conclusion it is unnecessary to consider the further question suggested by the Government: whether that portion of respondent's payments attributable to litigating the issue of the existence of community property was a capital expenditure or a personal expense. In neither event would these payments be deductible from gross income.

The judgment of the Court of Claims is reversed and the case is remanded to that court for further proceedings consistent with this opinion.

It is so ordered.

MR. JUSTICE BLACK and MR. JUSTICE DOUGLAS believe that the Court reverses this case because of an unjustifiably narrow interpretation of the 1942 amendment to the Internal Revenue Code and would accordingly affirm the judgment of the Court of Claims.

NOTE

1. *Scope of the Gilmore case.* In a companion case, United States v. Patrick, 372 U.S. 53 (1963), the Supreme Court held non-deductible a husband's payments to his and his wife's attorneys for services in connection with another divorce settlement. In *Patrick,* the wife owned 28 per cent of the stock of a family corporation by which the husband (who also owned 28 per cent) was employed, and she owned a 20 per cent interest in real property occupied by the corporation. Most of the attorneys' fees were incurred in settling these business interests, by "rearranging" the ownership of the corporation, leasing the real property for a long term, and transferring certain interests to a trust for the children. The Court held that the *Gilmore* case was controlling: "We find no significant distinction in the fact that [in *Patrick*] the legal fees for which the deduction is claimed were paid for arranging a transfer of stock interests, leasing real property, and creating a trust rather than for conducting litigation. These matters were incidental to litigation brought by respondent's wife, whose claims arising from respondent's personal and family life were the origin of the property arrangements." 372 U.S. at 57.

[5] The respondent's attempted analogy of a marital "partnership" to the business partnership involved in the *Kornhauser* case, supra, is of course unavailing. The marriage relationship can hardly be deemed an income-producing activity.

How far does the "but for" argument carry in this area? If the wife in *Gilmore* or *Patrick* had obtained stock in the family corporation by gift during marriage, or at the time of divorce, would the cost of later litigation alleging mismanagement of the corporation or a wrongful refusal to pay dividends be a personal expense as to either or both spouses because the stock would not have been owned by the wife but for the marriage? Can a wife deduct fees paid by her to an attorney to obtain, increase, or collect an allowance for alimony? Does the answer depend upon whether local law requires her husband to defray her legal expenses? On whether the alimony is taxable to her under §71 (periodic alimony payments)? See Regs. §1.262-1(b)(7).

In the *Lewis* case, cited in footnote 1 of the *Gilmore* opinion, the Court of Appeals for the Second Circuit denied a deduction for expenses incurred by the taxpayer in defending himself in an incompetency proceeding instituted by his wife, the deduction having been claimed because the proceeding threatened the sale of books of which he was the author and publisher. The Tax Court had denied the deduction on the theory that the taxpayer's primary purpose in contesting the incompetency proceedings was to maintain his freedom rather than to protect his business. The Court of Appeals was prepared to accept the opposite assumption, but did not want tax liability to turn on the fact that "one taxpayer prizes his personal liberty more than his property, while another values property more highly"; it concluded that the proper test was whether the charges which the taxpayer was contesting were "directed toward him as a person" or "directed to his occupational activities as such." The court expressed its disagreement with Draper v. Commissioner, 26 T.C. 201 (1956) (entertainer allowed to deduct expense of libel action, ending in hung jury, against person who called him a Communist, where action was to re-establish his professional income), but approved the result in Howard v. Commissioner, 202 F.2d 28 (9th Cir. 1953) (army officer allowed to deduct expense of defending himself in court-martial, the charge being conduct unbecoming an officer, viz., failing to pay alimony to his ex-wife). See also I.T. 3551, 1942-1 C.B. 42 (expense incurred by government official in defending himself against charges of engaging in political activities contrary to Hatch Act; held, non-deductible, apparently because the acts that stimulated the charges were not part of taxpayer's official duty); see also Salt v. Commissioner, infra page 282, allowing legal expenses in connection with subpoena issued by House Committee on Un-American Activities to be deducted.

Does *Gilmore* suggest a different result in any of the foregoing situations?

In *Gilmore,* the court indicates that a judgment against the taxpayer for an automobile accident "while driving for pleasure" cannot be deducted. What if he is on his way to or from work, or is on a "frolic and detour" during working hours? See Plante v. United States, 226 F. Supp. 314 (D.N.H. 1963) (accident occurred on detour during business hours; held deductible).

2. *Expenses in determining or resisting tax liability.* In the *Lykes* case, cited in *Gilmore,* the Supreme Court held that the taxpayer could not deduct legal fees incurred in resisting a gift tax deficiency asserted against him and based on a higher valuation for certain donated shares of a family corporation than had been used by the taxpayer in computing the gift tax due. The Court held that the gift tax liability arose only because of a personal transaction — the gift to members of the taxpayer's family — and that the legal expenses were therefore non-deductible living expenses under §262. The Regulations under the 1939 Code allowed the expenses of determining *income* tax liability to be deducted, Regs. 118, §39.23(a)-15(k), and in 1954 Congress overruled the *Lykes* case by enacting §212(3). The statutory provision refers to expenses incurred by an individual "in connection with the determination, collection, or refund of any tax." See Kaufmann v. United States, 227 F. Supp. 807 (W.D. Mo. 1963) (cost of obtaining ruling on tax consequences of proposed exchange of stock held deductible under §212(3)); United States v. Davis, 370 U.S. 65 (1962) (§212(3) does not embrace payment by husband to divorced wife's attorney for advice regarding her tax liability). As to the cost of concocting a "sham transaction" or of defending against a criminal prosecution for tax evasion, see page 282 infra.

Section 212(3), like the other subsections of §212, applies to individuals only. What is the status of comparable expenses incurred by a corporation?

GEVIRTZ v. COMMISSIONER

123 F.2d 707 (2d Cir. 1941)

Before SWAN, CHASE, and FRANK, Circuit Judges.

FRANK, Circuit Judge.

Taxpayer, a woman of considerable wealth, was, for some years prior to 1926, a resident of Mt. Vernon, where, at one time, she had built and later sold a garden apartment house. Conceiving the idea of constructing another garden apartment, she purchased a tract of several acres with this in view, but she became dissatisfied with the location and sold it in 1925. Shortly thereafter she advised a real estate agent at Mt. Vernon that she was interested in acquiring another tract of land upon which to build an apartment house. Early in 1926 she purchased a one-acre parcel for $32,000, paying $7,000 in cash and giving back a mortgage for $25,000. The deed contained restrictions, providing that no building could be erected on the premises for any trade, calling, or business whatever, the premises being restricted to dwelling purposes by means of homes for use or value of not less than $15,000, and built not more than one to each 75 feet of frontage, and that no building erected on the land could be used as a tenement house or apartment house. At the time of the hearing of the present proceeding by the Board, these restrictions had not been removed, although it was believed, we may assume with good reason, that they could be. Immediately following the acquisition of this property, the taxpayer learned, for the first time, that several large apartment house projects were being contemplated in Mt. Vernon, some of them not far distant from the property in question. She then decided that it would be a mistake to proceed with any plans to build an apartment house on that site, since the other projected apartment houses were more than sufficient to satisfy the demand and there would be difficulty in securing tenants at profitable rental rates.

She then erected on the property a 12-room residence costing in excess of $90,000. On the advice of her real estate agent, this residence was constructed with three separate wings, each of which could be made into a separate apartment with its own private entrance and driveway, so that the building could be converted into a 3-family dwelling. She knew at that time that it could not be rented at a profit as a private residence. She lived in it from the time of its completion in 1926 until December 31, 1931. She then vacated it and endeavored to sell or rent it, but without success. In November or December, 1934, she discharged the caretaker whom she had left in charge of the property and turned the keys to the house over to the attorneys for the original mortgagees with the request that she be released from personal liability on the bond and mortgage. In the last week of 1934, those attorneys informed her that she would not be thus released, as the mortgagees wished to foreclose, although they expressed the opinion that there would be no deficiency judgment against the taxpayer as the mortgagees thought that the market value of the property was in excess of the amount of bond and mortgage. In the taxpayer's income tax return for the calendar year 1934 she claimed, on the basis of the foregoing, a deductible loss from gross income of $89,588.80 and also deductions for depreçiation, cost of insurance and legal expenses. The Commissioner disallowed these deductions and the Board, after hearing, sustained the deficiency as determined by the Commissioner. The taxpayer petitioned this court for review.

Taxpayer is entitled to a deduction only for a loss incurred in a "transaction entered into for profit," I.R.C. [§165(c)(2)]. The evidence amply supports the finding of the Board that there was a "definite abandonment" by the taxpayer of her original profit motive in purchasing the land and a "definite devotion of the

property to a personal residence use." The fact that the residence cost $90,000, coupled with the other facts found by the Board, answers the suggestion that the construction of the residence with three separate wings, so that it could, at some indefinite future date, be converted into three separate apartments, showed a retention of the original business purpose. That the taxpayer had in mind the possibility of later devoting the property to such a purpose is not sufficient to demonstrate that the profit motive remained dominant. Cases can be imagined where a taxpayer's motive might be mixed, with the profit motive so markedly preponderant that it should be regarded as if it were controlling. But that is not this case. Here the prospect of a future business use of the property was clearly subsidiary, only on the edge of the taxpayer's mind. Her attitude was not unlike that of the White Knight who carried a mouse-trap on his horse because, he said, "it's well to be provided for everything." At best, it was as if she had bought a residence for her personal use, intending to live in it for several years and then put it on the market.

Once the conclusion is reached that when the residence was built she did not have a business purpose, the case falls into a familiar category. There was no subsequent conversion of the property to a business use; the mere effort to rent it did not have that effect. Morgan v. Commissioner, 5 Cir., 76 F.2d 390. The claimed deductions, therefore, constituted items of personal loss and expense which are not deductible.

The judgment of the Board of Tax Appeals is affirmed.

NOTE

1. *Other cases.* For cases in which other taxpayers have been denied deductions under §165(c)(2) for houses that were used as the family's principal place of residence, notwithstanding evidence of a hope, intention, or plan at the time of acquisition of selling the property at a profit, see Austin v. Commissioner, 298 F.2d 583 (2d Cir. 1962) (occupancy found by Tax Court to be primary purpose of acquisition; sale at a profit, secondary); Wilkes v. Commissioner, 17 T.C. 865 (1951) ("clear and convincing evidence" required to overcome the "strong presumption" that property occupied by the taxpayer as a personal residence was acquired for that purpose, rather than in a transaction entered into for profit). In Randall v. Commissioner, 27 B.T.A. 475 (1932), where a deduction under §165(c)(2) was allowed, the taxpayer's occupancy of the residence was temporary and may have been primarily intended to facilitate a sale.

If a taxpayer sells or surrenders a life insurance policy on his own life for less than the aggregate premiums paid by him, does he thereby incur a deductible loss from a "transaction entered into for profit"? See London Shoe Co. v. Commissioner, 80 F.2d 230 (2d Cir.), cert. denied, 298 U.S. 663 (1935); Early v. Atkinson, 175 F.2d 118 (4th Cir. 1949).

2. *Conversion of personal property to a business or profit-seeking purpose.* With respect to a possible "subsequent conversion of the property to a business use," the Supreme Court in Heiner v. Tindle, 276 U.S. 582, 587 (1928), permitted the taxpayer to deduct under §165(c)(2) his loss on the sale of a building constructed and used for a time as a residence but subsequently rented for some years:

> The loss here has resulted from the sale of property not used for residential purposes by the taxpayer, and the transaction entered into for profit and resulting in the loss was not the purchase of the property but its appropriation to rental purposes.

The courts have regularly refused (as in the *Gevirtz* case) to accept the mere listing of the property for rental as a sufficient conversion to satisfy §165(c)(2); it must be actually rented or remodeled for rental. See, for example, Rumsey v. Commissioner, 82 F.2d 158, 159-160 (2d Cir. 1936):

> The taxpayer argues with considerable persuasive force that the fact that a man first rents his house before selling it is only significant as evidentiary of his purpose

to abandon it as a residence and to devote the property to business uses; that renting is not the sole criterion of such purpose, as the regulations themselves imply by the words "rented or otherwise appropriated" to income producing purposes. But we think the argument cannot prevail over counter considerations. If an owner rents, his decision is irrevocable, at least for the term of the lease; and if he remodels to fit the building for business purposes, he has likewise made it impossible to resume residential uses by a mere change of mind. When, however, he only instructs an agent to sell or rent the property, its change of character remains subject to his unfettered will; he may revoke the agency at any moment. Certainly it strains the language of Article 171, Regulations 74 [now Regulations §1.165-3(b)], to find that the property is "appropriated to" and "used for" income producing purposes by merely listing it with a broker for sale or rental. Until instructed by the Supreme Court that its decision in Heiner v. Tindle was intended to have a broader application, we feel constrained to follow the more natural meaning of the regulation.

In Schmidlapp v. Commissioner, 96 F.2d 680, 682 (2d Cir. 1938), Judge L. Hand wrote:

As a new matter something may no doubt be said against distinguishing between a house actually let, and one unsuccessfully put upon the market; putting the property in the hands of a broker might perhaps be regarded as itself the inception of a "transaction entered into for profit." But Morgan v. Commissioner, 5 Cir., 76 F.2d 390, and Rumsey v. Commissioner, 2 Cir., 82 F.2d 158, are the other way; they hold in effect that only an actual letting creates a "transaction," and it is true that only then does it become impossible for the owner to resume his original occupation.

In the *Gevirtz* case, the maintenance expenses and depreciation for 1934 were put on the same footing as the loss on sale of the house; all were disallowed. After the enactment in 1942 of what are now §§212 and 167(a)(2), it was held that listing a residence for rent is a sufficient conversion to permit maintenance expenses and depreciation to be deducted under §§212 and 167(a)(2), even though it is not a sufficient conversion to permit the deduction of a loss on its sale under §165(c)(2). The theory is that once the house is listed for rental, it is "held for the production of income" within the meaning of §§212 and 167(a)(2), even though there is no "transaction entered into for profit," the term used in §165(c)(2). Robinson v. Commissioner, 2 T.C. 305, 308-309 (1943); see also Horrmann v. Commissioner, 17 T.C. 903 (1951). Is listing it for *sale* sufficient? The Tax Court has divided on this question, the majority holding that listing for sale is not enough. Leslie v. Commissioner, 6 T.C. 488 (1946). In May v. Commissioner, 299 F.2d 725 (4th Cir. 1962), listing an ocean-going yacht for sale was held an insufficient conversion to permit depreciation and maintenance expenses to be deducted; the court thought that "even stouter evidence of conversion is demanded" for property with "the unique qualities of a pleasure boat" (the ease with which the owner can return to the bridge?) than for a residence.

See generally Swanson, Loss on the Sale of Residential Property, 33 Taxes 589 (1955); Roehner and Roehner, Loss Deduction on the Sale of an Abandoned Residence: Case-Law Thinking in Statutory Interpretation, 23 Fordham L. Rev. 196 (1954).

3. *Measuring the loss on property converted to business use.* If the taxpayer succeeds in establishing that the property has been converted to a business use, how is his §165(c)(2) loss to be measured? See §165(b), interpreted by Regs. §1.165-9(b) to permit the taxpayer to deduct the difference between (a) the cost of the property or its value when converted, whichever is lower, minus depreciation for the rental period, and (b) the amount realized on the sale. This means that a decline in value attributable to the period of personal use is not deductible. Compare the method of determining the taxpayer's casualty loss when personal property is damaged or destroyed, supra page 195; see also Parsons v. United States, 227 F.2d 437 (3d Cir. 1955).

For the computation of loss on property that is used simultaneously for personal and business purposes (e.g., a physician's automobile, or his home if part is used as an office), see Sharp v. United States, 199 F. Supp. 743 (D. Del. 1961), aff'd per curiam, 303 F.2d 783 (3d Cir. 1962).

4. *Property acquired by gift or inheritance.* If the taxpayer acquires a residence by gift

or inheritance, has there been "a transaction entered into for profit" so that he may take a deduction under §165(c)(2) if he sells it at a loss? Apparently an heir's decision to sell property is sufficient for §165(c)(2), even though the property was not so held by the decedent; moreover, it has been held that listing the property for rental is enough, so long as the heir has not used it as a residence himself. Williams, Executor v. Commissioner, 1 B.T.A. 1101 (1925); Crawford v. Commissioner, 16 T.C. 678 (1951); see Horrmann v. Commissioner, 17 T.C. 903, 909-910 (1951). In another case, the disposition of property by an executor was held (by a divided court) to be a "transaction entered into for profit," although the decedent had acquired it for personal reasons and would have been unable to claim a loss had he disposed of it during his lifetime. Waterman's Estate v. Commissioner, 195 F.2d 244 (2d Cir. 1952). On the other hand, a donee of investment property was held to be entitled to deduct a loss on its sale on the theory that his donor's profit-seeking purpose should be imputed to him. Tanzer v. Commissioner, 37 B.T.A. 244 (1938). The reasoning of the court is somewhat weakened by a subsequent statutory change. Could the donee alternatively assert that his own holding of the property for the production of income would constitute a "transaction entered into for profit"?

5. *Sale for tax purposes.* Is §165(c)(2) satisfied if the taxpayer incurs the loss by selling the property for tax purposes? In Terry v. United States, 10 F. Supp. 183 (D. Conn. 1934), it was held that the loss qualified so long as the property was *acquired* in a "transaction entered into for profit." If the *sale* itself had to be such a transaction, the court argued, no loss would qualify under §165(c)(2). But the sale must be bona fide and at arm's length; see Evans v. Rothensies, 114 F.2d 958, 962 (3d Cir. 1940), holding that property acquired for profit-making purposes will not give rise to a deductible loss if sold at an unnecessarily low price: "The disposition of property as well as its acquisition is material to the question whether the transaction was entered into for profit. . . ." On the other hand, a sale below market value, if dictated by business considerations (e.g., granting a proprietary interest in a business to its employees), may give rise to a §165(c)(2) deduction. Kress v. Stanton, 98 F. Supp. 470 (W.D. Pa. 1951), aff'd per curiam, 196 F.2d 499 (3d Cir. 1952).

b. EXPENSE OR INVESTMENT?

MIDLAND EMPIRE PACKING CO. v. COMMISSIONER
14 T.C. 635 (1950)

ARUNDELL, JUDGE: The issue in this case is whether an expenditure for a concrete lining in petitioner's basement to oilproof it against an oil nuisance created by a neighboring refinery is deductible as an ordinary and necessary expense under [§162(a)] of the Internal Revenue Code, on the theory it was an expenditure for a repair, or, in the alternative, whether the expenditure may be treated as the measure of the loss sustained during the taxable year and not compensated for by insurance or otherwise within the meaning of [§165(a)] of the Internal Revenue Code.

The respondent has contended, in part, that the expenditure is for a capital improvement and should be recovered through depreciation charges and is, therefore, not deductible as an ordinary and necessary business expense or as a loss.

It is none too easy to determine on which side of the line certain expenditures fall so that they may be accorded their proper treatment for tax purposes. Treasury Regulations [§1.162-4] is helpful in distinguishing between an expenditure to be classed as a repair and one to be treated as a capital outlay. In Illinois Merchants Trust Co., Executor, 4 B.T.A. 103, at page 106, we discussed this subject in some detail and in our opinion said:

It will be noted that the first sentence of the article [now, with minor changes, Regs. §1.162-4] relates to repairs, while the second sentence deals in effect with replacements.

In determining whether an expenditure is a capital one or is chargeable against operating income, it is necessary to bear in mind the purpose for which the expenditure was made. To repair is to restore to a sound state or to mend, while a replacement connotes a substitution. A repair is an expenditure for the purpose of keeping the property in an ordinarily efficient operating condition. It does not add to the value of the property, nor does it appreciably prolong its life. It merely keeps the property in an operating condition over its probable useful life for the uses for which it was acquired. Expenditures for that purpose are distinguishable from those for replacements, alterations, improvements, or additions which prolong the life of the property, increase its value, or make it adaptable to a different use. The one is a maintenance charge, while the others are additions to capital investment which should not be applied against current earnings.

It will be seen from our findings of fact that for some 25 years prior to the taxable year petitioner had used the basement rooms of its plant as a place for the curing of hams and bacon and for the storage of meat and hides. The basement had been entirely satisfactory for this purpose over the entire period in spite of the fact that there was some seepage of water into the rooms from time to time. In the taxable year it was found that not only water, but oil, was seeping through the concrete walls of the basement of the packing plant and, while the water would soon drain out, the oil would not, and there was left on the basement floor a thick scum of oil which gave off a strong odor that permeated the air of the entire plant, and the fumes from the oil created a fire hazard. It appears that the oil which came from a nearby refinery had also gotten into the water wells which served to furnish water for petitioner's plant, and as a result of this whole condition the Federal meat inspectors advised petitioner that it must discontinue the use of the water from the wells and oil-proof the basement, or else shut down its plant.

To meet this situation, petitioner during the taxable year undertook steps to oil-proof the basement by adding a concrete lining to the walls from the floor to a height of about four feet and also added concrete to the floor of the basement. It is the cost of this work which it seeks to deduct as a repair. The basement was not enlarged by this work, nor did the oilproofing serve to make it more desirable for the purpose for which it had been used through the years prior to the time that the oil nuisance had occurred. The evidence is that the expenditure did not add to the value or prolong the expected life of the property over what they were before the event occurred which made the repairs necessary. It is true that after the work was done the seepage of water, as well as oil, was stopped, but, as already stated, the presence of the water had never been found objectionable. The repairs merely served to keep the property in an operating condition over its probable useful life for the purpose for which it was used.

While it is conceded on brief that the expenditure was "necessary," respondent contends that the encroachment of the oil nuisance on petitioner's property was not an "ordinary" expense in petitioner's particular business. But the fact that petitioner had not theretofore been called upon to make a similar expenditure to prevent damage and disaster to its property does not remove that expense from the classification of "ordinary" for, as stated in Welch v. Helvering [infra p. 228]:

ordinary in this context does not mean that the payments must be habitual or normal in the sense that the same taxpayer will have to make them often. . . . [T]he expense is an ordinary one because we know from experience that payments for such a purpose, whether the amount is large or small, are the common and accepted means of defense against attack. Cf. Kornhauser v. United States, 276 U.S. 145. The situation is unique in the life of the individual affected, but not in the life of the group, the community, of which he is a part.

Steps to protect a business building from the seepage of oil from a nearby refinery, which had been erected long subsequent to the time petitioner started to operate

its plant, would seem to us to be a normal thing to do, and in certain sections of the country it must be a common experience to protect one's property from the seepage of oil. Expenditures to accomplish this result are likewise normal.

In American Bemberg Corporation, 10 T.C. 361, we allowed as deductions, on the ground that they were ordinary and necessary expenses, extensive expenditures made to prevent disaster, although the repairs were of a type which had never been needed before and were unlikely to recur. In that case the taxpayer, to stop cave-ins of soil which were threatening destruction of its manufacturing plant, hired an engineering firm which drilled to the bedrock and injected grout to fill the cavities where practicable, and made incidental replacements and repairs, including tightening of the fluid carriers. In two successive years the taxpayer expended $734,316.76 and $199,154.33, respectively for such drilling and grouting and $153,474.20 and $79,687.29, respectively, for capital replacements. We found that the cost [of the drilling and grouting] did not make good the depreciation previously allowed, and stated in our opinion:

> In connection with the purpose of the work, the . . . program was intended to avert a plant-wide disaster and avoid forced abandonment of the plant. The purpose was not to improve, better, extend or increase the original plant, nor to prolong its original useful life. Its continued operation was endangered; the purpose of the expenditures was to enable petitioner to continue the plant in operation not on any new or better scale, but on the same scale and, so far as possible, as efficiently as it had operated before. The purpose was not to rebuild or replace the plant in whole or in part, but to keep the same plant as it was and where it was.

The petitioner here made the repairs in question in order that it might continue to operate its plant. Not only was there danger of fire from the oil and fumes, but the presence of the oil led the Federal meat inspectors to declare the basement an unsuitable place for the purpose for which it had been used for a quarter of a century. After the expenditures were made, the plant did not operate on a changed or larger scale, nor was it thereafter suitable for new or additional uses. The expenditure served only to permit petitioner to continue the use of the plant, and particularly the basement for its normal operations.

In our opinion, the expenditure of $4,868.81 for lining the basement walls and floor was essentially a repair and, as such, it is deductible as an ordinary and necessary business expense. This holding makes unnecessary a consideration of petitioner's alternative contention that the expenditure is deductible as a business loss. . . .

NOTE

1. *Non-deductibility of capital expenditures: §263.* Section 263 provides that deductions may not be taken for amounts "paid out for new buildings or for permanent improvements or betterments made to increase the value of any property or estate" or "expended in restoring property or in making good the exhaustion thereof for which an allowance is or has been made." Do these prohibitions narrow the reach that §162 or §165 would have if §263 were repealed?

2. *Other repair vs. investment cases.* With the *Midland Empire Packing Co.* case, compare the following:

> We do not agree that the installation of the sprinkler system [in a hotel] constituted a repair made "for the purpose of keeping the property in an ordinarily efficient operating condition." Cf. Illinois Merchants Trust Co., 4 B.T.A. 103, 106, cited by petitioner. It was a permanent addition to the property ordered by the city of New York to give the property additional protection from the hazard of fire. It was an improvement or betterment having a life extending beyond the year in which it was

> made and which depreciates over a period of years. While it may not have increased the value of the hotel property or prolonged its useful life, the property became more valuable for use in the petitioner's business by reason of compliance with the city's order. The respondent did not err in determining that the cost of this improvement or betterment should be added to petitioner's capital investment in the building, and recovered through depreciation deductions in the years of its useful life. [Hotel Sulgrave, Inc. v. Commissioner, 21 T.C. 619, 621 (1954).]

See also Mt. Morris Drive-in Theatre Co. v. Commissioner, 238 F.2d 85 (6th Cir. 1956) (drainage system installed by taxpayer, after threat of litigation by adjacent landowner, must be capitalized, one judge dissenting); United States v. Times-Mirror Co., 231 F.2d 876 (9th Cir. 1956) (cost of microfilming a set of back issues as protection against loss by enemy bombing deductible; amount spent allowed "business to be operated on the same scale and not to increase," one judge dissenting); Jones v. Commissioner, 242 F.2d 616 (5th Cir. 1957) (taxpayer who reconstructed decrepit building in French Quarter of New Orleans because he could not get permission to raze it required to capitalize costs of general rehabilitation).

3. *Repairs following a casualty loss.* The taxpayer in *Midland Empire Packing Co.* made a claim against the oil refinery for the damage caused by the seepage of oil into its building; after protracted negotiations, a suit was filed, and the taxpayer was paid about $11,700 in settlement of its claim, three years after the taxable year in which the repair expenditures were incurred. A portion of this amount was included in income for the year of the settlement, but the findings of fact in the Tax Court do not disclose how the amount included in income was computed, nor whether the return was accepted as filed. If the taxpayer had known when the expenditures were incurred that they would be reimbursed, would a deduction under §162 have been warranted?

If the taxpayer's business property is damaged by fire or storm, and the loss is not covered by insurance, is he entitled both to a casualty loss deduction and to a deduction for the cost of repairing the damage? See Regs. §1.161-1 ("Double deductions are not permitted.") Would the cost of making good the damage be a capital investment under the criteria employed in the *Midland Empire Packing Co.* case?

4. *Demolition losses.* If a taxpayer purchases real property with the intention of demolishing a building and erecting a new one, does he suffer a loss that is deductible under §165 (or incur an expense under §162 or §212) equal to the amount paid for the old building? See Regs. §1.165-3.

5. *References.* Cook, Repairs Expense Versus Capital Expenditures, 13 Tax L. Rev. 231 (1958); Shugerman, Basic Criteria for Distinguishing Revenue Charges from Capital Expenditures in Income Tax Computations, 49 Mich. L. Rev. 213 (1950).

STARR'S ESTATE v. COMMISSIONER

274 F.2d 294 (9th Cir. 1959)

Before CHAMBERS, HAMELY and JERTBERG, Circuit Judges.

CHAMBERS, Circuit Judge.

Yesterday's equities in personal property seem to have become today's leases. This has been generated not a little by the circumstance that one who leases as a lessee usually has less trouble with the federal tax collector. At least taxpayers think so.

But the lease still can go too far and get one into tax trouble. While according to state law the instrument will probably be taken (with the consequent legal incidents) by the name the parties give it, the internal revenue service is not always bound and can often recast it according to what the service may consider the practical realities. We have so held in Oesterreich v. Commissioner, 9 Cir., 226 F.2d 798, and Commissioner of Internal Revenue v. Wilshire Holding Corporation, 9 Cir., 244 F.2d 904, certiorari denied 355 U.S. 815. The principal case concerns a fire sprinkler system installed at the taxpayer's plant at Monrovia, Cali-

alty had not been exhausted as in *Starr's* case. And there was no basis for inferring that Western would just keep the equipment for what it had paid. It appears that Western paid substantial amounts to acquire the equipment at the end of the term. There was just one compelling circumstance against Western in its case: What it had paid as "rent" was apparently always taken into full account in computing the end purchase price. But on the other hand, there was almost a certainty that the "lessor" would come after his property if the purchase was not eventually made for a substantial amount. This was not even much of a possibility in *Oesterreich* and not a probability in *Starr's* case.

In Wilshire Holding Corporation v. Commissioner, 9 Cir., 262 F.2d 51, we referred the case back to the tax court to consider interest as a deductible item for the lessee. We think it is clearly called for here. Two yardsticks are present. The first is found in that the normal selling price of the system was $4,960 while the total rental payments for five years were $6,200. The difference could be regarded as interest for the five years on an amortized basis. The second measure is in clause 16 (loss by fire), where the figure of six per cent per annum discount is used. An allowance might be made on either basis, division of the difference (for the five years) between "rental payments" and "normal purchase price" of $1,240, or six per cent per annum on the normal purchase price of $4,960, converting the annual payments into amortization. We do not believe that the "lessee" should suffer the pains of a loss for what really was paid for the use of another's money, even though for tax purposes his lease collapses.

We do not criticize the commissioner. It is his duty to collect the revenue and it is a tough one. If he resolves all questions in favor of the taxpayers, we soon would have little revenue. However, we do suggest that after he has made allowance for depreciation, which he concedes, and an allowance for interest, the attack on many of the "leases" may not be worth while in terms of revenue.

Decision reversed for proceedings consistent herewith.

NOTE

1. *The statutory language of §162(a)(3).* If the only authority for the deduction of rental payments were the general language of §162(a) ("ordinary and necessary expenses . . . in carrying on any trade or business"), would the taxpayer's right to a deduction be broader or narrower than under the specific language of §162(a)(3)?

Other aspects of the rental-with-option-to-purchase include the "lessor's" obligation to treat the "lease" as a taxable sale of the property. See page 441 infra; Rev. Rul. 60-122, 1960-1 C.B. 56; Rev. Rul. 55-540, 1955-2 C.B. 39.

2. *Reference.* Kirby, Considerations in Business Lease Arrangements, 34 Taxes 34 (1956).

HOCHSCHILD v. COMMISSIONER

161 F.2d 817 (2d Cir. 1947)

Before SWAN, CHASE and FRANK, Circuit Judges.

CHASE, Circuit Judge.

In his income tax return for the calendar year 1939 the petitioner deducted $4,125 which he had paid in that year as attorney's fees incurred in the successful defense of a stockholder's derivative suit brought against him and others in the state court in New York. The Commissioner disallowed the deduction in full. The Tax Court disallowed the deduction in part and this petition was brought to review that decision.

The pertinent facts were not disputed and were found in accordance with a stipulation filed by the parties. They are that the petitioner has been a director

fornia, where Delano T. Starr, now deceased, did business as the Gross Manufacturing Company. The "lessor" was Automatic Sprinklers of the Pacific, Inc., a California corporation. The instrument entitled "Lease Form of Contract" (hereafter "contract") is just about perfectly couched in terms of a lease for five years with annual rentals of $1,240. But it is the last paragraph thereof, providing for nominal rental for five years, that has caused the trouble. It reads as follows:

28. At the termination of the period of this lease, if Lessee has faithfully performed all of the terms and conditions required of it under this lease, it shall have the privilege of renewing this lease for an additional period of five years at a rental of $32.00 per year. If lessee does not elect to renew this lease, then the Lessor is hereby granted the period of six months in which to remove the system from the premises of the Lessee.

Obviously, one renewal for a period of five years is provided at $32.00 per year, if Starr so desired. Note, though, that the paragraph is silent as to status of the system beginning with the eleventh year. Likewise the whole contract is similarly silent.

The tax court sustained the commissioner of internal revenue, holding that the five payments of $1,240, or the total of $6,200, were capital expenditures and not pure deductible rental. Depreciation of $269.60 was allowed for each year. Generally, we agree.

Taxpayers took the deduction as a rental expense under trade or business pursuant to [§162(a)].

The law in this field for this circuit is established in Oesterreich v. Commissioner, supra, and Robinson v. Elliot, 9 Cir., 262 F.2d 383. There we held that for tax purposes form can be disregarded for substance and, where the foreordained practical effect of the rent is to produce title eventually, the rental agreement can be treated as a sale.

In this, *Starr's* case, we do have the troublesome circumstance that the contract does not by its terms ever pass title to the system to the "lessee." Most sprinkler systems have to be tailor-made for a specific piece of property and, if removal is required, the salvageable value is negligible. Also, it stretches credulity to believe that the "lessor" ever intended to or would "come after" the system. And the "lessee" would be an exceedingly careless businessman who would enter into such contract with the practical possibility that the "lessor" would reclaim the installation. He could have believed only that he was getting the system for the rental money. And we think the commissioner was entitled to take into consideration the practical effect rather than the legal, especially when there was a record that on other such installations the "lessor," after the term of the lease was over, had not reclaimed from those who had met their agreed payments. It is obvious that the nominal rental payments after five years of $32.00 per year were just a service charge for inspection.*

Recently the Court of Appeals for the Eighth Circuit has decided Western Contracting Corporation v. Commissioner, 1959, 271 F.2d 694, reversing the tax court in its determination that the commissioner could convert leases of contractor's equipment into installment purchases of heavy equipment. The taxpayer believes that case strongly supports him here. We think not.

There are a number of facts there which make a difference. For example, in the contracts of Western there is no evidence that the payments on the substituted basis of rent would produce for the "lessor" the equivalent of his normal sales price plus interest. There was no right to acquire for a nominal amount at the end of the term as in *Oesterreich* and the value to the "lessor" in the person-

* The "lessor" was obligated to inspect the system at least once annually and to replace defective parts. — Ed.

and substantial stockholder of The American Metal Company, Ltd., a New York corporation, from November 22, 1916 to at least the date of the beginning of the proceedings in the Tax Court and, since May 24, 1917 has also been one of its principal officers. In accordance with a long standing practice of The American Metal Company its directors, officers, stockholders and employees were permitted to participate in new ventures which it undertook. A syndicate, formed in November 1916 consisting of The American Metal Company and a number of its directors, officers, employees and stockholders, acquired an option upon certain molybdenum properties at Climax, Col. The option was exercised and a Delaware corporation called Climax Molybdenum Company was organized in January 1917 to which the syndicate's property was transferred in consideration for its capital stock and the petitioner then became a stockholder of Climax in proportion to his interest in the syndicate. He has remained a stockholder and has been a director and part of the time an officer of Climax at least up to the commencement of the proceedings below.

The Climax venture at length proved to be a financial success and in December 1938 a stockholder's derivative suit was brought in the New York Supreme Court, New York County, against the petitioner and others for the benefit of The American Metal Company in which the petitioner and others were charged with breaches of their fiduciary duties to the Metal Company in respect to the Climax venture. It was consolidated for trial with a similar suit thereafter commenced in the same court. The petitioner was partly successful in defending that suit in the trial court, 36 N.Y.S.2d 356, and upon appeal a judgment of the Appellate Division of the Supreme Court, 50 N.Y.S.2d 800, which became final, completely vindicated him.

The plaintiffs in the above mentioned suit sought, inter alia, (1) to impress a trust upon the Climax stock held by the petitioner; (2) an accounting for damages and profits; and (3) an accounting for the value of any shares of Climax which the petitioner had held but was unable to transfer to The American Metal Company by reason of his sale or other disposition of them.

The petitioner had acquired 1,500 shares of Climax stock in 1918, 1,500 additional shares in 1920-21 and had surrendered 321 of them in 1926 in the settlement of litigation between Climax and the Metal Company. The Climax stock was split 10 for one in 1929 and three for one in 1935. During the period 1933 to 1939 inclusive the petitioner received dividends on his Climax stock amounting in the aggregate to $1,281,331.95.

The attorney's fees which the petitioner paid in making his successful defense of the suit in the state court were claimed to be deductible under [§162(a)] of the Internal Revenue Code, as ordinary and necessary expenses paid during the taxable year in carrying on a trade or business and, in the alternative, under [§212] of the Code as necessary expenses paid during the taxable year for the production or collection of income, or for the management, conservation, or maintenance of property held for the production of income.

The Tax Court allocated $3,581.84 of the fees paid to the expense of defending the equitable title to the petitioner's Climax stock and held that part of it was not deductible because it was the cost of defending the title to property and thus a capital expenditure within Regs. [§1.263(a)-2(c)]. The remainder was allowed as a deduction on the ground that it was paid to retain income after it was collected and was to be treated for purposes of deduction as though paid for the collection of the income. In this the Commissioner acquiesced. . . .

The petitioner when acting as a director and officer of The American Metal Company was engaged in carrying on a trade or business within the meaning of the above statute. Commissioner v. People's-Pittsburgh Trust Co., 3 Cir., 60 F.2d

187; Foss v. Commissioner, 2 Cir., 75 F.2d 326. The fees paid were ordinary and necessary expenses which were directly connected with such business, being paid to defend a lawsuit in which he was charged with breaches of the fiduciary duties he owed the corporation he served as a director and officer. Commissioner v. Heininger, 320 U.S. 467; Welch v. Helvering, 290 U.S. 111, 54; Kornhauser v. United States, 276 U.S. 145. He owed the corporation no duty as a fiduciary merely because he was a stockholder; his liability so alleged being solely that of a malfeasant director and officer and on that decision turned. The significance of his status as a stockholder is limited to the fact that, had the breaches of fiduciary duties been established, the state court would have had the opportunity as well as the power to deprive him of the Climax stock he still held and not have had to confine its relief to money damages.

Regardless of what effect an adverse decision might have had upon the title to his Climax stock, it was necessary for him to defend the lawsuit to protect himself from being compelled to account generally for the alleged breaches of the duties to The American Metal Company. And all the ordinary and necessary expenses which he paid in the taxable year for such defense were deductible under [§162(a)] of the Code as it has been construed in the authorities above cited.

We cannot agree that these fees which the petitioner paid in defense of the lawsuit were any the less deductible because his liability, if proved, might have destroyed his equitable title to the stock he held. His right to keep it was certainly in issue and in that sense his title to it was defended, to be sure, but the title as such was not perfected in any way by his expenditures for legal assistance. He thereby but fended off an abortive attack upon the conduct of his business as a fiduciary and by freeing himself from liability to his corporation to account for such conduct put all of his property beyond the reach of his then accusers. . . .

Decision reversed.

FRANK, Circuit Judge (dissenting in part).

To explain my reasons for partially dissenting, I must supplement my colleagues' statement of facts. The complaint in the State court suit, Turner v. American Metal Company (expressly made part of the stipulation on which the instant case was tried in the Tax Court), charged that, as a result of a conspiracy in which taxpayer and other officers and directors of American Metal had joined, the following had occurred: (a) Taxpayer had himself wrongfully acquired title to certain shares of the Climax Company, and the equitable title to those shares was therefore in American Metal. (b) Taxpayer had aided others in wrongfully acquiring title to certain other Climax shares; some of those others were direct parties to the conspiracy, while still others acquired such shares with full knowledge of the conspiracy; the equitable title to all these shares was asserted to be in American Metal. (c) Taxpayer had aided in causing American Metal wrongfully to spend money for the benefit of Climax, to the damage of American Metal. On this basis, the *Turner* complaint prayed as follows: (a) That taxpayer be ordered to transfer to American Metal the legal title to the Climax shares which he had wrongfully obtained; (b) that he account for any dividends on those Climax shares;[1] (c) that he and the other conspirators be held liable, jointly and severally, for all damages to American Metal resulting from the conspiracy. I think that these facts call for a nicer analysis than that contained in my colleague's opinion, for the following reasons:

1. In part, the *Turner* suit sought to hold taxpayer liable merely for damages said to have resulted from his conduct as an official of American Metal. Here I

[1] As to expenses incurred in defending as to this item, the Tax Court decided in favor of taxpayer, and the Commissioner has not appealed.

refer to (a) the alleged damages resulting from the moneys said to have been wrongfully paid by American Metal for the benefit of Climax, and (b) the alleged damages to American Metal resulting from the fact that the taxpayer and his alleged co-conspirators aided others than himself in allegedly wrongful acquisition of Climax stock.[2] To that extent, I agree that, in the *Turner* suit, he was not defending the title to the Climax stock he held or to any other of his property. To rule otherwise would be to say that defense of any suit is a defense against an attack on title to property, since an adverse judgment (through levy of execution or otherwise) may diminish a defendant's property, including, for instance, stock in which he may have invested. Consequently, taxpayer's expense in defending that phase of the *Turner* suit was, I think, incurred as a result of "carrying on a trade or business." Up to that point, in line with the authorities cited by them, I agree with my colleagues.

2. I think, however, that the same is not true of his defense of that part of the *Turner* suit which charged him with having himself wrongfully obtained Climax shares and which sought an order directing him to transfer those shares to American Metal as its equitable owner. To that extent, the *Turner* action was a direct attack on his title to the Climax shares.

True, that attack was grounded on the alleged impropriety of his conduct as an American Metal official, coupled with alleged similar improper conduct by other such officials conspiring with him; for the theory of the *Turner* suit was that only by such conduct had it been possible for him to acquire the Climax shares. But, in that respect, the action was the same as if, not being himself an American Metal officer, taxpayer had obtained Climax stock through action of American Metal officers known to him to be violative of their corporate obligations; in those circumstances, his expense of defending a suit seeking to compel him to transfer the title to such stock to American Metal, as its equitable owner, would not have been incurred in "carrying on a trade or business." So it seems to me that this follows: That, in order to succeed in having taxpayer ordered to transfer his Climax stock to American Metal, Turner had to prove that taxpayer's acquisition of that stock, for his own benefit, had been made possible by taxpayer's misconduct as an American Metal official, does not alter the fact that the *Turner* suit, as to those shares, was a direct attack on taxpayer's title to that stock. In other words, I think it immaterial that the alleged defect in that title stemmed from taxpayer's own alleged deviation from his corporate duties. Wherefore, in defending this phase of the action, taxpayer, I think, was engaged directly in protecting his title to property. . . .

However, taxpayer was, even as to [this] phase of the *Turner* suit, also in part defending the way he had functioned as a corporate officer. That part of the expense was, I believe, deductible.

3. Taxpayer made no proof of the appropriate allocation of the expenses as between the items discussed above. Since he had the burden, perhaps, if the foregoing is correct, he should fail. But I think that, in accordance with the doctrine of Cohan v. Commissioner, 2 Cir., 39 F.2d 540, 543-545, we should remand for determination of the allocation by the Tax Court.

NOTE

1. *Capital outlays and §212.* Bowers v. Lumpkin, 140 F.2d 927, 929 (4th Cir. 1944), involved the deductibility under §212 of legal expenses incurred by the taxpayer in the successful defense of a suit to invalidate a purchase by her of stock from trustees for a

2 There would be no such damages if those others still have the shares and were thus able to transfer them to American Metal.

charity. The taxpayer argued that even though such expenses might not be deductible under §162(a) by a person in trade or business, they were deductible under §212:

> It is contended that the phrase "all the ordinary and necessary expenses" in the amendment [§212] covers more ground than it did in the original act [§162(a)] because the amendment expressly authorizes a deduction for expenses paid "for the management, conservation, or maintenance of property held for the production of income"; and the word "conservation" is said to be particularly pertinent in the pending case where the expenses were incurred in the protection of income producing stock from adverse attack.

But the court, holding that the phrase "ordinary and necessary expenses" in §212 must be interpreted in the light of its settled meaning under §162(a), denied the deduction. See further Garrett v. Crenshaw, 196 F.2d 185 (4th Cir. 1952), and Allen v. Selig, 200 F.2d 487 (5th Cir. 1952). May the taxpayer add such expenditures to the basis of the stock in computing gain or loss when it is sold?

In Sergievsky v. McNamara, 135 F. Supp. 233 (S.D.N.Y. 1955), Mr. Hochschild's sister, who was also a defendant in the *Turner* suit but not an officer or director of the corporation, was allowed to deduct her share of the cost of defending under §212. She had acquired her shares as legatee of her father, who had allegedly violated a fiduciary duty to the corporation. The court held that the expenses were incurred to conserve income-producing property, within the meaning of §212, not to defend her title.

2. *Legal expenses of plaintiff in shareholder's action.* Are the legal expenses of the plaintiff in a derivative shareholder's action (like the one brought against the taxpayer in the *Hochschild* case) deductible under §212, or a proper addition to the basis of his shares? In Surasky v. United States, 325 F.2d 191 (5th Cir. 1963), the court held that a shareholder of Montgomery, Ward & Company who made a contribution to the "Wolfson Committee" to finance a proxy fight against the company's management could deduct the payment under §212; see also Graham v. Commissioner, 326 F.2d 878 (4th Cir. 1964).

3. *References.* Brookes, Litigation Expenses and the Income Tax, 12 Tax L. Rev. 241 (1957); McDonald, Deduction of Attorneys' Fees for Federal Income Tax Purposes, 103 U. of Pa. L. Rev. 168 (1954); Note, Proxy Fight Expenses: Problems of Tax Deduction, 43 Va. L. Rev. 891 (1957).

WELCH v. HELVERING
290 U.S. 111 (1933)

MR. JUSTICE CARDOZO delivered the opinion of the Court.

The question to be determined is whether payments by a taxpayer, who is in business as a commission agent, are allowable deductions in the computation of his income if made to the creditors of a bankrupt corporation in an endeavor to strengthen his own standing and credit.

In 1922 petitioner was the secretary of the E. L. Welch Company, a Minnesota corporation, engaged in the grain business. The company was adjudged an involuntary bankrupt, and had a discharge from its debts. Thereafter the petitioner made a contract with the Kellogg Company to purchase grain for it on a commission. In order to re-establish his relations with customers whom he had known when acting for the Welch Company and to solidify his credit and standing, he decided to pay the debts of the Welch business so far as he was able. In fulfillment of that resolve, he made payments of substantial amounts during five successive years. In 1924, the commissions were $18,028.20, the payments $3,975.97; in 1925, the commissions $31,377.07, the payments $11,968.20; in 1926, the commissions $20,925.25, the payments $12,815.72; in 1927, the commissions $22,119.61, the payments $7,379.72; and in 1928, the commissions $26,177.56, the payments $11,068.25. The Commissioner ruled that these payments were not deductible from income as ordinary and necessary expenses, but were rather in the nature

of capital expenditures, an outlay for the development of reputation and good will. The Board of Tax Appeals sustained the action of the Commissioner (25 B.T.A. 117), and the Court of Appeals for the Eighth Circuit affirmed. 63 F.(2d) 976. The case is here on certiorari. . . .

We may asume that the payments to creditors of the Welch Company were necessary for the development of the petitioner's business, at least in the sense that they were appropriate and helpful. McCulloch v. Maryland, 4 Wheat. 316, 4 L. Ed. 579. He certainly thought they were, and we should be slow to override his judgment. But the problem is not solved when the payments are characterized as necessary. Many necessary payments are charges upon capital. There is need to determine whether they are both necessary and ordinary. Now, what is ordinary, though there must always be a strain of constancy within it, is none the less a variable affected by time and place and circumstance. Ordinary in this context does not mean that the payments must be habitual or normal in the sense that the same taxpayer will have to make them often. A lawsuit affecting the safety of a business may happen once in a lifetime. The counsel fees may be so heavy that repetition is unlikely. None the less, the expense is an ordinary one because we know from experience that payments for such a purpose, whether the amount is large or small, are the common and accepted means of defense against attack. Cf. Kornhauser v. United States, 276 U.S. 145. The situation is unique in the life of the individual affected, but not in the life of the group, the community, of which he is a part. At such times there are norms of conduct that help to stabilize our judgment, and make it certain and objective. The instance is not erratic, but is brought within a known type.

The line of demarcation is now visible between the case that is here and the one supposed for illustration. We try to classify this act as ordinary or the opposite, and the norms of conduct fail us. No longer can we have recourse to any fund of business experience, to any known business practice. Men do at times pay the debts of others without legal obligation or the lighter obligation imposed by the usages of trade or by neighborly amenities, but they do not do so ordinarily, not even though the result might be to heighten their reputation for generosity and opulence. Indeed, if language is to be read in its natural and common meaning . . . we should have to say that payment in such circumstances, instead of being ordinary is in a high degree extraordinary. There is nothing ordinary in the stimulus evoking it, and none in the response. Here, indeed, as so often in other branches of the law, the decisive distinctions are those of degree and not of kind. One struggles in vain for any verbal formula that will supply a ready touchstone. The standard set up by the statute is not a rule of law; it is rather a way of life. Life in all its fullness must supply the answer to the riddle.

The Commissioner of Internal Revenue resorted to that standard in assessing the petitioner's income, and found that the payments in controversy came closer to capital outlays than to ordinary and necessary expenses in the operation of a business. His ruling has the support of a presumption of correctness, and the petitioner has the burden of proving it to be wrong. . . . Unless we can say from facts within our knowledge that these are ordinary and necessary expenses according to the ways of conduct and the forms of speech prevailing in the business world, the tax must be confirmed. But nothing told us by this record or within the sphere of our judicial notice permits us to give that extension to what is ordinary and necessary. Indeed, to do so would open the door to many bizarre analogies. One man has a family name that is clouded by thefts committed by an ancestor. To add to his own standing he repays the stolen money, wiping off, it may be, his income for the year. The payment figures in his tax return as ordinary expenses. Another man conceives the notion that he will be able to

practice his vocation with greater ease and profit if he has an opportunity to enrich his culture. Forthwith the price of his education becomes an expense of the business, reducing the income subject to taxation. There is little difference between these expenses and those in controversy here. Reputation and learning are akin to capital assets, like the good will of an old partnership. Cf. Colony Coal & Coke Corp. v. Commissioner (C.C.A.) 52 F.(2d) 923. For many, they are the only tools with which to hew a pathway to success. The money spent in acquiring them is well and wisely spent. It is not an ordinary expense of the operation of a business.

Many cases in the federal courts deal with phases of the problem presented in the case at bar. To attempt to harmonize them would be a futile task. They involve the appreciation of particular situations, at times with border-line conclusions. Typical illustrations are cited in the margin.[1]

The decree should be

Affirmed.

NOTE

Later cases. Somewhat similar expenses have been allowed in several cases subsequent to Welch v. Helvering on a finding that they were made to "protect" and "promote" the taxpayer's existing business, rather than to "acquire" business or goodwill. Thus, in Dunn & McCarthy, Inc. v. Commissioner, 139 F.2d 242, 244 (2d Cir. 1943), a corporation was permitted to deduct amounts it paid to certain employees who had lent funds to its former president; he had lost the money gambling at the race track and had died insolvent. The court did not think the payments were "extraordinary": "It was the kind of outlay which we believe many corporations would make, and have made, under similar circumstances." The *Welch* case was distinguished: "Welch made a capital outlay to acquire good will for a new business. In the present case the payment was an outlay to retain an existing good will, that is, to prevent loss of earnings that might result from destroying such good will by failing to recognize the company's moral obligation." In Carl Reimers Co., Inc. v. Commissioner, 19 T.C. 1235 (1953), a majority of the Tax Court betrayed some skepticism as to the validity of the distinction; in affirming, the Court of Appeals for the Second Circuit adhered to the distinction, not surprisingly in view of the fact that its own decision in the *Dunn & McCarthy* case, supra, had created it. 211 F.2d 66 (2d Cir. 1954).

---

1 Ordinary expenses: Commissioner v. People's Pittsburgh Trust Co., 60 F.(2d) 187, expenses incurred in the defense of a criminal charge growing out of the business of the taxpayer; American Rolling Mill Co. v. Commissioner, 41 F.(2d) 314, contributions to a civic improvement fund by a corporation employing half of the wage earning population of the city, the payments being made, not for charity, but to add to the skill and productivity of the workmen (cf. the decisions collated in 30 Columbia Law Review, 1211, 1212, and the distinctions there drawn); Corning Glass Works v. Lucas, 37 F.(2d) 798, donations to a hospital by a corporation whose employees with their dependents made up two-thirds of the population of the city; Harris & Co. v. Lucas, 48 F.(2d) 187, payments of debts discharged in bankruptcy, but subject to be revived by force of a new promise. Cf. Lucas v. Ox Fibre Brush Co., 281 U.S. 115, where additional compensation, reasonable in amount, was allowed to the officers of a corporation for services previously rendered. Not ordinary expenses: Hubinger v. Commissioner, 36 F.(2d) 724, payments by the taxpayer for the repair of fire damage, such payments being distinguished from those for wear and tear; Lloyd v. Commissioner, 55 F.(2d) 842, counsel fees incurred by the taxpayer, the president of a corporation, in prosecuting a slander suit to protect his reputation and that of his business; One Hundred Five West Fifty-Fifth Street v. Commissioner, 42 F.(2d) 849, and Blackwell Oil & Gas Co. v. Commissioner, 60 F.(2d) 257, gratuitous payments to stockholders in settlement of disputes between them, or to assume the expense of a lawsuit in which they had been made defendants; White v. Commissioner, 61 F.(2d) 726, payments in settlement of a lawsuit against a member of a partnership, the effect being to enable him to devote his undivided efforts to the partnership business and also to protect its credit.

COUGHLIN v. COMMISSIONER

203 F.2d 307 (2d Cir. 1953)

Before AUGUSTUS N. HAND, CHASE and CLARK, Circuit Judges.

CHASE, Circuit Judge.

The petitioner has been a member of the bar for many years and in 1944 was admitted to practice before the Treasury Department. In 1946 he was in active practice in Binghamton, N.Y., as a member of a firm of lawyers there. The firm engaged in general practice but did considerable work which required at least one member to be skilled in matters pertaining to Federal taxation and to maintain such skill by keeping informed as to changes in the tax laws and the significance of pertinent court decisions when made. His partners relied on him to keep advised on that subject and he accepted that responsibility. One of the various ways in which he discharged it was by attending, in the above mentioned year, the Fifth Annual Institute on Federal Taxation which was conducted in New York City under the sponsorship of the Division of General Education of New York University. In so doing he incurred expenses for tuition, travel, board and lodging of $305, which he claimed as an allowable deduction under [§162(a)], as ordinary and necessary expenses incurred in carrying on a trade or business and no question is raised as to their reasonableness in amount. The Commission disallowed the deduction and the Tax Court, four judges dissenting, upheld the disallowance on the ground that the expenses were non-business ones "because of the educational and personal nature of the object pursued by the petitioner."

The Tax Court found that the Institute on Federal Taxation was not conducted for the benefit of those unversed in the subject [of] Federal taxation and students were warned away. In 1946, it was attended by 408 attorneys, accountants, trust officers, executives of corporations and the like. In 1947, over 1500 of such people from many states were in attendance. It was "designed by its sponsors to provide a place and atmosphere where practitioners could gather trends, thinking and developments in the field of Federal taxation from experts accomplished in that field."

Thus there is posed for solution a problem which involves no dispute as to the basic facts but is, indeed, baffling because, as is so often true of legal problems, the correct result depends upon how to give the facts the right order of importance.

We may start by noticing that the petitioner does not rely upon [§212] which permits the deduction of certain non-trade or non-business expenses, but rests entirely upon his contention that the deduction he took was allowable as an ordinary and necessary expense incurred in the practice of his profession. The expenses were deductible under [§162 (a)] if they were "directly connected with" or "proximately resulted from" the practice of his profession. Kornhauser v. United States, 276 U.S. 145, 153. And if it were usual for lawyers in practice similar to his to incur such expenses they were "ordinary." Deputy v. DuPont, 308 U.S. 488, 495. They were also "necessary" if appropriate and helpful. Welch v. Helvering, 290 U.S. 111. But this is an instance emphasizing how dim a line is drawn between expenses which are deductible because incurred in trade or business, i.e., because professional, and those which are non-deductible because personal. [§262.]

The respondent relies upon [Regs. §1.212-1(f)], which provides that "expenses of taking special courses or training" are not allowable as deductions under [§212]. But [§212] concerns non-trade or non-business expenses. It is not necessary to decide whether, in the light of the regulation, an expense of the nature here involved would be deductible if incurred in connection with a profit-making

venture that is not a trade or business. It will suffice to say that, since the expense was incurred in a trade or business within the meaning of [§162(a)], the regulation interpreting [§212] is not a bar to allowance here.

In Welch v. Helvering, 290 U.S. at page 115, there is a dictum that the cost of acquiring learning is a personal expense. But the issue decided in that case is far removed from the one involved here. There the taxpayer paid debts for which he was not legally liable whose payment enhanced his reputation for personal integrity and consequently the value of the good will of his business, and it was held that these payments were personal expenses. The general reference to the cost of education as a personal expense was made by way of illustrating the point then under decision, and it related to that knowledge which is obtained for its own sake as an addition to one's cultural background or for possible use in some work which might be started in the future. There was no indication that an exception is not to be made where the information acquired was needed for use in a lawyer's established practice.

Regulations [§1.162-6] makes clear that among the expenses which a professional man may deduct under [§162(a)] are dues to professional societies, subscriptions to professional journals, and amounts currently expended for books whose useful life is short. Such expenses as are here in question are not expressly included or excluded, but they are analogous to those above stated which are expressly characterized as allowable deductions.

This situation is closely akin to that in Hill v. Commissioner, 4 Cir., 181 F.2d 906, where the expenses incurred by a teacher in attending a summer school were held deductible. The only difference is in the degree of necessity which prompted the incurrence of the expenses. The teacher couldn't retain her position unless she complied with the requirements for the renewal of her teaching certificate: and an optional way to do that, and the one she chose, was to take courses in education at a recognized institution of learning. Here the petitioner did not need a renewal of his license to practice and it may be assumed that he could have continued as a member of his firm whether or not he kept currently informed as to the law of Federal taxation. But he was morally bound to keep so informed and did so in part by means of his attendance at this session of the Institute. It was a way well adapted to fulfill his professional duty to keep sharp the tools he actually used in his going trade or business. It may be that the knowledge he thus gained incidentally increased his fund of learning in general and, in that sense, the cost of acquiring it may have been a personal expense; but we think that the immediate, over-all professional need to incur the expenses in order to perform his work with due regard to the current status of the law so overshadows the personal aspect that it is the decisive feature.

It serves also to distinguish these expenditures from those made to acquire a capital asset. Even if in its cultural aspect knowledge should for tax purposes be considered in the nature of a capital asset as was suggested in Welch v. Helvering, supra, the rather evanescent character of that for which the petitioner spent his money deprives it of the sort of permanency such a concept embraces.

Decision reversed and cause remanded for the allowance of the deduction.

NOTE

1. *The 1958 Regulations.* For many years, the Regulations under §212 have provided, §1.212-1(f), that the taxpayer may not deduct

> expenses such as those paid or incurred in seeking employment or in placing oneself in a position to begin rendering personal services for compensation, . . . bar examination fees and other expenses paid or incurred in securing admission to the bar,

and corresponding fees and expenses paid or incurred by physicians, dentists, accountants, and other taxpayers for securing the right to practice their respective professions.

Yet paragraph (b) of the same Regulation states that the expense of maintaining a building is deductible even though no income is being currently produced and that "income," as the term is used in §212, comprehends income which the taxpayer "may realize in subsequent taxable years." Why is not a bar examination fee, for example, as much a cost of producing or collecting future income as is the cost of maintaining a presently unoccupied building? After admission to the bar, but before gaining any clients, may the young attorney deduct the salary of an idle stenographer?

If the taxpayer is already qualified to practice his occupation or profession, but incurs expenses for additional training, the relevant Regulation is Regs. §1.162-5, which was amended in 1958 after the Secretary of Health, Education, and Welfare — perhaps responding to the success of Sputnik I — wrote the Secretary of the Treasury that "the importance to the national security of encouraging teachers to employ their summers and their leaves of absence in acquiring greater mastery of their professional responsibilities leads . . . to the conclusion that the criteria which now govern the deductibility of expenses of teachers for further education should be liberalized," but without indicating whether more liberal Regulations or new legislation would be appropriate. Note the distinction in §1.162-5 between the expenses of retaining the taxpayer's salary, status, or employment and the expenses of education for a new position or substantial advancement in position. Do the new Regulations go beyond what was permitted in *Coughlin?*

The Internal Revenue Service's interpretation of the 1958 Regulation may be found in Rev. Rul. 60-97, 1960-1 C.B. 69. For the judicial response, see Sandt v. Commissioner, 303 F.2d 111 (3d Cir. 1962) (research chemist denied deduction for cost of attending law school, where primary purpose was to qualify for new post as patent chemist); Welsh v. United States, 210 F. Supp. 597 (N.D. Ohio, 1962) (law school expenses incurred by internal revenue agent; held deductible, on proof that purpose was improved skills in regular employment, despite taxpayer's entry into private law practice shortly after admission to bar); Marlor v. Commissioner, 251 F.2d 615 (2d Cir. 1958) (graduate study by college instructor on temporary appointment who could be neither reappointed nor promoted without demonstrating substantial progress toward doctoral degree; held, deductible).

On the cost of a physician's training in psychoanalysis, including the cost of his own analysis, see Watson v. Commissioner, 31 T.C. 1014 (1959) (deductible, where physician specialized in internal medicine and intended to continue to do so, using psychoanalysis only to improve his skill as an internist); Namrow v. Commissioner, 288 F.2d 648 (4th Cir. 1961) (non-deductible, by psychiatrist intending to specialize in psychoanalysis; alternative claim for deduction of cost of personal psychoanalysis as medical expense disallowed on ground taxpayer was being trained for profession, not treated for illness).

In most of the cases in which deductions have been denied, the taxpayers have been seeking to qualify for promotion or a new post. But see Davis v. Commissioner, 38 T.C. 175 (1962), denying a deduction for travel expenses incurred by a professor in connection with scholarly research, on theory that a professor with lifetime tenure has it made and can relax ; six judges dissented, and the Internal Revenue Service, on mature reflection in which Commissioner, formerly Professor, Caplin may have participated, in effect confessed error by issuing Rev. Rul. 63-275, 1963-2 C.B. 85 (research expenses, including travel, incurred by professor for purpose of teaching or writing in his area of competence are deductible under §162(a) even though he expects no compensation other than his regular salary).

In Brooks v. Commissioner, 274 F.2d 96 (9th Cir. 1959), a research scientist was allowed to deduct traveling and living expenses while engaged in (uncompensated) research in Europe. Does this suggest that the recipient of a fellowship whose grant does not specifically designate any amount for travel (supra p. 143) may deduct the portion actually expended for this purpose? Does §265(1) have any bearing on this question, if the taxpayer is availing himself of the $300 monthly exclusion of §117(b)(2)(B)?

Can a professional man take a deductible Mediterranean cruise if he listens to lectures on shipboard? Hoover v. Commissioner, 35 T.C. 566 (1961); and see the cases on business conventions, supra page 227.

The cases cited above are only a modest sample of the spate of recent litigation. One more case, the saddest tax story ever told: Gulbranson v. Commissioner, ¶63,205 P-H Memo T.C. — an employee of a law firm went to night law school, studied so much that his wife left him, flunked out despite his best efforts, and was denied a deduction because the skills he did not acquire would have qualified him for admission to the bar.

FRANK v. COMMISSIONER

20 T.C. 511 (1953)

[The taxpayer, who had been employed as a newspaperman before World War II, was discharged from the navy in November, 1945. With his wife, who had been employed by several government agencies during the war, he traveled extensively in search of a newspaper or radio station to purchase and operate. For about six months in 1946, they were employed by a newspaper in Phoenix, Arizona, but continued to travel to examine other newspapers that were for sale. In November, 1946, they purchased a newspaper in Canton, Ohio, and commenced at once to publish it.]

VAN FOSSAN, Judge: The only question presented is whether the petitioners may deduct $5,965 in the determination of their net income for the year 1946 as ordinary and necessary business expenses or as losses. The petitioners base their claim for deductions upon [§162(a), §212, and §165(c)(2)]. The evidence reasonably establishes that the petitioners expended the amount of expenses stated in our Findings of Fact during the taxable year in traveling, telephone, telegraph, and legal expenses in the search for and investigation of newspaper and radio properties. This total amount was spent by the petitioners in their travels through various states in an endeavor to find a business which they could purchase and operate. These expenses do not include amounts spent while living in Phoenix, Arizona.

The travel expenses and legal fees spent in searching for a newspaper business with a view to purchasing the same cannot be deducted under the provisions of [§162(a)]. The petitioners were not engaged in any trade or business at the time the expenses were incurred. The trips made by the taxpayers from Phoenix, Arizona, were not related to the conduct of the business that they were then engaged in but were preparatory to locating a business venture of their own. The expenses of investigating and looking for a new business and trips preparatory to entering a business are not deductible as an ordinary and necessary business expense incurred in carrying on a trade or business. George C. Westervelt, 8 T.C. 1248. The word "pursuit" in the statutory phrase "in pursuit of a trade or business" is not used in the sense of "searching for" or "following after," but in the sense of "in connection with" or "in the course of" a trade or business. It presupposes an existing business with which petitioner is connected. The fact that petitioners had no established home during the period of their travels further complicates the question and alone may be fatal to petitioners' case. If they had no home, how could they have expenses "away from home"? The issue whether all or part of the expenses so incurred were capital expenditures is not raised or argued and we do not pass judgment on such question.

Neither are the travel and legal expenses incurred by the petitioners in their attempt to find and purchase a business deductible under [§212], which allows the deduction of expenses incurred in the production or collection of income or in the management, conservation, or maintenance of property held for the produc-

tion of income. There is a basic distinction between allowing deductions for the expense of producing or collecting income, in which one has an existent interest or right, and expenses incurred in an attempt to obtain income by the creation of some new interest. Marion A. Burt Beck, 15 T.C. 642, aff'd 194 F.2d 537. Stella Elkins Tyler, 6 T.C. 135. The expenses here involved are of the latter classification. The traveling costs were incurred in an endeavor to acquire a business which might, in the future, prove productive of income. It might reasonably be said that petitioners were engaged in the active search of employment as newspaper owners, but that cannot be regarded as a business. It is much like the situation obtaining in Mort L. Bixler, 5 B.T.A. 1181, or like that found in McDonald v. Commissioner, 323 U.S. 57, where it was held that a Pennsylvania court of common pleas judge seeking reelection could not deduct under [§212] expenses of such campaign. The Supreme Court said ". . . his campaign contributions were not expenses incurred in being a judge but in trying to be a judge for the next ten years."

The petitioners contend finally that the expenses in question must be allowed as deductions as nonbusiness losses under [§165(c)(2)]. This subsection of the Code provides a deduction for losses incurred in transactions entered into for profit. The only transaction entered into for profit by the petitioners, as disclosed by the facts, was the purchase of a newspaper in Canton, Ohio. Other possible transactions were investigated and rejected or otherwise not entered into. It cannot be said that the petitioners entered into a transaction every time they visited a new city and examined a new business property. Nor can we hold that petitioners entered into such transactions and then abandoned them, as they here contend. Rather, they refused to enter into such transactions after the preliminary investigation. If the general search for a suitable business property itself be considered as a transaction entered into for profit, no abandonment of such project occurred in the taxable year so as to enable deduction of these expenses as losses. Travel and legal expenses, such as were incurred here by petitioners, are not deductible as losses. Robert Lyons Hague, 24 B.T.A. 288; cf. Charles T. Parker, 1 T.C. 709. The cases cited by the petitioners concern instances where transactions were actually entered into and losses were than sustained upon abandonment. We cannot find this situation here.

We conclude that the petitioners may not deduct the expenses claimed for 1946 under the applicable provisions of the Internal Revenue Code.

NOTE

1. *A no man's land?* The expenditures allocable to the newspaper in Canton could probably have been capitalized, but could the rest of the expenditures be included in the cost basis of the Canton business? See Rev. Rul. 55-442, 1955-2 C.B. 529, implying that the cost of inspecting several sites for a boy's camp could not be added to the cost basis of the site that was finally acquired. See also Rev. Rul. 57-418, 1957-2 C.B. 143, issued in reliance on the *Frank* case, ruling that a taxpayer can deduct expenditures incurred in search of a business or investment "only where the activities are more than investigatory and the taxpayer has actually entered into a transaction for profit and the project is later abandoned." Under this ruling, a taxpayer whose investigation was totally unsuccessful would be denied a deduction under §165(c)(2) and would be equally unable to capitalize the expenditures. See also Rev. Rul. 55-237, 1955-1 C.B. 317, ruling that a taxpayer engaged in investing in independently produced motion pictures released in the United States could not deduct the expense of a trip to Europe "to explore the general possibilities of making more favorable investments in films there" because he did not possess "an existing right or interest resulting in the production of income"; Rev. Rul.

56-511, 1956-2 C.B. 170, denying a deduction for the cost of trips by an investor to attend shareholders' meetings of corporations in which he owned stock.

Do these cases and rulings create a no man's land of expenditures that are incurred for acquisitive rather than personal reasons, but that the taxpayer can neither deduct under §162(a), §165(c)(2), or §212 nor capitalize for eventual offset against income? Is this the fate of the cost of going to law or medical school or of taking an examination to acquire a professional license? Should the Code be amended so that all non-personal expenditures made for purposes of profit will be offset against income at some time?

C. WHAT IS "ORDINARY AND NECESSARY"?

FRIEDMAN v. DELANEY

171 F.2d 269 (1st Cir. 1948), cert. denied, 336 U.S. 936 (1949)

Before MAGRUDER, Chief Judge, WOODBURY, Circuit Judge, and PETERS, District Judge.

PETERS, District Judge.

In this suit the plaintiff taxpayer seeks to recover the sum of $3,411.47, the amount by which his income tax for the year 1941 was increased by reason of the refusal of the Commissioner to allow the deduction of an item of $5,000, claimed in the income tax return to be a bad debt, but now asserted to be allowable as a business expense or a loss incurred in business. There is no dispute about the facts.

It appears that the plaintiff, Mr. Friedman, a Boston lawyer of long experience, had a valued client in whom he had confidence, one Louis H. Wax, whose proposed composition in bankruptcy required the deposit in court of the sum of $7000. The record shows that Mr. Friedman made this deposit in February, 1938, accompanying it with a caveat to the effect that no part of the money came from Wax or his estate. In November, 1939, Mr. Friedman entered a petition in bankruptcy court alleging "that the money deposited for the proposed composition, which has been abandoned," was deposited by him and was not the property of the bankrupt, and asking that it be ordered returned. The petition was denied in November, 1941, and thereupon Mr. Friedman filed an undertaking that he would not further oppose transfer of the money to the trustee in bankruptcy, at the same time alleging that slightly over $5000 of the amount deposited was his own money.

It seems that the reason Mr. Friedman furnished this money from his own funds in the bankruptcy proceeding was because, in conversations with attorneys for creditors, when he was urging the acceptance of the proposed composition, he had personally assured them that the money to carry it out would be forthcoming. He did this without informing Mr. Wax and without intending to subject him to any legal liability, presumably feeling certain that the money would be obtained from a certain life insurance policy, which he had in his possession. This policy on the life of Wax, payable to his wife, could be pledged for $5000, but when it came to that point Mr. and Mrs. Wax refused to have it so used, which left Mr. Friedman in the breach. Commendably recognizing his moral obligation, in view of the assurances he had given, he paid the money to the clerk of the bankruptcy court.

The question presented is whether the $5000, which the plaintiff in his complaint alleged was "lost by him in connection with the bankruptcy proceedings

of one Louis H. Wax," and which he claimed as a deduction from income in his return for 1941, was wrongfully disallowed by the Commissioner, the plaintiff now claiming that it should have been allowed as an ordinary and necessary expense in carrying on business under [§162(a)], or a loss incurred in business under [§165(a)] of the Internal Revenue Code. . . .

The parties are in agreement that the plaintiff, to recover, must show the applicability of one or the other of those Sections. We agree with the District Court that he has failed to do so.

The plaintiff contends that the loss of the amount in question was due to his keeping his word, which the ethics of his profession, as well as his own conscientiousness compelled him to do, and argues that consequently the payment was made and the loss incurred in his law business, and should have been allowed as a deduction from income under one or the other of the sections referred to. His position is illustrated by his rhetorical question: Is it not part of a lawyer's business to keep his word? It might be answered that it is everybody's business to do so, but that is wide of the mark. We are obliged to inquire whether the circumstances of this loss — no matter how creditably incurred — are clearly within the coverage of either Section referred to. Nor can equitable considerations be allowed to control. The matter of deductions from income ". . . 'depends upon legislative grace; and only as there is clear provision therefor can any particular deduction be allowed.' " Deputy v. DuPont, 308 U.S. 488, 493.

It is necessary to consider the origin of the obligation under which the taxpayer considered himself to be under when he made the payment in question, in determining whether it is a permissible deduction under either Section of the statute. It arose from the gratuitous assurance given attorneys for creditors of Wax by Mr. Friedman that the money for the composition would be forthcoming if they would approve it. In effect, it was the voluntary underwriting of the obligation of another. It was, of course, the duty of the client to furnish the money, not of his attorney. Payment of the $5000 by the attorney was made as a consequence of his undertaking and in pursuance of it and was no less voluntary than the assurance which occasioned it. From any point of view his loss was caused by his voluntary action.

As was said by this Court in the very similar case of W. F. Young, Inc. v. Commissioner, 120 F.2d 159, 166,

> Even if the credit and reputation of the taxpayer would have been improved by these payments and even though they would in any way benefit the taxpayer, voluntary payments are not deductible as ordinary and necessary business expenses or losses.

See also Robinson v. Commissioner, 8 Cir., 53 F.2d 810.

The emphasis placed by the plaintiff upon his moral obligation to keep his professional word should not obscure the fact that the transaction on his part was voluntary from the beginning.

That the circumstances of the taxpayer's payment preclude its being considered either an "ordinary and necessary expense" of his business or a loss incurred in business is clear both from the Regulations promulgated under the Internal Revenue Code and the construction [§162(a)] and [§165(a)] have received by the Courts.

The business expenses covered by the former Section are limited to those described as being "ordinary and necessary"; such as are directly connected with and proximately resulting from carrying it on; those normally originating in a liability created in the course of its operation. Deputy v. DuPont, supra. Welch v. Helvering, 290 U.S. 111.

The moral obligation which the taxpayer recognized here, to his financial

detriment, was an extra-professional liability which resulted in a loss which is certainly not clearly covered by [§162(a)] according to the accepted construction of that Section.

Nor is the taxpayer in any better case if he claims a deductible loss under [§165(a)]. His was not a business loss made in carrying on a law practice. It is obviously no part of a lawyer's business to take on a personal obligation to make payments which should come from his client, unless in pursuance of a previous understanding or agreement to do so. The voluntary nature of the action, resulting in the loss, takes it outside of this Section as well as the other. W. F. Young v. Commissioner, supra. Robinson v. Commissioner, supra.

It should be said that we also see no error in the finding of the District Court that the payment of the $5000 — if ever a proper deduction — was deductible only in 1938, when made, and not in 1941, when the taxpayer failed in an attempt to get it back. It is admittedly not a debt due the taxpayer which became "bad." The deposit was made without restriction of destination and was, for all practical purposes, gone and lost to the owner when made.

The action of the District Court in giving judgment for the defendant on the claim in the complaint for the item of $3,411.47 is affirmed. . . .

[Chief Judge Magruder, whose opinion is omitted, concurred in the result on the basis of certain additional facts that were in the record but which were not regarded as significant by either the District Court or the majority of the Court of Appeals.]

NOTE

1. *Deputy v. du Pont.* In Deputy v. du Pont, cited by the court in Friedman v. Delaney, the Supreme Court refused to permit a shareholder of the du Pont Company to deduct certain expenses arising from his sale of du Pont stock to a group of young executives. The purpose of the sale was to give these executives a financial interest in the corporation; because the corporation was prevented by legal restrictions from doing so, the taxpayer stepped in "to the end that his beneficial stock ownership in the du Pont Company might be conserved and enhanced." The deduction was denied because the expenses were attributable to the corporation's trade or business, rather than to the taxpayer's, and because, even if attributable to the taxpayer's business, the expenses were not "ordinary":

> There is no evidence that stockholders or investors, in furtherance of enhancing and conserving their estates, ordinarily or frequently lend such assistance to employee stock purchase plans of their corporations. And in absence of such evidence there is no basis for an assumption, in experience or common knowledge, that these payments are to be placed in the same category as typically ordinary expenses of such activities, e.g., rental of safe deposit boxes, cost of investment counsel or of investment services, salaries of secretaries and the like. Rather these payments seem to us to represent most extraordinary expenses for that type of activity. Therefore, the claim for deduction falls, as did the claim of an officer of a corporation who paid its debts to strengthen his own standing and credit. Welch v. Helvering [supra p. 255]. And the fact that the payments might have been necessary in the sense that consummation of the transaction . . . was beneficial to [taxpayer's] estate is of no aid. For Congress has not decreed that all necessary expenses may be deducted. Though plainly necessary they cannot be allowed unless they are also ordinary. [308 U.S. 488, 496-497.]

The government had urged as an independent objection to the deduction that the taxpayer's investment activities did not constitute a "trade or business" under §162(a), the case having arisen before the enactment of §212. The Court did not pass on this issue. Would the expenses have been deductible if §212 had been in force when they were incurred?

2. *The scrupulous lawyer and other extraordinary taxpayers.* In Pepper v. Commissioner, 36 T.C. 886 (1961), another scrupulous lawyer paid up when his client misbehaved

himself, but a deduction was allowed. The taxpayer had assisted a client to find financing for a business by approaching other clients, friends, and business acquaintances and by executing the necessary loan and security arrangements; on discovering that the client was engaged in fraudulent manipulations and that his business was bankrupt, the taxpayer and his law partner paid about $65,000 to the victims. A deduction was allowed, on the ground that the taxpayer's law practice was enhanced by his financial assistance to business clients and on the theory that the payments to the persons victimized were essential to protect his firm's goodwill and professional reputation. Friedman v. Delaney was distinguished "because there was no contention that the money involved was paid to protect or promote Friedman's business." See also Dunn & McCarthy, Inc. v. Commissioner, summarized supra page 257.

In Goedel v. Commissioner, 39 B.T.A. 1, 12 (1939), a stock dealer was denied a deduction for premiums paid on insurance on the life of the President of the United States, whose death it was feared would disrupt the stock market:

> Where, as here, the expenditure is so unusual as never to have been made, so far as the record reveals, by other persons in the same business, *when confronted with similar conditions*, . . . then we do not think the expenditure was ordinary or necessary, so as to be a deductible business expense within the intendment and meaning of the statute.

See also Levitt & Sons v. Nunan, 142 F.2d 795 (2d Cir. 1944), 160 F.2d 209 (2d Cir. 1947). In Commissioner v. Motch, 180 F.2d 859 (6th Cir. 1950), it was held that an army officer stationed in Washington could not deduct the expense of using a personal car on official business because "it is not the ordinary practice for army officers and other government officials to supply and use their own vehicles" and because use of a personal car was not "necessary" since the taxpayer could have waited for a bus or official vehicle even though "some loss of time would be occasioned." In short, the taxpayer "merely made voluntary expenditures for greater convenience and dispatch in performing his official duties and for his personal comfort." (Were the expenditures deductible as charitable contributions to the United States?)

In Greenspon v. Commissioner, 229 F.2d 947 (8th Cir. 1956), the court refused to allow a corporation to deduct the expense of converting a farm, owned by its president and sole shareholder, into a "unique horticultural showplace" at which he "was able to visit leisurely with his customers in pleasant surroundings and create good will for his product." The court found that "the record does not compel a conclusion that the horticultural features of the farm overwhelmed the potential customers," but stated that even if "it were to be conceded that the expenses here incurred were necessary in the sense that they were helpful to the taxpayers' business, it would still be necessary to prove such expenses were ordinary." Citing Welch v. Helvering, supra page 255, the court referred to the taxpayer's failure to prove "that the creation of a horticultural showplace by a corporation at the home of its principal officer and stockholder is such an expense as is ordinarily incurred in promoting a corporate business." (The court also pointed out that the expense enhanced the value of the stockholder's home, and expressed a fear of opening the door to questionable deductions.) Haverhill Shoe Novelty Co. v. Commissioner, 15 T.C. 517 (1950), concerned the expenses of the wedding and reception of the majority shareholder's daughter; the corporation deducted 60 per cent of the expenses on the claim that 60 per cent of the guests were persons "who would not have been invited were it not for the ordinary and necessary advertising policy of the corporation." (The court found that only a few, if any, of the guests knew "that they would not have been invited except for business reasons," and the bride's attitude was apparently not put in evidence.) Stating that it was not "ordinary and necessary" for a corporation to act as "father of the bride," the court disallowed the deduction. See also Pantages Theatre Co. v. Welch, 71 F.2d 68 (9th Cir. 1934), disallowing a deduction for payments by a corporation to defray the legal expenses incurred by its president in the defense of a rape case arising out of an "interview" with an applicant for employment; Bonney v. Commissioner, 247 F.2d 237 (2d Cir. 1957), holding that a payment by a lawyer to silence accusations that were damaging his professional reputation was not "an ordinary business expense, even assuming it to have been necessary for the protection of [taxpayer's] law practice." Com-

pare Catholic News Publishing Co. v. Commissioner, 10 T.C. 73 (1948), where a similar expense was allowed.

When denying a deduction on the ground that the expense was not "ordinary," the courts have usually relied on Welch v. Helvering and Deputy v. du Pont, supra. If the payment is not unlawful and its deduction would not contravene public policy in some fashion (a problem dealt with infra p. 279), should the deduction be denied merely because the expense is unusual, extraordinary, or unique? Did any of the cases just described reach the right result for the wrong reason?

PATTON v. COMMISSIONER

168 F.2d 28 (6th Cir. 1948)

Before Hicks, McAllister and Miller, Circuit Judges.

Hicks, Circuit Judge.

Respondent found a deficiency in the income and victory taxes for 1943 of petitioner, James F. Patton, in the sum of $16,561.12, and of petitioner, Vincent Patton, in the sum of $16,361.80. The cases were consolidated for hearing before the Tax Court and here. The Tax Court confirmed the deficiency assessments and we are asked to review its decision.

The cases arose under [§162(a)(1)].

During the calendar year 1943 petitioners were partners doing a general jobbing business under the firm name of "Patton Company, Cleveland, Ohio," and one William Kirk was an employee of the firm. The partnership claimed deductions for 1943 for compensation of $46,049.41 paid to Kirk. The Commissioner determined that $13,000.00 constituted reasonable compensation for him for that year and disallowed the deductions claimed above that amount. The Tax Court sustained the Commissioner.

Kirk kept the books and records of the partnership and rendered such other clerical and routine services as the office work required. He generally worked without assistants. Petitioners complain that the Tax Court erred in finding that Kirk kept the books on a cash basis, that his duties as a bookkeeper entailed little effort; that petitioners' production was practically supervised by Government inspectors; that Kirk was paid 10% of the net sales of the partnership; that the payments to him formed a basis for tax reduction; that he was to receive 10% of net sales so long as 10% commission, plus the $2,400.00 minimum, did not exceed 22½% of net profits.

They also complain that the Tax Court erred in failing to make findings that the petitioners and Kirk were unrelated and had no common business interests other than that created by the contract; that Kirk devoted long hours to the business; that the contract was of the "profit-sharing" type and formed a measuring rod by which Kirk's earnings were to be determined; that the court failed to make findings of the educational background of petitioners and give effect thereto. . . .

At this late date it is an elementary proposition, needing no citation of authorities to support it, that this court is without power to make findings of fact. Its function [§7482(c)(1)] is to determine whether the decision of the Tax Court is "in accordance with law." If it is, an affirmance is in order; otherwise the court may modify or reverse the decision. And in determining this question, the court is limited to ascertaining whether there was evidence to support the findings and decision of the Tax Court. We may not make an independent determination of the issues before the Tax Court nor pass upon the weight of the evidence or consider conflicting evidence nor choose between possible inferences that may arise.

The Tax Court found the following facts: Prior to July 1, 1940, petitioner, James F. Patton, operated the machine shop as an individual, during which time

his business was small. At times he had no employees and did all the work himself. At other times the work required additional help. At times his son, Vincent, assisted him, although Vincent had full time employment elsewhere. About 1937 James F. Patton employed Kirk to do his office work. Kirk had a grammar school education and a two years' commercial course in high school. From 1893 to 1919 he engaged in clerical work and following that, he operated a small trucking business until 1929. From then, until his employment by James F. Patton he had no regular employment. From 1919 to 1941 his earnings were not sufficient to require the filing of tax returns. From 1937 to 1940 Kirk's compensation was approximately as follows: For 1937, $939.00; for 1938, $1,230.00; for 1939, $1,385.00; for 1940, $1,855.00.

On July 1, 1940, James F. Patton and his son Vincent formed a partnership and shortly thereafter James F. turned over the affairs of the partnership to Vincent. Up to December 17, 1940, the partnership, called The Patton Company, did job work for general customers, but on that date The General Motors Corporation began sending work to the Company in such volume that its productive capacity was absorbed by the new customer.

On January 2, 1941, petitioners contracted in writing with Kirk whereby he was to receive a minimum salary of $2,400.00 a year until such time as 22½% of the net profits exceeded $2,400.00. In such event the contract provided that Kirk was to receive 10% of the net sales for as long as that percentage, plus the $2,400.00 basic salary, did not exceed 22½% of the net profits.

The gross sales from 1941 to 1943 were, for 1941, $179,050.00; for 1942, $365,-609.53; for 1943 [the year involved here] $460,494.06. Kirk kept the books on a cash basis in a simple way. He recorded in a cash book all receipts and disbursements and at the end of each month prepared two summary sheets, one showing total receipts and disbursements of each class and the other showing materials purchased. At the end of each year the summary sheets showing totals for each month and year were used by an accountant who translated them to an accrual basis in preparing income tax returns. Kirk kept a ledger and did the billing, which required little effort because substantially all of the Company's work was for General Motors. He prepared the payrolls, kept social security records and made quarterly social security reports. He kept petitioner Vincent Patton informed of the bank balances and transmitted to shop foremen information from General Motors as to the orders it desired to be finished first. He spoke to insurance salesmen before purchases of insurance were approved by Vincent. About five times in 1942-3 he called upon the appropriate agents for approval for wage increases for employees. Kirk was not a partner in the Patton Company nor related to either of the partners.

The case strips to one question: whether, as determined by the Commissioner, $13,000.00 was reasonable compensation to Kirk for 1943. . . .

In the proceedings before the Tax Court the presumption is that the Commissioner was right and petitioners have the burden of proving that his determination was wrong. We think that the findings of the Tax Court are supported by substantial evidence and an affirmance must result. There is no hard and fast rule by which reasonableness of compensation may be determined by the Tax Court. Every case must stand or fall upon its own peculiar facts and circumstances. Among other factors to be considered by that Court are: The nature of the services to be performed, the responsibilities they entail, the time required of the employee in the discharge of his duties, his capabilities and training, and the amount of compensation paid in proportion to net profits. An exclusive function of the Tax Court is the determination of the weight and credibility to be given to the witnesses.

We think that petitioners have failed to carry the burden, which the law imposes upon them, to make out their case by clear and convincing evidence. . . . Probably one of the most important factors in determining the reasonableness of compensation is the amount paid to similar employees by similar concerns engaged in similar industries. The petitioners introduced no evidence upon this subject. Moreover, it occurs to us that the books of the partnership kept by Kirk would have disclosed to a great extent the nature and volume of his work and his capabilities to perform it, but neither the books nor any verified entries therefrom were introduced by petitioners. There is of course a presumption that as between the parties to the contract the compensation agreed to be paid was reasonable. But, as between petitioners and the Commissioner, such a presumption is not controlling in a controversy of this nature before the Tax Court. Botany Worsted Mills v. United States, 278 U.S. 282, 292.

Affirmed.

McALLISTER, Circuit Judge (dissenting).

According to [§162(a)(1)] of the Internal Revenue Code, to which reference has been made, petitioners are entitled to a deduction in their taxes for all "the ordinary and necessary expenses paid or incurred during the taxable year in carrying on" their business, "including a reasonable allowance for salaries or other compensation for personal services actually rendered." The issue is whether the compensation which was paid to Kirk, in accordance with his contract of employment, was a reasonable allowance. As is said in the prevailing opinion, there is a presumption that, as between the parties to the contract, the compensation agreed to be paid was reasonable. But it is declared that as between petitioners herein and the Commissioner, such a presumption is not controlling in a controversy of this nature before the Tax Court, and Botany Worsted Mills v. United States, 278 U.S. 282, 292, is cited as authority to sustain this conclusion.

It does not seem to me that the *Botany Mills* case controls the controversy before us. There, the stockholders of a corporation adopted a bylaw providing for the payment of more than 50% of the annual net profits to the members of the board of directors, for their services, in addition to their regular annual salaries of $9,000 each. In 1917, the tax year there in controversy, the amount paid out of net profits to the board of directors was $1,565,739.39, or a payment to each director of $156,573.93, in addition to his salary. Under a statute, similar in phrasing to the one before us, providing for deductions of all "the ordinary and necessary expenses paid within the year in the maintenance and operation of its business," 39 Stat. 756, the court held that this amount so greatly exceeded the amounts which are usually paid to directors for their attendance at meetings of the board and the discharge of their customary duties, as to raise a strong inference that the "amount paid to the directors was *not in fact compensation for their services, but merely a distribution of a fixed percentage of the net profits* that had no relation to the services rendered." (Emphasis supplied.) The *Botany Mills* case cites three other cases . . . that seem to me to elucidate the reason for the court's decision. . . .

In all of these cases, the amounts were paid to officers who were really the beneficial owners of the corporation and who controlled its action in contracting for and paying them the unusually high salaries based upon net profits. The reasons the courts have held such salaries were not deductible as "ordinary and necessary expenses," were because they were not, in fact, compensation, but merely a distribution of profits; that such profits, divided on the basis of stock holdings, were not payments of compensation; that the claimed salaries were not salaries at all, but profits diverted to stock holding officers under the guise of salaries; and that a distribution of profits "under the guise of salaries" to officers

who held the stock of a company and controlled its affairs, is not an ordinary and necessary expense, within the meaning of the statute.

In this case, Kirk was not an owner or part owner of the company, directly or indirectly. His contract of employment, providing for a salary, based on profits, was not a distribution of profits under the guise of a salary. There is no question that the contract of employment was bona fide. As was said in United States v. Philadelphia Knitting Mills Co., [273 F.2d 657], the Government has no right to inquire into and determine whether the amount of the salary was proper, or whether it was too much or too little, but only "whether the amount paid is salary or something else."

Although much importance is seemingly attached by the Government to the fact that, before the contract of employment was entered into between Kirk and petitioners, his salary for the preceding four years was only $939, $1,230, $1,385, and $1,855, the Commissioner finally allowed a deduction on the basis of a salary to Kirk in the amount of $13,000. It can easily be perceived from the evidence that this was a purely arbitrary allowance on the part of the Commissioner. If it was based on the previous earnings of Kirk or upon what he actually did, it was obviously excessive. If it was arrived at by taking the contract for his services into consideration, it was clearly inadequate. It is impossible to escape the conclusion that the Commissioner based his allowance on the ground that the amount of compensation provided by the contract eventually turned out to be too high, merely because the profits during the years in question were so great. No such arbitrary determinations are valid, either in administrative decisions or in court adjudications. The decision that the amount provided by the contract of employment was too high was, as has been stated by the courts, no business or concern of the Government. The decisive question is whether the amount paid to Kirk was salary or a distribution of profits paid under the guise of salary. It was not a distribution of profits, for Kirk has no interest in the company.

It is admitted in this case that the amount paid to Kirk was salary, and there is nothing in the case to overcome the presumption that such compensation was reasonable. In my opinion, the partners were entitled to deduct the payment of such salary as an ordinary and necessary expense incurred during the taxable year, and the decision of the Tax Court to the contrary should be reversed.

NOTE

1. *Origin of phrase "a reasonable allowance for salaries or other compensation."* It has been shown that originally the phrase here involved — "including a reasonable allowance for salaries or other compensation for personal services actually rendered" — was intended not as a *limitation* on §162(a)'s blanket allowance of "all ordinary and necessary business expenses," but rather as an authorization to deduct an additional allowance for services where the salary *actually* paid or incurred therefor was inadequate. Griswold, New Light on "A Reasonable Allowance for Salaries," 59 Harv. L. Rev. 286 (1945). The contrary belief, that the phrase was intended to restrict rather than to enlarge what would otherwise be deductible as a business expense, however, is apparently imbedded beyond correction. See Walts, Inc. v. Commissioner, ¶47,003 P-H Memo T.C.; and note that the 1954 Code re-enacted the phrase after innumerable cases had interpreted it as a limitation on the deduction of business expenses. Its principal function has been to disallow so-called salaries that are in reality non-deductible dividends to stockholder-employees or indirect gifts by stockholders to members of their families. Such disguised dividends could of course be disallowed without the use of the "reasonable allowance" test, on the theory that they are not "expenses" at all.

The *Patton* case is unusual in this area in that the employee whose compensation is disallowed was neither a proprietor of the enterprise nor the relative of one. Wholly

extravagant salaries are unlikely to be found in such a situation except where tax rates are so high as to destroy any incentive to be economical with employees. Another occasion for wild generosity toward an employee who is neither a stockholder nor a stockholder's relative is the closely held corporation with one important "outside" executive who owns no stock. If the stockholder-executives are receiving extravagant "salaries," it may be necessary to give the outsider a slice of the melon in order to preserve intracompany harmony. See Builders Steel Co. v. Commissioner, 197 F.2d 263 (8th Cir. 1952).

One other area of possible application for the "reasonable" compensation doctrine is the publicly held corporation whose officers have control through the proxy machinery and are unduly open-handed in compensating themselves with corporate funds. But the courts have been reluctant to hold compensation unreasonable in stockholders' derivative actions, see Heller v. Boylan, 29 N.Y.S.2d 653 (1941), aff'd, 32 N.Y.S.2d 131 (1941), and this may explain why there has apparently been no attempt to disallow for tax purposes compensation paid by publicly held corporations. A possible exception is to be found in R. J. Reynolds Tobacco Co. v. United States, 149 F. Supp. 889 (Ct. Cl. 1957), cert. denied, 355 U.S. 893, see also R. J. Reynolds Tobacco Co. v. Commissioner, 269 F.2d 9 (4th Cir. 1958), disallowing certain profit-sharing payments paid, under an unusual arrangement for a widely held corporation, to employees in proportion to stockholdings.

What would be the probative effect of a disallowance of compensation in a tax case on a subsequent stockholder's suit for breach of the fiduciary obligation?

2. *Contingent compensation agreements.* Did the court find that Kirk's contract was unreasonable when made, or only that his 1943 salary (however computed and despite its contingent nature) was greater than the value of his 1943 services? Note Regs. §1.162-7(b)(2) and (3). Relying on the Regulations, the Court of Claims allowed a corporation to deduct contingent compensation that came to $177,000 as a result of war business, although when the employment contract was made the previous year it had been estimated that the officer's compensation would not exceed $50,000. Having concluded that the contract was reasonable when made, the court apparently felt that the amount actually paid under it was irrelevant. Rogers, Inc. v. United States, 93 F. Supp. 1014 (Ct. Cl. 1950). In Harolds Club v. Commissioner, ¶63,198 P-H Memo T.C., a 1941 agreement between a gambling casino and its manager (whose two sons owned the business), under which he was to receive a salary of $10,000 plus 20 per cent of the profits, produced income ranging from $350,000 to about $560,000 during the years 1952-1956. The court held that "reasonable" compensation would have been $10,000 plus 15 per cent of the profits.

3. *The recipient of excessive compensation.* If part of a salary is disallowed as unreasonable, is the recipient's tax status affected? See Regs. §1.162-8, stating that excessive compensation is taxable income to the recipient unless there is "evidence to justify other treatment." Such as? If the excessive salary is paid to a shareholder-employee and is "treated as a dividend" under Regs. §1.162-8, what is the impact of facts establishing that under applicable state law the corporation was not legally entitled to declare a dividend because it had no qualified surplus?

What if the excessive portion is returned by the recipient, either voluntarily or because of a pre-existing agreement to return any amount that might be found unreasonable on an audit of the employer's tax returns? Is §1341 applicable? See Berger v. Commissioner, 37 T.C. 1026 (1962); Leach v. Commissioner, 21 T.C. 70 (1953); Schlaudt, Returnable Compensation Arrangements in Closely Held Corporations, 8 N.Y.U. Inst. on Fed. Taxation 724 (1950).

See also Healy v. Commissioner, page 854 infra.

4. *Scope of the problem.* Whether a payment is "compensation" or a disguised dividend is one of the most commonly litigated tax questions, and the lack of standards makes for constant friction between taxpayer and government in this field. Almost every successful closely held corporation is a potential target for disallowance. The litigated cases, numerous as they are, undoubtedly represent only a small fraction of the disputes, since the factual nature of the question and the presumption of correctness enjoyed by the Commissioner both encourage settlements to avoid the cost and uncertainty of lawsuits. On the question of standards, see Regs. §1.162-7; Griswold, The Deduction of "A Reasonable Allowance for Salaries" — The Undefined Power of the Commissioner, 56 Harv. L. Rev. 997 (1943); and for details of litigated cases, see Miller, What the Tax Court Wants to

Know in a Reasonable Compensation Case, 79 J. Accountancy 366 (1945); Wolder, Facts and Figures on Reasonable Compensation, 24 Taxes 150 (1946).

5. *Must all expenses be "reasonable"?* Section 162(a)(1) in terms requires only that compensation be "reasonable." There is no such explicit requirement for other business expenses under §162(a), for non-trade and non-business expenses under §212, or for losses under §165. Must these other deductions nevertheless be "reasonable" in amount? Commissioner v. Lincoln Electric Co., 176 F.2d 815 (6th Cir. 1949); Place v. Commissioner, 17 T.C. 199, 203 (1951), aff'd per curiam, 199 F.2d 373 (6th Cir. 1952), cert. denied, 344 U.S. 927 (1953); Kilcullen, Is Reasonableness a Requirement of Non-compensation Expenses? 9 N.Y.U. Inst. on Fed. Taxation 863 (1951). If the "reasonable" restriction applies to all business deductions, was there any need for the 1962 amendment to §162(a)(2), disallowing "lavish and extravagant" travel expenses?

TANK TRUCK RENTALS, INC. v. COMMISSIONER

356 U.S. 30 (1958)

MR. JUSTICE CLARK delivered the opinion of the Court.

In 1951 petitioner Tank Truck Rentals paid several hundred fines imposed on it and its drivers for violations of state maximum weight laws. This case involves the deductibility of those payments as "ordinary and necessary" business expenses under [§162(a)]. Prior to 1950 the Commissioner had permitted such deductions, but a change of policy that year caused petitioner's expenditures to be disallowed. The Tax Court, reasoning that allowance of the deduction would frustrate sharply defined state policy expressed in the maximum weight laws, upheld the Commissioner. The Court of Appeals affirmed on the same ground, and we granted certiorari. In our view, the deductions properly were disallowed.

Petitioner, a Pennsylvania corporation, owns a fleet of tank trucks which it leases, with drivers, to motor carriers for transportation of bulk liquids. The lessees operate the trucks throughout Pennsylvania and the surrounding States of New Jersey, Ohio, Delaware, West Virginia, and Maryland, with nearly all the shipments originating or terminating in Pennsylvania. In 1951, the tax year in question, each of these States imposed maximum weight limits for motor vehicles operating on its highways. Pennsylvania restricted truckers to 45,000 pounds, however, while the other States through which petitioner operated allowed maximum weights approximating 60,000 pounds. It is uncontested that trucking operations were so hindered by this situation that neither petitioner nor other bulk liquid truckers could operate profitably and also observe the Pennsylvania law. Petitioner's equipment consisted largely of 4,500-5,000 gallon tanks, and the industry rate structure generally was predicated on fully loaded use of equipment of that capacity. Yet only one of the commonly carried liquids weighed little enough that a fully loaded truck could satisfy the Pennsylvania statute. Operation of partially loaded trucks, however, not only would have created safety hazards, but also would have been economically impossible for any carrier so long as the rest of the industry continued capacity loading. And the industry as a whole could not operate on a partial load basis without driving shippers to competing forms of transportation. The only other alternative, use of smaller tanks, also was commercially impracticable, not only because of initial replacement costs but even more so because of reduced revenue and increased operating expense, since the rates charged were based on the number of gallons transported per mile.

Confronted by this dilemma, the industry deliberately operated its trucks overweight in Pennsylvania in the hope, and at the calculated risk, of escaping the notice of the state and local police. This conduct also constituted willful violations in New Jersey, for reciprocity provisions of the New Jersey statute subjected trucks registered in Pennsylvania to Pennsylvania weight restrictions while

traveling in New Jersey. In the remainder of the States in which petitioner operated, it suffered overweight fines for several unintentional violations, such as those caused by temperature changes in transit. During the tax year 1951, petitioner paid a total of $41,060.84 in fines and costs for 718 willful and 28 innocent violations. Deduction of that amount in petitioner's 1951 tax return was disallowed by the Commissioner.

It is clear that the Congress intended the income tax laws "to tax earnings and profits less expenses and losses," Higgins v. Smith, 308 U.S. 473, 477 (1940), carrying out a broad basic policy of taxing "net, not . . . gross, income. . . ." McDonald v. Commissioner, 323 U.S. 57, 66-67 (1944). Equally well established is the rule that deductibility under [§162(a)] is limited to expenses that are both ordinary and necessary to carrying on the taxpayer's business. Deputy v. du Pont, 308 U.S. 488, 497 (1940). A finding of "necessity" cannot be made, however, if allowance of the deduction would frustrate sharply defined national or state policies proscribing particular types of conduct, evidenced by some governmental declaration thereof. Commissioner v. Heininger, 320 U.S. 467, 473 (1943); see Lilly v. Commissioner, 343 U.S. 90, 97 (1952). This rule was foreshadowed in Textile Mills Securities Corp. v. Commissioner, 314 U.S. 326 (1941), where the Court, finding no congressional intent to the contrary, upheld the validity of an income tax regulation reflecting an administrative distinction "between legitimate business expenses and those arising from that family of contracts to which the law has given no sanction." 314 U.S., at 339. Significant reference was made in *Heininger* to the very situation now before us; the Court stated, "Where a taxpayer has violated a federal or a state statute and incurred a fine or penalty he has not been permitted a tax deduction for its payment." 320 U.S., at 473.

Here we are concerned with the policy of several States "evidenced" by penal statutes enacted to protect their highways from damage and to insure the safety of all persons using them.[1] Petitioner and its drivers have violated these laws and have been sentenced to pay the fines here claimed as income tax deductions.[2] It is clear that assessment of the fines was punitive action and not a mere toll for use of the highways: the fines occurred only in the exceptional instance when the overweight run was detected by the police. Petitioner's failure to comply with the state laws obviously was based on a balancing of the cost of compliance against the chance of detection. Such a course cannot be sanctioned, for judicial deference to state action requires, whenever possible, that a State not be thwarted in its policy. We will not presume that the Congress, in allowing deductions for income tax purposes, intended to encourage a business enterprise to violate the declared policy of a State. To allow the deduction sought here would but encourage continued violations of state law by increasing the odds in favor of noncompliance. This could only tend to destroy the effectiveness of the State's maximum weight laws.

This is not to say that the rule as to frustration of sharply defined national or state policies is to be viewed or applied in any absolute sense. "It has never been thought . . . that the mere fact that an expenditure bears a remote relation to an illegal act makes it nondeductible." Commissioner v. Heininger, supra, at 474. Although each case must turn on its own facts, Jerry Rossman Corp. v. Com-

---

[1] Because state policy in this case was evidenced by specific legislation, it is unnecessary to decide whether the requisite "governmental declaration" might exist other than in an Act of the legislature. See Schwartz, Business Expenses Contrary To Public Policy, 8 Tax L. Rev. 241, 248.

[2] Unlike the rest of the States, Pennsylvania imposed the fines on the driver rather than the owner of the trucks. In each instance, however, the driver was petitioner's employee, and petitioner paid the fines as a matter of course, being bound to do so by its collective bargaining agreement with the union representing the drivers.

missioner [175 F.2d 711 (2d Cir. 1949)], the test of nondeductibility always is the severity and immediacy of the frustration resulting from allowance of the deduction. The flexibility of such a standard is necessary if we are to accommodate both the congressional intent to tax only net income, and the presumption against congressional intent to encourage violation of declared public policy.

Certainly the frustration of state policy is most complete and direct when the expenditure for which deduction is sought is itself prohibited by statute. See Boyle, Flagg & Seaman, Inc. v. Commissioner, 25 T.C. 43.* If the expenditure is not itself an illegal act, but rather the payment of a penalty imposed by the State because of such an act, as in the present case, the frustration attendant upon deduction would be only slightly less remote, and would clearly fall within the line of disallowance. Deduction of fines and penalties uniformly has been held to frustrate state policy in severe and direct fashion by reducing the "sting" of the penalty prescribed by the state legislature.

There is no merit to petitioner's argument that the fines imposed here were not penalties at all, but merely a revenue toll. It is true that the Pennsylvania statute provides for purchase of a single trip permit by an overweighted trucker; that its provision for forcing removal of the excess weight at the discretion of the police authorities apparently was never enforced; and that the fines were devoted by statute to road repair within the municipality or township where the trucker was apprehended. Moreover, the Pennsylvania statute was amended in 1955, raising the maximum weight restriction to 60,000 pounds, making mandatory the removal of the excess, and graduating the amount of the fine by the number of pounds that the truck was overweight. These considerations, however, do not change the fact that the truckers were fined by the State as a penal measure when and if they were apprehended by the police.

Finally, petitioner contends that deduction of the fines at least for the innocent violations will not frustrate state policy. But since the maximum weight statutes make no distinction between innocent and willful violators, state policy is as much thwarted in the one instance as in the other. Petitioner's reliance on Jerry Rossman Corp. v. Commissioner, supra, is misplaced. Deductions were allowed the taxpayer in that case for amounts inadvertently collected by him as OPA overcharges and then paid over to the Government, but the allowance was based on the fact that the Administrator, in applying the Act, had differentiated between willful and innocent violators. No such differentiation exists here, either in the application or the literal language of the state maximum weight laws.

Affirmed.

COMMISSIONER v. SULLIVAN

356 U.S. 27 (1958)

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

The question is whether amounts expended to lease premises and hire employees for the conduct of alleged illegal gambling enterprises are deductible as ordinary and necessary business expenses within the meaning of [§162(a)].

The taxpayers received income from bookmaking establishments in Chicago, Ill. The Tax Court found that these enterprises were illegal under Illinois law,

---

* In this case, the Tax Court held that an insurance broker could not deduct, under §162(a), payments made in violation of an Illinois criminal statute to non-licensed automobile dealers and others for soliciting insurance for it. Such payments were a common practice, the taxpayer believed them to be necessary to avoid loss of business to other brokers, and when the payments were discovered by the state authorities, the taxpayer was reprimanded but its license was not revoked and no criminal proceeding against it was commenced. — ED.

that the acts performed by the employees constituted violations of that law, and that the payment of rent for the use of the premises for the purpose of bookmaking was also illegal under that law. The Tax Court accordingly held that the amount paid for wages and for rent could not be deducted from gross income since those deductions were for expenditures made in connection with illegal acts. The Court of Appeals reversed, on the basis of its prior decision in Commissioner v. Doyle, 231 F.2d 635. The case is here on a petition for certiorari, for consideration in connection with the companion cases, Hoover Motor Express Co. v. United States and Tank Truck Rentals, Inc. v. Commissioner, decided this day.

Deductions are a matter of grace and Congress can, of course, disallow them as it chooses. At times the policy to disallow expenses in connection with certain condemned activities is clear. It was made so by the Regulations in Textile Mills Corp. v. Commissioner, 314 U.S. 326.* Any inference of disapproval of these expenses as deductions is absent here. The Regulations, indeed, point the other way, for they make the federal excise tax on wagers deductible as an ordinary and necessary business expense.† This seems to us to be recognition of a gambling enterprise as a business for federal tax purposes. The policy that allows as a deduction the tax paid to conduct the business seems sufficiently hospitable to allow the normal deductions of the rent and wages necessary to operate it. We said in Commissioner v. Heininger, 320 U.S. 467, 474, that the "fact that an expenditure bears a remote relation to an illegal act" does not make it nondeductible. And see Lilly v. Commissioner, 343 U.S. 90. If we enforce as federal policy the rule espoused by the Commissioner in this case, we would come close to making this type of business taxable on the basis of its gross receipts, while all other business would be taxable on the basis of net income. If that choice is to be made, Congress should do it. The amounts paid as wages to employees and to the landlord as rent are "ordinary and necessary expenses" in the accepted meaning of the words. That is enough to permit the deduction, unless it is clear that the allowance is a device to avoid the consequence of violations of a law, as in Hoover Motor Express Co. v. United States, supra, and Tank Truck Rentals, Inc. v. Commissioner, supra, or otherwise contravenes the federal policy expressed in a statute or regulation as in Textile Mills Corp. v. Commissioner, supra.

Affirmed.

J. ROSSMAN CORP. v. COMMISSIONER

175 F.2d 711 (2d Cir. 1949)

Before L. Hand, Chief Judge, and Clark and Frank, Circuit Judges.

L. Hand, Chief Judge.

The petitioner appeals from an order of the Tax Court, in banc, seven judges dissenting, assessing a deficiency in its excess profits tax for the year 1943. Only one question is involved: whether the taxpayer was entitled to deduct a payment made to the United States during the year in question in circumstances to be stated. The taxpayer was a "converter" of "greige goods," which shrink or stretch in the process of dyeing to an extent not determinable in advance. During the period in question its prices were fixed upon a "cost plus" basis by regulations promulgated under the Emergency Price Control Act of 1942, 50 U.S.C.A. Appendix, §901 et seq., of which the apposite one provided that a "converter"

---

* Concerning lobbying expenses, infra page 283. — Ed.

† The Regulations themselves do not refer to the federal excise tax on wagers, see 1954 Code, §4401, but a ruling cited by the Court, Rev. Rul. 54-219, 1954-1 C.B. 51, states that this tax is deductible by taxpayers engaged in the business of accepting wagers or conducting wagering pools or lotteries. — Ed.

might fix a "working allowance shrinkage" in his contracts with his customers, but that this must be limited to a maximum, which for the purpose of this appeal it is not necessary to describe. In May, 1943, the taxpayer learned that, because it had accepted and charged the shrinkage figures given it by the "finishers" to whom it had sent the goods to be dyed, it had unwittingly overcharged its customers by claiming larger shrinkages than the regulation allowed. Although the Office of Price Administration had not started any investigation of the taxpayer's charges and had not until then undertaken to investigate them, its president asked the advice of the Office as to what he should do. The official to whom he went suggested that he return the overcharges to the customers; but this was altogether impracticable. In the first place, it involved going over more than 200 accounts; and, more important, the taxpayer's customers were not entitled to the overcharges anyway, for they had passed them on to the consumers. For these reasons the official consented that the taxpayer should settle the whole matter by paying the gross overcharge to the United States in one sum and this it did on May 17, 1943. That payment is the disputed deduction. Nobody suggests that the overcharge was deliberate; but the Tax Court did find that it was "not too clear from the evidence that the overcharges in question might not have been avoided, if the petitioner had adopted other more appropriate measures."

Three questions arise: (1) whether the payment can be regarded as a "penalty" at all; (2) supposing it can be so regarded, whether no "penalties" are deductible as "ordinary and necessary expenses" of a business under [§162(a)]; and (3) if some penalties are, and some are not, deductible, whether this "penalty" is among those which may be deducted. First, it seems apparent to us that the payment of the overcharge — which is all that is here involved — can on no theory be treated as the payment of a "penalty." Taken in its broadest sense that word has a punitive, as opposed to a remedial, meaning; it covers fines and other exactions which are not restitution for a wrong, and are only justified, either as a deterrent, or in order to satisfy an atavistic craving for retaliation. A seller's duty to return the overcharge to the "terminal buyer": that is, to one "who buys . . . for use, or consumption other than in the course of trade or business," is so clearly not a "penalty" under this definition that no argument can make it plainer than its bare statement. The only possible excuse for confusion is that §205(e) [of the Emergency Price Control Act] gave to the "terminal buyer" a claim, not only to recover the overcharge, but twice its amount in addition; and we will assume that the addition was a "penalty" (though even that is not absolutely certain). However, a recovery of three times the overcharge is no less a recovery of the overcharge because it includes the penalty along with it. Hence, if the taxpayer had been able to distribute the overcharge to the "terminal buyers," and had done so, the distribution would have been deductible. It did not make such a distribution because it could not; but in its stead it paid the overcharge to the Administrator upon his agreeing not to press for more. We agree with the Commissioner that this was not a voluntary payment, or a gratuity; §205(e) [Emergency Price Control Act] imposed upon the taxpayer a duty to the Administrator in precisely the same terms as its duty to the "terminal buyer"; and, although that duty was conditional upon the "terminal buyer's" being "not entitled to bring suit," we will assume that in the case at bar that condition was fulfilled. However, the Administrator's claim, like the "terminal buyer's" claim for which it is a substitute, is also made up of the overcharge and an addition of twice its amount; and the Commissioner must maintain that the part of it, which is made up of the overcharge, is a "penalty" and loses its character as restitution even though the Administrator demands only the overcharges. There is no basis for such a conclusion. The taxpayer wished to abandon the overcharge; it recognized that the fund belonged to the

"terminal buyers"; and, since the "terminal buyer" was inaccessible, the overcharge "was subject . . . to the right of appropriation by the sovereign as bona vacantia," even though, strictly speaking, it may not have been "the subject of escheat." Indeed, if §205(e) [Emergency Price Control Act] had not intervened, conceivably as matter of strict theory, the overcharge might have passed to the several states.

Assuming, however, that we are wrong, and that the payment can be regarded as that of a penalty, the second question is whether in no circumstances could it be an "ordinary and necessary expense" of the business. The Revenue Act does not declare that penalties may not be deducted; the doctrine is a judicial gloss — and, for that matter, a gloss of the lower courts only, save as the Supreme Court recognized it by implication in Commissioner v. Heininger [320 U.S. 467]. We agree that it is a proper gloss (indeed we have ourselves enforced it several times;)[1] and its justification is that, when acts are condemned by law and their commission is made punishable by fines or forfeitures, to allow these to be deducted from the wrongdoer's gross income, reduces, and so in part defeats, the prescribed punishment. Obviously, to relieve the wrongdoer of a part of the tax due upon his income, in effect is to remit that much of the sanction imposed; as would at once be apparent, if we were to compare the case of a wrongdoer who has an income with that of one who has none. Hence, if one rigorously applied the doctrine, a taxpayer could never deduct the payment of fines and forfeitures; and we can see no relevant distinction between them and legal expenses incurred in an unsuccessful effort to prevent their collection. Indeed, to hold otherwise would be to subsidize the obduracy of those offenders who were unwilling to pay without a contest and who therefore added impenitence to their offence; and for this reason in the decisions just cited we held that such legal expenses were never deductible. The Supreme Court overruled this doctrine in Commissioner v. Heininger, supra; and the question is as to the scope of that decision. It is possible to read it as distinguishing between the legal expenses of an unsuccessful defence and the payment of fines or forfeitures. On the other hand, it is also possible to read it as meaning that, whether the claimed deduction be of legal expenses or of fines or forfeitures, its allowance depends upon the place of sanctions in the scheme of enforcement of the underlying act. We think that the second is the right reading; in short that there are "penalties" and "penalties," and that some are deductible and some are not. This we infer, not only because the result of denying deductibility only to legal expenses would, as we have said, put a premium upon resistance, but because of the following language, which was the kernel of the ratio decidendi: "If the respondent's litigation expenses are to be denied deduction, it must be because the allowance of the deduction would frustrate the sharply defined policies . . . which authorize the Postmaster General to issue fraud orders." 320 U.S. at page 474. Again: "We hold therefore that the Board of Tax Appeals was not required to regard the administrative finding of guilt . . . as a rigid criterion of the deductibility of the respondent's litigation expenses." 320 U.S. at p. 475. Perhaps the deduction of a fine or forfeiture after an "administrative finding of guilt," is more likely to "frustrate" the "sharply defined policies" of a statute which imposes it, than the deduction of the legal expenses of an unsuccessful defence — though that seems questionable — but certainly there is no more ground for taking as "a rigid criterion" the imposition of the fine than the incurrence of the expenses. Each may "frustrate the sharply defined policies" of a statute; that will depend upon how one views their deterrent

[1] Burroughs Building Material Co. v. Com'r, 2 Cir., 47 F.2d 178; Gould Paper Co. v. Com'r, 2 Cir., 72 F.2d 698; National Outdoor Advertising Bureau v. Helvering, 2 Cir., 89 F.2d 878.

effect. We hold therefore that in every case the question must be decided ad hoc.

This conclusion leads directly to the third question: whether, even though the overcharge was a "penalty," its allowance as a deduction would "frustrate" any "sharply defined policies" of the Emergency Price Control Act of 1942. It is impossible to find an answer in general terms; indeed any answer goes to the very root of one's theory of criminal law. Happily, in the case at bar, we are not left to speculation, for we have an answer from the best possible source — the Administrator himself. The body of regulations, by which the United States sought to control prices during the last war, was extraordinarily complicated and difficult to comprehend. That was inevitable; the innumerable varieties of commercial transactions to be covered made possible nothing simpler. One may indeed argue, as the Commissioner does, that the more unsparing and relentless was the pursuit of offenders, however innocent they may have been of any wilful violation of the regulations, the more solicitous would they become to comply, and the more effective would be the enforcement of the Act. That has been a school of penology since the time of Draco; but it has not been the only school, and, as we read Commissioner v. Heininger, supra, the Supreme Court did not accept it. The Administrator did not believe that such a rigid and uncomprising policy was the best way to realize the purposes of the Act. When the amendment to §205(e) [Emergency Price Control Act] was being considered in 1944, he declared in a letter to the Senate Committee "that the protection of innocent violators from excessive damages" was "obviously desirable"; and that it had been his "policy to adjust cases involving innocent violations by payment of merely the amount of the overcharge." He thought that Congress had given him discretion not to sue for "treble damages" in some instances, and he had exercised that discretion so as "to avoid undue hardship in deserving cases." In short, he did not believe that it paid to sweep into the same pool with wilful or careless violators, violators for whom the daedalian mazes of the regulations had proved too much. Moreover Congress showed in 1944 by the amendment of §205(e) that it agreed with the Administrator. It seems to us that we should accept these expressions as evidence that in cases where the Administrator accepted the overcharge as sufficient, it did not "frustrate" any "sharply defined" policies of the Emergency Price Control Act of 1942.

Hence, we hold erroneous the order assessing the deficiency. First, we say that on no theory was the payment of the overcharge to the United States the payment of a "penalty." Second, we say that, even if it was the payment of a "penalty," that is not a "rigid criterion" of its deductibility. Third, we say that there was positive and compelling evidence that to allow such a deduction would not "frustrate" the policies of the underlying act. It is true that although the order were reversed, it would not inevitably follow that the deficiency should be expunged. The practice of the Administrator was to accept the overcharge as adequate compliance only if the seller had both acted in good faith, and had taken all "practicable precautions"; and the Tax Court found, as we said at the outset, that it was not "too clear" that in this case the taxpayer "might not have avoided" the overcharges by "more appropriate accounting." So it may be argued that the taxpayer did not carry the burden of proof of showing that the deduction would not "frustrate" the Act. It is true that this would be irrelevant to the first point; for, if the payment was only restitutionary, it could not be a penalty in any event. On the other hand, lack of proper care would be relevant to the third point: whether the allowance would "frustrate" the Act. However the Administrator's consent to accept the overcharge showed that he thought that the taxpayer had in fact used adequate care; and that was enough. We do not say that his decision was final; but it stands uncontradicted, and it was the judgment of one who was in the best possible position to make an estimate.

The deficiency determination also included adjustments not here in controversy. The order of the Tax Court is reversed; the deficiency is expunged so far as it results from disallowance of the deduction of the payment to the United States, and the cause is remanded to the Tax Court for recomputation of the taxes involved in conformity with the opinion of this court.

NOTE

1. *Fines for inadvertent violations of law.* In Hoover Motor Express Co., Inc. v. United States, 356 U.S. 38 (1958), a companion case to *Tank Truck Rentals* and *Sullivan*, the Supreme Court held that a trucking company could not deduct fines paid for "inadvertent violations of state maximum weight laws," resulting from shifting of the freight load during transit so as to overload one of the truck's axles:

> The District Court held that even if petitioner had acted innocently and had taken all reasonable precautions, allowance of the deductions would frustrate clearly defined state policy . . .
>
> Wholly apart from possible frustration of state policy, it does not appear that payment of the fines in question was "necessary" to the operation of petitioner's business. This, of course, prevents any deduction. Deputy v. du Pont, 308 U.S. 488 (1940). The violations usually resulted from a shifting of the load during transit, but there is nothing in the record to indicate that the shifting could not have been controlled merely by tying down the load or compartmentalizing the trucks. Other violations occurred because petitioner relied on the weight stated in the bill of lading when picking up goods in small communities having no weighing facilities. It would seem that this situation could have been alleviated by carrying a scale in the truck.
>
> Even assuming that petitioner acted with all due care and without willful intent, it is clear that allowance of the deduction sought by petitioner would severely and directly frustrate state policy. Tank Truck Rentals, Inc. v. Commissioner . . . As in *Tank Truck,* the statutes involved here do not differentiate between innocent and willful violators.

2. *Source of "sharply defined public policy."* In the *Lilly* case, cited in the *Tank Truck Rentals, Inc.* case, the Supreme Court held that an optician could deduct payments made to physicians who prescribed the glasses made and sold by him:

> The facts are not in dispute. The payments to the doctors were made by petitioners monthly in the regular course of their business. Under the long-established practice in the optical industry in the localities where petitioners did business, these payments, in 1943 and 1944, were normal, usual and customary in size and character. The transactions from which they arose were of common or frequent occurrence in the type of business involved. They reflected a nationwide practice. Consequently, they were "ordinary" in the generally accepted meaning of that word. See Deputy v. du Pont, 308 U.S. 488, 495; Welch v. Helvering, 290 U.S. 111, 114.
>
> The payments likewise were "necessary" in the generally accepted meaning of that word. It was through making such payments that petitioners had been able to establish their business. Discontinuance of the payments would have meant, in 1943 or 1944, either the resumption of the sale of glasses by the doctors or the doctors' reference of their patients to competing opticians who shared profits with them. Several doctors testified that they had recommended petitioners and petitioners' competitor, the American Optical Company, simultaneously. Both were sharing profits with the doctors on substantially the same basis. If either had stopped making the payments while the other continued them, there is no reason to doubt that the doctors thereafter would have omitted their recommendation of the nonpaying optician. In 1943 and 1944 the continuance of these payments was as essential to petitioners as were their other business expenses. As has been said of legal expenses

under somewhat comparable circumstances, "To say that this course of conduct and the expenses which it involved were extraordinary or unnecessary would be to ignore the ways or conduct and the forms of speech prevailing in the business world." Commissioner v. Heininger, 320 U.S. 467, 472 . . .

Assuming for the sake of argument that, under some circumstances, business expenditures which are ordinary and necessary in the generally accepted meanings of those words may not be deductible as "ordinary and necessary" expenses under [§162(a)] when they "frustrate sharply defined national or state policies proscribing particular types of conduct," nevertheless the expenditures now before us do not fall in that class. The policies frustrated must be national or state policies evidenced by some governmental declaration of them. In 1943 and 1944 there were no such declared public policies proscribing the payments which were made by petitioners to the doctors.

Customs and the actions of organized professional organizations have an appropriate place in determining in a factual sense what are ordinary and necessary expenses at a given time and place. For example, they materially affect competitive standards which determine whether certain expenditures are in fact ordinary and necessary. Evidence of them is admissible on that issue. They do not, however, in themselves constitute the "sharply defined national or state policies" the frustration of which may, as a matter of law, preclude the deductibility of an expense under [§162(a)].

We voice no approval of the business ethics or public policy involved in the payments now before us. We recognize the province of legislatures to translate progressive standards of professional conduct into law and we note that legislation has been passed in recent years in North Carolina and other states outlawing the practice here considered. We recognize also the organized activities of the medical profession in dealing with the subject. A resulting abolition of the practice will reflect itself in the tax returns of the parties without the retroactive hardship complained of here. [Lilly v. Commissioner, 343 U.S. 90, 93-98 (1952).]

Note the Supreme Court's statement that there must be "some governmental declaration" of the "sharply defined national or state" policy allegedly frustrated by the deduction. The Court of Appeals for the Fourth Circuit said of the payments in the *Lilly* case:

> A doctor owes the duty of undivided loyalty to his patients, and a contract which violates this duty is unenforcible and opposed to public policy. . . . Surely, the doctor is assuming an utterly inconsistent position when he recommends an optician without disclosing that he is being paid for the recommendation. This corrupt practice obviously involves, or tends to promote, serious evils: (1) the prescription by the doctor of glasses where not actually necessary; (2) more expensive lenses than really needed; (3) recommendation of an inferior optician; (4) artificial increase in the cost of glasses by the inclusion of the physician's commission, for which the physician affords no value to the patient. . . . We hold, since these kickbacks corrupt the fiduciary relationship between physicians and patient and result in a violation of the duty of loyalty, they are opposed to public policy. . . . [Lilly v. Commissioner, 188 F.2d 269, 271 (4th Cir. 1951).]

Why is this not a "governmental declaration" of a "sharply defined" state policy? Would a legislative resolution, condemning the practice but attaching no sanctions, warrant a denial of the deduction? Would a declaration by the *governor* meet the Supreme Court's requirement?

The Supreme Court said in the *Lilly* case that "the actions of organized professional organizations have an appropriate place in determining in a factual sense what are ordinary and necessary expenses at a given time and place." Suppose the local morticians officially frown on neon lights or the bankers condemn the luring of customers with free piggy banks — should a deduction be denied to the taxpayer who flouts custom on the ground that the expense is not "ordinary and necessary"?

After the *Lilly* case was decided, the Internal Revenue Service announced that payments made by a surgeon to other physicians for referring patients to him could be

deducted if customary in the profession, helpful in obtaining business, and not in violation of any governmentally declared national or state policy. I.T. 4096, 1952-2 C.B. 91. The American College of Surgeons has condemned the practice of fee-splitting and has urged the Service to disallow deductions for such payments.

In Kirtz v. United States, 304 F.2d 460 (Ct. Cl. 1962), the government relied on the "frustration" doctrine to disallow payments made by an insurance agent to the officers of a corporation through which business was referred to him; the court held that unless a payment was malum in se or was determined to be unlawful by the appropriate state or federal law enforcement agency, the frustration doctrine was not applicable. The *Boyle* case, supra page 274n, was distinguished on the ground that the payments in that case had been condemned by the state insurance commission.

3. *Applications of the "frustration" doctrine.* The courts have been flooded with litigation involving the "frustration" doctrine. Among many others, these cases are worthy of mention: Reuter v. Commissioner, 37 T.C. 599 (1961) (additions to federal excise tax for delinquent filing; deduction disallowed); Christodoulou v. Commissioner, ¶62,004 P-H Memo T.C. ("labor procurement expenses," evidently constituting bribes to union officials: deduction disallowed); Dixie Machine Welding & Metal Works, Inc. v. United States, 315 F.2d 445 (5th Cir. 1963) ("kickbacks" paid to officers of foreign vessels by ship repair yard to obtain business and expedite repairs, amounting to 10 per cent of repair bills; non-deductible as commercial bribes); Reffett v. Commissioner, 39 T.C. 869 (1963) (plaintiff in civil action paid a fee to witness contingent on success of lawsuit; held non-deductible by divided court); McGraw-Edison Co. v. United States, 300 F.2d 453 (Ct. Cl. 1962) (compromise damage payment for employing child labor in violation of Walsh-Healey public contracts act held non-deductible penalty, despite characterization of payments as remedial rather than penal by Secretary of Labor); United States v. Winters, 261 F.2d 675 (10th Cir. 1958) (cost of liquor used to entertain customers in a dry state); Smith v. Commissioner, 33 T.C. 861 (1960) (accord, for a taxpayer named Al Smith!).

In Atzingen-Whitehouse Dairy, Inc. v. Commissioner, 36 T.C. 173 (1961), the taxpayer violated a Pennsylvania law forbidding the sale of milk below a prescribed price by collecting the legal price but paying rebates or discounts pursuant to pre-arrangement with the customers; the court held that the taxpayer was taxable only on the amounts received less the rebates: ". . . the problem before us is not whether such discounts are deductible as 'ordinary and necessary' business expenses in arriving at net income . . . rather it is whether the discounts must be taken into account in determining the amount of gross income chargeable to petitioner in the first instance [citing the *Sullenger* case, supra p. 72]." In Stoller v. United States, 320 F.2d 340 (Ct. Cl. 1963), a warehouseman who dishonestly sold his customers' grain was taxed on the full proceeds despite his claim that the value of the grain (for which he was legally responsible to his customers) was his "cost of goods sold."

See Richey v. Commissioner, 33 T.C. 272 (1959), concerning taxpayer whose interest in "making a dollar" led him to invest $15,000 in a plan to counterfeit one hundred dollar bills; he was denied a deduction, lest public policy be frustrated, when his co-venturers absconded with his investment. Here the "frustration" doctrine was applied to a deduction claimed under §165(c)(2) and (3), although §165 does not contain the "ordinary and necessary" restriction found in §162.

In Rev. Rul. 61-115, 1961-1 C.B. 46, the Internal Revenue Service ruled that public policy would not be frustrated by allowing a corporate officer or director to deduct a payment to his corporation, pursuant to §16(b) of the Securities Exchange Act of 1934 (providing that for the purpose of preventing the unfair use of information, such persons must repay to the corporation any profit realized on a purchase and sale of its stock within a period of less than six months):

> Section 16(b) does not render the dealings of the insider unlawful or state that the amount required to be paid to the corporation constitutes a penalty. No distinction is made as to whether or not the profits were innocently derived. As distinguished from a statute which requires a wrongdoer to pay a specific amount, section 16(b) merely shifts the benefit of the insider's dealings to the corporation. It extends the

common law concept of a corporate officer's or director's fiduciary duty. The purpose of the statute is to place the insider in the same position he would have occupied if he had never engaged in the stock dealings. This purpose is not frustrated by the allowance of a tax deduction for amounts paid by reason of section 16(b); but, rather, the allowance of the deduction is consistent with the purpose of the statute in returning the insider to his original position.

The ruling indicated that the deduction would be capital or ordinary depending upon the character of the stock transaction giving rise to the gain. But what is the statutory provision affirmatively authorizing the deduction — §162, §212, §165, or something else?

If the taxpayer, in the course of a tax avoidance scheme that fails as a "sham," incurs expenses for legal and accounting advice, interest on borrowed funds, brokerage commissions, etc., are they deductible under §162, §165, or §212? Compare the majority and dissenting opinions in Fabreeka Products Co. v. Commissioner, 34 T.C. 290 (1960); Becker v. Commissioner, 277 F.2d 146 (2d Cir. 1960); DeWoskin v. Commissioner, 35 T.C. 356 (1960).

4. *Legal expenses and the "frustration" doctrine.* In the *Rossman* case, Judge L. Hand says that "we can see no relevant distinction between [fines and forfeitures] and legal expenses incurred in an unsuccessful effort to prevent their collection." Once it is determined that deduction of the fines in the *Tank Truck Rentals* and *Hoover Motor Express* cases would frustrate public policy, does it inevitably follow that a deduction of the legal expenses incurred in defending against such fines would also frustrate public policy? Would a deduction for the legal expenses "subsidize the obduracy of those offenders who were unwilling to pay without a contest and who therefore added impenitence to their offence," as suggested in *Rossman?* If so, would public policy be best served by allowing persons who plead guilty to deduct the fine, and disallowing both the fine and the legal expenses of those who demonstrate their "impenitence" by demanding a trial — or is public policy served, rather than frustrated, by allowing a deduction for the expense of defending?

For the denial of deductions where legal fees were incurred in the unsuccessful defense of criminal proceedings, see Thomas v. Commissioner, 16 T.C. 1417 (1951) (gambler convicted under local law; query the effect of the subsequently decided *Sullivan* case), and Tracy v. United States, 284 F.2d 379 (Ct. Cl. 1960) (criminal tax evasion). If the taxpayer is successful in the criminal proceeding, what must be shown to establish that the charge against him grew out of his business? Would the *Gilmore* case (supra p. 236) bar a deduction if the accused individual in the *Pantages Theater Co.* case (supra p. 266) had paid the legal fees himself? If the taxpayer is charged with criminal tax evasion, can he rely on §212(3) for a deduction in deducting the legal expenses of a successful defense? If not, does it matter whether the taxpayer is charged with fraud in connection with his business or investment income, rather than in connection with personal income or deductions (e.g., receipt of alimony, medical expenses, or dependency exemptions)?

Assuming a sufficient business connection, legal expenses incurred in civil proceedings have generally been allowed as deductions, even though fraud or similar conduct was charged and regardless of the outcome. The leading case is Commissioner v. Heininger, 320 U.S. 467 (1943) (mail fraud; taxpayer lost in proceeding to regain right to use mails); see also Longhorn Portland Cement Co. v. Commissioner, 3 T.C. 310 (1944) (state antitrust proceedings; taxpayers consented to entry of judgment against them without admitting violation); Greene Motor Co. v. Commissioner, 5 T.C. 314 (1945) (compromise of civil tax fraud case). But in Bell v. Commissioner, 320 F.2d 953 (8th Cir. 1963), a certified public accountant was denied a deduction for the expense of an unsuccessful defense of professional disciplinary proceedings growing out of a criminal tax evasion case in which he entered a plea of nolo contendere; the court held that legal fees attributable to the criminal case were non-deductible because a plea of nolo contendere is the equivalent of a plea of guilty, and then cited the *Gilmore* case (supra p. 236) in holding that the disciplinary proceedings had their origin in the taxpayer's "personal" life (viz., his commission of a crime) and hence did not grow out of his business activity. But what if the tax evasion case was based on a failure to report business income?

In Salt v. Commissioner, 18 T.C. 182 (1952), a taxpayer was allowed to deduct as a

business expense legal fees paid for advice in connection with a subpoena served by the House Committee on Un-American Activities. The taxpayer was a writer in the motion picture industry and was subpoenaed during the committee's investigation of that industry. He was not called upon to testify. The government argued that the deduction should be denied on the ground that the fees (part of a fund to which others, who refused to answer questions and were cited for contempt, also contributed) were "for the purpose of directly opposing and resisting the actual investigative function of a Congressional committee." The court found that the taxpayer did not have this intention and allowed the deduction as a business expense on the ground that the investigation was calculated to affect the future of the motion picture industry and specifically of his employment therein.

5. *Illegal businesses.* Does the principle of the *Sullivan* case extend to other businesses that are unlawful under state law but that are not subject to a federal excise tax, such as operating dice games, bootlegging, etc., or is it limited to an activity taxed by Congress and thereby recognized "as a business for federal tax purposes"? Does *Sullivan* permit a distinction between the "legal" and the "illegal" expenses of an illegal business, or are fines, bribes paid to the police, and payments to rival gangs for "protection" also deductible as "ordinary and necessary" expenses? See Hopka v. United States, 195 F. Supp. 474 (N.D. Iowa, 1961) (forfeiture of slot machines used in unlawful gambling; deduction disallowed).

Recall that in James v. United States (supra p. 110), Chief Justice Warren apparently endorsed the government's argument that if the embezzler made a repayment to his victim, it would be deductible. What is the statutory basis for such a deduction? See Wusich v. Commissioner, 35 T.C. 279 (1960), holding that a bank manager who defrauded his employer by crediting a depositor's account with fictitious deposits and by honoring overdrafts could not deduct payments made by him to the bonding company which had reimbursed the bank for the losses. Because the taxpayer's purpose was to injure and defraud the bank, the court held that the payments were not "ordinary and necessary" and that a deduction would frustrate public policy. The taxpayer was allowed, however, to deduct amounts paid to the bonding company as interest on the agreed payments. Should the payments of principal have been allowed under *James?*

Revenue Ruling 60-77, 1960-1 C.B. 386, holds that an individual engaged in an illegal trade or business must pay the self-employment (social security) tax under §1402 of the Code, relying in part on *Sullivan.* Does this embrace professional thieves and safecrackers? Will their social security benefits on retirement be appropriately geared to their incomes before retirement? Cf. Communist Party, U.S.A. v. Catherwood, 367 U.S. 389 (1961) (re status of Communist Party under New York State unemployment compensation system).

6. *Expenditures for lobbying, political campaigns, etc.* Lobbying expenses have been held non-deductible, largely because of a long-standing administrative ruling now found in Regs. §1.162-15(c). Textile Mills Securities Corp. v. Commissioner, 314 U.S. 326 (1941); Cammarano v. United States, 358 U.S. 498 (1959) (contribution by wholesale beer dealer to finance publicity to defeat initiative measure to create state monopoly in wine and beer; held, non-deductible under the Regulations; First Amendment objection rejected on ground that denial of tax exemption puts everyone on equal economic footing and hence does not abridge free speech). For interpretations of the Regulations, see Southwestern Electric Power Co., 312 F.2d 437 (Ct. Cd. 1963) (cost of newspaper advertisements opposing a competitive federal public power system held non-deductible; legal and travel expenses for appearances before Congressional committees, urging that appropriations requested by executive departments for the system be denied, held deductible because paid to persuade Congress of illegality of appropriations rather than "to promote or defeat legislation"); Rev. Rul. 62-156, 1962-2 C.B. 47 (non-partisan activity by business firms to encourage public participation in elections, by urging public to register, sponsoring political debates, granting time off with pay on election day, and maintaining payroll deduction plan for employees wishing to make political contributions; held, not in violation of "lobbying" regulations). See Comment, Deducting Business Expenses Designed to Influence Governmental Policy as "Ordinary and Necessary": Cammarano v. United States and a Bit Beyond, 69 Yale L.J. 1017 (1960); Spiegel, Deductibility of Lobbying,

Initiative, and Referendum Expenses: A Problem for Congressional Consideration, 45 Calif. L. Rev. 1 (1957), reprinted in 35 Taxes 863 (1957).

The disallowance rules originating in Regs. §1.162-15(c) were restricted in 1962 by the enactment of §162(e), permitting taxpayers to deduct the expenses of appearances before legislative bodies in connection with legislation of direct interest to the taxpayer, dues paid to an organization to the extent attributable to such appearances, and similar expenses, provided they are related to the trade or business. Political contributions and the expense of attempting to influence the general public with respect to elections or legislative matters remain non-deductible.

The ban on deducting political contributions found in Regs. §1.162-15(c) is buttressed by §271 (supra p. 201), denying a deduction for an uncollectible loan to a political party unless the taxpayer is a bank. The campaign expenses of an unsuccessful candidate for public office were disallowed by a divided Court, in McDonald v. Commissioner, 323 U.S. 57 (1944), and a successful candidate got the same treatment in Mays v. Bowers, 201 F.2d 401 (4th Cir. 1953), where the court also refused to allow the expenses to be amortized over his official term. The court expressed the view that *allowing* a deduction would subsidize wealthy candidates, while the dissenting Justices in the *McDonald* case felt that *denying* the deduction would have this effect. In 1952, the Internal Revenue Service ruled that a Congressman might deduct the cost of printing and mailing a report on his official activities together with a "brief personal message" to his constituents:

> It is often difficult to determine the line of demarcation between deductible business expenses and non-deductible campaign expenses of a Congressman. The mere fact, however, that it might be politically expedient for a Congressman to incur an otherwise deductible expense would not ordinarily convert that expense into a non-deductible campaign expense. [I.T. 4095, 1952-2 C.B. 90.]

See also Goldman, Income Tax Incentives for Political Contributions: A Study of the 1963 Proposals, 11 U.C.L.A. Law Rev. 212 (1964); Peters, Political Campaign Financing: Tax Incentives for Small Contributors, 18 La. L. Rev. 414 (1958) (proposing a tax credit for political contributions).

In Hale, Adolph Hitler: Taxpayer, 60 Amer. Hist. Rev. 830 (1955), the author reports that the German Finance Office in 1925 allowed Adolph Hitler to deduct one half of the expenses of his political activities on the ground that while they were not in themselves deductible professional expenses, they provided material for his work as a writer and helped to increase the sale of *Mein Kampf*. This evidently established a pattern that continued through Hitler's first year as Chancellor; in 1935, however, the official in charge concluded that Hitler was tax-exempt and, when Der Fuehrer agreed with this interpretation of the applicable law, the file was closed.

7. *Payments to foreign officials*. Section 162(c), added in 1958, denies a deduction for payment to foreign officials if the payment would have been unlawful "under the laws of the United States." Does this apply a more stringent test to payments to foreign officials than would be applied to domestic transactions, by precluding the taxpayer from showing that despite the violation of law the payment did not frustrate United States public policy? Or does a payment to a public official in violation of law necessarily frustrate public policy?

Regulations §1.162-18(d) provide that a payment to a foreigner may be disallowed if its deduction would contravene United States public policy, even though §162(c) does not apply. If an American company operating in West Germany paid fines like those in the *Tank Truck* case, supra page 272, would their deduction frustrate United States public policy? Would this depend on what the Secretary of State thinks about the effect of such conduct on our foreign relations? What if the fines were paid because of a violation of the laws of East Germany or Cuba?

8. *Reference*. See generally Comment, Business Expenses, Disallowance, and Public Policy: Some Problems of Sanctioning with the Internal Revenue Code, 72 Yale L.J. 108 (1962).

2. Bad Debts

Section 166, relating to bad debts and worthless securities, is derived from §23(k) of the 1939 Code. The principal change, aside from minor revisions of phraseology, was the enactment in 1954 of §166(f) (relating to guarantors of certain obligations).

It has already been seen (supra p. 201) that bad debts are deductible, whether incurred in business or not. Some problems connected with bad debts (e.g., ascertaining the year of worthlessness) are common to business and non-business bad debts.

There are other problems, however, that are peculiar to business bad debts. Thus an individual's "non-business debts," as defined by §166(d), must be deducted when they become worthless; they do not qualify for the "bad debt reserve" method of accounting for uncollectible obligations. This method, which is widely but not universally used for business debts, starts with an estimate each year of the amount of accounts then on the taxpayer's books that will prove to be uncollectible. In making this estimate, the taxpayer may "age" his accounts receivable, i.e., classify them according to the due date and take a larger percentage of those that are seriously delinquent than of those that are only slightly in arrears. If his existing reserve (built up by deductions in previous years and reduced by debts that have actually proved uncollectible) is insufficient to provide for the estimate, the taxpayer adds an amount to the reserve to build it up to the estimate. The amount thus added to the reserve is deducted in the taxable year. See Mill Factors Corp. v. Commissioner, 14 T.C. 1366 (1950); Paramount Liquor Co. v. Commissioner, 242 F.2d 249 (8th Cir. 1957).

It will be noted that unduly pessimistic estimates in one year are corrected by adding less to the reserve in later years. Thus, if on December 31, 1963, the taxpayer had $100,000 in accounts receivable outstanding, against which a reserve of $5000 had been provided, and if $2000 of these accounts proved uncollectible during the year 1964, his bad debt reserve will have a balance of $3000 at the end of 1964. If at that time he has $90,000 of accounts, of which $4000 can be expected to prove uncollectible, the addition to the reserve in 1964 need be only $1000 to give full protection against the anticipated losses. Conversely, an unduly optimistic estimate in an earlier year will be corrected by making a larger addition to the reserve in a later year.

It has already been noted (supra p. 201) that in the case of an individual, "non-business debts" that become worthless give rise to short-term capital loss, which means that their deductibility is limited by §1211 (b). Moreover, "non-business debts" do not qualify for a partial write-off under §166(a)(2); they can be deducted only in the year of complete worthlessness.

WHIPPLE v. COMMISSIONER

373 U.S. 193 (1963)

MR. JUSTICE WHITE delivered the opinion of the Court.

Section [166(a)(1)] provides for the deduction in full of worthless debts other than nonbusiness bad debts while [§166(d)] restricts nonbusiness bad debts to the treatment accorded losses on the sale of short-term capital assets. The statute defines a nonbusiness bad debt in part as "a debt . . . other than a debt the loss from the worthlessness of which is incurred in the taxpayer's trade or business." The question before us is whether petitioner's activities in connection with several

corporations in which he holds controlling interests can themselves be characterized as a trade or business so as to permit a debt owed by one of the corporations to him to be treated within the general rule of [§166(a)(1)] as a "business" rather than a "nonbusiness" bad debt.

Prior to 1941 petitioner was a construction superintendent and an estimator for a lumber company but during that year and over the next several ones he was instrumental in forming and was a member of a series of partnerships engaged in the construction or construction supply business. In 1949 and 1950 he was an original incorporator of seven corporations, some of which were successors to the partnerships, and in 1951 he sold his interest in the corporations along with his equity in five others in the rental and construction business, the profit on the sales being reported as long-term capital gains. In 1951 and 1952 he formed eight new corporations, one of which was Mission Orange Bottling Co. of Lubbock, Inc., bought the stock of a corporation known as Mason Root Beer and acquired an interest in a related vending machine business. From 1951 to 1953 he also bought and sold land, acquired and disposed of a restaurant and participated in several oil ventures.

On April 25, 1951, petitioner secured a franchise from Mission Dry Corporation entitling him to produce, bottle, distribute and sell Mission beverages in various counties in Texas. Two days later he purchased the assets of a sole proprietorship in the bottling business and conducted that business pursuant to his franchise as a sole proprietorship. On July 1, 1951, though retaining the franchise in his own name, he sold the bottling equipment to Mission Orange Bottling Co. of Lubbock, Inc., a corporation organized by petitioner as mentioned, of which he owned approximately 80% of the shares outstanding. In 1952 he purchased land in Lubbock and erected a bottling plant thereon at a cost of $43,601 and then leased the plant to Mission Orange for a 10-year term at a prescribed rental. Depreciation was taken on the new bottling plant on petitioner's individual tax returns for 1952 and 1953.

Petitioner made sizable cash advances to Mission Orange in 1952 and 1953, and on December 1, 1953, the balance due him, including $25,502.50 still owing from his sale of the bottling assets to the corporation in July 1951, totaled $79,389.76. On December 15, 1953, petitioner advanced to Mission Orange an additional $48,000 to pay general creditors and on the same day received a transfer of the assets of the corporation with a book value of $70,414.66. The net amount owing to petitioner ultimately totaled $56,975.10, which debt became worthless in 1953 and is in issue here. During 1951, 1952 and 1953 Mission Orange made no payments of interest, rent or salary to petitioner although he did receive such income from some of his other corporations.

Petitioner deducted the $56,975.10 debt due from Mission Orange as a business bad debt in computing his 1953 taxable income. The Commissioner, claiming the debt was a nonbusiness bad debt, assessed deficiencies. The Tax Court, after determining that petitioner in 1953 was not in the business of organizing, promoting, managing or financing corporations, of bottling soft drinks or of general financing and money lending, sustained the deficiencies. A divided Court of Appeals affirmed, 301 F.2d 108, and upon a claim of conflict among the Courts of Appeals, we granted certiorari. 371 U.S. 875.

I

The concept of engaging in a trade or business as distinguished from other activities pursued for profit is not new to the tax laws. As early as 1916, Congress, by providing for the deduction of losses incurred in a trade or business separately

from those sustained in other transactions entered into for profit, §5, Revenue Act of 1916, c. 463, 39 Stat. 756, distinguished the broad range of income or profit producing activities from those satisfying the narrow category of trade or business. This pattern has been followed elsewhere in the Code. See, e.g., [§162(a) and §212 (ordinary and necessary expenses); §165(c)(1) and (2) (losses); §167(a)(1) and (2) (depreciation); §172(d)(4) (net operating loss deduction)]. It is not surprising, therefore, that we approach the problem of applying that term here with much writing upon the slate.

In Burnet v. Clark, 287 U.S. 410 (1932), the long-time president and principal stockholder of a corporation in the dredging business endorsed notes for the company which he was forced to pay. These amounts were deductible by him in the current year under the then existing law, but to carry over the loss to later years it was necessary for it to have resulted from the operation of a trade or business regularly carried on by the taxpayer. The Board of Tax Appeals denied the carry-over but the Court of Appeals for the District of Columbia held otherwise on the grounds that the taxpayer devoted all of his time and energies to carrying on the business of dredging and that he was compelled by circumstances to endorse the company's notes in order to supply it with operating funds. This Court in turn reversed and reinstated the judgment of the Board of Tax Appeals, since "[t]he respondent was employed as an officer of the corporation; the business which he conducted for it was not his own. . . . The unfortunate endorsements were no part of his ordinary business, but occasional transactions intended to preserve the value of his investment in capital shares. . . . A corporation and its stockholders are generally to be treated as separate entities." A similar case, Dalton v. Bowers, 287 U.S. 404, decided the same day, applied the same principles.

A few years later, the same problem arose in another context. The taxpayer with large and diversified investment holdings, including a substantial but not controlling interest in the du Pont Company, obtained a block of stock of that corporation for distribution to its officers in order to increase their management efficiency. The taxpayer, as a result, became obligated to refund the annual dividends and taxes thereon and these amounts he sought to deduct as ordinary and necessary expenses paid or incurred in the carrying on of a trade or business pursuant to §23(a) of the Revenue Act of 1928 [§162(a), 1954 Code]. The Court, Deputy v. du Pont, 308 U.S. 488 (1940), assuming arguendo that the taxpayer's activities in investing and managing his estate were a trade or business, nevertheless denied the deduction because the transactions "had their origin in an effort by that company to increase the efficiency of its management" and "arose out of transactions which were intended to preserve his investment in the corporation. . . . The well established decisions of this Court do not permit any such blending of the corporation's business with the business of its stockholders." 308 U.S., at 494. Reliance was placed upon Burnet v. Clark and Dalton v. Bowers, supra.

The question assumed in *du Pont* was squarely up for decision in Higgins v. Commissioner, 312 U.S. 212 (1941). Here the taxpayer devoted his time and energies to managing a sizable portfolio of securities and sought to deduct his expenses incident thereto as incurred in a trade or business under [§162(a)]. The Board of Tax Appeals, the Court of Appeals for the Second Circuit and this Court held that the evidence was insufficient to establish taxpayer's activities as those of carrying on a trade or business. "The petitioner merely kept records and collected interest and dividends from his securities, through managerial attention for his investments. No matter how large the estate or how continuous or extended the work required may be, such facts are not sufficient as a matter of law to permit the courts to reverse the decision of the Board." 312 U.S., at 218.

Such was the state of the cases in this Court when Congress, in 1942, amended the Internal Revenue Code in respects crucial to this case. In response to the *Higgins* case and to give relief to Higgins-type taxpayers, see H.R. Rep. No. 2333, 77th Cong., 2d Sess. 46, [the law] was amended not by disturbing the Court's definition of "trade or business" but by following the pattern that had been established since 1916 of "[enlarging] the category of incomes with reference to which expenses were deductible," McDonald v. Commissioner, 323 U.S. 57, 62; United States v. Gilmore, 372 U.S. 39, 45, to include expenses incurred in the production of income [§212(1) and (2)].

At the same time, to remedy what it deemed the abuses of permitting any worthless debt to be fully deducted, as was the case prior to this time, see H.R. Rep. No. 2333, 77th Cong., 2d Sess. 45, Congress restricted the full deduction under [§166(a)] to bad debts incurred in the taxpayer's trade or business[1] and provided that "nonbusiness" bad debts were to be deducted as short-term capital losses. Congress deliberately used the words "trade or business," terminology familiar to the tax laws, and the respective committees made it clear that the test of whether a debt is incurred in a trade or business "is substantially the same as that which is made for the purpose of ascertaining whether a loss from the type of transaction covered by [§165(c)] is 'incurred in trade or business' under paragraph (1) of that section." H.R. Rep. No. 2333, 77th Cong., 2d Sess. 76-77; S. Rep. No. 1631, 77th Cong., 2d Sess. 90. Section [165(c)(1)], of course, was a successor to the old §5 of the Revenue Act of 1916 under which it had long been the rule to distinguish between activities in a trade or business and those undertaken for profit. The upshot was that Congress [enacted §212(1) and (2)] to reach income producing activities not amounting to a trade or business and conversely narrowed [§166(a)] to exclude bad debts arising from these same sources.

The 1942 amendment of [§166], therefore, as the Court has already noted, Putnam v. Commissioner, 352 U.S. 82, 90-92, was intended to accomplish far more than to deny full deductibility to the worthless debts of family and friends. It was designed to make full deductibility of a bad debt turn upon its proximate connection with activities which the tax laws recognized as a trade or business, a concept which falls far short of reaching every income or profit making activity.

II

Petitioner, therefore, must demonstrate that he is engaged in a trade or business, and lying at the heart of his claim is the issue upon which the lower courts have divided and which brought the case here: That where a taxpayer furnishes regular services to one or many corporations, an independent trade or business of the taxpayer has been shown. But against the background of the 1942 amendments and the decisions of this Court in the *Dalton, Burnet, du Pont* and *Higgins* cases, petitioner's claim must be rejected.

Devoting one's time and energies to the affairs of a corporation is not of itself,

[1] "The character of the debt for this purpose is not controlled by the circumstances attending its creation or its subsequent acquisition by the taxpayer or by the use to which the borrowed funds are put by the debtor, but it is to be determined rather by the relation which the loss resulting from the debt's becoming worthless bears to the trade or business of the taxpayer. If that relation is a proximate one in the conduct of the trade or business in which the taxpayer is engaged at the time the debt becomes worthless, the debt is not a nonbusiness debt for the purposes of this amendment." H.R. Rep. No. 2333, 77th Cong., 2d Sess. 77; S. Rep. No. 1631, 77th Cong., 2d Sess. 90. . . .

[See, however, the subsequently enacted proviso of §166(d)(2)(A), permitting a debt to qualify as a business debt if it was created or acquired in connection with a trade or business of the taxpayer. —ED.]

and without more, a trade or business of the person so engaged. Though such activities may produce income, profit or gain in the form of dividends or enhancement in the value of an investment, this return is distinctive to the process of investing and is generated by the successful operation of the corporation's business as distinguished from the trade or business of the taxpayer himself. When the only return is that of an investor, the taxpayer has not satisfied his burden of demonstrating that he is engaged in a trade or business since investing is not a trade or business and the return to the taxpayer, though substantially the product of his services, legally arises not from his own trade or business but from that of the corporation. Even if the taxpayer demonstrates an independent trade or business of his own, care must be taken to distinguish bad debt losses arising from his own business and those actually arising from activities peculiar to an investor concerned with, and participating in, the conduct of the corporate business.

If full-time service to one corporation does not alone amount to a trade or business, which it does not, it is difficult to understand how the same service to many corporations would suffice. To be sure, the presence of more than one corporation might lend support to a finding that the taxpayer was engaged in a regular course of promoting corporations for a fee or commission, see Ballantine, Corporations (rev. ed. 1946), 102, or for a profit on their sale, see Giblin v. Commissioner, 227 F.2d 692 (C.A. 5th Cir.), but in such cases there is compensation other than the normal investor's return, income received directly for his own services rather than indirectly through the corporate enterprise, and the principles of *Burnet, Dalton, du Pont* and *Higgins* are therefore not offended. On the other hand, since the Tax Court found, and the petitioner does not dispute, that there was no intention here of developing the corporations as going businesses for sale to customers in the ordinary course, the case before us inexorably rests upon the claim that one who actively engages in serving his own corporations for the purpose of creating future income through those enterprises is in a trade or business. That argument is untenable in light of *Burnet, Dalton, du Pont* and *Higgins,* and we reject it.[2] Absent substantial additional evidence,[3] furnishing management and other services to corporations for a reward no different than that flowing to an investor in those corporations is not a trade or business under [§166(d)]. We are, therefore, fully in agreement with this aspect of the decision below.

III

With respect to the other claims by petitioner, we are unwilling to disturb the determinations of the Tax Court, affirmed by the Court of Appeals, that petitioner was not engaged in the business of money lending, of financing corporations, of bottling soft drinks or of any combination of these since we cannot say they are clearly erroneous. See Commissioner v. Duberstein, 363 U.S. 278, 289-291. Nor need we consider or deal with those cases which hold that working as a corporate executive for a salary may be a trade or business. E.g., Trent v. Commissioner, 291 F.2d 669 (C.A. 2d Cir.). Petitioner made no such claim in either the Tax Court or the Court of Appeals and, in any event, the contention would be ground-

2 To the extent that they hold or contain statements to the contrary, we disapprove of such cases as Maytag v. United States, 289 F.2d 647 (Ct. Cl. 1961); Mays v. Commissioner, 272 F.2d 788 (C.A. 6th Cir.); Commissioner v. Stokes' Estate, 200 F.2d 637 (C.A. 3d Cir.); Foss v. Commissioner, 75 F.2d 326 (C.A. 1st Cir.); Washburn v. Commissioner, 51 F.2d 949 (C.A. 8th Cir.); Sage v. Commissioner, 15 T.C. 299; Campbell v. Commissioner, 11 T.C. 510; and Cluett v. Commissioner, 8 T.C. 1178.

3 Compare Maloney v. Spencer, 172 F.2d 638 (C.A. 9th Cir.), and Dorminey v. Commissioner 26 T.C. 940.

less on this record since it was not shown that he has collected a salary from Mission Orange or that he was owed one. Moreover, there is no proof (which might be difficult to furnish where the taxpayer is the sole or dominant stockholder) that the loan was necessary to keep his job or was otherwise proximately related to maintaining his trade or business as an employee. Compare Trent v. Commissioner, supra.

We are more concerned, however, with the evidence as to petitioner's position as the owner and lessor of the real estate and bottling plant in which Mission Orange did business. The United States does not dispute the fact that in this regard petitioner was engaged in a trade or business[4] but argues that the loss from the worthless debt was not proximately related to petitioner's real estate business. While the Tax Court and the Court of Appeals dealt separately with assertions relating to other phases of petitioner's case, we do not find that either court disposed of the possibility that the loan to Mission Orange, a tenant of petitioner, was incurred in petitioner's business of being a landlord. We take no position whatsoever on the merits of this matter but remand the case for further proceedings in the Tax Court.

Vacated and remanded.

MR. JUSTICE DOUGLAS dissents.

NOTE

1. *Alternative modes of financing a closely held business.* If Mr. Whipple had advanced the necessary funds to his corporation by purchasing additional stock, making a contribution to its capital, or lending funds on the strength of the corporation's bonds or debentures, the loss incurred when such securities became worthless would be governed by §166(e) and §165(g): it would be a capital loss as of the last day of the taxable year, long-term or short-term depending upon the taxpayer's holding period for the securities in question. If the corporation had obtained the necessary funds by borrowing from a bank on the strength of a guarantee by Mr. Whipple, his loss would have been governed by principles discussed in paragraph 4 infra. Finally, if the business had been conducted as a sole proprietorship or partnership rather than in corporate form, his loss would have been an ordinary loss under §162(a) (ordinary and necessary business expenses) or §165(c)(1) (loss incurred in trade or business). For the special treatment of losses incurred by a so-called "Subchapter S corporation," see infra pages 740 et seq.

2. *Purpose of §166(d).* When §166(d) was enacted in 1942, the only explicit statement of its purpose referred to claims for losses on "loans which [taxpayers] do not expect to be repaid." It was presumably thought that difficulties of proof made it impossible to rebut claims for "losses" that were in effect gifts to relatives or friends, and that the next best thing was a mechanical rule subjecting all non-business debts to the limited deductibility of capital losses. It was held in Putnam v. Commissioner, 352 U.S. 82 (1956), however, that the 1942 amendment had another purpose: to put "nonbusiness investments in the form of loans on a footing with other nonbusiness investments." The capital loss provisions had for many years provided that a taxpayer who acquired bonds, debentures, or other securities for investment would realize a capital loss on worthlessness; and the *Putnam* case concluded that §166(d) was designed in part to treat worthless loans that are not evidenced by a "security" consistently with those that are. As indicated supra, however, this aim is not fully accomplished, since non-business bad debts always give rise to short-term capital losses under §166(d), while the capital loss produced by a bad debt that is evidenced by a security may be either short term or long term. Note also that §166(d) does not apply to corporate taxpayers.

3. *Impact of Whipple case on prior cases under §166(d).* Maytag v. United States and the other cases cited and disowned by the Court in footnote 2 of the opinion suggest

[4] Although petitioner received no rental payments from Mission Orange, there was rent owing to him under the 10-year-lease agreement.

that the corporate veil may be disregarded if the taxpayer is "more than" an "investor" in a group of corporations in a single industrial area:

> [The findings] show, we think, that the plaintiff's business was a myriad of activities, all directly connected with aviation, which could be carried on as relatively small business enterprises without involving outside capital in large amounts. The plaintiff, for reasons satisfactory to him, carried on these enterprises in corporate form. He was not involved in these corporations merely as an investor. He worked in them, made the important decisions in them, put up the money to enable them to operate. . . . Our conclusion is that these activities were his business, and that the bad debt which he seeks to deduct was a business bad debt. [Maytag v. United States, 289 F.2d 647, 649.]

Note that the Supreme Court in *Whipple* reserved judgment on the *Trent* case, in which the Court of Appeals for the Second Circuit held that loans made by a minority shareholder to the corporation by which he was employed in order to hold his job were business, rather than non-business, debts, not subject to the restriction of §166(d). If the *Trent* case is going to be of little aid to a taxpayer who is the dominant shareholder of his corporate employer, as the Supreme Court intimates in the *Whipple* case, what chance did the taxpayer have of winning on the remand of the *Whipple* case?

4. *Loss resulting from guarantee of debt.* A series of cases in the Courts of Appeals during the years 1951-1956 indicated that a taxpayer in Mr. Whipple's position could avoid the restriction of §166(d) by guaranteeing the corporation's bank loans, instead of lending the funds himself. These cases held that a taxpayer who had to make good on a guarantee, when the primary obligor defaulted, was entitled to an ordinary loss under §165(c)(2), rather than being restricted by §166(d) to a short-term capital loss. The cases are cited in Putnam v. Commissioner, supra, which overruled them, holding that the guarantor's loss must be treated as a bad debt, subject to §166(d) if it does not arise in his trade or business. The Court pointed out that the guarantor, by paying the debtor's obligation to the creditor, is subrogated to that obligation and concluded from this principle of private law that "the loss sustained by the guarantor unable to recover from the debtor is by its very nature a loss from the worthlessness of a debt." (Query: does theft or embezzlement, by creating an obligation in the wrongdoer to repay the victim, give rise to a bad debt loss under §166 rather than to a casualty loss under §165?)

The effect of the *Putnam* case is somewhat diluted by §166(f), a curious provision that entered the Code in 1954. Under it, a taxpayer is relieved from the restriction of §166(d) if he guarantees the debt of an individual who uses the proceeds in his trade or business. The provision is not applicable to guarantees of corporate obligations, nor to individual obligations if the proceeds are not used in the borrower's trade or business. When applicable, §166(f) restores the disparity between guarantees and direct loans that was eliminated for pre-1954 years by the *Putnam* case. Does it also permit the taxpayer to deduct a "loss" on a guarantee that was intended as a gift to the borrower from the outset?

In the first case decided under §166(f), the court held that funds borrowed to finance the acquisition of a business interest were "used in the trade or business of the borrower" within the meaning of §166(f). Axelrod v. Commissioner, 320 F.2d 327 (6th Cir. 1963).

In his dissenting opinion in the *Putnam* case, Mr. Justice Harlan attempted to explain the rationale of §166(f). See Surrey, The Congress and the Tax Lobbyist — How Special Tax Provisions Get Enacted, 70 Harv. L. Rev. 1145, 1149n (1957), stating that §166(f) "reportedly was designed to meet the problem of a Texas father who had made advances to his son's business" and that the dissent in the *Putnam* case "labors long to gather an intelligible legislative history . . . but fails to realize that the provision has all the earmarks of an ad hoc resolution of a particular situation."

5. *Debts arising in the taxpayer's former business.* Note the definition of "non-business debt" in §166(d)(2). Before 1954, the statute included clause (B) of this definition, but clause (A) is new in the 1954 Code. It overrules the position taken in the pre-1954 Regulations, that even though a claim arose in connection with the taxpayer's trade or business, it is a non-business debt if he is no longer engaged in a trade or business when it becomes worthless.

6. *References.* Note, Shareholder-Creditor Bad Debts Under Section 166 of the Internal Revenue Code, 75 Harv. L. Rev. 589 (1962); Allen and Orechkoff, Toward a More Systematic Drafting and Interpreting of the Internal Revenue Code: Expenses, Losses and Bad Debts, 25 U. of Chi. L. Rev. 1, 48 et seq. (1957); Brown, Putnam v. Commissioner — The Reimbursable Outlay Under the Tax Law, 6 Buffalo L. Rev. 283 (1957); Note, Section 166(f) of the Internal Revenue Code: Bad Debts and Confusion Guaranteed, 65 Yale L.J. 247 (1955).

3. *Depreciation and Amortization*

Section 167 of the 1954 Code, relating to depreciation, is derived from §23(1) of the 1939 Code, but with substantial modifications.

BUREAU OF INTERNAL REVENUE, BULLETIN F
1-5, 1942

DEPRECIATION — OBSOLESCENCE — DEFINITIONS

The Federal income tax in general is based upon net income of a specified period designated as the taxable year. The production of net income usually involves the use of capital assets which wear out, become exhausted, or are consumed in such use. The wearing out, exhaustion, or consumption usually is gradual, extending over a period of years. It is ordinarily called depreciation, and the period over which it extends is the normal useful life of the asset.

It is elemental that in determining the net income derived from the operation of a trade or business, all operating costs and expenses allowable as deductions must be determined and deducted from the gross income. The consumption of trade or business capital represented by depreciation is an operating cost the deduction of which in computing net income is specifically provided for in the Internal Revenue Code [§167(a)] and several prior Revenue Acts, as follows:

Depreciation. A reasonable allowance for the exhaustion, wear and tear of property used in the trade or business, including a reasonable allowance for obsolescence.

The factors of wear and tear and decay cause physical exhaustion, or deterioration, ultimately resulting in retirement of the property, while those retirements due to obsolescence are caused by forces ordinarily unrelated to physical condition.

Obsolescence may be defined as the process of becoming obsolete due to progress of the arts and sciences, changed economic conditions, legislation, or otherwise, which ultimately results in the retirement or other disposition of property. As said by the Supreme Court in United States Cartridge Co. v. United States, 284 U.S. 511, 516 (1932):

Obsolescence may arise from changes in the art, shifting of business centers, loss of trade, inadequacy, supercession, prohibitory laws and other things which, apart from physical deterioration, operate to cause plant elements or the plant as a whole to suffer diminution in value.

With respect to any property for which past experience indicates a gradual lessening of useful value due to inadequacy or obsolescence and when the effects of such factors can be expected to continue without substantial variation, the annual diminution in useful value is considered ordinary or normal obsolescence to be included in depreciation. Much of the discussion hereinafter having specific reference to depreciation only is in fact equally applicable to normal obsolescence.

Some property, however, may become obsolete or inadequate due to revolu-

tionary or radical changes unforeseen and unpredictable by their nature when the property was acquired. To distinguish from the allowance for what is considered normal obsolescence, this type is usually termed extraordinary or special obsolescence, allowances for which will be dealt with more specifically hereinafter. . . .

Allowance for Depreciation and Obsolescence

The proper allowance for exhaustion, wear and tear, including obsolescence, of property used in trade or business is that amount which should be set aside for the taxable year in accordance with a reasonably consistent plan (not necessarily at a uniform rate) whereby the aggregate of the amounts so set aside, plus the salvage value, will, at the end of the useful life of the property in the business, equal the cost or other basis of the property. In no instance may the total amount allowed be in excess of the amount represented by the difference between the cost or other allowable basis and the salvage value which reasonably may be expected to remain at the end of the useful life of the property in the trade or business.

The allowance in any given year must be determined in accordance with the conditions existing at the end of the year, and a taxpayer is not permitted under the law to take advantage in later years of his prior failure to take any depreciation deduction or of his action in taking deductions plainly inadequate under the known facts in prior years.

Probable Useful Life — Rate of Depreciation and Obsolescence

In general. The amount of the annual deduction allowable for depreciation is ordinarily dependent upon the expected useful life of the asset. The factors which determine the useful life of property in a trade or business have already been discussed briefly in the Introduction. These factors are wear and tear and decay or decline from natural causes; and also various forms of obsolescence attributable to the normal progress of the art, economic changes, inventions, and inadequacy to the growing needs of the trade or business. Two principal forms or types of obsolescence are generally recognized, that is, normal obsolescence and extraordinary or special obsolescence.

Normal obsolescence is caused by factors which can be anticipated with substantially the same degree of accuracy as other ordinary depreciation factors, such as wear and tear, corrosion or decay. Accordingly, it is included in estimating the normal useful life of depreciable property, the effect of which is to include the allowance for normal obsolescence in the depreciation deduction.

Extraordinary or special obsolescence rarely can be predicted prior to its occurrence. However, this does not necessarily imply that the asset already must have been completely discarded or become useless, but merely that a point has been reached where it can be definitely predicted that its use for its present purpose will be discontinued at a certain future date. Deductions for obsolescence of this type may be taken over the period beginning with the time such obsolescence is apparent and ending with the time the property will become obsolete. In every case the burden of proof is entirely upon the taxpayer to establish a claim for obsolescence by facts and evidence that are definite and indisputable. No amount may be charged off in any year merely because, in the opinion of the taxpayer, property may become obsolete a number of years later. The allowance will be confined to such items or such portion of the property on which obsolescence is definitely shown to be sustained, and cannot be held applicable to an entire property unless all portions thereof are affected by the conditions to which

the obsolescence is found to be due. Nor can obsolescence be allowed retrospectively in the light of subsequent events or happenings not anticipated during the period for which the obsolescence is claimed. In no case may the deduction for obsolescence be extended to include shrinkage in value due to other causes, as, for instance, a general drop in the price of commodities.

Past experience, which is a matter of fact and not of opinion, coupled with informed opinion as to the present condition of the property, and current developments within the industry and the particular trade or business, furnish a reliable guide for the determination of the useful life of the property. Such a determination should reflect all the peculiar circumstances of the use or operation of the property, such as the purpose for which it is utilized, the conditions under which it is used or operated, the policy as to repairs, renewals, and improvements, and the climatic and other local conditions.

Unusual conditions; abnormal depreciation. It is recognized that the useful life of some depreciable property, or items thereof, may be affected by a radical increase or decrease in plant activity, or diversion in use, extending over a period of time so that depreciation in excess of, or less than, the amounts allowable under normal operating conditions or use may be sustained. Such increase or decrease in depreciation is dependent upon the decrease or increase, respectively, in the normal useful life resulting from the exceptional operating conditions or use. However, where factors of obsolescence and inadequacy and decay control the useful life of property, no increase or decrease from normal depreciation will be allowed. Any modification of normal depreciation, therefore, must be confined to those items the useful lives of which are controlled by the factor of use or wear and tear. Moreover, since accelerated use of property is almost invariably accompanied by an increase in maintenance and repair charges, accelerated depreciation is allowable only to the extent that such maintenance and repair fail to arrest acceleration or depreciation.*

Methods of Apportionment

The capital sum to be replaced by allowances for depreciation over the useful life of the property may either be deducted in equal annual installments or in accordance with any other recognized trade practice, such as apportionment to units of production. While no specific method is prescribed, whatever plan or method of apportionment is adopted must be reasonable and cannot be changed in a later year without the consent of the Commissioner. The methods in general use by taxpayers are the "straight-line" and the "unit of production," the latter being used for the most part by taxpayers owning natural resource property. These, with other methods used to a lesser extent, are described below.

Straight-Line Method

Under this method, the cost or other basis of the property, less its estimated salvage value, is deducted in equal annual installments over the period of its estimated useful life. Ordinarily, the depreciation deduction is computed by applying a depreciation rate expressed as a percentage to the cost or other basis to be recovered, but it also may be computed by dividing that cost or other basis by the estimated useful life. The estimated useful life is subject to modification in the light of conditions known to exist at the end of each taxable period. Ordinarily, depreciation computed by this method represents the actual diminution in

* For the problems of proof in a claim for accelerated depreciation based on abnormal use of equipment (longer hours in wartime), see Copifyer Lithograph Corp. v. Commissioner, 12 T.C. 728 (1949). — Ed.

service value from year to year as closely as the depreciation computed by any other method. The practical simplicity in accounting records required and the ease and facility by which revisions or changing life estimates may be applied tend to make this method the most acceptable one for general use.

Unit of Production Method

This method is peculiarly applicable in determining depreciation for property used in the exploitation of natural resources, such as mineral deposits or timber, the available reserves of which limit the useful life of the depreciable property. Under such circumstances, the rate of exhaustion of the natural resource measures the useful life of the physical property. By dividing the cost or other basis less estimated salvage value by the estimated available reserves of raw material, a unit cost is obtained which, when multiplied by the units produced during a given year, gives the depreciation sustained for that year. Depreciation, at least to the extent of that based upon decay and normal obsolescence, is allowable and should be deducted during the period when property is idle or is producing at a rate below normal.

In the case of depreciable property the useful life of which is not limited by sources of supply, however, uncertain and unpredictable factors arise to such an extent as to make application of the method very difficult, if not impossible. Use of the method must be confined to those items in the property account whose lives are determined by the factors of wear and tear or where the extent of use or the rate of production measures the rate of exhaustion of the property. When such a separation can be made, it is then necessary to forecast for those items the useful lives of which are controlled by extent of use the total number of units to be produced during their useful lives, in order to obtain a cost factor to be applied against units produced each year in arriving at the depreciation allowance. For most property it is not possible to obtain this information with any reasonable degree of accuracy and, therefore, the method is not considered an acceptable one for general application to the machinery account of industrial concerns, or to the property of those companies exploiting a natural resource with reserves sufficient to extend operations beyond the physical life of the original plant.

Declining Balance Method

Under this method the amount of depreciation is subtracted annually from the cost or other basis of the property and the rate applied only to the resulting balances. Depreciation on any single item is largest in amount the first year and declines each year thereafter. . . .

Retirement Accounting

In this form or method of accounting for a depreciable property, the cost of property retired each year is credited to the capital asset account and, less net salvage (actual or estimated), charged to expense in lieu of annual provisions for depreciation. . . .

NOTE

1. *Methods of computing depreciation.* The straight line method of computing depreciation is by far the most commonly employed. The retirement method is largely restricted to railroads, where it has long been sanctioned by regulatory bodies for fixing rates. See, for an example of its use, Commissioner v. Union Pacific R.R., 188 F.2d 950 (2d Cir. 1951). The declining balance method, or at least a peculiar variation of it, was authorized by the Internal Revenue Service in 1946 as a method of encouraging post-war

building construction, since it would permit larger than normal (i.e., straight line) deductions during the early years after construction when taxes were higher (it was thought) than they would be later. Mayer, Declining Balance Depreciation, 25 Taxes 162 (1947).

The 1954 Code carries over without change the general provision of earlier law that the depreciation deduction shall be a "reasonable allowance" for exhaustion and wear and tear. It also provides that for certain property acquired or constructed after December 31, 1953, the term "reasonable allowance" shall include (but is not limited to) an allowance computed under certain specified methods; these are the straight line, the declining balance, and the "sum of the years-digits" methods, and any other consistent method that will not during the first two thirds of the property's life produce aggregate allowances greater than the declining balance method. The point of §167(b) is to give statutory sanction to the use of several methods (in addition to any methods that are acceptable by virtue of the general provision for a "reasonable allowance") that will afford larger depreciation allowances during the earlier years of the property's life. To encourage new investment, this privilege is limited to post-1953 property.

The declining balance method that is specifically allowed by §167(b)(2) will permit approximately 40 per cent of an asset's cost to be depreciated in the first quarter of its service life, and two thirds in the first half of its life. Section 167(b)(4), sanctioning any other consistent method that for the first two thirds of the asset's life will not yield aggregate allowances greater than the declining balance method, permits the taxpayer to avoid certain technical drawbacks in the declining balance method that are explained in the Senate Report on the 1954 Code pp. 26-27.

The "sum of the years-digits" method can be best explained by illustration: assuming property with a useful life of 6 years, the taxpayer would compute the sum of $1 + 2 + 3 + 4 + 5 + 6$, or 21, and would take a deduction of $\frac{6}{21}$ of the property's depreciable basis for the first year, $\frac{5}{21}$ for the second year, etc. This method yields deductions that are similar to the declining balance method.

The allowances for depreciation under the three statutory methods are compared in the following table, which is based upon equipment having an estimated useful life of 10 years, a cost of $2100, and an estimated salvage value at the end of its useful life of $100.

Year	*Straight Line (10 per cent)*	*Declining Balance (20 per cent)*	*Sum of the Years-Digits*
1	$200	$420.00	$363.64
2	200	336.00	327.27
3	200	268.80	290.90
4	200	215.04	254.54
5	200	172.03	218.18
6	200	137.63	181.82
7	200	110.10	145.45
8	200	88.08	109.09
9	200	70.46	72.74
10	200	56.37	36.37
Total	$2,000	$1,874.51	$2,000.00
Salvage value or unrecovered cost	$100	$225.49 *	$100.00

* To avoid having so large an unrecovered cost (which would be applied against the proceeds if the asset is sold in the final year or deducted if it is abandoned), the taxpayer may avail himself of the option granted by §167(e) to shift to the straight line method toward the end of the asset's useful life and depreciate it during the remaining years down to the estimated salvage value.

2. *Special incentives: additional first-year depreciation for "small business."* By virtue of §179, enacted in 1958, the taxpayer is entitled to an additional depreciation allowance of 20 per cent of the cost of tangible personal property having a useful life of 6 years or more; the allowance may be taken only in the first year for which depreciation is allowable

for the property, and the maximum cost qualifying for the allowance is $10,000 ($20,000 on a joint return of husband and wife) per year. The provision contains a number of restrictions, designed primarily to forestall transfers of property within a family or other related group as a means of getting more than one "first-year" allowance for the same property and to prevent an affiliated group of corporations from claiming the allowance on more than $10,000 of property in a single year. Although §179's catch-title refers to "small business," the allowance is not tied in any way to the taxpayer's gross receipts, net worth, or total assets.

Canada has employed the depreciation deduction for precisely the opposite purpose: to discourage certain classes of capital investment. Unless the taxpayer obtained a certificate from the Ministry of Trade and Commerce, no depreciation on assets acquired after April, 1951, could be taken for a period of four years. See McGurran, Deferred Depreciation, 4 Nat. Tax J. 299 (1951).

3. *Special incentives to investment: the 1962 investment credit.* A further incentive to investment was the enactment in 1962 of §38 and §§46-48, granting an "investment credit" for certain depreciable property acquired or constructed by the taxpayer after December 31, 1961. To qualify for the credit (which is applied against the tax liability itself, rather than used as a deduction in computing taxable income), the property must have a useful life of 4 years or more, and it must be either (a) tangible personal property (e.g., machinery, equipment, and vehicles), or (b) other tangible property used as an integral part of manufacturing, extraction, transportation, or certain other business activities (e.g., blast furnaces, railroad tracks, and oil pipelines). In no event, however, do buildings and their "structural components" qualify. There are certain other exclusions, including most property used predominantly outside the United States and property used by federal, state, and local governments; the former exclusion reflects the legislative purpose of encouraging domestic rather than foreign investment, and the latter no doubt rests on the premise that no investment incentive is needed for assets that are leased or otherwise made available to governmental agencies. In furtherance of the purpose of the legislation, the emphasis is on newly constructed property; used property is not entirely disqualified, but it is subject to special restrictions and no more than $50,000 of such property may qualify for the credit in any taxable year.

The credit itself is 7 per cent of the taxpayer's "qualified investment," a term that is defined by §46(c) and will ordinarily mean 100 per cent of the cost of qualified property with a useful life of 8 years or more, two thirds of the cost of property with a useful life of 6 to 8 years, and one third of the cost of property with a useful life of 4 to 6 years. In some circumstances, however, the credit is not based on the cost of the property, but on its basis as specially defined. Moreover, regulated public utilities are granted a credit equal to only $\frac{3}{7}$ of the credit otherwise computed, presumably on the theory that the assurance of a fair return on their investment reduces the need for a tax incentive.

If the credit exceeds $25,000 in any year, the taxpayer may be required by §46(a)(2) and §46(b) to use part or all of the excess as a carryback to an earlier year or as a carryover to a later year rather than utilizing it in the year it arises.

If there is an early disposition of property qualifying for the investment credit (e.g., if property with an estimated useful life of 8 years or more is retired from service in 5 years), the credit is "recaptured" by §47 to the extent of the reduction that would have resulted if the actual life had been used in computing the credit instead of the estimated life. (In the parenthetical example, only one third of the basis would have qualified on the assumption of a 4 to 6 years useful life, instead of the full basis.) The "recapture" takes the form of an additional tax in the year of disposition. A number of events that do not produce taxable income or deductible loss can cause a recapture of the investment credit, e.g., gifts and corporate distributions. Moreover, part or all of the credit may be recaptured even if the taxpayer continues to be the owner of the property, if he transfers it to a predominantly foreign use or uses in a way that would not have qualified for the credit at the outset.

See Wilkinson, The Investment Tax Credit Under the Revenue Act of 1962, 42 Texas L. Rev. 498 (1964).

4. *Special incentives to investment: rapid amortization of war facilities.* A more drastic method of encouraging new investment was in force for defense and war construction dur-

ing World War II. Under §124 of the 1939 Code, the taxpayer was allowed to amortize over a period of 60 months the cost of any plant or equipment that was certified by an appropriate war agency as necessary to national defense. War production facilities could thus be constructed or acquired with assurance that the cost (or such part as was certified for amortization by the agency) could be written off during a period of high profits, and against income that would otherwise be taxed at high rates, even though the facilities might continue to be useful at the end of the 5-year period. See United States v. Allen-Bradley Co., 352 U.S. 302 (1957). A similar provision was enacted in 1950 (§168 of the 1954 Code), which was extensively used during the Korean War. By virtue of a 1957 amendment, §168 was made applicable only to a limited group of "emergency facilities," primarily for research, development, and atomic equipment for the Department of Defense and the Atomic Energy Commission, and its use terminated in 1959. §168(a) and (i). See Report on 5-Year Amortization of Emergency Defense Facilities Under Section 168 of the Internal Revenue Code of 1954, Joint Committee on Internal Revenue Taxation, 84th Cong., 2d Sess. (1956); Schlaifer, Butters, and Hunt, Accelerated Amortization, 29 Harv. Bus. Rev. 113 (May, 1951).

A primitive antecedent of the "recapture" rule for the 1962 investment credit may be found in §1238, providing that the taxpayer's gain on the sale or exchange of property that qualified for rapid amortization under §168 must be reported as ordinary income (rather than as capital gain) to the extent that the rapid amortization exceeded the amount that would have been deducted under a normal method of depreciation. For another, and closer parallel, see the 1962 and 1964 rules for recapture of "excessive" depreciation under §1245 and §1250, infra pages 561-563.

5. *Useful life.* As stated in the extract from Bulletin F, supra page 292, depreciation is ordinarily dependent upon the "expected useful life" of the depreciable property. (A special problem, arising when the taxpayer customarily disposes of depreciable property substantially before the expiration of its useful life, is considered in Massey Motors, Inc. v. United States, infra p. 300). As a guide to taxpayers and internal revenue agents, Bulletin F itself contained estimates of the useful lives of a large number of classes of property used in many industries; although not binding, these estimates tended to be widely used because they offered a method of avoiding arguments over what at best was only an informed guess about the future. The estimates in Bulletin F were widely criticized, however, as outmoded in an industrial society in which technology changes more rapidly than when the estimates were compiled.

In 1962, the Internal Revenue Service promulgated Rev. Proc. 62-21, 1962-2 C.B. 418, drastically revising the useful lives to be recognized as normal hereafter. The new "guidelines," which unlike Bulletin F apply to broad classes of equipment (e.g., office equipment regardless of industry, all equipment used in providing personal services, all equipment in manufacturing plastic products, etc.), are 30 to 40 per cent shorter on the average than those of Bulletin F. The taxpayer is permitted to use the new guidelines for a period of three years as a matter of right; thereafter, they are to be accepted "unless there are clear indications that the taxpayer's replacement practices do not conform with the depreciation claimed and are not even showing a trend in that direction." Revenue Procedure 62-21 provides an objective method (the "reserve ratio") of establishing that continued use of the new lives, or the adoption of shorter lives, is proper — in essence, the reserve ratio measures the relationship between the lives used by the taxpayer in claiming depreciation and the extent to which he is in fact replacing the depreciable equipment, and it includes a margin of tolerance to permit the depreciation to be taken as much as 20 per cent faster than equipment is replaced.

For more on the 1962 guidelines, see Goldstein, Developments in Tax Depreciation and Related Areas, 49 Va. L. Rev. 411 (1963).

Taxpayers are not required to use the 1962 guidelines; shorter lives are permissible if they can be justified, and longer lives are equally permissible if the facts warrant. For the procedures applicable in reviewing depreciation deductions claimed by taxpayers who choose not to avail themselves of the 1962 guidelines, see Rev. Ruls. 90 and 91, 1953-1 C.B. 43 and 44. These pre-1962 procedures are also applicable to assets depreciated under methods that do not measure the asset's life in terms of years, such as the unit-of-production method (Bulletin F, supra) and the "income forecast" method sanctioned for television films by Rev. Rul. 60-358, 1960-2 C.B. 68 (entire income to be derived from film

is estimated in advance, and appropriate fraction of the cost is deducted each year as income is realized).

See also §167(d), added by the 1954 Code, permitting the government and the taxpayer to enter into written agreements relating to the useful life and rate of depreciation of any property, which "shall be binding on both the taxpayer and the Secretary in the absence of facts or circumstances not taken into consideration in the adoption of such agreement."

6. *Salvage value.* The amount to be depreciated over the asset's useful life is not necessarily its cost (or other basis), but the difference between that amount and its estimated salvage value. See page 305 infra.

7. *Changes in asset's useful life, salvage value, or basis.* For the adjustments that are required if the asset's useful life or salvage value are re-estimated, or if an error in the determination of its basis is corrected, see page 453 infra.

8. *Extraordinary obsolescence.* Section 167(a) speaks of a reasonable allowance for the exhaustion of property, "including a reasonable allowance for obsolescence." Since the useful life of depreciable property depends on "the normal progress of the art, economic changes, inventions and current developments within the industry and the taxpayer's trade or business," as well as on the property's physical characteristics, the deduction for depreciation includes a built-in allowance for so-called "normal obsolescence." Regs. §1.167(a)-1(b) and §1.167(a)-9; see also the discussion in Bulletin F, supra. For an example, see Adda, Inc. v. Commissioner, 9 T.C. 199 (1947), where the taxpayer was permitted to depreciate a building in Times Square, New York City, over a period of 21 years, although its physical life would be much longer, because "we think it reasonable under the evidence to determine that, within a period of 21 years . . . the present building will be removed and a much taller one erected that will produce revenue more in keeping with the value of the lot."

Although Regs. §1.167(a)-9 provides that the originally estimated useful life of an asset may be reduced on a showing that obsolescence is proceeding more rapidly than had been predicted, taxpayers have not been very successful in establishing a right to such special or extraordinary obsolescence. See, for example, Southeastern Building Corp. v. Commissioner, 148 F.2d 879 (5th Cir. 1945). A deduction was allowed in Hazeltine Corp. v. Commissioner, 89 F.2d 513 (3d Cir. 1937), upon a showing that certain patents had "ceased to have any further practical utility or substantial earning power" prior to the end of their legal lives, by reason of a change in the art. What if the patents continued to have minor value by protecting the taxpayer's monopoly in manufacturing repair parts for equipment, although new equipment was no longer being manufactured because of technological changes? Is there any justification for demanding a very high degree of proof, or even of insisting upon total loss of utility, as a condition to the allowance for "extraordinary obsolescence" when deductions for "normal obsolescence" are granted upon less proof? See generally Green, What Deductions for Obsolescence? 9 N.Y.U. Inst. on Fed. Taxation 701 (1951); Keller St. Development Co. v. Commissioner, 323 F.2d 166 (9th Cir. 1963).

9. *Differences between tax returns and financial statements in respect of depreciation.* If a business depreciates its assets for income tax purposes faster than it depreciates them in financial statements to shareholders (or, in the case of regulated industries, in financial statements prepared for rate-making agencies), its "tax return income" will be lower than its "financial statement income" in early years, but higher in later years. For this reason, the Securities and Exchange Commission has expressed the view that if the amounts are material, investors may be misled: in the early years, when "financial statement income" is high but income tax liabilities low, investors may become too optimistic about the company's financial position, and they will have a rude awakening in later years, when the income tax liabilities will be greater than the "financial statement income" anticipated for those years would seem to warrant. The SEC has announced that the proper method of reflecting this disparity is by charging income in the early years with the tax reduction resulting from the accelerated depreciation method used for tax purposes, and restoring this amount to income in the later years. Securities Act of 1933, Release No. 4191 (Feb. 29, 1960); see also Securities Act Release No. 4574 (Jan. 10, 1963) (re accounting for investment credit); Dean and Harriss, Railroad Accounting Under the New Depreciation Guidelines and Investment Tax Credit, 1963 Accounting Rev. 230.

For the effect of accelerated depreciation on the rates charged by public utilities, see

Swiren, Accelerated Depreciation Tax Benefits in Utility Rate Making, 28 U. of Chi. L. Rev. 629 (1961); Federal Power Commission, Alabama-Tennessee Natural Gas Co. (Op. No. 417, 1964).

10. *Depreciation based on replacement cost.* In recent years, especially since the end of World War II, there have been a number of proposals for acknowledging in corporate financial statements that depreciation reserves based upon cost are inadequate to cover the replacement cost of equipment and plant as they are retired or scrapped. One method is to make an appropriation of earned surplus to a reserve for the excess of replacement cost over depreciation reserves based on cost. Another, more controversial, is to increase the depreciation deductions themselves, thus reflecting a smaller earned income in reports to stockholders, employees, government agencies, and the public. The income tax return, however, must still be prepared with depreciation based upon cost, and thus taxable income will exceed the income reported for other purposes. Finally, not surprisingly, it has been urged that taxable income should be adjusted to reflect replacement costs. This drastic proposal is extensively discussed in Brown, Depreciation Adjustments for Price Changes (1952). For a consideration of this and other problems in the relation of depreciation to investment, see Joint Committee on the Economic Report, Factors Affecting Volume and Stability of Private Investment, 81st Cong., 1st Sess. 158-197 (1949).

11. *References.* For the economic significance of the depreciation deduction, see the papers by various authors in 2 Tax Revision Compendium 793-931 (House Ways and Means Committee, 1959), Federal Tax Policy for Economic Growth and Stability 495-545 (Joint Committee on the Economic Report, 1955), and Depreciation and Taxes (Tax Institute, 1959).

MASSEY MOTORS, INC. v. UNITED STATES
364 U.S. 92 (1960)

MR. JUSTICE CLARK delivered the opinion of the Court.

These consolidated cases involve the depreciation allowance for automobiles used in rental and allied service, as claimed under [§167(a)(1)], which permits the deduction for income tax purposes of a "reasonable allowance for the exhaustion, wear and tear . . . of property used in the trade or business." The applicable Treasury Regulations 111, §29.23(l)-1, defines such allowance to be "that amount which should be set aside for the taxable year in accordance with a reasonably consistent plan . . . whereby the aggregate of the amounts so set aside, plus the salvage value, will, at the end of the useful life of the depreciable property, equal the cost or other basis of the property." * The Courts of Appeals have divided on the method of depreciation which is permissible in relation to such assets, and we therefore granted certiorari to resolve this conflict. 361 U.S. 810, 812. We have concluded that the reasonable allowance for depreciation of the property in question used in the taxpayer's business is to be calculated over the estimated useful life of the asset while actually employed by the taxpayer, applying a depreciation base of the cost of the property to the taxpayer less its resale value at the estimated time of disposal.

In No. 143, Commissioner v. R. H. and J. M. Evans, the taxpayers are husband and wife. In 1950 and 1951, the husband, Robley Evans, was engaged in the business of leasing new automobiles to Evans U-Drive, Inc., at the rate of $45 per car per month. U-Drive in turn leased from 30% to 40% of the cars to its customers for long terms ranging from 18 to 36 months, while the remainder were rented to the public on a call basis for shorter periods. Robley Evans normally kept in

* The corresponding current provision, Regs. §1.167(a)-1(a), is virtually identical. — ED.

stock a supply of new cars with which to service U-Drive and which he purchased at factory price from local automobile dealers. The latest model cars were required because of the demands of the rental business for a fleet of modern automobiles.

When the U-Drive service had an oversupply of cars that were used on short-term rental, it would return them to the taxpayer and he would sell them, disposing of the oldest and least desirable ones first. Normally the ones so disposed of had been used about 15 months and had been driven an average of 15,000 to 20,000 miles. They were ordinarily in first-class condition. It was likewise customary for the taxpayer to sell the long-term rental cars at the termination of their leases, ordinarily after about 50,000 miles of use. They also were usually in good condition. The taxpayer could have used the cars for a longer period, but customer demand for the latest model cars rendered the older styles of little value to the rental business. Because of this, taxpayer found it more profitable to sell the older cars to used car dealers, jobbers or brokers at current wholesale prices. Taxpayer sold 140 such cars in 1950 and 147 in 1951. On all cars leased to U-Drive, taxpayer claimed on his tax returns depreciation calculated on the basis of an estimated useful life of four years with no residual salvage value. The return for 1950, for example, indicated that each car's cost to taxpayer was around $1,650; after some 15 months' use he sold it for $1,380; he charged depreciation of $515 based on a useful life of four years, without salvage value, which left him a net gain of $245, on which he calculated a capital gains tax. In 1951 the net gain based on the same method of calculation was approximately $350 per car, on which capital gains were computed. The Commissioner denied the depreciation claims, however, on the theory that useful life was not the total economic life of the automobile (i.e., the four years claimed), but only the period it was actually used by the taxpayer in his business; and that salvage value was not junk value but the resale value at the time of disposal. On this basis he estimated the useful life of each car at 17 months and salvage value at $1,325; depreciation was permitted only on the difference between this value and the original cost. The Tax Court accepted the Commissioner's theory but made separate findings. The Court of Appeals reversed, holding that useful life was the total physical or economic life of the automobiles — not the period while useful in the taxpayer's business. 264 F.2d 502.

In No. 141, Massey Motors, Inc. v. United States, the taxpayer, a franchised Chrysler dealer, withdrew from shipments to it a certain number of new cars which were assigned to company officials and employees for use in company business. Other new cars from these shipments were rented to an unaffiliated finance company at a substantial profit.

The cars assigned to company personnel were uniformly sold at the end of 8,000 to 10,000 miles' use or upon receipt of new models, whichever was earlier. The rental cars were sold after 40,000 miles or upon receipt of new models. For the most part, cars assigned to company personnel and the rental cars sold for more than they cost the taxpayer. During 1950 and 1951, the tax years involved here; the profit resulting from sale of company personnel cars was $11,272.80 and from rental cars, $525.84. The taxpayer calculated depreciation on the same theory as did taxpayer Evans, computing the gains on the sales at capital gain rates with a basis of cost less depreciation. The Commissioner disallowed the depreciation claimed. After paying the tax and being denied a refund, the taxpayer filed this suit. The trial court decided against the Commissioner. The Court of Appeals for the Fifth Circuit, however, reversed, sustaining the Commissioner's views as to the meaning of useful life and salvage value. 264 F.2d 552.

First, it may be well to orient ourselves. The Commissioner admits that the

automobiles involved here are, for tax purposes, depreciable assets rather than ordinary stock in trade. Such assets, employed from day to day in business, generally decrease in utility and value as they are used. It was the design of the Congress to permit the taxpayer to recover, tax free, the total cost to him of such capital assets; hence it recognized that this decrease in value — depreciation — was a legitimate tax deduction as business expense. It was the purpose of [§167(a)] and the regulations to make a meaningful allocation of this cost to the tax periods benefitted by the use of the asset. In practical life, however, business concerns do not usually know how long an asset will be of profitable use to them or how long it may be utilized until no longer capable of functioning. But, for the most part, such assets are used for their entire economic life, and the depreciation base in such cases has long been recognized as the number of years the asset is expected to function profitably in use. The asset being of no further use at the end of such period, its salvage value, if anything, is only as scrap.

Some assets, however, are not acquired with intent to be employed in the business for their full economic life. It is this type of asset, where the experience of the taxpayers clearly indicates a utilization of the asset for a substantially shorter period than its full economic life, that we are concerned with in these cases. Admittedly, the automobiles are not retained by the taxpayers for their full economic life and, concededly, they do have substantial salvage, resale or second-hand value. Moreover, the application of the full-economic-life formula to taxpayers' businesses here results in the receipt of substantial "profits" from the resale or "salvage" of the automobiles, which contradicts the usual application of the full-economic-life concept. There, the salvage value, if anything, is ordinarily nominal. Furthermore, the "profits" of the taxpayers here are capital gains and incur no more than a 25% tax rate.* The depreciation, however, is deducted from ordinary income. By so translating the statute and the regulations, the taxpayers are able, through the deduction of this depreciation from ordinary income, to convert the inflated amounts from income taxable at ordinary rates to that taxable at the substantially lower capital gains rates. This, we believe, was not in the design of Congress.

It appears that the governing statute has at no time defined the terms "useful life" and "salvage value." In the original Act, Congress did provide that a reasonable allowance would be permitted for "wear and tear of property *arising out of its use or employment in the business.*" (Emphasis added.) Act of Oct. 3, 1913, 38 Stat. 167. This language, particularly that emphasized above, may be fairly construed to mean that the wear and tear to the property must arise from its use *in the business* of the taxpayer — i.e., useful life is measured by the use in a taxpayer's business, not by the full abstract economic life of the asset in any business. In 1918, the language . . . was amended so that the words emphasized above would read "used in the trade or business," §214(a)(8), Revenue Act of 1918, 40 Stat. 1067, and the section carried those words until 1942. Meanwhile, Treas. Reg. 45, Art. 161, was promulgated in 1919 and continued in substantially the same form until 1941. It provided:

> The proper allowance for such depreciation of any property used in the trade or business is that amount which should be set aside for the taxable year in accordance with a consistent plan by which the aggregate of such amounts for the *useful life of the property in the business* will suffice, with the *salvage value, at the end of such useful life* to provide in place of the property its cost. . . . [Emphasis added.]

It, too, may be construed to provide that the use and employment of the property *in the business* relates to the trade or business of the taxpayer — not, as is con-

* See page 306 infra. — ED.

tended, to the type or class of assets subject to depreciation. The latter contention appears to give a strained meaning to the phrase. This might be particularly true of the language in Treasury Regulations 103, promulgated January 29, 1940, under the Internal Revenue Code of 1939. Its §19.23(1)-1 and §19.23(1)-(2) complement each other and seem to advise the taxpayer how to compute depreciation and what property is subject to it. The first section not only describes the proper allowance, but sets out how it is to be computed so that depreciation "plus the salvage value, will, *at the end of the useful life of the property in the business,* equal the cost. . . ." (Emphasis added.) The second section specifically defines the type of assets to which the depreciation allowance is applicable. It may be said that the taxpayers' arguments as to this regulation fail completely, since it not only specifically provides that "useful life" relates to property while used "in the business," but also details the type or class of property included within the allowance. It appears to cut from under the taxpayers the argument that the term "property used in the trade or business" relates to the type or class of assets that are included within the allowance. It would be strange to say that both of these sections of Regulations 103 defined the same thing, viz., the type or class of assets subject to depreciation. On the other hand, the taxpayers point out that Regulations 111, issued in 1942, deleted the words "property in the business" from §19.23(1)-1 and substituted the term "depreciable property." This might, as taxpayers claim, establish that the phrase "property used in the trade or business" merely referred to the type of property involved. Certainly when considered in isolation, this appears to be true. But the "depreciable property" phrase does refer back to the earlier identical language, still remaining in the section, of "property used in the trade or business." It does appear, however, as the Court of Appeals in No. 141, *Massey,* held, that this substitution was made because Congress expanded the depreciation allowance provision . . . to include property held for the production of income.* The change in the Regulations only conformed it to this amendment of the basic statute.

It is true, as taxpayers contend and as we have indicated, that the language of the statute and the regulations as we have heretofore traced them may not be precise and unambiguous as to the term "useful life." It may be that the administrative practice with regard thereto may not be pointed to as an example of clarity, and that in some cases the Commissioner has acquiesced in inconsistent holdings. But from the promulgation of the first regulation in 1919, he has made it clear that salvage had some value and that it was to be considered as something other than zero in the depreciation equation. In fact many of the cases cited by the parties involved controversies over the actual value of salvage, not as scrap but on resale. The consistency of the Commissioner's position in this regard is evidenced by the fact that the definition of salvage as now incorporated in the regulations as identical with that claimed as least since 1941. In the light of this, it appears that the struggle over the term "useful life" takes on less practical significance, for, if salvage is the resale value and a deduction of this amount from cost is required, the dollar-wise importance to the taxpayer of the breadth in years of "useful life" is diminished. It is only when he can successfully claim that salvage means junk and has no value that an interpretation of "useful life" as the functional, economic, physical life of the automobile brings money to his pocket. Moreover, in the consideration of the appropriate interpretation of the term, it must be admitted that there is administrative practice and judicial decision in its favor, as we shall point out.† Furthermore, as we have said, Congress intended by the de-

* By the enactment in 1942 of what is now §167(a)(2), parallel to the enactment of §212(1) and (2). — ED.

† The Court's account of the administrative practice and its citation of cases are omitted. — ED.

preciation allowance not to make taxpayers a profit thereby, but merely to protect them from a loss. The concept is, as taxpayers say, but an accounting one and, we add, should not be exchangeable in the market place. Accuracy in accounting requires that correct tabulations, not artificial ones, be used. Certainly it is neither accurate nor correct to carry in the depreciation equation a value of nothing as salvage on the resale of the automobiles, when the taxpayers actually received substantial sums therefor. On balance, therefore, it appears clear that the weight of both fairness and argument is with the Commissioner. . . .

Finally, it is the primary purpose of depreciation accounting to further the integrity of periodic income statements by making a meaningful allocation of the cost entailed in the use (excluding maintenance expense) of the asset to the periods to which it contributes. This accounting system has had the approval of this Court since United States v. Ludey, 274 U.S. 295, 301 (1927), when Mr. Justice Brandeis said, "The theory underlying this allowance for depreciation is that by using up the plant, a gradual sale is made of it." The analogy applies equally to automobiles. Likewise in Detroit Edison Co. v. Commissioner, 319 U.S. 98, 101 (1943), this Court said:

> The end and purpose of it all [depreciation accounting] is to approximate and reflect the financial consequences to the taxpayer of the subtle effects of time and use on the value of his capital assets. For this purpose it is sound accounting practice annually to accrue . . . an amount which at the time it is retired will with its salvage value replace the original investment therein.

Obviously a meaningful annual accrual requires an accurate estimation of how much the depreciation will total. The failure to take into account a known estimate of salvage value prevents this, since it will result in an understatement of income during the years the asset is employed and an overstatement in the year of its disposition. The practice has therefore grown up of subtracting salvage value from the purchase price to determine the depreciation base. On the other hand, to calculate arbitrarily the expected total expense entailed by the asset on the false assumption that the asset will be held until it has no value is to invite an erroneous depreciation base and depreciation rate, which may result in either an over- or an under-depreciation during the period of use. If the depreciation rate and base turn out to reflect the actual cost of employing the asset, it will be by accident only. The likelihood of presenting an inaccurate picture of yearly income from operations is particularly offensive where, as here, the taxpayers stoutly maintain that they are only in the business of renting and leasing automobiles, not of selling them.* The alternative is to estimate the period the asset will be held in the business and the price that will be received for it on retirement. Of course, there is a risk of error in such projections, but prediction is the very essence of depreciation accounting. Besides, the possibility of error is significantly less where probabilities rather than accidents are relied upon to produce what is hoped to be an accurate estimation of the expense involved in utilizing the asset. Moreover, under a system where the real salvage price and actual duration of use are relevant, to further insure a correct depreciation base in the years after a mistake has been discovered, adjustments may be made when it appears that a miscalculation has been made.

Accounting for financial management and accounting for federal income tax purposes both focus on the need for an accurate determination of the net income from operations of a given business for a fiscal period. The approach taken by

* In claiming that their profit on selling the vehicles was capital gain, the taxpayers must establish that they were held for rental, and not for sale to customers in the ordinary course of business. (See page 559 infra.) — Ed.

the Commissioner computes depreciation expense in a manner which is far more likely to reflect correctly the actual cost over the years in which the asset is employed in the business.

We therefore conclude that the Congress intended that the taxpayer should, under the allowance for depreciation, recover only the cost of the asset less the estimated salvage, resale or second-hand value. This requires that the useful life of the asset be related to the period for which it may reasonably be expected to be employed in the taxpayer's business. Likewise salvage value must include estimated resale or second-hand value. It follows that No. 141, Massey Motors, Inc. v. United States, must be affirmed, and No. 143, Commissioner v. R. H. and J. M. Evans, reversed.

It is so ordered.

[Mr. Justice Harlan, joined by Mr. Justice Whittaker, Mr. Justice Stewart, and Mr. Justice Douglas, dissented. They found the statute and Regulations inconclusive, and their examination of the Commissioner's position as reflected in his stand in litigated cases led them to the conclusion that his "pre-1956 position on 'useful life' was flatly opposed to that which he now takes." Acknowledging that the 1956 position could be properly applied prospectively, they would not allow it to be applied to pre-1956 years.]

NOTE

1. *Salvage value.* After the decision of the Supreme Court, the *Massey Motors* case was remanded to the District Court for a determination of the salvage value of the automobiles. The court held that the retail value of the cars at the time of disposal, not their wholesale value at that time, was controlling, in the light of the taxpayer's practice of selling the cars at retail.

In a companion case, Hertz Corp. v. United States, 364 U.S. 122, the Court held that a taxpayer using the declining balance method of computing depreciation under §167(b)(2) could not depreciate an asset below its salvage value; the taxpayer had contended that the "mathematical residue" that is always left in the declining balance method constitutes a built-in salvage value so that no further computation of salvage value need be made. Mr. Justice Douglas dissented.

In 1962, §167(f) was enacted, to permit the salvage value of personal property with an estimated useful life of 3 years or more to be reduced, if the taxpayer chooses, by an amount not in excess of 10 per cent of the asset's basis. Under this provision, salvage value can be disregarded if it amounts to 10 per cent of the asset's basis or less; this simplifies the computation of the depreciation deduction, and slightly increases the amount that may be deducted, at the cost of increasing the gain (or decreasing the loss) when the property is disposed of.

2. *Relation of depreciation to gain on disposition of depreciable assets.* The corollary of higher depreciation deductions is more gain (or less loss) if the property is disposed of before it is fully depreciated. This is because the property's "adjusted basis" for determining gain or loss on a sale or other disposition is cost less depreciation. Thus if the equipment used as an example in the table of depreciation, supra page 296, was sold at the end of the first year, its adjusted basis would be $1900 if depreciated on a straight line basis, but only $1680 if depreciation had been calculated by the 20 per cent declining balance method. A sale for $1950 would, therefore, produce income of $50 or $270 respectively, while a sale at $1500 would produce loss of $400 or $180.

A bird in the hand is not necessarily better than two in the bush. Can a taxpayer, recognizing this, forgo current depreciation deductions in order to retain a higher "adjusted basis" against the year when the asset is ultimately sold? No, because in computing the "adjusted basis" he must reduce his cost by any depreciation that was "allowable" in past years, whether he took it or not. §1016(a)(2). Moreover, if he took more than he was entitled to, that too must be applied against the cost of the asset unless the excessive depreciation was of no "tax benefit" when taken. This last qualification

is a legislative overruling of Virginian Hotel Corp. v. Helvering, 319 U.S. 523 (1943); see §1016(a)(2)(A) and (B) and §1020.

One of the factors of importance in this area, the full significance of which will appear more clearly after Chapter 6 has been studied, is that depreciation deductions are applied against ordinary income, whereas the countervailing profit on a sale (assuming the property is sold for more than its "adjusted basis") may be taxed as capital gain, at a more lenient rate. Thus the taxpayer may be tempted to "trade" deductions against ordinary income for capital gain even when it is recognized that high current depreciation will have the effect of increasing the profit (or decreasing the loss) on disposition of the property. This opportunity of obtaining ordinary deductions at the cost of later capital gain was fundamental to the *Massey Motors* case, but since 1962 it has been drastically restricted by the enactment of §1245. This provision (discussed further infra p. 561) provides that gain on a sale of depreciable personal property must be reported as ordinary income, rather than as capital gain, to the extent of the post-1961 depreciation deductions attributable to the property. Because excessive depreciation will thus be "recaptured" as ordinary income, the Internal Revenue Service was willing to promulgate the shortened new guidelines for depreciable property described supra page 298; and the enactment in 1962 of §167(f) (allowing salvage value to be reduced by an amount up to 10 per cent of the property's basis) should also be viewed as an outgrowth of §1245.

3. *Denial of depreciation in year asset is sold.* Is there any justification for a depreciation deduction in the year depreciable property is sold, if the sales price equals or exceeds its adjusted basis? A deduction was denied in Cohn v. United States, 259 F.2d 371 (6th Cir. 1958), where the assets were sold near the end of their useful life and no salvage value had been taken into account and in Fribourg Navigation Co., Inc. v. Commissioner, ¶62,290 P-H Memo T.C., depreciation for the year of sale was denied even though reasonable salvage values had been used and the sales price had been inflated by unforeseen circumstances; but see Motorlease Corp. v. United States, 215 F. Supp. 356 (D. Conn. 1963) (depreciation allowed in year of sale, where reasonable useful life and salvage value were used in computing deduction). Does *Massey Motors* shed any light on this problem?

WORLD PUBLISHING CO. v. COMMISSIONER

299 F.2d 614 (8th Cir. 1962)

Before VOGEL, VAN OOSTERHOUT and BLACKMUN, Circuit Judges.

BLACKMUN, Circuit Judge.

This is a petition for review of a decision of the Tax Court approving the Commissioner's determination of deficiencies in the taxpayer's income taxes for the respective calendar years 1952, 1953 and 1954. 35 T.C. 7. The taxpayer, World Publishing Company, is a Nebraska corporation on the accrual basis. Its taxable year is the calendar year. It is engaged primarily in the newspaper business and it publishes the Omaha World Herald.

The issue before us concerns the taxpayer's right to a deduction for depreciation of a portion of the price it paid when it purchased improved real estate subject to an outstanding lease to the tenant who had built the building on the property.

The facts are not in dispute: On June 29, 1928, George Warren Smith, Inc., was the owner of two mid-block lots in downtown Omaha. On that date Smith leased those lots to Farnam Realty Corporation. The lease was for a term of fifty years from July 1, 1928, and called for annual rentals averaging $28,500 but varying between $25,000 and $32,500 for specified decades. It required Farnam immediately to construct a "six (6) story, or more, and basement building" on the property at a cost of not less than $250,000. Farnam complied with this requirement.

On January 4, 1950, the taxpayer purchased as an investment Smith's entire interest in the property, including the lease, for $700,000. The deed recited that

it was subject to the lease to Farnam. The parties have stipulated that "the remaining useful life of the building in January, 1950, was not greater than the unexpired term of the lease."

In its income tax return for each of the years in question the taxpayer asserted a deduction of $10,547.92 for "Depreciation and Amortization." This amount was determined by spreading $300,000 (constituting that part of its purchase price which the taxpayer claimed was allocable to the building) over the remaining years of the still outstanding lease. The Commissioner disallowed this deduction.

Certain other provisions of the lease of June 29, 1928, from Smith, as lessor, to Farnam, as lessee, may be pertinent.

1. The parties agreed that "Any and all buildings erected on the said premises under covenants by, or permission granted, to the Lessee shall, at and upon the construction thereof, be and become a part of the realty and upon the termination of this lease, by the expiration of its term or by default or otherwise, any and all such buildings and improvements shall pass to and remain the property of the Lessor."

2. The lessee agreed to pay all taxes and assessments upon the land or the improvements or "which the Lessor shall be required to pay by reason of or on account of its interest in said land or improvements, or its interest in or under this lease, except estate, inheritance, and income taxes."

3. The lessee agreed, before beginning construction of the building, to submit all plans and specifications to the lessor for approval. The lessor could reject or amend these.

4. The lessee agreed to post security with a named Omaha bank for the construction of the building, and the lessor possessed rights, in the event of default in the construction, to call upon that security.

5. The lessee agreed at its expense to procure fire and tornado insurance for the full insurable value of the improvements, with the lessor having the right to attach any mortgage clause its mortgagee might require; to buy plate glass and explosion insurance "in such form as to furnish protection to the Lessor and Lessee"; to buy workmen's compensation insurance "for the protection of the Lessor"; and to buy upon demand "such other reasonable insurance protection as the Lessor may require." The lessee agreed to carry rental interruption insurance in its own favor.

6. The lessee agreed, in case of damage or destruction of the building or any part thereof during the lease, to repair and restore it; it was then entitled to the insurance collected. If, however, the damage or destruction occurred on or after noon of July 1, 1958, the lessee's obligation to restore, in the absence of default in its insurance covenants, was limited to the insurance received.

7. The lessee agreed that upon the completion of the building it "shall not be altered in any manner whatsoever" without the written consent of the lessor, except by governmental authority and except that the lessee could make at its own expense alterations and improvements "in a first-class manner" without such consent if the cost did not exceed $10,000. It was stated that it was "the intention that the building shall at all times be kept in such physical condition that excessive depreciation shall not occur."

8. The lessee agreed at its own cost to maintain the building, the premises and the fixtures in good condition and repair; to permit inspection by the lessor; and to permit the lessor to enter the premises and effect repairs when the lessee failed to keep its repair covenant.

9. The lessee agreed that the lessor could, up to a stated percentage of the

ity, a line of cases, including one of our own, concerning the situation where a taxpayer, through *inheritance* or *devise* from a deceased lessor, comes into the ownership of tenant-improved property subject to an outstanding lease: First Nat. Bank of Kansas City v. Nee, 8 Cir., 1951, 190 F.2d 61, with Judge Collet concurring in the result; Goelet v. United States, 2 Cir., 1959, 266 F.2d 881; Schubert v. Commissioner, 4 Cir., 1961, 286 F.2d 573, cert. den. 366 U.S. 960; Friend v. Commissioner, 7 Cir., 1941, 119 F.2d 959, cert. den. 314 U.S. 673; Commissioner v. Moore, 9 Cir., 1953, 207 F.2d 265, cert. den. 347 U.S. 942; Commissioner v. Pearson, 5 Cir., 1951, 188 F.2d 72, cert. den. 342 U.S. 861; and Albert L. Rowan, 1954, 22 T.C. 865. To the same effect is Rev. Rul. 55-89, 1955-1 C.B. 284.

The theories which find expression in these cases are (a) that the decedent had — and his successor has — no investment in the wasting asset and (b) that the heir or devisee could acquire no different interest than was possessed by the decedent. "The major thrust of the statute is toward an allowance for recovery of investment in a wasting asset." *Goelet* (District Court), p. 307 of 161 F. Supp. "Appellants fail to show how a depreciable interest in the building was supplied to them . . ." *Goelet* (2 Cir.), p. 882 of 266 F.2d. "All she [the taxpayer] could acquire by inheritance from her mother, the testatrix, was such interest as her mother had to devise." *Schubert*, p. 579 of 286 F.2d.

Are these inheritance-or-devise cases cited by the Commissioner proper or helpful precedent for a situation involving acquisition by purchase? In determining this, some comments about the death cases are perhaps in order:

A. They have provoked substantial criticism. See Rabkin and Johnson, Federal Income, Gift and Estate Taxation, Vol. 2, §45.09(2) and (3); Lurie, Depreciating Structures Bought Under Long Leases: An Adventure in Blunderland, New York University 18th Annual Institute on Federal Taxation, 1960, pp. 43, 60-62; Rubin, Depreciation of Property Purchased Subject to a Lease, 65 Harvard Law Review, 1952, pp. 1134, 1137, 1145-1146; dissenting opinion of Judge Opper, joined by Judge Drennen, in *Schubert*, supra, pp. 1055, et seq., of 33 T.C. See Mertens, The Law of Federal Income Taxation, Vol. 4, §23.90, pp. 187-188.

B. The facts of certain of these cases possess some significance. In *Goelet* the district court emphasized that, although the taxpayer by the terms of the lease may have had "technical legal title to the building," this was not determinative but "beneficial ownership" was. In *Schubert* it appears from the majority opinion of the Tax Court, p. 1049 of 33 T.C., that under the lease the improvement was to become the property of the lessor only "upon the termination of the lease." In *Friend*, too, it is clear from the Board's opinion, p. 771 of 40 B.T.A., that the taxpayers "did not own the buildings" and did not "even claim that they are entitled to an allowance for depreciation in respect of the buildings." In *Pearson*, *Moore*, and *Nee* the appellate courts all concluded that no part of the estate tax valuation, which constituted basis, was attributable to the improvements and that the taxpayer's case, depending, as it did, on a basis to depreciate, consequently failed. And in our *Nee* case we concluded that the rentals were attributable solely to the land; that the building was not held by the testamentary trustee for the production of income; that the tenant had the right to remove the building and replace it; and that because of this right the title to the building may have been in the lessee (the trial court had held specifically that under the terms of the lease title to the building was in the lessee: D.C., 85 F. Supp. 840, 843; D.C., 92 F. Supp. 328, 329).

C. An alternative and forceful argument made by the taxpayer in some of these cases is that he is entitled to claim a deduction for amortization of the "premium value" of the lease. The argument was rejected in *Schubert* (4 Cir

ground value, borrow money on the security of the property and secure it by mortgages or deeds of trust "which shall constitute a lien on the grounds and buildings prior to the claim of the Lessee" or its assigns.

10. The lessee had the right to assign, if it was not in default, but was not thereby released from its obligations under the lease unless the lessor so consented in writing.

11. The lessee agreed that at the termination of the lease it would "surrender the possession of the demised premises to the Lessor with the buildings and improvements thereon without delay."

The taxpayer in fact has received and retained the insurance policies required by the lease. These are issued in the name of the taxpayer as the insured.

There is substantial, and uncontradicted, evidence in the record to support the $300,000 figure. A qualified appraiser testified that at the time of purchase the fair and reasonable value of the ground alone was $400,000 and the fair and reasonable value of the building alone was around $300,000. These valuation allocations correspond, too, with the full valuations thereof used for real estate assessment purposes at the time of the purchase. The witness also testified that in his opinion the probable value of the land alone at the expiration of the lease in 1978 would be approximately $400,000.

On these facts, uninfluenced by any decided lease cases, it would seem clearly to follow that the taxpayer is entitled to a deduction, under §167(a), for depreciation of the $300,000 portion of its 1950 purchase price allocable to the improvements on the real estate in question. See Detroit Edison Co. v. Commissioner, 1943, 319 U.S. 98, 101. The building, as well as the land, was acquired and held by the taxpayer "for the production of income." The taxpayer's interest was one acquired by purchase and was not in any sense a derivative right acquired without investment on its part. By the stipulation, the building is a wasting asset and its complete exhaustion will have been effected before the end of the lease term. The taxpayer's spreading of the wasting portion of its purchase price over the entire remaining lease term by the straight-line method approximated the minimal deduction for the taxpayer.

Furthermore, for what it may be worth, the lessor, and consequently the taxpayer, in spite of a contrary suggestion at the trial by the Commissioner's counsel, clearly owned the building in more than a bare-legal-title sense. The lease recites that all buildings erected on the premises "shall, *at and upon the construction thereof, be and become* a part of the realty and upon the termination of this lease . . . shall pass to and *remain* the property of the Lessor." (Emphasis supplied.) Consistent with this are other provisions of the lease: the reference in the tax clause to the lessor's interest in the "land or improvements"; the lessor's right to amend and even reject plans and specifications for the building; the insurance protection afforded the lessor and its being named as insured; the lessor's right to subject the improvements as well as the ground to a mortgage lien; and the lessee's inability to alter the completed building beyond a $10,000 cost without the lessor's approval. . . . This is consistent, too, with the general law, evidently recognized in Nebraska, to the effect that, unless provided otherwise by contract, a building permanently affixed to the land becomes a part of it. . . .

But the Commissioner — and the Tax Court has agreed with him — has taken the position that the taxpayer here acquired no depreciable interest in the property; that what it acquired was the land, not a wasting asset, for which it received ground rental income; that the taxpayer has not shown that it held any interest in the building for the production of income; that it acquired only such interest as its grantor Smith had; and that Smith had no depreciable interest in the lessee-constructed building. He strenuously urges, as supporting author-

and Tax Court), Friend (Tax Court) and Moore (Tax Court); see Martha R. Peters, 1945, 4 T.C. 1236, 1241-1242. It prevailed, however, in *Moore* (9 Cir.) and necessarily by the Tax Court on remand in that case. T.C. Memo. 1955-219. It was avoided in *Goelet,* on the ground the point was not preserved below or in the administrative proceedings, and in Frieda Bernstein, 1954, 22 T.C. 1146, 1151-1152, affirmed, 2 Cir., 230 F.2d 603, on the ground of failure of proof. *Moore* demonstrates, however, that one circuit has afforded relief to a taxpayer who found himself with a newly acquired interest in property with a newly acquired basis which had no rational relationship to land value alone. This alternative argument was mentioned by the Tax Court in the present case and was again rejected; it is not particularly urged by the taxpayer on this appeal.

D. The cases themselves intimate, though perhaps by indirection, that the purchase situation is distinguishable. Thus, in *Friend,* the Seventh Circuit, at p. 960 of 119 F.2d, describes the testamentary trustees' position there as though "they have the same right to amortize such cost as if the purchase had been made for cash" and, on p. 961 of 119 F.2d, denies a construction of the statute that would "place the petitioners in the position of a purchaser of the leaseholds [together with the reversions] for a valuable consideration." This latter observation was also quoted with approval by the Fourth Circuit in *Schubert,* p. 580 of 286 F.2d. In *Goelet* the district court, at p. 310 of 161 F. Supp., refers to the devisees' attempt to draw an analogy to purchase cases and says "An extension of these decisions to the instant case is not warranted. The crucial distinguishing factor is the payment of a purchase price or the existence of an investment, not present here, to which type of transaction the statute was meant to apply." When the *Friend* case, supra, was in the Board of Tax Appeals, the Board said, p. 771 of 40 B.T.A.:

> Clearly if a taxpayer had invested money in acquiring such right he would be entitled to deduct from the rents received each year an aliquot part of the cost of his investment; for he would be entitled under the same statute to recover back the cost of his investment, without being taxed thereon.

E. Finally, as a collateral comment on the cases, we cannot fail to observe that the deprecation provisions of the Internal Revenue Code draw no distinction between death-acquired property and purchased property. The basis they establish for depreciation is the same as the basis for determining gain. §167(f). The only difference is as to what that basis is. §§1011, 1012 and 1014. Once ascertained, its use, for depreciation purposes, is the same for both inherited and purchased property.

In summary, therefore, one may say of the inheritance-or-devise cases (a) that they are not without substantial criticism; (b) that many of them possess facts, particularly having to do with title and the allocation of basis to the improvement, which provide sources of difficulty and confusion; (c) that there is an alternative argument which has borne fruit in at least one circuit; (d) that the cases themselves intimate that a purchase situation may provide a different result; and (e) that the depreciation statute itself provides no basis for a distinction between the death situation and the purchase situation.

So much for these death cases. The situation before us, however, is that of a purchaser of the lessor's interest and is not that of the lessor's heir or devisee. No purchase case precisely in point has been found. We therefore start with three established propositions:

1. Where an owner of land erects a building on it and then leases it he is still entitled to recover the cost of the improvement by depreciation deductions. See . . Regs. 1.167(a)-4.

2. Where a lessee makes a capital improvement on leased property he is entitled to recover its cost by appropriate deductions for depreciation or for amortization. Regs. §§1.167(a)-4 and 1.162-11(b)(1) . . .

3. Conversely, in the situation just described, the lessor, having no investment in the lessee's improvements, is not entitled to a deduction with respect to them. 4 Mertens, §23.90, where possible exceptions to this rule are noted.

To these may be added the result reached by the death cases cited above. We think, however, that the death cases do not govern the purchase situation. We reach this result because:

A. The taxpayer-purchaser by his purchase of the property has made an investment. He is not concerned with the identity, as between his vendor-lessor and the tenant, of the builder of the building. From this point of view, if he is entitled to the deduction where his vendor-lessor was the builder, he is entitled to a deduction where the tenant was the builder.

B. To allow the purchaser to depreciate in the one situation and to deny him depreciation in the other, especially where, as here, title to the building is in the lessor and then in the purchaser, seems to be illogical, to emphasize a historical fact not participated in or caused by the purchaser and not of any other considered economic consequence to him, and to exhalt form over substance. This would be illustrated by identical buildings, one constructed by the lessor and one by the lessee, on adjoining identical lots, subject to otherwise identical leases, when both improved properties are sold to the taxpayer-purchaser. There seems to be no merit in allowing the taxpayer, as distinguished from the lessor, depreciation on the one but not on the other.

C. It is no answer to say that the lease rentals, averaging $28,500, constitute only ground rent. We are concerned here not with depreciation of rentals, but with depreciation of a portion of this taxpayer's investment in the income producing property he purchased.

D. Whatever may be the proper result in the inheritance or devise situation, as exemplified by our 1951 holding in the *Nee* case, and by the other cases cited above, we are not now willing to extend the philosophy of those cases to the purchase situation of the present litigation.

We regard Millinery Center Building Corporation v. Commissioner, 2 Cir., 1955, 221 F.2d 322, as of particular and helpful significance here. That taxpayer had leased land with an option to renew and, in accordance with the lease, had erected a substantial building on it. Title to the building was in the taxpayer but under the lease it would vest in the lessor at the end of the lease term or the lessor could then compel the taxpayer to remove it. During the lease period the taxpayer fully depreciated the cost of the building. Then it exercised its option to renew. When this was done, it bought the fee. The taxpayer sought to deduct the difference between its purchase price and the then value of the land, as unimproved, as a business expense. The Tax Court disallowed this; it also refused to accept the taxpayer's alternative contentions (a) that the difference should be amortized over the lease term and (b) that it should be depreciated over the remaining useful life of the building. 21 T.C. 817. Six judges dissented on the ground that some part of the purchase price should be allocated to the additional rights the taxpayer acquired in the building and should be recovered through depreciation. On petition for review the Second Circuit reversed on the depreciation issue. It said, p. 324 of 221 F.2d, "A third-party purchaser of such a fee would be entitled to allocate part of its cost to the building and to depreciate it as such." On the taxpayer's petition for certiorari the Supreme Court affirmed. 350 U.S. 456. The Commissioner did not seek review of the allowance of depreciation.

The taxpayer there occupied a position similar to that of the taxpayer here. The only fact differences were the taxpayer's additional posture as lessee and the lease's consequent extinguishment upon the purchase. These differences seem to us, however, of minor import.

That Farnam may have been taking depreciation with respect to its cost in the building need not concern us. Its right so to do is not here at issue. Despite the Ninth Circuit's observation, by way of dictum in the *Moore* case, p. 272 of 207 F.2d, that "A construction of the law to permit not only the lessee (who has a real economic interest) but also the taxpayer here to take depreciation on the same building would be somewhat anomalous," we fail to see the anomaly. What is significant is that each taxpayer has a separate wasting investment which meets the statutory requirements for depreciation. To allow each to recover his own, and separate, investment is not, as is suggested, to permit duplication at the expense of the revenues and is not to permit one taxpayer to depreciate another's investment. That each is concerned with the same building is of no relevance. Farnam has its lessee's cost of the structure and the present taxpayer has the portion of its purchase price attributable to the building. If two taxpayers own undivided interests in improved real estate, each may be entitled to depreciation. The situation here is not dissimilar.

This leaves only the question of proof. We could remand the case with instructions to the Tax Court to take further evidence as to that portion of the taxpayer's purchase price which was properly allocable to the building as distinguished from the land. We feel, however, that on this record the taxpayer has sufficiently established his $300,000 allocation. The Commissioner had his opportunity in the proceedings which have already taken place in the Tax Court to controvert the taxpayer's evidence. This he did not do but chose, instead, to rely on his basic thesis that the taxpayer had no investment which was entitled to depreciation.

The decision of the Tax Court is reversed with directions to recompute the taxpayer's deficiencies in accord with the views herein expressed.

NOTE

1. *What did the taxpayer purchase?* If the land was worth only $400,000 in 1950 and was likely to be worth the same amount on the expiration of the lease (as one witness testified), did the taxpayer pay $700,000 because the building was worth $300,000, or because the rental fixed in the lease was substantially more than would normally be obtainable for land worth only $400,000? If the latter hypothesis explains the taxpayer's willingness to pay $700,000, should the result in the case have been different? What would have been the proper result if the $700,000 had been paid in 1950 by two taxpayers, one of whom acquired the reversion while the other received the right to receive the rental payments due under the 1928 lease? See Rubin, Depreciation of Property Purchased Subject to a Lease, 65 Harv. L. Rev. 1134 (1952); 1220 Realty Co. v. Commissioner, 322 F.2d 495 (6th Cir. 1963).

2. *Allocation of purchase price among depreciable and non-depreciable assets.* If the taxpayer buys improved real estate for a lump sum, his cost must be allocated between the land and the improvements, since the land is not depreciable; this principle is illustrated by the *World Publishing Co.* case; see also Regs. §1.167(a)-5. Since "useful life" refers to the property's economic life rather than to its inherent physical characteristics, however, may the cost of the land be depreciated if the taxpayer can establish that it will become worthless (and will be abandoned because it will not be profitable to pay local property taxes) by reason of predictable economic changes? In Johnson v. Westover, 48 A.F.T.R. 1671 (S.D. Cal. 1955) (not officially reported), the taxpayer was allowed to depreciate part of the price paid for grazing land used for pasturage, on the ground that the

growth was not natural and would have to be renewed by replanting every ten years; but see Shainberg v. Commissioner, 33 T.C. 241, 252 (1959) (cost of shrubbery in shopping center is non-depreciable, notwithstanding estimated useful life of 10 to 15 years); Rev. Rul. 55-730, 1955-2 C.B. 53 (no depreciation for farm land composed of peat soil, notwithstanding "reliable estimate" that land will subside in 50 years and become worthless by reason of lowering of water level and other technical factors). The cost of orchards and vineyards, canals, drainage facilities, and similar improvements (as distinguished from the land itself), however, may be depreciated if a limited useful life can be established. When such improvements are made to property held for sale to customers (e.g., sewers, roads, and sidewalks installed by a dealer in subdivided residential property), depreciation is barred because the property is not used in the taxpayer's trade or business or held for the production of income within the meaning of §167(a)(1) and (2); see also Regs. §1.167(a)-2 (inventory property and stock in trade not depreciable); Cooper v. Commissioner, 31 T.C. 1155 (1959).

3. *The lessee's allowance for depreciation or amortization.* Under Regs. §1.167(a)-4 and §1.162-11(b), the lessee is allowed to recover his investment in a building erected at his expense by depreciation deductions if the useful life of the building equals or is shorter than the remaining period of the lease, and by deductions under §162 ("amortization") if the building's life exceeds the remaining period of the lease. If the allowance takes the form of depreciation, the lessee may employ the rapid methods sanctioned by §167(b); amortization, however, is confined to a series of equal annual deductions. Why?

If the lease contains an option to renew exercisable by the lessee, §178(a) provides rules for determining whether the renewal period is to be taken into account in computing the lessee's depreciation or amortization. Section 178(b) goes much further and provides that a lease (whether the lessee has an option to renew or not) shall be treated as having a life at least as long as the useful life of the building if the lessor and lessee are "related persons" (as defined). What is the reason for this provision? Section 178(c) contains a final rule to govern this area: if neither §178(a) nor §178(b) applies, the original term of the lease is controlling unless it has in fact been renewed or there is a "reasonable certainty" that it will be renewed. See Donaldson, Section 178 and Related Problems of Amortizing Leasehold Costs, 20 N.Y.U. Inst. on Fed. Taxation 537 (1962).

NACHMAN v. COMMISSIONER

191 F.2d 934 (5th Cir. 1951)

Before HUTCHESON, Chief Judge, and HOLMES and STRUM, Circuit Judges.

STRUM, Circuit Judge.

These are two consolidated petitions to review decisions of the Tax Court which modified as to amount, but otherwise sustained, deficiency assessments in income taxes entered by the Commissioner of Internal Revenue against petitioners Nachman and Tobias for their fiscal tax year 1944-45.

Desiring to enter the retail liquor business as partners in Jacksonville, Florida, petitioners on April 25, 1944, purchased from one Baker Bryan for $8,000 an existing liquor license, good until September 30, 1944, issued to Bryan by the City of Jacksonville for $750, the fee fixed by ordinance therefor. The difference between the official fee of $750 and the purchase price of $8,000 was a premium which Bryan was enabled to exact from petitioners because these licenses were restricted by law to approximately 76 for the entire City of Jacksonville, all of which were then issued. Many more persons desired them than could obtain them directly from the city, so they were in great demand, even at a premium. These licenses were assignable, and carried with them valuable renewal privileges, as it was the established practice in issuing renewal licenses from year to year to prefer the holders of existing licenses over other applicants. Because of

this known practice, and the limited number of licenses available, persons wishing to enter the liquor business in Jacksonville were willing to pay a substantial premium in order to acquire a license from an existing licensee.

In making their income tax returns for the tax year involved, petitioners deducted as an ordinary and necessary business expense, the entire $8,000 paid for the license. The Commissioner disallowed all except $\frac{5}{12}$th of the $750 annual fee, representing the unexpired portion of the license extending from April 25, 1944, the date of purchase, to September 30, 1944, when it expired. The Commissioner entered a deficiency assessment accordingly. On appeal, the Tax Court held that petitioners were entitled to deduct as ordinary business expense the entire $750 official fee, but no more, and reduced the deficiency accordingly. It is the latter determination by the Tax Court that petitioners bring here for review.

Of course it was necessary for petitioners to have a license before they could commence business. None could be procured directly from the City, as the maximum number allowed by law had already been issued. Like other scarce commodities, they commanded a premium on a seller's market. The license carried with it by established custom, if not by law, a valuable renewal privilege indispensable to petitioners' continuance in business in subsequent years. In purchasing the license, petitioners bought not only the operating right for the current year but also renewal privileges for future years. This privilege, entitling petitioners to preference over non-license holders in the issuance of renewal licenses, was of substantial value, of which the seller and the purchasers of this license were well aware. No one would pay $8,000 for a $750 license having only five months to run, unless the purchaser was reasonably sure it carried with it appurtenant privileges of substantial future value to the purchaser. It was these considerations that prompted petitioner to pay $8,000 for a $750 license, of which only $\frac{5}{12}$ths remained.

Of the $8,000 paid for the license in question, the official cost of issuance, $750, was an ordinary and necessary business expense. The remaining $7,250 was the expenditure of capital in the acquisition of a capital asset reasonably expected to serve petitioners through future years, the cost of which is not deductible as an ordinary expense. . . . The Supreme Court of Florida has recently recognized a liquor license as "property," often having an actual value far in excess of the official fee charged for it. House v. Cotton, 52 So.2d 340.

Petitioners further contend that if the $7,250 in question be regarded as the purchase price of a capital asset and therefore not deductible as ordinary business expense, they are entitled to an amortized depreciation allowance on such capital asset under [§167], and [Treasury Regs. §1.167(a)-3], relating to depreciation of intangible property. Depreciation allowance on intangibles, however, is confined to those definitely limited in duration, such as patents, franchises, copyrights, licenses for fixed periods, and the like, the partial exhaustion of which may be computed with reasonable certainty.

It is clear that the renewal privilege appurtenant to this license extends beyond, and was actually exercised beyond, the taxable year in question. Presumably the petitioners may continue to exercise their renewal privileges as long as they desire, as there is no indication that the City will depart from its custom of renewing existing licenses. How long petitioners may wish to continue exercising their renewal privileges is indeterminable. It might be for one year, or many. It was exercised by them at least as late as 1949. The basis for depreciation of an intangible capital asset is partial exhaustion due to lapse of time. This renewal privilege being of indefinite duration, dependent upon petitioners' wishes as well as upon the City's future course of action, there is no rational basis for prediction as to duration.

Moreover, if petitioners elect to discontinue the exercise of their renewal rights, it is reasonable to assume that they will sell them, just as did their predecessor Bryan, either recouping their investment or sustaining a deductible loss. We conclude therefore, as did the Tax Court, that the renewal privilege incident to the license is a nondepreciable capital asset. Clark Thread Co. v. Commissioner, 3 Cir., 100 F.2d 257.

We have examined the cases cited by the petitioners in support of their contentions, but consider them inapposite here.

Affirmed.

NOTE

1. *Goodwill as a non-depreciable asset.* The court's treatment of the cost of the license is in line with the usual treatment of expenses to acquire goodwill: the theory has been that the goodwill continues to serve the taxpayer as long as he remains in business and, if it is worthless when the business is wound up, its cost will be deductible at that time. Regs. §1.167(a)-3. See generally Note, An Inquiry into the Nature of Goodwill, 53 Colum. L. Rev. 660 (1953). Almost always, of course, the taxpayer would prefer to amortize the capitalized cost of goodwill during his successful years if he were permitted to do so, rather than wait for a large deduction in what may be a loss year. See X-Pando Corp. v. Commissioner, 7 T.C. 48 (1946); Note, 62 Yale L.J. 640 (1953). In Williams v. McGowan, 152 F.2d 570 (2d Cir. 1945), Judge L. Hand, despite the Regulations, adhered to an earlier announced view that goodwill is depreciable. Even if in theory it is depreciable, however, in practice it may be impossible to prove a limited useful life.

For other cases in which depreciation or amortization has been claimed in respect of contracts, see Thrifticheck Service Corp. v. Commissioner, 287 F.2d 1 (2d Cir. 1961) (contracts for the sale of bank checks, having a 5-year term but subject to renewal; price paid by purchaser of business for intangibles held non-depreciable for want of any reasonable estimate of useful life); Johnson v. United States, 7 A.F.T.R.2d 793 (W.D. Tex. 1961) (medical charts purchased from retiring physician held depreciable on showing of limited useful life).

In Indiana Broadcasting Corp. v. Commissioner, 41 T.C. No. 76 (1964), a broadcasting company was allowed to amortize its cost for two CBS network affiliation contracts over a 20-year period, despite the fact that such contracts had a 2-year legal life but were subject to renewal for an indefinite number of 2-year terms, upon a showing of their average life in the industry's experience; Westinghouse Broadcasting Co., Inc. v. Commissioner, 309 F.2d 279 (3d Cir. 1962), cert. denied, 372 U.S. 935 (1963), disallowing depreciation on similar contracts, was distinguished because of the limited amount of evidence there adduced.

If the number of authorized liquor licenses had been greatly increased by the municipal authorities in *Nachman*, so that the value of the taxpayer's license was substantially depressed, would he have been entitled to a deduction under §162 (business expenses) or §165 (losses)? In Reporter Publishing Co. v. Commissioner, 201 F.2d 743 (10th Cir. 1953), the taxpayer, which had paid about $80,000 for a membership in the Associated Press, deducted $30,000 as a loss when the Supreme Court, in Associated Press v. United States, 326 U.S. 1 (1945), held that a provision giving members a veto over the admission of new members in their territory was invalid. The deduction was denied, although the court conceded that the Supreme Court's decision decreased the value of the taxpayer's Associated Press membership:

> It is no doubt much less desirable since the holder thereof may no longer prevent a competitor from having such a membership. But this is a far cry from saying that it is valueless. The present membership still enables the taxpayer to receive all the services therefrom that he received before the decision by the Supreme Court. . . . If the membership had no value or utility, it would be a simple matter to surrender it and eliminate it entirely from the business. Then appellant would be entitled to the claimed deduction. But so long as the membership is being retained and used in the business, in the same way, for the same purposes and with the same beneficial results, it cannot be said to have no value. [201 F.2d at 745.]

2. *Expenditures for advertising.* So long as taxpayers are unable to depreciate goodwill, either because of the blanket disapproval of the Regulations or because of the difficulty of proving a limited life, they will be particularly eager to deduct advertising expenses, for if these expenses are capitalized, they may never be recovered out of income. Much advertising is, of course, devoted to creating goodwill; this is especially true of "institutional advertising" and of publicity for a new trade name or product. It may be noted that for excess profits tax purposes taxpayers were permitted to capitalize certain advertising expenditures (those that "may be regarded as made for the purpose of increasing the taxpayer's earning capacity over a substantial period subsequent to the taxable year in which such expenditure was made," see Regs. 130, §40.451-2(a)) in order to increase the excess profits credit. If this option was exercised, the taxpayer was required to pay the additional income tax that resulted from eliminating the deducted expenditures; see also §263(b); Regs. §1.162-14.

Except in unusual circumstances, the Internal Revenue Service appears to acquiesce in the deduction of advertising expenses, even though capitalizing them might be theoretically more appropriate. I.T. 3581, 1942-2 C.B. 88.

3. *Statutory provisions permitting the deduction or amortization of expenditures for trademarks and trade names, increasing newspaper circulation, organizing corporations, research and development, etc.* Section 177, enacted in 1956, permits certain expenditures in connection with the acquisition or protection of trademarks and trade names to be amortized over a 5-year period. In the absence of this provision, the taxpayer who wished to depreciate such expenditures would find it difficult to prove a limited useful life. See also §173, permitting the deduction of expenditures "to establish, maintain, or increase" the circulation of newspapers, magazines, and other periodicals.

The expenses of organizing a corporation, which would not be deductible because they represent a long-term investment and which would not be depreciable unless the corporation had a limited existence, may now be written off over a period of 5 years or more if the corporation elects to do so. Section 248, added by the 1954 Code. If not amortized under §248, such expenditures can presumably be deducted in the year the corporation dissolves, as formerly. See Bryant Heater Co. v. Commissioner, 231 F.2d 938 (6th Cir. 1956).

A related problem is the treatment of expenditures for research and development. Before 1954, these items were not specifically dealt with by the statute, but the government apparently allowed them to be deducted so long as that was the taxpayer's accounting practice, even when capitalization would have been the theoretically more correct practice. The courts, however, were more inclined to deny a current business deduction if the issue was raised. See Red Star Yeast & Products Co. v. Commissioner, 25 T.C. 321, 341 et seq. (1955). When research and development expenses were capitalized, the investment could be depreciated if allocable to patents or other intangibles of limited life or written off if the project was a failure, but if the investment was represented by industrial "know-how," the taxpayer would probably be unable to prove that it had a limited life. See Hart-Hartlett-Sturtevant Grain Co. v. Commissioner, 182 F.2d 153 (8th Cir. 1950).

Section 174 of the 1954 Code alters the prior law. The taxpayer is granted an option to deduct research or experimental expenditures, even if they would otherwise be chargeable to capital account. The taxpayer also has the right to amortize certain expenditures of this type over a 5-year period. The Regulations state that a taxpayer who does not elect under either §174(a) (to deduct these expenditures) or §174(b) (to defer and amortize them over a 5-year period) must capitalize his research and experimental expenditures. Regs. §1.174-1. Whether the courts will ultimately sanction this view that the enactment of §174 forecloses resort to §162(a) remains to be seen. See Alexander, Research and Experimental Expenditures Under the 1954 Code, 10 Tax L. Rev. 549 (1955); Swanson, Tax Treatment of Research and Experimentation Expenditures, 34 Taxes 541 (1956).

See also §175, allowing farmers to deduct, within specified limits, expenditures for soil and water conservation and the prevention of erosion.

4. *Depreciation of patents and copyrights.* It is usually assumed that patents and copyrights can always be depreciated over their legal lives (or over a shorter period if obsolescence is a factor). If the taxpayer buys a patent having 10 years to run with the well-

founded expectation that within that period he will have attained an impregnable position in the industry, so that the patent will have been just as useful as though its life had been unlimited, however, does the *Nachman* case justify the denial of a deduction for depreciation?

4. *Depletion*

Sections 611 and 613, relating to depletion, re-enact, with some modifications, §23(m) and §114(b) of the 1939 Code.

Although the *Baltic Mining Co.* case, supra page 70, held that an "adequate allowance . . . for the exhaustion of the ore body" resulting from mining operations is not required by the Constitution, Congress has always allowed depletion to be deducted in computing taxable income from mining and other extractive activities.

Originally, the deduction was based upon the cost of the property being depleted, and "cost depletion" is still authorized. When this method is employed, the taxpayer allocates his adjusted basis (cost, value as of March 1, 1913, or basis otherwise determined) equally among the estimated recoverable units and deducts an appropriate amount as the units are sold. Thus, if the cost to be allocated is $100,000 and there are 100,000 recoverable tons, the depletion allowance will be $1 per ton, deducted as the ore is sold. The provision considered in the *Baltic Mining Co.* case, providing that the depletion allowance might not in any circumstances exceed 5 per cent of gross income, was repealed in 1916.

Until 1954, a second authorized method of computing depletion was to use "discovery value" as the amount to be recovered tax-free by the taxpayer. This method, first granted as an incentive to exploration in 1918, permitted the taxpayer to take the fair market value of the mine at the time of discovery or within 30 days thereafter and to allocate this amount (no matter how much it exceeded his cost) among the recoverable units to find the depletion allowance per unit. See Holloway v. Commissioner, 21 T.C. 40 (1953). Although popular at one time, this method was seldom encountered in recent years, because it was not allowed for deposits entitled to percentage depletion, and these constituted an ever-widening group. The 1954 Code made percentage depletion generally available, and discovery value depletion is no longer authorized.

The percentage depletion method ignores both the taxpayer's cost and the number of recoverable units. Instead, the taxpayer is permitted to deduct a given percentage of his gross income (but not to exceed 50 per cent of taxable income calculated before depletion is taken) as a depletion allowance. This method avoids the problem, common to both cost and discovery value depletion, of estimating the number of recoverable units in the deposit in question, an estimate that may be only the wildest of guesses.* For the taxpayer, percentage depletion has the special attraction of increasing the depletion allowance when income rises, which ordinarily is when the deduction will save most in taxes. Even more important, percentage depletion just keeps rolling along, even after the taxpayer's full cost or discovery value has been recovered. This feature is not an essential of percentage depletion, since the taxpayer *could* be restricted in his total lifetime recoveries to the cost or discovery value of the deposit, but the statute does not now contain such a limitation. Percentage depletion is of particular importance in the petroleum industry ($27\frac{1}{2}$ per cent being the figure applicable to oil and gas), but it is now granted, at various rates, to a wide variety of deposits listed in

* Despite this, the taxpayer may have to compute depletion on a cost basis for some purposes (most notably, in calculating a corporation's "earnings and profits," infra p. 646) even though percentage depletion is used in determining taxable income.

§163(b) and, lest any be omitted, to all other minerals, excluding only "soil, sod, dirt, turf, water, or mosses" and "minerals from sea water, the air, or similar inexhaustible sources."

COMMISSIONER v. SOUTHWEST EXPLORATION CO.

350 U.S. 308 (1956)

MR. JUSTICE CLARK delivered the opinion of the Court.

The Southwest Exploration Co., respondent in No. 286, contracted to develop certain oil deposits lying off the coast of California by whipstock drilling from sites located on the property of adjacent upland owners. Southwest agreed to pay to such owners 24½% of the net profits for the use of their land. Both Southwest and the upland owners sought to take the statutory depletion allowance of 27½% on this share of the profits. The Tax Court decided that Southwest was entitled to the depletion allowance, and the Ninth Circuit affirmed. In the other case, the Court of Claims held that one of the upland owners, Huntington Beach Co., respondent in No. 287, was entitled to the depletion allowance on its share of the net income. We granted certiorari in both cases because both the drilling company and the upland owners cannot be entitled to depletion on the same income. We agree with the Court of Claims.[1]

The California State Lands Act of 1938 provided that the State's offshore oil might be extracted only from wells drilled on filled lands or slant drilled from upland drill sites to the submerged oil deposits. Other provisions of the same statute required that "derricks, machinery, and any and all other surface structures, equipment, and appliances" be located only on filled lands or uplands. It was further provided that the state commission might require each prospective bidder for such a state lease to furnish, as a condition precedent to consideration of his bid, satisfactory evidence of "present ability to furnish all necessary sites and rights of way for all operations contemplated under the provisions of the proposed lease."

In 1938 California published notice of its intention to receive bids for the lease of certain oil lands pursuant to this statute. At the time Southwest — a corporation organized in 1933 but completely inactive until the transaction at issue here — did not own, lease, operate or control any of the uplands adjacent to the area of oil deposits. It is agreed that there were no filled lands available. Southwest entered into three agreements with the upland owners, and was granted the right of ingress to and egress from the designated uplands and the right to construct, use and maintain all equipment necessary for drilling on the same lands. The upland owners reserved to themselves the right to give easements or subsurface well crossings in the uplands, except that they would not allow such easements for the purpose of drilling into the offshore oil deposits while Southwest retained an interest granted to it by state easement. Southwest's rights were expressly subject to all rights previously granted by the upland owners. The agreements defined "net profits" and provided that Southwest would pay a total of 24½% of its net profits from extraction and sale of oil to the upland owners. It was also provided that the upland owners did not acquire a share in the lease or oil deposit by virtue of the last agreement and that it was not the intention of the parties to create a partnership relationship.

As a result of these agreements, the upland owners endorsed Southwest's bid

---

[1] In the courts below, the Commissioner took technically inconsistent positions, opposing the depletion allowance in both cases and losing in both. Before this Court the Commissioner urged that depletion be denied the drilling company and allowed to the upland owners on the latter's 24½% of net profits.

for a lease submitted to the State of California. Southwest, as the only bidder, was granted "Easement No. 392" by the State in consideration of the "royalty to be paid, the covenants to be performed, and the conditions to be observed by the Grantee." One such condition was that set out in paragraph (1):

> That each well drilled pursuant to the terms of this agreement shall be slant drilled from the uplands to and into the subsurface of the State lands. Derricks, machinery, and any and all other surface structures, equipment and appliances shall be located only upon the uplands and all surface operations shall be conducted therefrom.

The agreement further provided that, if Southwest should "default in the performance or observance of any of the terms, covenants and stipulations hereof," the State might re-enter, cancel the agreement or close down wells not being operated according to the agreement.

The wells drilled pursuant to this lease have produced oil continuously since 1939. In No. 286, Southwest Exploration Co., the tax years 1939 through 1945 are involved. If Southwest may claim the depletion allowance on the upland owner's share of the profits during this period, its tax liability is reduced by approximately $175,000. In No. 287, Huntington Beach Co., the upland owner is claiming a tax refund of $135,000 for the year 1948 alone.

An allowance for depletion has been recognized in our revenue laws since 1913. It is based on the theory that the extraction of minerals gradually exhausts the capital investment in the mineral deposit. Presently, the depletion allowance is a fixed percentage of gross income which Congress allows to be excluded; this exclusion is designed to permit a recoupment of the owner's capital investment in the minerals so that when the minerals are exhausted, the owner's capital is unimpaired. The present allowance, however, bears little relationship to the capital investment, and the taxpayer is not limited to a recoupment of his original investment. The allowance continues so long as minerals are extracted, and even though no money was actually invested in the deposit. The depletion allowance . . . is solely a matter of congressional grace; it is limited to 27½% of gross income from the property after excluding from gross income "any rents or royalties" paid by the taxpayer with respect to the property [§611(a), §613(a), and §613(b)(1)].

In determining which parties are entitled to depletion on oil and gas income, this Court has relied on two interrelated concepts which were first formulated in Palmer v. Bender, 287 U.S. 551. There, the taxpayer, a lessee of certain oil and gas properties, had transferred his interest in these properties to two oil companies in return for a cash bonus, a future payment to be made "out of one-half of the first oil produced and saved," and an additional royalty of one-eighth of the oil produced and saved. In upholding the taxpayer's right to depletion on all such income, the Court based its decision on the grounds that a taxpayer is entitled to depletion where he has: (1) "acquired, by investment, any interest in the oil in place," and (2) secured by legal relationship "income derived from the extraction of the oil, to which he must look for a return of his capital." 287 U.S., at 557.

These two factors, usually considered together, constitute the requirement of "an economic interest." This Court has found the requisite interest in the oil in place to have been retained by the assignor of an oil lease, Thomas v. Perkins, 301 U.S. 655, the lessor of oil properties for a share of net profits, Kirby Petroleum Co. v. Commissioner, 326 U.S. 599, and the grantor of oil lands considered as an assignor of drilling rights, Burton-Sutton Oil Co. v. Commissioner, 328 U.S. 25. The Court found no such interest in the case of a processor of natural gas who had only contracted to buy gas after extraction, Helvering v. Bankline Oil Co.,

303 U.S. 362, and in the case of a former stockholder who had traded his shares in a corporation which owned oil leases for a share of net income from production of the leased wells, Helvering v. O'Donnell, 303 U.S. 370.

The second factor has been interpreted to mean that the taxpayer must look *solely* to the extraction of oil or gas for a return of his capital, and depletion has been denied where the payments were not dependent on production, Helvering v. Elbe Oil Land Co., 303 U.S. 372, or where payments might have been made from a sale of any part of the fee interest as well as from production. Anderson v. Helvering, 310 U.S. 404. It is not seriously disputed here that this requirement has been met. The problem revolves around the requirement of an interest in the oil in place.

It is to be noted that in each of the prior cases where the taxpayer has had a sufficient economic interest to entitle him to depletion, he has once had at least a fee or leasehold in the oil-producing properties themselves. No prior depletion case decided by this Court has presented a situation analogous to that here, where a fee owner of adjoining lands necessary to the extraction of oil is claiming a depletion allowance.

Southwest contends that there can be no economic interest separate from the right to enter and drill for oil on the land itself. Since the upland owners did not themselves have the right to drill for offshore oil, it is argued that respondent — who has the sole right to drill — has the sole economic interest. It is true that the exclusive right to drill was granted to Southwest, and it is also true that the agreements expressly create no interest in the oil in the upland owners. But the tax law deals in economic realities, not legal abstractions, and upon closer analysis it becomes clear that these factors do not preclude an economic interest in the upland owners.

Southwest's right to drill was clearly a conditional rather than an absolute grant. Without the prior agreements with the upland owners, Southwest could not even have qualified as a bidder for a state lease. Permission to use the upland sites was the express condition precedent to the State's consideration of Southwest's bid, and it was one of the express conditions on which "Easement No. 392" was granted to Southwest. For a default in that condition the State retained the right to re-enter or to cancel the lease. Thus it is seen that the upland owners have played a vital role at each successive stage of the proceedings. Without their participation there could have been no bid, no lease, no wells and no production.

But Southwest contends that the upland owners here contributed merely property which was useful but not necessary to the drilling operation. The facts are to the contrary. State law required that the wells be drilled either on the uplands or on filled lands, and there were no filled lands available. By hindsight Southwest now suggests that it might have constructed a drilling island which might have been considered as filled land under the statute. Then, too, perhaps the State itself might have changed the law or condemned the uplands under existing law. But none of these possibilities occurred. The fact is that the drilling arrangement was achieved and oil produced in the only way that it could have been, consistent with state law and the express requirements of the State's lease.

Recognizing that the law of depletion requires an economic rather than a legal interest in the oil in place, we may proceed to the question of whether the upland owners had such an economic interest here. We find that they did. Proximity to the offshore oil deposits and effect of the state law combined to make the upland owners essential parties to any drilling operations. This controlling position greatly enhanced the value of their land when extraction of oil from the State's offshore fields became a possibility. The owners might have realized this value by selling their interest for a stated sum and no problem of depletion would have

been presented. But instead they chose to contribute the use of their land in return for rental based on a share of net profits. This contribution was an investment in the oil in place sufficient to establish their economic interest. Their income was dependent entirely on production, and the value of their interest decreased with each barrel of oil produced. No more is required by any of the earlier cases.

Southwest contends, finally, that if depletion is allowed to the upland owners in this case, it would be difficult to limit the principle in instances of strangers "disassociated from the lease" who may have contributed an essential facility to the drilling operation in return for a share of the net profits. But those problems are not before us in this case where the upland owners could hardly be said to be "disassociated from the lease." We decide only that where, in the circumstances of this case, a party essential to the drilling for and extraction of oil has made an indispensable contribution of the use of real property adjacent to the oil deposits in return for a share in the net profits from the production of oil, that party has an economic interest which entitles him to depletion on the income thus received.

For the foregoing reasons the judgment in No. 286, as to Southwest Exploration Company, is reversed and that in No. 287, as to Huntington Beach Company, is affirmed.

MR. JUSTICE DOUGLAS dissents.

MR. JUSTICE HARLAN took no part in the consideration or decision of these cases.

UNITED STATES v. CANNELTON SEWER PIPE CO.

364 U.S. 76 (1960)

MR. JUSTICE CLARK delivered the opinion of the Court.

This income tax refund suit involves the statutory percentage depletion allowance to which respondent, an integrated miner-manufacturer of burnt clay products from fire clay and shale, is entitled under the Internal Revenue Code of 1939.*

The percentage granted by the statute is on respondent's "gross income from mining." It defines "mining" to include the "ordinary treatment processes normally applied by mine owners . . . to obtain the commercially marketable mineral product or products." Respondent claimed that its first "commercially marketable mineral product" is sewer pipe and other vitrified articles. Alternatively, it contended that depletion should be based on the price of 80 tons of ground fire clay and shale actually sold during the tax year in question. The District Court agreed with respondent's first claim. The Court of Appeals affirmed, holding that respondent could not profitably sell its raw fire clay and shale without processing it into finished products, and that its statutory percentage depletion was therefore properly based on its gross sales of the latter. 268 F.2d 334. The Government contends that the product from which "gross income from mining" is computed is an industry-wide test and cannot be reduced to a particular operation that a taxpayer might find profitable. The Government further argues that, while the statute permits ordinary treatment processes normally applied by miners to the raw product of their mines to produce a commercially marketable mineral product, it does not embrace the fabrication of the mineral product into finished articles. In view of the importance of the question to tax-

* For present law, see Editor's Note following the decision. — ED.

payers as well as to the Government, we granted certiorari. 361 U.S. 923. We disagree with respondent's contention that the issue is not presented by this record, and we therefore reach the merits. We have concluded that, under the mandate of the statute, respondent's "gross income from mining" under the findings here is the value of its raw fire clay and shale, after the application of the ordinary treatment processes normally applied by nonintegrated miners engaged in the recovery of those minerals.[1]

I

During the tax year ending November 30, 1951, the respondent owned and operated an underground mine from which it produced fire clay and shale in proportions of 60% fire clay and 40% shale. It transported the raw mineral product by truck to its plant at Cannelton, Indiana, about one and one-half miles distant. There it processed and fabricated the fire clay and shale into vitrified sewer pipe, flue lining and related products. In this process, the clay and shale is first ground into a pulverized form about as fine as talcum powder. The powder is then mixed with water in a pug mill and becomes a plastic mass, which is formed by machines into the shape of the finished ware desired. The ware is then placed in dryers where heat of less than 212° is applied to remove all of the water. This process takes from 12 hours to 3 weeks, depending on the size of the ware. Thereafter the ware is vitrified in kilns at 2,200° Fahrenheit, requiring from 60 to 210 hours. It is then cooled, graded and either shipped or stored.

Not all clays and shales are suitable for respondent's operations. They must have plasticity, special drying qualities and be able to withstand high temperatures. Respondent's clay, known as Cannelton clay, is the deepest clay mined in Indiana and, respondent says, yields the best sewer pipe. Its cost of removing and delivering the same to its plant was $2.418 per ton in 1951. Respondent used some 38,473 tons of clay and shale in its operations that year and sold approximately 80 tons of ground fire clay and shale in bags at a price of $22.88 per ton. Net sales of its finished wares amounted to approximately one and a half million dollars.

In connection with its tax assessment for the year in question, respondent filed a document in which it stated that "we used as a basis for calculating the gross income from our mining operations of shale and fire clay the point in our manufacturing operations at which we first arrive with a commercially marketable product, which is ground fire clay. This product arrives after the raw mineral is crushed and granulated to such extent that by the addition of water it can be made into a mortar for use in laying or setting fire or refractory brick. This ground fire clay has a definite market and an ascertainable market value at any particular time and is the same product from which our end product, sewer tile, is made simply by the addition of water and the necessary baking process." In this return it based the value of the ground fire clay at $22.81 per ton, the price for which it sold some 80 tons of that material in bags during 1951. At this figure the depletion allowance would have been slightly above $2 per ton. Thereafter respondent claimed error and asserted that its mineral product, rather than being commercially marketable when it reached the stage of ground fire clay, only became commercially marketable when it became a finished product, e.g., sewer pipe. On this basis, the depletion allowance on petitioner's gross income would be approximately $4 per ton, since the mineral would have a value of about $40

---

1 The quantity of ground and bagged fire clay and shale actually sold is too negligible to furnish an appropriate basis for computing depletion.

per ton. On the other hand, if the mineral it used in 1951 was valued at $1.60 to $1.90 per ton, the going price elsewhere in Indiana, the depletion allowance would be approximately 20¢ per ton.

The record shows and the District Court found that in 1951 there were substantial sales of raw fire clay and shale in Indiana, mostly in the vicinity of Brazil, about 140 miles from Cannelton. The average price there was $1.60 to $1.90 per ton for fire clay and $1 per ton for shale. Transportation costs from Brazil to Cannelton ran from $4.58 to $5.50 per ton. In Kentucky, across the river from respondent's plant, it appears that fire clay and shale of the same grade were mined and sold before, during and subsequent to 1951. In fact, since 1957 respondent has secured all of its mineral requirements from this source on a lease basis under which the lessor mines and delivers the raw material to its plant. The exact cost is not shown, but the haul in 1957 from pit to plant, including the ferry crossing, was some seven miles.

II

We have carefully studied the legislative history of the depletion allowance, including the voluminous materials furnished by the parties, not only in their briefs but in the exhaustive [685-page] appendices and the record. We shall not burden this opinion with its repetition.

In summary, mineral depletion for tax purposes is an allowance from income for the exhaustion of capital assets. Anderson v. Helvering, 310 U.S. 404 (1940). In addition, it is based on the belief that its allowance encourages extensive exploration and increasing discoveries of additional minerals to the benefit of the economy and strength of the Nation. We are not concerned with the validity of this theory or with the statutory policy. Our sole function is application of the congressional mandate. A study of the materials indicates that percentage depletion first came into the tax structure in 1926, when the Congress granted it to oil and gas producers. The percentage allowed was based on "gross income from the property," which was described as "the gross receipts from the sale of oil and gas as it is delivered from the property." Preliminary Report, Joint Committee on Internal Revenue Taxation, Vol. I, Part 2 (1927). The report continued that, as to the integrated operator, "the gross income from the property must be computed from the production and posted price of oil, as the gross receipts from a refined and transported product can not be used in determining the income as relating to an individual tract or lease." The Treasury Regulations confirmed this understanding. Treas. Reg. 74 (1929 ed.), Arts. 221(i), 241.

Thereafter, in 1932, percentage depletion was extended to metal mines, coal, and sulphur. The mining engineer of the Joint Committee, Alex. R. Shepherd, urged in a report to the Congress that depletion for metal mines be computed, as in the oil and gas industry, on a percentage-of-income basis, and the Revenue Act of 1932 was so drawn. The Shepherd Report pointed out that the percentage basis for oil and gas depletion had been in force for over a year and had "functioned satisfactorily both from economical and administrative viewpoints and without loss of revenue." It added that "careful study of this method as applied to metal mines indicates that the same results will be attained in practice as in the case of oil and gas," but that, because of varied practices in the mining industry, it would be necessary to determine "the point in accounting at which" gross income from the property mined could be calculated. It recommended that "it is logical to peg 'gross income from the property' f.o.b. cars at mine," i.e., net smelter returns, recognizing that processing beyond this point should not be included in calculating "gross income from the property." While as to certain metals, viz.,

gold, silver, or copper, the report suggested that gross income should be based on receipts from "the sale of the crude, partially beneficiated or refined" product, this was but to make provision for the specific operations of miners in those metals. In this regard the report also proposed that the depletion base "in the case of all other metals, coal and oil and gas, [should be] the competitive market receipts, or its equivalent, received from the sale of the crude products, or concentrates on an f.o.b. mine, mill, or well basis."

The Congress in fashioning the 1932 Act took into account these recommendations. It incorporated a provision in the Act allowing percentage depletion for coal and metal mines and sulphur, based on the "gross income from the property." §114(b)(4), Revenue Act of 1932, 47 Stat. 169. On the following February 10, 1933, the Treasury issued its Regulations 77, which defined "gross income from the property" as "the amount for which the taxpayer sells (a) the crude mineral product of the property or (b) the product derived therefrom, not to exceed in the case of (a) the representative market or field price . . . or in the case of (b) the representative market or field price . . . of a product of the kind and grade from which the product sold was derived, before the application of any processes . . . with the exception of those listed. . . ." Treas. Reg. 77, Art. 221(g). These exceptions listed processes normally in use in the mining industry for preparing the mineral as a marketable shipping product. The regulation was of unquestioned validity and, in 1943, at the instance of the industry, the Congress substantially embodied it into the statute itself, 58 Stat. 21, 44, including the basic definition of the term "gross income from the property." Since that time the section on percentage depletion — §114(b)(4)(B) of the 1939 Code — has remained basically the same. Additional minerals have been added from time to time — shale and fire clay in 1951 — until practically all minerals are included.

As now enacted, the section provides that "mining" includes "not merely the extraction of the ores or minerals from the ground but also the ordinary treatment processes normally applied by mine owners or operators in order to obtain the commercially marketable mineral product or products," plus transportation from the place of extraction to the "plants or mills in which the ordinary treatment processes are applied thereto," not exceeding 50 miles. It then defines "ordinary treatment processes" by setting out specifically in four categories those covering some 17 named minerals. Fire clay and shale are not within these specific enumerations. The Government, however, contends that they should come within clause (iii) of the section, which provides that, "in the case of iron ore, bauxite, ball and sagger clay, rock asphalt, *and minerals which are customarily sold in the form of a crude mineral product* — sorting, concentrating, and sintering to bring to shipping grade and form, and loading for shipment . . ." are included in "ordinary treatment processes." (Italics added.) Clause (iv) lists specific metals such as lead, zinc, copper, etc., "and ores which are not customarily sold in the form of crude mineral product," and specifically excludes from the permissible processes certain ones used in connection with these metals. To recapitulate, the section contains four categories of "ordinary treatment processes": the first enumerating those permissible as to the mining of coal; the second, as to sulphur; the third, as to minerals customarily sold in the form of the crude mineral product; and the fourth, as to those ores not customarily so sold. We note that the Congress even states the steps in each permissible process, and in addition specifically declares some processes not to be "ordinary treatment" ones, viz., "electrolytic deposition, roasting, thermal or electric smelting, or refining." Furthermore, none of the permissible processes destroy the physical or chemical identity of the minerals or permit them to be transformed into new products.

From this legislative history, we conclude that Congress intended to grant miners

a depletion allowance based on the constructive income from the raw mineral product, if marketable in that form, and not on the value of the finished articles.

III

The findings are that three-fifths of the fire clay produced in Indiana in 1951 was sold in its raw state. This indicates a substantial market for the raw mineral. In addition, large sales of raw fire clay and shale were made across the river in Kentucky. This indicates that fire clay and shale were "commercially marketable" in their raw state unless that phrase also implies marketability at a profit. We believe it does not. Proof of these sales is significant not because it reveals an ability to sell profitably — which the respondent could not do — but because the substantial tonnage being sold in a raw state provides conclusive proof that, when extracted from the mine, the fire clay and shale are in such a state that they are ready for industrial use or consumption — in short, they have passed the "mining" state on which the depletion principle operates. It would be strange, indeed, to ascribe to the Congress an intent to permit each miner to adopt processes peculiar to his individual operation. Depletion, as we have said, is an allowance for the exhaustion of capital assets. It is not a subsidy to manufacturers or the high-cost mine operator. The value of respondent's vitrified clay products, obtained by expensive manufacturing processes, bears little relation to the value of its minerals. The question in depletion is what allowance is necessary to permit tax-free recovery of the capital value of the minerals.

Respondent insists that its miner-manufacturer status makes some difference. We think not. It is true that the integrated miners in Indiana outnumbered the nonintegrated ones. But in each of the three basic percentage depletion Acts the Congress indicated that integrated operators should not receive preferred treatment. Furthermore, in Regulations 77, discussed above, the Treasury specifically provided that depletion was allowable only on the crude mineral product. And, as we have said, this regulation was substantially enacted into the 1943 Act. We need not tarry to deal with any differences which are said to have existed in administrative interpretation, for here we have authoritative congressional action itself. Ever since the first percentage depletion statute, the cut-off point where "gross income from mining" stopped has been the same, i.e., where the ordinary miner shipped the product of his mine. Respondent's formula would not only give it a preference over the ordinary nonintegrated miner, but also would grant it a decided competitive advantage over its nonintegrated manufacturer competitor. Congress never intended that depletion create such a discriminatory situation. As we see it, the miner-manufacturer is but selling to himself the crude mineral that he mines, insofar as the depletion allowance is concerned.

IV

We now reach what "ordinary treatment processes" are available to respondent under the statute. As the principal industry witness put it at hearings before the Congress: "Obviously it was not the intent of Congress that those processes which would take your products and make them into different products having very different uses should be considered, as the basis of depletion." But respondent says that the processes it uses are the ordinary ones applied in the industry. As to the miner-manufacturer, that is true. But they are not the "ordinary" normal ones applied by the nonintegrated miner. It was he whom the Congress made the object of the allowance. The fabrication processes used by respondent in manufacturing sewer pipe would not be employed by the run-of-the-mill miner —

only an integrated miner-manufacturer would have occasion to use them.

Respondent further contends, however, that it must utilize these processes in order to obtain a "commercially marketable mineral product or products." It points out that its underground method of mining prevents it from selling its raw fire clay and shale. This position leads to the conclusion that respondent's mineral product has no value to it in the ground. If this be true, then there could be no depletion. One cannot deplete nothing. On the other hand, respondent alleges that its minerals yield "the best sewer pipe which is made in Indiana." If this be true, then respondent's problem is one purely of cost of recovery, an item which, as we have said, has nothing to do with value in the depletion formulae. Depletion, as we read the legislative history, was designed not to recompense for costs of recovery but for exhaustion of mineral assets alone. If it were extended as respondent asks, the miner-manufacturer would enjoy, in addition to a depletion allowance on his minerals, a similar allowance on his manufacturing costs, including depreciation on his manufacturing plant, machinery and facilities. Nor do we read the use by the Congress of the plural word "products" in the "commercially marketable" phrase as indicating that normal processing techniques might include the fabrication of different products from the same mineral. We believe that the Congress was only recognizing that in mining operations often more than one mineral product was recovered in its raw state.

In view of the finding that substantial quantities — in fact, the majority — of the tonnage production of fire clay and shale were sold in their raw state, we believe that respondent's mining activity during the year in question would come under clause (iii) of the section here involved. That clause includes "minerals which are customarily sold in the form of a crude mineral product." We believe that the Congress intended integrated mining-manufacturing operations to be treated as if the operator were selling the mineral mined to himself for fabrication. It would, of course, be permissible for such an operator to calculate his "gross income from mining" at the point where "ordinary" miners — not integrated — disposed of their product. All processes used by the nonintegrated miner before shipping the raw fire clay and shale would under such a formula be available to the integrated miner-manufacturer to the same extent but no more.

Nor do we believe that the District Court and the Court of Appeals cases involving percentage depletion and cited by respondent are apposite here.[2] We do not, however, indicate any approval of their holdings. It is sufficient to say that on their facts they are all distinguishable.

In view of these considerations, neither of respondent's alternate claims for depletion allowance is appropriate. The judgment of the Court of Appeals is therefore reversed, and the cause remanded for further proceedings in conformity with this opinion.

It is so ordered.

MR. JUSTICE HARLAN, concurring in the result.

[Mr. Justice Harlan concurred in the result on the ground that the 1933 Regula-

---

2 Respondent's cases are based on United States v. Cherokee Brick & Tile Co., 218 F.2d 424 (adhered to in United States v. Merry Bros. Brick & Tile Co., 242 F.2d 708), which went off on factual concessions not present here. They have been pyramided into a statistically imposing number of cases, predicated upon one another. Close analysis indicates that they either go off on concessions or findings not present here, or deal with controversies over particular treatment processes claimed as "ordinary" in the industry involved. For our purposes, we need not reach the question of whether in those cases the minerals in place had any "value" to be depleted. Other than the decision here under review, only two of the Court of Appeals cases cited by respondent, both from the same Circuit (Commissioner v. Iowa Limestone Co., 269 F.2d 398; Bookwalter v. Centropolis Crusher Co., 272 F.2d 391), adopt the profitability test, which we find unacceptable.

tion was a valid exercise of administrative authority and through history had become an authoritative gloss on the statute.]

NOTE

1. *The concept of an "economic interest" in the depletable mineral.* As the *Southwest Exploration Co.* case indicates, there are many problems in determining which of the many persons with a financial stake in the extraction of a mineral are entitled to a deduction for depletion. For a review of the issues and cases, see Sneed, The Economic Interest — An Expanding Concept, 35 Texas L. Rev. 307 (1957).

2. *"Gross income from mining."* The *Cannelton* case illustrates the difficulty of measuring, in the case of an integrated business, the taxpayer's "gross income from mining," which (except in the case of oil and gas) is the base to which the appropriate depletion rate is applied in computing the amount to be deducted. The range of choice in *Cannelton* was from $1.60 to $40 per ton, but for some other minerals the range is even more dramatic: salt, for example, is worth $10 per ton at an early point in the extractive process, but its value is $1800 per ton after it has been purified for table use and packed in small containers for sale to consumers. For discussion, see White and Brainerd, Percentage Depletion of Minerals — A Costly Study in Definitions, 34 Taxes 97 (1956).

For the years before the Court in the *Cannelton* case, "mining," as used in the term "gross income from mining," was defined to include "the ordinary treatment processes normally applied by mine owners or operators in order to obtain the commercially marketable product or product" (plus certain transportation), and the term "ordinary treatment processes" was in turn defined to include certain specified technical processes, to include such others as might be prescribed by the Treasury, and to exclude still others. A few days before the *Cannelton* case was decided, a House-Senate conference committee recommended a statutory change, which became law just three days after the decision: the statutory reference to "ordinary treatment processes normally applied . . . in order to obtain the commercially marketable product or products" was repealed, and §613(c) was given its present form, under which "mining" includes the technical processes that were previously specified (with a few additions) plus those that are specified by Treasury Regulations, and excludes certain others. See generally Taubeneck, The Depletion Base Controversy, 46 A.B.A.J. 1136 (1960). The result in the *Cannelton* case itself was altered prospectively by the 1960 legislation, since §613(c)(4)(G) now contains an explicit statement of the processes that qualify in the case of clay used for sewer pipe, and in 1961 Congress rejected the *Cannelton* holding retroactively on the ground that it departed from earlier case law on which taxpayers in the clay and shale industry had properly relied. The majority and minority Congressional views, together with a statement of the Treasury's position, are reprinted in 1961-2 C.B. 429 et seq.

3. *Option to deduct expenditures for mineral exploration and development.* In 1951, some of the extractive industries gained the unusual option of capitalizing or "expensing," as the taxpayer chooses, certain costs of exploration and development that would otherwise have to be capitalized. §§615 and 616. Ordinarily, of course, a taxpayer who writes off items to expense simply accelerates a tax benefit that he would otherwise obtain (if he capitalized them) through increased depreciation or depletion or an increased basis for calculating gain or loss on sale. But for the taxpayer who is entitled to use percentage depletion, which is not restricted to the basis of the property, the right to "expense" an item is unusually advantageous. See Alexander and Grant, Mine Development and Exploration Expenditures, 8 Tax L. Rev. 401 (1953).

The 1951 amendments did not include the oil and gas industry. But for some years, the Regulations had permitted the oil and gas taxpayer either to expense or to capitalize intangible drilling and development costs. Regs. 118, §39.23(m)-16. Drilling and development costs that are reflected in tangible equipment are not included in this option; they must be capitalized and recovered by depreciation deductions. But the *intangible* costs would ordinarily be attributed to the cost of the oil and gas and thus be recovered through the depletion allowance. Since percentage depletion is not limited by the deposit's cost, the taxpayer will usually prefer to "expense" his intangible costs. Con-

sternation was created in the industry in 1945 when the Court of Appeals for the Fifth Circuit, in F.H.E. Oil Co. v. Commissioner, 147 F.2d 1002 (5th Cir. 1945), held that the Regulations were invalid in permitting the taxpayer to deduct a capital expenditure. The opinion was somewhat modified on rehearing, after briefs had been filed by thirty counsel for other oil producers, appearing amici curiae, alleging that a billion dollars of deductions were imperiled by the opinion. F.H.E. Oil Co. v. Commissioner, 149 F.2d 238 (5th Cir. 1945). A few weeks later Congress passed a concurrent resolution declaring that it had approved the questioned Regulations by re-enacting §23 of the 1939 Code with knowledge of the Treasury's interpretation of it. 59 Stat. (Part 2) 844 (1945). What is the effect of such a resolution? F.H.E. Oil Co. v. Commissioner, 150 F.2d 857 (5th Cir. 1945); Gibson, Congressional Concurrent Resolutions: An Aid to Statutory Interpretation? 37 A.B.A.J. 421 (1951). Whatever the effect of the concurrent resolution of 1945, the enactment of §263(c) of the 1954 Code put the Congressional stamp of approval on the Regulations for future years.

4. *References.* The hotly debated issues of policy in percentage depletion are acutely summarized by Dean Griswold and Rex G. Baker in their Percentage Depletion — A Correspondence, 64 Harv. L. Rev. 361 (1951); see also Galvin, The "Ought" and "Is" of Oil-and-Gas Taxation, 73 Harv. L. Rev. 1441 (1960); Eldridge, Tax Incentives for Mineral Enterprise, 58 J. Pol. Econ. 222 (1950); Galvin, Federal Income Tax — Percentage Depletion of Oil and Gas Wells, 21 Texas L. Rev. 410 (1943); Jackson, Federal Income Tax Percentage Depletion of Oil and Gas Wells — Another View, id. 798 (1947); Freeman, Percentage Depletion for Oil — A Policy Issue, 30 Ind. L.J. 399 (1955). 5. *The Optional Standard Deduction*

Sections 141-144, relating to the optional standard deduction, are based on §23(aa) of the 1939 Code, but the "minimum standard deduction" of §141(c) was enacted in 1964.

Section 62, defining "adjusted gross income," re-enacts, with a few substantive changes, §22(n) of the 1939 Code. See also §36 (loss of certain credits if standard deduction is elected), which corresponds to §23(aa)(2) of the 1939 Code.

Although the optional standard deduction, if elected by the taxpayer, displaces all personal deductions (supra p. 163), it displaces only a few of the deductions considered in this chapter:

1. *Trade or business expenses.* These expenses are ordinarily allowed in addition to the optional standard deduction, except that if they are incurred by the taxpayer "in connection with the performance by him of services as an employee," they are allowed only if they consist of (a) expenses paid by him under a reimbursement or other expense allowance arrangement with his employer, (b) expenses of travel, meals, and lodging while away from home, (c) expenses of transportation, or (d) trade or business expenses of an "outside salesman." See §62(2).

A surprising volume of litigation, considering the small amounts ordinarily involved, has been required as a result of this treatment of the employee. In the first place, when is a taxpayer an independent contractor, not an employee, so as to be entitled to deduct all trade and business expenses in addition to the standard deduction? Kershner v. Commissioner, 14 T.C. 168 (1950); Meisinger v. Commissioner, ¶52,178 P-H Memo T.C.

Secondly, what is a "reimbursement or other expense allowance arrangement"? McKinney v. Commissioner, ¶48,265 P-H Memo T.C. Apparently an employee

can get the benefit of all of his trade or business expenses, as well as the optional standard deduction, if his employer reimburses his expenses separately from the salary, instead of paying a larger salary and expecting the employee to pay the expenses himself.

The 1954 Code liberalized this area somewhat by allowing items (c) and (d) above to be deducted; previously, only items (a) and (b) were allowable. Item (c) takes care of automobile expenses incurred by employees who return home every night; and item (d) allows "outside salesmen," as defined by §62(2)(D), to deduct telephone and telegraph, secretarial, and entertainment expenses in addition to the standard deduction.

The "moving expense" deduction of §217 (supra page 227) is also allowed even though the taxpayer elects to use the standard deduction.

2. *Expenses of profit-seeking transactions.* By electing the optional standard deduction, the taxpayer forfeits certain of the deductions otherwise available under §§212 and 165. Deductions attributable to property held for the production of rents and royalties are still allowable. But expenses attributable to other property held for income (e.g., securities) are not allowed, nor are losses on transactions entered into for profit if there is no sale or exchange of property.

Certain credits are also denied if the standard deduction is taken. §36.

Upon what theory — or theories — did Congress promulgate these rules governing the allowances that must be forsworn if the standard deduction is elected? Harris v. Commissioner, 22 T.C. 1118, 1124 et seq. (1954).

Note the link between the standard deduction and "adjusted gross income"; the deductions that are used to convert gross income into adjusted gross income are the same ones that may be deducted in addition to the standard deduction. The term "adjusted gross income" (which is relevant, among other places, in computing the deductions for medical expenses and charitable contributions, supra pages 170 and 174) is defined by §62; and a taxpayer electing the standard deduction applies it against his adjusted gross income by virtue of §63(b).

CHAPTER 4

The Splitting of Income

Section A. The Advantages of Community Property

POE v. SEABORN

282 U.S. 101 (1930)

Mr. Justice Roberts delivered the opinion of the Court.

Seaborn and his wife, citizens and residents of the State of Washington, made for the year 1927 separate income tax returns. . . .

During and prior to 1927 they accumulated property comprising real estate, stocks, bonds and other personal property. While the real estate stood in [the husband's] name alone, it is undisputed that all of the property real and personal constituted community property and that neither owned any separate property or had any separate income.

The income comprised Seaborn's salary, interest on bank deposits and on bonds, dividends, and profits on sales of real and personal property. He and his wife each returned one-half the total community income as gross income and each deducted one-half of the community expenses to arrive at the net income returned.

The Commissioner of Internal Revenue determined that all of the income should have been reported in the husband's return, and made an additional assessment against him. Seaborn paid under protest, claimed a refund, and on its rejection, brought this suit. . . .

The case requires us to construe sections 210(a) and 211(a) of the Revenue Act of 1926,* and apply them, as construed, to the interests of husband and wife in community property under the law of Washington. These sections lay a tax upon the net income of every individual. The Act goes no farther, and furnishes no other standard or definition of what constitutes an individual's income. The use of the word "of" denotes ownership. It would be a strained construction, which, in the absence of further definition by Congress, should impute a broader significance to the phrase.

The Commissioner concedes that the answer to the question involved in the cause must be found in the provisions of the law of the State, as to a wife's ownership of or interest in community property. What, then, is the law of Washington as to the ownership of community property and of community income including the earnings of the husband's and wife's labor?

The answer is found in the statutes of the State, and the decisions interpreting them.

These statutes provide that, save for property acquired by gift, bequest, devise or inheritance, all property however acquired after marriage, by either husband or wife, or by both, is community property. On the death of either spouse his or her interest is subject to testamentary disposition, and failing that, it passes to the issue of the decedent and not to the surviving spouse. While the husband

* These sections provided that the normal tax and the surtax "shall be levied, collected, and paid for each taxable year upon the net income of every individual." Substantially the same language now appears in §1(a) of the Code. — Ed.

has the management and control of community personal property and like power of disposition thereof as of his separate personal property, this power is subject to restrictions which are inconsistent with denial of the wife's interest as co-owner. The wife may borrow for community purposes and bind the community property. . . . Since the husband may not discharge his separate obligation out of community property, she may, suing alone, enjoin collection of his separate debt out of community property. . . . She may prevent his making substantial gifts out of community property without her consent. . . . The community property is not liable for the husband's torts not committed in carrying on the business of the community. . . .

The books are full of expressions such as "the personal property is just as much hers as his"; . . . "her property right in it [an automobile] is as great as his"; "the title of one spouse therein was a legal title, as well as that of the other. . . ."

Without further extending this opinion it must suffice to say that it is clear the wife has, in Washington, a vested property right in the community property, equal with that of her husband; and in the income of the community, including salaries or wages of either husband or wife, or both. A description of the community system of Washington and of the rights of the spouses, and of the powers of the husband as manager, will be found in Warburton v. White, 176 U.S. 484.

The taxpayer contends that if the test of taxability under sections 210 and 211 is ownership, it is clear that income of community property is owned by the community and that husband and wife have each a present vested one-half interest therein.

The Commissioner contends, however, that we are here concerned not with mere names, nor even with mere technical legal titles; that calling the wife's interest vested is nothing to the purpose, because the husband has such broad powers of control and alienation, that while the community lasts, he is essentially the owner of the whole community property, and ought so to be considered for the purposes of sections 210 and 211. He points out that as to personal property the husband may convey it, may make contracts affecting it, may do anything with it short of committing a fraud on his wife's rights. And though the wife must join in any sale of real estate, he asserts that the same is true, by virtue of statutes, in most States which do not have the community system. He asserts that control without accountability is indistinguishable from ownership, and that since the husband has this, quoad community property and income, the income is that "of" the husband under sections 210, 211 of the income tax law.

We think in view of the law of Washington above stated this contention is unsound. The community must act through an agent. This Court has said with respect to the community property systems (Warburton v. White, supra) that "property acquired during marriage with community funds became an acquêt of the community and not the sole property of the one in whose name the property was bought, although by the law existing at the time the husband was given the management, control, and power of sale of such property. This right being vested in him, not because he was the exclusive owner, but because by law he was created the agent of the community."

In that case, it was held that such agency of the husband was neither a contract nor a property right vested in him, and that it was competent to the legislature which created the relation to alter it, to confer the agency on the wife alone, or to confer a joint agency on both spouses, if it saw fit — all without infringing any property right of the husband. . . .

The reasons for conferring such sweeping powers of management on the husband are not far to seek. Public policy demands that in all ordinary circumstances, litigation between wife and husband during the life of the community

should be discouraged. Law-suits between them would tend to subvert the marital relation. The same policy dictates that third parties who deal with the husband respecting community property shall be assured that the wife shall not be permitted to nullify his transactions. The powers of partners, or of trustees of a spendthrift trust, furnish apt analogies.

The obligations of the husband as agent of the community are no less real because the policy of the State limits the wife's right to call him to account in a court. Power is not synonymous with right. Nor is obligation coterminous with legal remedy. The law's investiture of the husband with broad powers, by no means negatives the wife's present interest as a co-owner.*

We are of opinion that under the law of Washington the entire property and income of the community can no more be said to be that of the husband, than it could rightly be termed that of the wife. . . .

Finally the argument is pressed upon us that the Commissioner's ruling will work uniformity of incidence and operation of the tax in the various states, while the view urged by the taxpayer will make the tax fall unevenly upon married people. This argument cuts both ways. When it is remembered that a wife's earnings are a part of the community property equally with her husband's, it may well seem to those who live in states where a wife's earnings are her own, that it would not tend to promote uniformity to tax the husband on her earnings as part of his income. The answer to such argument, however, is, that the constitutional requirement of uniformity is not intrinsic, but geographic. Billings v. United States, 232 U.S. 261; Head Money Cases, 112 U.S. 580; Knowlton v. Moore, 178 U.S. 41. And differences of state law, which may bring a person within or without the category designated by Congress as taxable, may not be read into the Revenue Act to spell out a lack of uniformity. Florida v. Mellon, 273 U.S. 12.

The District Court was right in holding that the husband and wife were entitled to file separate returns, each treating one-half of the community income as his or her respective incomes, and its judgment is affirmed.

The Chief Justice and Mr. Justice Stone took no part in the consideration or decision of this case.

NOTE

1. *Income-splitting in common law states.* In common law property states, if the husband makes an outright gift to his wife of property, such as securities or real estate, the income subsequently produced by the property is taxed to her. If he transfers the property into a joint tenancy or a tenancy in common with his wife, the income will be divided between them for tax purposes; and the same result will follow if the property is transferred into a tenancy by the entirety unless under local law the husband is entitled to all the income. See Rudick, Federal Tax Problems Relating to Property Owned in Joint Tenancy and Tenancy by the Entirety, 4 Tax L. Rev. 3, 25-29 (1948). But ordinarily the common law couple cannot split up the husband's *earned* income for tax purposes, as will be seen infra page 343, and splitting of investment income will be jeopardized if the husband retains control over either the transferred property or the income. With respect to both earned and unearned income, then, there was a world of difference between the Northeast and the Southwest.

2. *Eastward Ho! The spread of community property, 1939-1947.* As income tax rates rose just before and during World War II, the community property system spread. In 1939 Oklahoma enacted an optional system and Oregon did the same in 1943; both had community property neighbors and were to a degree concerned about migration for tax advantages. These statutes were repealed, however, when the Supreme Court held in Commissioner v. Harmon, infra page 344, that an optional system, not "dictated by State

* For another view of the wife's rights in community property see page 1107 infra. — Ed.

policy, as an incident of matrimony," could not claim the mantle of Poe v. Seaborn, and were later replaced by mandatory systems. During this period Hawaii, Nebraska, Michigan, and Pennsylvania* also adopted the community property system, despite their lack of historical or geographical connection with Spanish law, and adoption was under discussion in several other states, including New York. Against this background Congress enacted the "income-splitting" provisions of the Revenue Act of 1948, in the framing of which the following Treasury study was influential.

SECTION B. INCOME-SPLITTING BY CONGRESSIONAL GRACE

DIVISION OF TAX RESEARCH, TREASURY DEPARTMENT, THE TAX TREATMENT OF FAMILY INCOME

Reprinted in Hearings, House Committee on Ways and Means, 80th Cong., 1st Sess. 846-874 (1947)

This study examines alternative procedures for reducing tax differences which result from the present treatment of family income under the individual income tax. Present [i.e., pre-1948] law discriminates between families on the basis of residence, by enabling couples in community-property States to divide their earned and investment community income between separate tax returns thereby reducing their taxes through the double use of the lower rates of the progressive tax rate schedule. It discriminates also on the basis of the nature of income, by requiring earned income in noncommunity-property States to be taxed to the earner, but affording recipients of investment income numerous opportunities for splitting that income with members of their family. Finally, it discriminates between recipients of investment income by favoring families who avail themselves of opportunities to split income by gift and such devices as family trusts, corporations, and partnerships. . . .

Proposals for the elimination of the inequities inherent in the tax differences resulting from the present tax treatment of family income under the individual income tax have been considered by the Congress on several occasions in the past. These proposals reflect the different points of view from which the problem can be approached.

At one extreme is the doctrine that taxpaying ability is determined by total family income regardless of the distribution of the ownership of such income among the members of the family. Those holding this view propose that the family's total income be taxed as a unit in order that families with equal incomes and equal exemptions be subjected to equal taxes. They would require that all married couples having the same amount of net income pay the same amount of tax, regardless of whether husband or wife is the income receiver or whether both contribute to the family income in varying proportions. One procedure for giving effect to this theory is to make joint returns mandatory: to apply the graduated rates of the individual income tax against the combined income of the spouses, after requiring them to file a joint return.† An alternative procedure is to con-

* Pennsylvania's statute was held unconstitutional. Willcox v. Penn Mutual Life Insurance Co., 357 Pa. 581, 55 A.2d 521 (1947).

† In Hoeper v. Tax Commission of Wisconsin, 284 U.S. 206 (1931), the Court held that a Wisconsin statute requiring the income of husband, wife, and children under 18 years of age to be combined (if they were residing together as members of a family) in applying the progressive income tax rate schedule was an unconstitutional violation of the due process clause of the Fourteenth Amendment: "We have no doubt that, because of the fundamental conceptions which underlie our [constitutional] system, any attempt by a state to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process

tinue to give married couples the option of filing joint or separate returns, but to require those filing separate returns to use a new rate schedule employing smaller brackets which would in effect take the profit out of separate returns and tend to equalize the tax on all married couples with equal incomes. Another alternative, which has recently received considerable attention and therefore is treated in this memorandum at some length, is to tax each spouse on one-half of the couple's combined income, giving each the benefits of lower rates in the graduated surtax schedule.

Another approach to this problem and one which is diametrically opposed to any of the aforementioned procedures for the handling of family income proceeds from the assumption that the family as a unit has no combined taxpaying ability per se; that its taxpaying ability is composed of the separate taxpaying abilities of its individual members; and that the taxpaying ability of each of these is determined by the amount of income of which he or she is the owner without reference to the income of the other members of the family. This approach sanctions the tax effects of income-splitting within the family provided that the transferer actually parts with title to and control of the property. This, in substance, is the rationale underlying the present income tax practice which accords each spouse the privilege of filing a separate return covering only his or her separate income. However, even those who favor basing taxes on individual legal rights to income, differ on its specific application. The large volume of litigation involving the recognition for tax purposes of income-splitting by means of trusts, assignments, etc., attests to the differences in opinion as to the degree of separation of ownership and control needed before the tax reduction effects of income-splitting can be accepted. Some deny that the differences in the matter of title to income between the community-property systems are sufficiently real to justify the present differentiation in the tax treatment of married couples with the same combined incomes. They therefore propose to tax personal-service income to the earner and to tax income derived from community-property to the spouse exercising management and control. This approach is an attempt to reconcile the tax effects of automatic division of community income practiced in community-property States with the situation in noncommunity-property States when property and control are actually transferred from one spouse to the other.

[The study went on to present in some detail a plan for income-splitting that was adopted by Congress the following year, 1948.]

Joint returns of husband and wife. The issue of geographical uniformity in federal income taxation came to a head during the Congressional hearings on the Revenue Act of 1948. Proposals for mandatory joint returns and for a legislative

---

of law as guaranteed by the Fourteenth Amendment. That which is not in fact the taxpayer's income cannot be made such by calling it income." 284 U.S. at 215. Although the Wisconsin law contained a provision apportioning the tax among the members of the family, it was not discussed in the opinion. Three justices (Holmes, Brandeis, and Stone) dissented, arguing that the state's control over the consequences of marriage included the power to impose a tax on the aggregate family income, that the husband's practical control over the family property justified consolidating the separate incomes, and that consolidation was a reasonable measure to prevent tax avoidance even if it reached "innocent people." Magill, Taxable Income (rev. ed. 1945) 329-334, concludes that federal legislation taxing the family as a unit would be held constitutional, at least if the tax burden were distributed among the members of the family in proportion to their shares of the aggregate income. For a comparative study, see Oldman and Temple, Comparative Analysis of the Taxation of Married Persons, 12 Stan. L. Rev. 585 (1960); Herbert, The Uncommon Law (1935) 397 (divorce to avoid tax on consolidated family income; held, couple should be rewarded for calling attention to a grave evil: "a tax on virtue").

reversal of Poe v. Seaborn found no support, but the so-called "split-income" plan (permitting a married couple to file a joint return and pay twice the tax that would be paid by a single taxpayer having one half their joint income) gained ground rapidly. It had obvious political appeal, and the Treasury study reprinted supra implied that it would be acceptable to the Treasury. Moreover, the substantial reduction in tax that the plan would produce for married taxpayers in the common law states would be intertwined with tax reform in an appealing way, an advantage of some consequence at a time when Congress, but not the President, favored a tax cut. Alternative forms of tax reduction would have been more difficult to defend in the political arena, and they would have left the problem of geographical discrimination unsolved. Against this background, and with the community property system threatening to sweep the country, it is not surprising that the split-income plan was enacted into law by the Revenue Act of 1948.*

The statutory scheme is simplicity itself. Husband and wife may file a joint return† on which they aggregate their income and deductions; this procedure is open to them even though one spouse has no income or deductions. Their status is determined at the end of the taxable year; if there is a decree of divorce or of legal separation at that time, they are not to be considered as married. §6013(d). For the effect of invalid divorces and other state law complications, see Borax v. Commissioner, 40 T.C. 111 (1963). It has been held that separation under an interlocutory decree of divorce does not bar the filing of a joint return. Rev. Rul. 57-368, 1957-2 C.B. 896. If husband or wife dies during the taxable year, a joint return may be executed by the decedent's executor or administrator and the surviving spouse; if no representative has been appointed for the decedent before the return is due, a joint return may be executed by the surviving spouse, but the executor or administrator, upon his appointment, may disaffirm the joint return by filing a separate return within one year after the return was due. §6013(a)(3). Joint returns cannot be filed if either husband or wife is a nonresident alien or if they have different taxable years. §6013(a).

The tax on a joint return is determined by computing a tax at the usual rate on one half of the aggregate taxable income, and then doubling that amount. §2(a). The result is that the tax paid by husband and wife on a joint return is twice what a single person would pay on one half their taxable income. Liability for the tax is joint and several. §6013(d)(3). This joint and several liability is for the tax actually due on the true aggregate taxable income, not merely for the amount of tax reported on the return itself; and it includes liability for interest on any deficiency and penalties for negligence or fraud if applicable, even if the misconduct is attributable to only one spouse.

Because the tax on a joint return is twice what would be paid on a separate return reporting one half the aggregate income, a married couple will rarely find any advantage in filing separate returns.‡ (Note that a married couple who would

---

* Once the privilege of income-splitting was extended to couples in common law states, the "new" community property states lost their taste for Spanish law and repealed their statutes. See Note, Epilogue to the Community Property Scramble: Problems of Repeal, 50 Colum. L. Rev. 332 (1950).

† Joint returns for husband and wife were authorized by pre-1948 law, but the aggregate net income was taxed as though it were the income of a single taxpayer. A married couple might derive an advantage from joint filing, however, if one spouse had excessive losses or expenses; instead of being wasted on a separate return, they could be applied on a joint return against the income of the other spouse. See Shelmerdine v. Commissioner, 24 B.T.A. 833 (1931).

‡ The filing of a separate return by a married man was regarded as a badge of fraud in Noell v. Commissioner, 22 T.C. 1035 (1954), where the husband transferred much of his property to his wife, without consideration, and then filed a separate return. Because the tax thus com-

be entitled to an optional standard deduction of $1000 on a joint return cannot improve their position by separate returns; the usual limit of $1000 is reduced to $500 for a married person filing a separate return. §141.) There are a few exceptions to the use of joint returns by married couples, aside from the case of the spouse who refuses to sign: (1) If the income of husband and wife is divided approximately equally, and each suffers a net capital loss, separate returns will permit each one to use $1000 of his capital loss against ordinary income; on a joint return, however, the aggregate deduction under §1211(b) would be only $1000. (2) If income is divided about equally and one spouse pays substantial medical expenses, separate returns will reduce the "adjusted gross income" of the one who paid the medical expenses and thus increase the medical deduction. But this advantage may be offset by a lower ceiling on the deduction for charitable contributions. (3) Since neither party to a joint return can be claimed as a dependent by a third taxpayer, by virtue of §151(e)(2), a separate return may be preferable for some lower-bracket taxpayers. An example is a married student who is supported by his father and whose wife's adjusted gross income is $2000. Under the tax table of §3, the tax on a separate return is $163; on a joint return, $122. By paying the higher tax, however, they make it possible for the father to claim the son as a dependent on his return.

Under the Revenue Act of 1948, an election to file a joint return, as well as a failure to elect, was irrevocable after the time for filing the return expired. The statute was amended in 1951, however, to permit a joint return to be filed after a separate return was filed even though the time for filing has expired. §6013(b). But an election to file a joint return is irrevocable, unless it was filed by the surviving spouse of a decedent and the decedent's representative disaffirms under §6013(a)(3). See Spanos v. United States, 323 F.2d 108 (4th Cir. 1963).

Ordinarily a joint return is easily recognized by the fact that both spouses sign, although on occasion an intent to file a joint return has prevailed over the fact that only one spouse signed. Lane v. Commissioner, 26 T.C. 405 (1956) (husband agreed to sign but failed to do so because of physical handicap and excessive use of alcohol); Ferguson v. Commissioner, 14 T.C. 846 (1950) (husband filed return purporting to report joint income; wife did not sign, but failed to file separate return); but see Hennen v. Commissioner, 35 T.C. 747 (1961) ("tacit consent" rule inapplicable where husband signed both names, there was no evidence of wife's consent, and Commissioner asserted that return was not a joint return). Conversely, it is sometimes possible for one of the spouses to repudiate his or her signature. Hickey v. Commissioner, ¶55,149 P-H Memo T.C. (wife signed only to avoid exciting husband, a cardiac patient); Furnish v. Commissioner, 262 F.2d 727 (9th Cir. 1958) (husband woke wife up at 2:00 A.M. and told her, harshly, to sign return in blank; she signed out of "fear"); but see Aylesworth's Estate v. Commissioner, 24 T.C. 134 (1955) (wife signed a day after husband flew into violent rage because of her refusal to sign; court concluded her signature was "voluntary, though perhaps distasteful").

Because of the joint and several liability mentioned above, the representative of a decedent may be reluctant to file a joint return for the decedent and surviving spouse for the year of death, as permitted by §6013(a)(3), since the tax savings to the estate may be outweighed by a tax deficiency if it turns out that the surviving spouse understated his or her income. See In re Floyd's Estate, 43 A.F.T.R. 1301 (Orphans' Court, Delaware County, Pa., 1951), ordering a co-executrix to sign a

---

puted was much larger than would have been due on a joint return, the court inferred that the taxpayer's purpose was to shield the assets transferred to his wife from the tax liability that she would have incurred by executing a joint return. The wife was held liable as a "transferee." Infra page 929.

joint return in order to obtain the benefits of income-splitting for the estate of a deceased taxpayer with respect to income prior to his death; page 1352 infra.

See generally Ritz, The Married Woman and the Federal Income Tax, 14 Tax L. Rev. 137 (1959).

Heads of households. Although the 1948 Act produced geographical uniformity by giving married couples in the common law states the opportunity to split their income, it brought to the common law states a tax disparity (which had formerly existed only in the community property states) between married couples and unmarried persons with the same income and similar family responsibilities. This disparity led Congress in 1951 to enact the head-of-household provision, §1(b), under which a special rate schedule (embodying half the tax reduction available to a married couple filing a joint return) is granted to an unmarried person if he (or she) (1) "maintains as his home a household which constitutes . . . the principal place of abode, as a member of such household" of an unmarried child or grandchild or of any person (with minor exceptions) for whom the taxpayer is entitled to a dependency deduction, or (2) "maintains a household which constitutes . . . the principal place of abode" of a parent who is claimed as a dependent. On the meaning of "home," "household," and "principal place of abode," see Brehmer v. United States, 191 F. Supp. 421 (D. Minn. 1961); Reardon v. United States, 158 F. Supp. 745 (D.S.D. 1958); Smith v. Commissioner, 332 F.2d 671 (9th Cir. 1964). See also Pechman, Individual Income Tax Provisions of the 1954 Code, 8 Nat. Tax J. 114, 126-128 (1955).

Surviving spouse with dependent child. Along with the head of household provision, Congress in 1951 enacted §2, which extends the tax benefit of a joint return to a widow or widower for the two taxable years following the year of his or her spouse's death, providing the survivor "maintains as his home a household which constitutes . . . the principal place of abode (as a member of such household)" of a child for whom he is entitled to a dependency deduction. After the two-year period, the surviving spouse may qualify as a "head of household" under §1(b), and thus receive the tax concession available to persons in that status.

Distribution of returns among family units. Of the 61.5 million income tax returns filed during 1962, 36.7 million were joint returns of husbands and wives, 3.8 million were separate returns of husbands and wives, 1.6 million were "head of household" returns, 0.3 million were "surviving spouse" returns, and 19.1 million were returns of single persons (other than "heads of households" and "surviving spouses").

Dependency exemptions. The taxpayer is allowed by §151(e) an exemption of $600 (deducted in computing taxable income) for each "dependent" whose gross income is less than $600 for the taxable year. Because the dependent's gross income is the critical factor rather than his adjusted gross or taxable income, a dependent with $600 or more of rental or business income is disqualified even though he suffered a loss for the year because his business deductions exceeded his gross income. Gooch v. Commissioner, 21 T.C. 481 (1954). Because the dependency exemption is not merely reduced but lost entirely if the gross income limit is violated, the taxpayer may lose as much as $420 (70 per cent, the maximum 1965 rate, of $600) if an otherwise qualified dependent realizes a few extra dollars of gross income.

Such an inadvertent loss of the dependency exemption is less common now than it was in the past, because in 1954 Congress enacted §151(e)(1)(B), eliminating the gross income limit if the dependent is a child of the taxpayer and is either under the age of 19 or a full-time student (as defined). See Bayley v. Commissioner, 35 T.C. 288 (1960) (intern in hospital is not a full-time "student"). This exception — which was presumably enacted to encourage summer employment of students —

is in turn subject to a restriction: it is denied if the dependent is married and files a joint return with his spouse. The result is that a married student who otherwise qualifies as a dependent must forego the tax benefits of a joint return if he wishes to preserve his father's dependency deduction.

The term "dependent" is defined by §152 by reference to two criteria:*

(a) *Relationship.* A "dependent" must be related to the taxpayer by blood, marriage, or adoption within the degrees specified by §152(a)(1)-(8), or meet the special requirements of §152(a)(9) or (10). Section 152(a)(9), relating to a person who lives with the taxpayer as a member of his household, was enacted in 1954, evidently to permit foster children to qualify as dependents. It seemed at first, however, to hold out some hope for a bachelor who wished to claim a "friend" as a dependent. The Tax Court held in Turnipseed v. Commissioner, 27 T.C. 758 (1957), however, that an illicit relationship did not qualify under §152(a)(9); one judge concurred on the ground that the taxpayer was not supporting the lady, since she was supporting herself. The Tax Court's instincts about the meaning of §152(a)(9) were confirmed by the enactment in 1958 of §152(b)(5), providing that an illicit relationship does not make a "household."

(b) *Support.* The taxpayer must furnish over half of the "support" for the taxable year of the person claimed as a dependent. The term "support" is not defined by the Code, but the Regulations supply some content to the concept. Regs. §1.152-1(a)(2) ("food, shelter, clothing, medical and dental care, education, and the like"; items supplied in kind are to be taken at fair market value). See also Flower v. United States, 52 A.F.T.R. 1383 (W.D. Pa. 1957) ($1400 Chris-Craft boat and $130 rifle for boy of 13 not part of "support"); Rev. Rul. 56-399, 1956-2 C.B. 114 (cost of automobile, as distinguished from cost of transportation, not included in "support"); Limpert v. Commissioner, 37 T.C. 447 (1961) (payments to babysitter included in computing cost of child's support); Bartsch v. Commissioner, 41 T.C. No. 83 (1964) (fair market value of taxpayer's services in caring for aged and infirm mother not included in "support," two judges dissenting); I.T. 3834, 1947-1 C.B. 29 (subsistence allowance received by veteran under "G. I. Bill of Rights" not part of support if not so used by him); Dick v. United States, 218 F. Supp. 839 (E.D. Wis. 1963) (father used child's earnings for child's support; held, no dependency exemption). A determination that a disputed item is part of the claimed dependent's "support" may establish that one person rather than another (e.g., a child's grandfather rather than his father) is entitled to the dependency exemption, or it may defeat the claim entirely (e.g., if the disputed item was supplied by the dependent himself). Note also that an expense may lay the basis for a dependency exemption even though the taxpayer has deducted it under §163 and §164 (mortgage interest and real estate taxes), §214 (child care expenses), or §213 (medical expenses). See Limpert v. Commissioner, supra.

A scholarship received by a student is not taken into account in determining whether his parents supplied more than half his support. See Ide v. Commissioner, 40 T.C. 721 (1963) (tuition and books received by college student under Naval R.O.T.C. training program; held, scholarship); Rev. Rul. 58-338, 1958-2 C.B. 54 (value of room and board supplied by nursing school to student nurses qualified as scholarship).

There is some authority for assuming that a person who supplies more than half the aggregate support of a group of persons (e.g., three children) has supplied more than half the support of each one, as well as for the theory that the cost of maintaining a household inures equally to the benefit of each occupant; it is by

* An alien cannot be a "dependent" unless he is a resident of the United States, a contiguous country, the Canal Zone, or Panama, or is a child of the taxpayer who meets the special requirements of §152(b)(3)(A) or (B).

no means clear, however, that the statutory provisions support these administratively appealing ways of avoiding troublesome problems of proof, and some cases seem to require more precision. Dunn v. Commissioner, ¶63,189 P-H Memo T.C.; Vance v. Commissioner, 36 T.C. 547 (1961); Fisher v. Commissioner, 16 T.C. 1144 (1951).

Before 1954, the Code was inflexible in requiring the taxpayer to contribute "over half" of the dependent's support. The exemption was often lost because two or more taxpayers contributed in equal proportions, particularly where several children were supporting a parent. See, e.g., Russoniello v. Commissioner, 21 T.C. 828 (1954). The 1954 Code, by §152(c), authorizes a "multiple support agreement." If more than half of the dependent's support was supplied by two or more otherwise eligible persons, those who contributed over 10 per cent may join in an agreement to designate one of their number to take the deduction. They can rotate the designation annually if they wish, or assign it repeatedly to the person who will derive the most tax benefit from claiming the exemption.

By virtue of §152(b)(4), payments to a wife that are deductible by the husband under §71 (alimony, etc.) are not to be treated as payments by him for the support of any dependent. On the other hand, payments that he cannot deduct under §71 because they are allocable to the support of minor children within the doctrine of the *Lester* case, supra page 184, may serve to establish a dependency exemption for him, but he will find it difficult to prove his claim if some of the support is supplied by the wife and she will not co-operate in making the evidence of their respective contributions available to him. Supra page 184. What is the status of amounts that are not explicitly designated as child support payments, but that nevertheless cannot be deducted under §71 (e.g., lump sum payments) if used by the wife to support the children?

It will be noted that the fact that a taxpayer is entitled to an exemption of $600 in respect of a qualified dependent does not deprive the dependent of the $600 personal exemption as to his own income. This "doubling up" of exemptions is especially important in the case of children who are under 19 or are full-time students, since they may be claimed as dependents without regard to the $600 gross income of §151(e)(1)(A). The child's parents are entitled to a dependency exemption if they supply more than half his support, and he will pay no income tax unless his adjusted gross income exceeds $900 (the sum of his personal exemption and the minimum standard deduction). A comparable phenomenon can occur with respect to other dependents, but the potential tax saving is smaller because the dependency exemption will be lost if the dependent's gross income is $600 or more.

The term "dependent" is important outside of the dependency exemption area of §151; it is employed, for example, by §213 (medical expenses of dependent deductible by taxpayer), §214 (expenses of caring for certain "dependents"), §1(b)(2)(A)(ii) (definition of "head of household"), §2(b)(1)(B) (definition of "surviving spouse"), etc. A person can be a "dependent" for these purposes if the requisite relationship and amount of support is established; the $600 gross income provision is a restriction on the dependency exemption, not part of the definition of the term "dependent."

In 1960, §170(d) was amended to allow a charitable contribution deduction for the cost (subject to limitations) of maintaining an elementary or secondary school student in the taxpayer's household under a charitable organization's program for providing educational opportunities in private homes. The child need not be a dependent or relative of the taxpayer, but the deduction, although achieved through the mechanism of §170, resembles the dependency exemption.

Exemptions based on age and blindness. The taxpayer is entitled to an extra

personal exemption of $600 if he reaches the age of 65 before the end of the taxable year. On a joint return, if both spouses are 65 or over, there will be four exemptions, with the result that no tax will be payable unless their adjusted gross income exceeds $3000 (the sum of their minimum standard deduction of $600 and their personal exemptions of $2400). Other tax concessions based on age are the exclusion of social security benefits from gross income and the related credit for "retirement income" (supra page 202), the relaxation of the limits on the medical expense deduction (supra page 170), and §121 (tax-free sale of residence by person 65 or over, infra page 474).

Section 151(d) provides an additional exemption for a taxpayer who is blind (as defined) at the end of the taxable year. Proposals to extend the same concession to persons who are physically handicapped in other ways have been made from time to time, but not enacted. At several other points in the Code, however, concessions are based on physical disability, regardless of its source. See §213(g)(3) (defining "disabled" for purpose of applying special limitation on medical expense deduction), §214 ("mentally or physically defective"), §152(a)-(10)(B) ("institutional care required by reason of a physical or mental disability").

See articles by various authors on "Taxation of the Aged," in 1959 Tax Revision Compendium (House Committee on Ways and Means) 539-578; Chen, Income Tax Exemptions for the Aged as a Policy Instrument, 16 Natl. Tax J. 325 (1963).

Economic effect of personal and dependency exemptions. The personal and dependency exemptions eliminate persons at the lowest income levels from the tax rolls, supply a degree of progression in the effective rate of tax beyond what is built into the rate schedule itself, differentiate among taxpayers according to the size of their family units, and grant special concessions to the aged and the blind.

For a family of four, it has been estimated that a bare subsistence budget would have required $2500 in 1959; a minimum health and decency budget, $3600; and a minimum comfort budget, $4400.* For the same year, the hypothetical family would have paid no federal income tax on adjusted gross income of less than $2700; but the tax would have been $173 and $317 at the minimum health and decency and minimum comfort budget levels. In 1965, with the newly enacted "minimum standard deduction" and rate reductions — but assuming no change in the cost of living — the comparable tax bills will be $95 (minimum health and decency budget) and $211 (minimum comfort budget). As to the number of returns with minimum amounts of adjusted gross income, 4 million (out of 61.5 million) returns filed in 1962 fell in the under $600 adjusted gross income class, and another 6.9 million reported adjusted gross income of $600 to $1500.

Changes in the personal exemptions have a drastic impact on the coverage and yield of the federal income tax. An increase in the exemption from $600 to $700 in 1963 would have resulted in a reduction in taxable returns of 2 million and a loss of $3.2 billion in revenue, and an increase to $800 would have cost another $2.9 billion, according to a Treasury estimate. To recoup these losses of revenue by a proportionate rate increase, a 7 to 13 per cent increase would have been required; alternatively, a 100 per cent rate on all taxable income above $22,000 or $15,000 would have done the trick.

The following table sets out the number of exemptions claimed on income tax returns for 1961:

---

* Samuelson, Economics (5th ed. 1961) 113-114; see also Lamale and Stotz, Interim City Worker's Family Budget, 1960 Monthly Labor Review 785.

	Returns	Exemptions
	(in millions)	
Taxpayer's exemptions:		
Taxpayer and spouse	61.5	99.4
Age 65 or over	5.3	6.8
Blindness	0.1	0.1
Dependency exemptions	30.9	71.2
Total	61.5	177.5

Comparative tax burden: Separate, joint, and head of household returns. The tax burden on domestic units of various types is compared in the following table, which gives effect to the personal and dependency exemptions and the optional standard deduction, as well as to the varying rates applicable to separate, joint, and head of household returns:

FEDERAL INCOME TAX ON FAMILY UNITS OF VARIOUS TYPES *

Adjusted gross income	*Single person*	*Head of household, one dependent*	*Married couple*	*Married couple, two dependents*
$ 2,500	$ 244	$ 128	$ 128	——
5,000	671	534	501	$ 290
10,000	1,742	1,456	1,342	1,114
25,000	7,730	6,348	5,276	4,892
50,000	21,630	18,610	15,960	15,360
100,000	54,386	48,892	43,860	43,140

* 1965 rates on adjusted gross income less standard deduction and exemptions.

The reasonableness of these burdens might be judged by comparing the relative incomes required by families of different sizes to attain the same standard of living. According to a 1947 study by the Treasury, the same standard of living is attained by a single person living alone, a married couple with no dependents, and a married couple with two dependents at income levels in the ratio of about 70:100:150.* These ratios also suggest that the uniform $600 exemption of existing law is too low for a single person living alone and too large, on a comparative basis, for married couples with two or more children; and that variations in the cost of living would be more accurately reflected with exemptions of $800 for a single person, $1200 or $1600 for a married couple, and $400 for each child.

It should also be noted, however, that these statistical comparisons are of limited validity. According to the 1947 Treasury study which preceded enactment of the joint return "split income" provision of 1948:

> The use of these ratios for the purpose of appraising alternative methods of solving the family income problem is subject to several important limitations. It appears, for example, that a married couple does not need twice the money income of a single person to attain the same standard of living because the housewife contributes a substantial amount of real income to the family. However, the income tax applies largely to money incomes and not real incomes. The determination of the relative taxpaying abilities in accordance with the above-indicated ratios would seem to involve the taxation of the real income added by the housewife. Another limitation stems from the fact . . . that the data used to obtain the above relative income ratios pertain to relatively low-income groups (primarily under $5,000), whereas the family income problem under consideration

* Division of Tax Research, Treasury Department, Individual Income Tax Exemptions (1947); see also Froeder, Estimating Equivalent Incomes or Budget Costs by Family Type, Monthly Labor Review, Nov. 1960, p. 1197, reaching a similar result.

pertains primarily to middle- and upper-income groups. Finally, the proportion of income used for consumption purposes tends to decrease and savings tend to increase as income increases. Thus, the ratios of relative income needed to obtain comparable levels of living would have less and less applicability, as an index of relative taxpaying abilities, as a larger and larger proportion of income is saved. [Division of Tax Research, Treasury Department, The Tax Treatment of Family Income, in Hearings on Revenue Revisions, 1947-48, House Committee on Ways and Means, 80th Cong., 1st Sess., 844, 852.]

On the taxation of family income, including joint returns, rate schedules, personal and dependency exemptions, see the papers by various authors, in 1959 Tax Revision Compendium (House Ways and Means Committee) 473-538; Groves, Federal Tax Treatment of the Family (Brookings Institution, 1963); Oldman and Temple, Comparative Analysis of the Taxation of Married Persons, 12 Stan. L. Rev. 585 (1960).

Section C. Income-Splitting by Private Arrangement

Before 1948, when Congress granted to married couples the privilege of splitting their income for tax purposes by filing joint returns, almost every conceivable method of accomplishing the same result by private arrangement was essayed by taxpayers. The materials that follow illustrate the most popular of these plans and the judicial, administrative, and legislative responses that they evoked.

Although the pressure to devise a private arrangement for income-splitting was greatly reduced when Congress enacted the income-splitting joint return provision of 1948 and the head-of-household provision of 1951, tax advantages can still be enjoyed if income can be split with children, other relatives, trusts, etc. The greater the number of individuals and entities among whom a given amount of income can be divided, the greater the tax savings. Moreover, the optional standard deduction may lend additional enchantment to income-splitting. Thus, a married couple with two dependents is entitled to a maximum standard deduction of $1000 on a joint return; if income is divided so that husband and wife file a joint return and their two dependents each file a separate return, the aggregate of their standard deductions may rise to $3000. The amount of tax that may be saved by a married couple with two dependents by splitting various amounts of adjusted gross income equally among all members of the family is shown by this table:

EFFECT OF INCOME-SPLITTING

Tax on Married Couple With Two Children *

Adjusted gross income	*Income reported on joint return*	*Income reported on 3 returns*†
$ 10,000	$ 1,114	$ 985
25,000	4,892	3,717
50,000	15,360	10,232
100,000	43,140	31,420
250,000	143,600	118,104

* 1965 rates applied to taxable income (adjusted gross income less optional standard deduction and exemptions)

† One-half of adjusted gross income reported on a joint return by parents; one-quarter by each child on a separate return.

As will be seen, income may be split not only with children and other members of the family, but also with trusts and other entities; moreover, business income

may be spread out among a number of proprietorships, partnerships, and corporations. The impact of thirty years of income-splitting tactics upon the law of federal income taxation is incalculable. The judicial doctrines worked out during this period have penetrated to every crevice of our tax structure, so that the relationships of employer and employee, of parent corporation and subsidiary, of corporation and stockholder, of philanthropist and charity, and of landlord and tenant are all influenced by the cases that follow.

For comprehensive studies of the income-splitting area, see Lyon and Eustice, Assignment of Income: Fruit and Tree as Irrigated by the P. G. Lake Case, 17 Tax L. Rev. 295 (1962) (reprinted, with some revisions, from 1962 So. Calif. Tax Inst. 47); Rice, Judicial Trends in Gratuitous Assignments to Avoid Federal Income Taxes, 64 Yale L.J. 991 (1955); Soll, Intra-Family Assignments: Attribution and Realization of Income, 6 Tax L. Rev. 435 (1951) and 7 id. 61 (1951). More specialized studies are cited hereafter.

1. *Gifts*

LUCAS v. EARL
281 U.S. 111 (1930)

MR. JUSTICE HOLMES delivered the opinion of the Court.

This case presents the question whether the respondent, Earl, could be taxed for the whole of the salary and attorney's fees earned by him in the years 1920 and 1921, or should be taxed for only a half of them in view of a contract with his wife which we shall mention. The Commissioner of Internal Revenue and the Board of Tax Appeals imposed a tax upon the whole, but their decision was reversed by the Circuit Court of Appeals, 30 F. (2d) 898. A writ of certiorari was granted by this court.

By the contract, made in 1901, Earl and his wife agreed

> that any property either of us now has or may hereafter acquire . . . in any way, either by earnings (including salaries, fees, etc.), or any rights by contract or otherwise, during the existence of our marriage, or which we or either of us may receive by gift, bequest, devise, or inheritance, and all the proceeds, issues, and profits of any and all such property shall be treated and considered, and hereby is declared to be received, held, taken, and owned by us as joint tenants, and not otherwise, with the right of survivorship.

The validity of the contract is not questioned, and we assume it to be unquestionable under the law of the State of California, in which the parties lived. Nevertheless we are of opinion that the Commissioner and Board of Tax Appeals were right.

The Revenue Act of 1918 . . . imposes a tax upon the net income of every individual including "income derived from salaries, wages, or compensation for personal service . . . of whatever kind and in whatever form paid," §213(a) [§61(a)]. . . . A very forcible argument is presented to the effect that the statute seeks to tax only income beneficially received, and that taking the question more technically the salary and fees became the joint property of Earl and his wife on the very first instant on which they were received. We well might hesitate upon the latter proposition, because however the matter might stand between husband and wife he was the only party to the contracts by which the salary and fees were earned, and it is somewhat hard to say that the last step in the performance of those contracts could be taken by anyone but himself alone. But this case is not to be decided by attenuated subtleties. It turns on the import and reasonable

construction of the taxing act. There is no doubt that the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skilfully devised to prevent the salary when paid from vesting even for a second in the man who earned it. That seems to us the import of the statute before us and we think that no distinction can be taken according to the motives leading to the arrangement by which the fruits are attributed to a different tree from that on which they grew.

Judgment reversed.

THE CHIEF JUSTICE took no part in this case.

NOTE

1. *Mrs. Earl's tax status.* Was Mrs. Earl also taxable on the income in question? Suppose Mrs. Earl had paid for Mr. Earl's legal education, his law library, etc., in return for an assignment of 50 per cent of his professional earnings either for a stated period or for life. Would the income then be taxed to Mr. Earl?

In Wilkinson v. United States, 304 F.2d 469 (Ct. Cl. 1962), the court held that a lawyer who had purchased a 45 per cent interest in another lawyer's rights under a contingent fee contract for $12,000 in 1938 was taxable on his share ($191,000) when the contingency was satisfied in 1951, although he had in turn assigned his claim to a charitable institution.

2. *Do-it-yourself community property.* In Commissioner v. Harmon, 323 U.S. 44 (1944), the Supreme Court held that a 1939 Oklahoma statute permitting husband and wife to elect to be governed by a community property system was not effective for federal income taxation. The Court said that the existence of an option resulted in a status similar to that in Lucas v. Earl, "where by contract future income of the spouses was to vest in them as joint tenants" and distinguished Poe v. Seaborn, where "the court was not dealing with a consensual community but one made an incident of marriage by the inveterate policy of the State." Mr. Justice Douglas dissented in an opinion joined by Mr. Justice Black, arguing that a decision to move to or marry in a community property state is as "consensual" as filing an election under the Oklahoma statute. He also pointed out that income from community property was divisible under Poe v. Seaborn even though in some community property states the spouses have the power to convert community property into separate property and vice versa. Finally:

> I do not mean to defend Poe v. Seaborn. I only say that if we are to stand by it, we should not allow it to become a "vested" interest of only a few of the states. The truth of the matter is that Lucas v. Earl and Helvering v. Clifford [infra, p. 372] on the one hand and Poe v. Seaborn on the other state competing theories of income tax liability. [323 U.S. at 56.]

G.C.M. 27026

1951-2 C.B.7

An opinion is requested as to the treatment for Federal income tax purposes of the proceeds derived from public entertainments conducted for the benefit of charitable organizations.

It is a common practice for those engaged in the business of promoting sporting events, or other forms of public entertainment, to designate events conducted on certain days as "charity" events, the net proceeds being turned over to specific charitable organizations.

It is a well-established principle, based on decisions of the Supreme Court of the United States, that an assignment of income by the person who earns it, or is otherwise entitled to it, does not relieve him from tax on such income. When a person who is in the business of promoting sporting events, or other public entertainments, enters into an agreement with a charitable organization under the terms of which the facilities of the former are operated by him as agent for the

charitable organization, and all the proceeds from the event less expenses are received by or on account of the latter, the promoter is in effect assigning to the charitable organization earnings derived by him from the operation of the event. To allow the promoter in these circumstances to exclude such amounts from his gross income would be to give effect to form rather than substance, and would permit circumvention of the specific statutory limitations, contained in [§170(b)(1)], on the amount of charitable contributions which is deductible in computing net income. This office is accordingly of the opinion that if a professional promoter would, in the absence of an agreement between the parties, be entitled to the proceeds of an event, such agreement will not operate to permit him to exclude the proceeds of the event from his income for Federal income tax purposes.

It is recognized, however, that there are instances in which a charitable organization is itself the promoter of an event designed to produce income to be used for its purposes. Bazaars, amateur productions, and sporting events are, of course, frequently promoted by such organizations. If the charitable organization is actually the promoter of an event, the fact that services and property are contributed or facilities loaned to the organization does not, of itself, result in tax to the contributor or lender.

Determination of whether the charitable organization is in substance the beneficiary of profits earned by a professional promoter of an event, or whether it is itself the promoter, must depend on the particular facts in each case, considering the realities of the situation.

NOTE

1. *G.C.M. 27026 as applied.* Bearing in mind what Mr. Justice Holmes said of "attenuated subtleties" in Lucas v. Earl, how would you conduct negotiations on behalf of a promoter to avoid an imputation of income to him?

Is the principle of this ruling applicable only to promoters, or does it embrace all performers? See Regs. §1.61-2(c). A few years before this regulation was issued there was a spirited exchange between Assistant Attorney General (later Mr. Justice) Jackson and several members of a joint Congressional committee over a Treasury ruling that the proceeds of Mrs. Roosevelt's radio broadcasts, which were paid to charities, were not taxable to her. The basis of the ruling was thus stated by Mr. Jackson.

> One who earns a salary or wages or has income from invested property cannot assign that income nor order it to be paid to a person or corporation so as to avoid a tax merely by routing his income so as not to pass through his hands. But this doctrine of constructive receipt of income cannot be used to create income when there is no income, and has never been used to justify a tax on services devoted to charity. Mrs. Roosevelt declined to work for money and was only willing to serve for charity's sake. It was and is my opinion that such benefit broadcasts do not result in taxable income. [Hearings Before the Joint Committe on Tax Evasion and Avoidance, 75th Cong., 1st Sess., p. 4, 426 (1937).]

Are similar practices prevented by the subsequently issued regulation cited above? See Rev. Rul. 71, 1953-1 C.B. 18.

What is the status of a salary paid for services to a member of a religious order who is bound by an oath of poverty and transfers his entire earnings to his ecclesiastical superior? See statement of Paul Blanshard (on behalf of Protestants and Other Americans United for Separation of Church and State), in Hearings, Technical Amendments to Internal Revenue Code, Subcommittee of House Ways and Means Committee, 84th Cong., 2d Sess. 46, 54 (1956).

Under G.C.M. 27026, could a promoter contribute his services to a group of friends who are sponsoring a "benefit" for an indigent prizefighter? For the promoter's son? For the promoter himself?

2. *Benefits for the Red Cross.* Section 114, enacted in 1952, excludes from gross income the proceeds of certain sports events, if the taxpayer is a corporation and turns the proceeds over to the American Red Cross. What does this provision accomplish that is not permissible under G.C.M. 27026 or Regs. §1.61-2(c)?

TESCHNER v. COMMISSIONER

38 T.C. 1003 (1962)

[The taxpayer submitted one of the winning entries in a contest sponsored by Johnson & Johnson, Inc., in cooperation with Mutual Benefit Life Insurance Company, in which prizes were awarded for the best essays beginning "A good education is important because . . ." The prizes were 49 fully paid annuity contracts with face amounts ranging from $10,000 to $1000. The rules of the contest required contestants over the age of 17 years and 1 month to designate a person under that age to receive the annuity contract in the event the contestant's entry was successful. In accordance with this rule, the taxpayer had designated his daughter (age 7) when he submitted his essay, and she was awarded a $1500 annuity.]

TRAIN, Judge: While the taxability of prizes and awards may have been in doubt prior to the enactment of the Internal Revenue Code of 1954, it is now clear that they are includible in gross income, with certain exceptions not here applicable. Sec. 74 I.R.C. 1954. The sole question in this case is whether the prize (annuity policy) is taxable to petitioners.

Respondent, relying on Lucas v. Earl, 281 U.S. 111 (1930), and Rev. Rul. 58-127, 1958-1 C.B. 42, contends that the annuity policy which Karen received is includible in petitioners' gross income. Respondent states on brief that the issue here "is whether a prize attributable to a taxpayer's contest efforts, which, if received by him, would constitute taxable income in the nature of compensation for services rendered, may be excluded by him because paid to his designee." Respondent declares his theory of the case to be "that whenever *A* receives something of value attributable to services performed by *B*, *B*, the earner, is the proper taxpayer."

Petitioners contend that the value of the annuity policy should not be included in their gross income because they did not receive anything either actually or constructively and never had a right, at any time, to receive anything that could have been the subject of an anticipatory assignment or similar arrangement.

We agree with the petitioners.

In the instant case, we are not confronted with the question of whether the prize is income. The sole question is whether it is the petitioners' income for tax purposes. Certainly, it was Paul's effort that generated the income, to whomever it is to be attributed. However, as we have found, he could not under any circumstances whatsoever receive the income so generated, himself. He had no right to either its receipt or its enjoyment. He could only designate another individual to be the beneficiary of that right. Moreover, under the facts of this case, the payment to the daughter was not in discharge of an obligation of petitioners. Cf. Douglas v. Willcutts, 296 U.S. 1 (1935). At age 18, Karen will be entitled to $1,500. She can use that money, in her uncontrolled and unfettered discretion, for any purpose she chooses. Nor does respondent here contend that petitioners received income by virtue of a satisfaction of an obligation to support. Finally, there is no evidence whatsoever that the arrangement here involved was a sham or the product of connivance.

As pointed out above, respondent relies, in part, on Rev. Rul. 58-127, supra, and a consideration of that ruling is useful because it reveals the error into which

the respondent has here fallen. Under the circumstances stated by that ruling, the taxpayer prepared and submitted a winning entry in an essay contest. Pursuant to the terms of that contest, the taxpayer received a check payable to his child, the use of which was entirely without restriction imposed by the sponsors of the contest. The respondent ruled that, under such circumstances, the amount of the prize was includible in the gross income of the taxpayer. While the facts set out in that ruling do not disclose whether the taxpayer could himself have received the prize, it would seem that in all salient respects the facts therein are identical to those before us.

In his ruling, the respondent declared, "The basic rule in determining to whom an item of income is taxable is that income is taxable to the one who earns it." If by this statement the respondent means that income is in all events includible in the gross income of whomsoever generates or creates the income by virtue of his own effort, the respondent is wrong. If this were the law, agents, conduits, fiduciaries, and others in a similar capacity would be personally taxable on the proceeds of their efforts. The charity fund-raiser would be taxable on sums contributed as the result of his efforts. The employee would be taxable on income generated for his employer by his efforts. Such results, completely at variance with every accepted concept of Federal income taxation, demonstrate the fallacy of the premise.

If, on the other hand, the respondent used the term "earn," not in such a broad sense, but in the commonly accepted usage of "to acquire by labor, service, or performance; to deserve and receive compensation" (Webster's New International Dictionary), then the rule is intelligible but does not support the conclusion reached by the respondent either in the ruling in question or in the case before us. The taxpayer there, as here, acquired nothing himself; he received nothing nor did he have a right to receive anything.

In Rev. Rul. 58-127, supra, respondent relied heavily, as he does here, on Helvering v. Horst, 311 U.S. 112 (1940), especially the language of the opinion to the effect that — "The power to dispose of income is the equivalent of ownership of it. The exercise of that power to procure the payment of income to another is the enjoyment, and hence the realization, of the income by him who exercises it." The respondent's reliance on this language is misplaced. The power of disposition assumes possession or the right of possession. To dispose is to part with. Where there is neither possession nor the right to possession, there can be no disposition. In Helvering v. Horst, supra, the taxpayer, the owner of negotiable bonds, detached from them negotiable interest coupons shortly before their due date and delivered them as gifts to his son who in the same year collected them at maturity. The language of the Court, quoted above and relied upon by respondent, mistakenly we believe, must be read in relation to the facts then before the Court. In this connection, the Court in *Horst* stated unequivocally: "The question here is, whether because one who in fact receives payment for services or interest payments is taxable only on his receipt of the payments, he can escape all tax by giving away his right to income in advance of payment." Plainly, here, petitioners have not given away any *right* of theirs whatsoever. Further, in *Horst,* at page 119, the Supreme Court stated:

> The dominant purpose of the revenue laws is the taxation of income to those who earn or otherwise create the right to receive it and enjoy the benefit of it when paid. . . . The tax laid . . . upon income "derived from . . . wages, or compensation for personal service, . . . in whatever form paid, . . ." . . . cannot fairly be interpreted as not applying to income derived from interest or compensation when *he who is entitled to receive it* makes use of his power to dispose of it in procuring satisfactions which he would otherwise procure only by the use of the money when received. [Emphasis supplied.]

In Lucas v. Earl, 281 U.S. 111 (1930), upon which respondent heavily relies, the Supreme Court refused to allow a husband to escape taxes on his income by way of salaries and attorney fees through a contractual arrangement by which he and his wife were to receive, hold, and own such earnings as joint tenants. The Court declared that tax on a salary could not be avoided by the person earning the salary by anticipatory arrangements and contracts. Shortly thereafter, in Poe v. Seaborn, 282 U.S. 101, 117 (1930), the Supreme Court stated:

> In the *Earl* case . . . the husband's professional fees, earned in years subsequent to the date of the contract, were his individual income . . . The very assignment in that case was bottomed on the fact that the earnings would be the husband's property, else there would have been nothing on which it could operate. That case presents quite a different question from this, because here, by law, the earnings are never the property of the husband, . . .

In Harrison v. Schaffner, 312 U.S. 579, 580, 582 (1941), the Supreme Court stated that the rule applicable to an anticipatory assignment of income applies when the assignor is *entitled* at the time of the assignment to receive the income at a future date and is vested with such a right. In the instant case, petitioners themselves received nothing and were *never entitled* to anything. What was said in the early case of Marion Stone Burt Lansill, 17 B.T.A. 413, 423 (1929), affd. 58 F.2d 512 (C.A.D.C. 1932), seems appropriate here:

> The right in the taxpayer to receive the income at the time it is attributed and taxed to him is likewise not essential, where, as in the *Old Colony, Boston & Maine,* and *Rensselaer* and *Rosenwald* cases, supra, the taxpayer has by his own volition chosen to dispose of the right to receive income while retaining that from which the income is derived. The volition in disposing of the right is important, *for while all will agree that one who never received or had a right to receive or who has involuntarily lost it should not be taxed,* it is also plain that his voluntary exercise of the right to dispose of the income before receipt may be just as valuable and important practically as its exercise after receipt. . . . [Emphasis supplied.]

It cannot be argued that Paul voluntarily gave up *his* right to get the annuity policy and designated his daughter to receive it in his place. There was no discretion on his part; the choice was to accept the terms of the contest or reject them.

In the case before us, the taxpayer, while he had no power to *dispose* of income, had a power to appoint or designate its recipient. Does the existence or exercise of such a power alone give rise to taxable income in his hands? We think clearly not. In Nicholas A. Stavroudes, 27 T.C. 583, 590 (1956), we found it to be settled doctrine that a power to direct the distribution of trust income to others is not alone sufficient to justify the taxation of that income to the possessor of such a power. See also Bateman v. Commissioner, 127 F.2d 266 (C.A. 1, 1942).

Granted that an individual cannot escape taxation on income to which he is entitled by "turning his back" upon that income, the fact remains that he must have received the income or had a right to do so before he is taxable thereon. As stated by the court in United States v. Pierce, 137 F.2d 428, 431 (C.A. 8, 1943):

> The sum of the holdings of all cases is that for purposes of taxation income is attributable to the person entitled to receive it, although he assigns his right in advance of realization, and although, in the case of income derived from the ownership of property, he transfers the property producing the income to another as trustee or agent, in either case retaining all the practical benefits of ownership.

Section 1(a) of the 1954 Code imposes a tax on the "income of every individual." Where an individual neither receives nor has the right to receive income, he is

not the taxable individual within the contemplation of the statute. There is no basis in the statute or in the decided cases for a construction at variance with this fundamental rule.

Reviewed by the Court.

Decision will be entered for the petitioners.

DAWSON, J., concurring: Harrison v. Shaffner, 312 U.S. 579 (1941), settled the proposition that there can be no anticipatory assignment of income unless the assignor is entitled at the time of assignment to receive the income at a future date and is vested with such a right. Paul Teschner was at no time "vested with the right to receive income" under the rules of the contest and, therefore, could not possibly "escape the tax by any kind of anticipatory arrangement." Consequently, the cases cited by the dissent, Lucas v. Earl, 281 U.S. 111 (1930), Helvering v. Horst, 311 U.S. 112 (1940), and Helvering v. Eubank, 311 U.S. 122 (1940), all of which held that "one *vested with the right to receive income* [does] not escape the tax by any kind of anticipatory arrangement, however skillfully devised," Harrison v. Shaffner, supra at 582 (emphasis supplied), are inapposite here.

It is true that a taxpayer having the right to dispose of income would be taxable on the exercise of such a right where the disposition results in an economic benefit to him. However, in the instant case Paul Teschner had no *right of disposition,* but only a *duty* under the contest rules to designate a person under the age of 17 years, 1 month. Compliance with this duty was a *condition precedent* for entry of persons over that age into the contest. While it might be said concomitantly that there was a right to designate to *whom* the prize would go if it *were* won, no economic benefit could be conferred upon anyone when this right was exercised since there was no income upon which such a right of designation could operate at the time the designation was made. If those who disagree with this result fear the prize (annuity policy) will escape taxation, there is no problem because it would appear to be taxable to the daughter under the provisions of section 74, I.R.C. 1954.

MULRONEY, J., agrees with this concurring opinion.

ATKINS, J., dissenting: It is a well-settled principle of our income tax law that personal earnings are taxable to the earner, and that cases involving the taxation of personal earnings are not to be decided by attenuated subtleties. Lucas v. Earl, 281 U.S. 111, in which the Supreme Court held an anticipatory assignment of future personal earnings to be ineffective to relieve the earner of tax. . . . The annuity policy which Paul won resulted from his personal efforts. The fruit of his labor consisted of the payment of the award to his designee, his daughter. His efforts alone generated the income in question; and it is a matter of no consequence that, under the rules of the contest, such income could not be paid to him, for he had the power to control its disposition. He in fact exercised that power when he entered the contest, by designating the natural object of his bounty, his daughter, as the recipient of any prize which he might win. The exercise of such power, with resultant payment to the daughter, constituted the enjoyment and hence the realization of the income by Paul. In the circumstances he should be fully charged with the income. Cf. Helvering v. Horst, 311 U.S. 112, and Helvering v. Eubank, 311 U.S. 122. There is no more basis here for narrowing the broad scope of the holding in Lucas v. Earl than there was in the *Horst* and *Eubank* cases. The decision of the majority herein rests upon "attenuated subtleties" similar to those disapproved, first in Lucas v. Earl and then again in Burnet v. Leininger, 285 U.S. 136, Helvering v. Horst, Helvering v. Eubank, Harrison v. Schaffner, 312 U.S. 579, and Commissioner v. P. G. Lake, Inc., 356 U.S. 260.

TIETJENS, OPPER, RAUM, WITHEY, PIERCE, and SCOTT, JJ., agree with this dissent.

NOTE

Implications of Teschner. If Johnson and Johnson offered to employ the taxpayer on condition that he designate, irrevocably, a child under the age of 17 to receive his salary, would the majority come to the same conclusion? Would this depend on whether the salary could be used, or in fact was used, to discharge the taxpayer's obligation to support the person named to receive it? Would the dissenters reach the same result if Johnson and Johnson offered to pay $100,000 to the medical school whose dean submitted the best 25-word essay beginning: "A medical school education is a public service because . . ."?

With *Teschner,* see Commissioner v. Giannini, 129 F.2d 638 (9th Cir. 1942), involving the president of a corporation who was entitled to receive a percentage of business profits as compensation. During a taxable year (1927), he advised the corporation that he would not accept any more compensation for that year and "suggested that the corporation do something worth while with the money"; early the following year, the corporation contributed the amount which the taxpayer had refused ($1,500,000) to the University of California. The court held that "we cannot say as a matter of law that the money was beneficially received by the taxpayer." In Hedrick v. Commissioner, 154 F.2d 90 (2d Cir. 1946), a taxpayer who refused to cash a series of pension checks because he feared that as a pensioner he would find it difficult to obtain other employment was held taxable. The court had this to say of *Giannini:*

> Perhaps [it] may be distinguished on the facts. If, as we understand them, the amount sought to be taxed as income was offered compensation which the taxpayer refused before he performed the services for which he might have been so paid and the [employer] acquiesced in the taxpayer's insistence that he should serve for the remainder of the year without additional compensation, we agree with it. In so far as it cannot be so distinguished, we are not persuaded that it should be followed.

See Note, Disclaimers in Federal Taxation, 63 Harv. L. Rev. 1047, 1051ff (1950).

BLAIR v. COMMISSIONER

300 U.S. 5 (1937)

MR. CHIEF JUSTICE HUGHES delivered the opinion of the Court.

This case presents the question of liability of a beneficiary of a testamentary trust for a tax upon the income which he had assigned to his children prior to the tax years and which the trustees had paid to them accordingly.

The trust was created by the will of William Blair, a resident of Illinois who died in 1899, and was of property located in that State. One-half of the net income was to be paid to the donor's widow during her life. His son, the petitioner Edward Tyler Blair, was to receive the other one-half and, after the death of the widow, the whole of the net income during his life. In 1923, after the widow's death, petitioner assigned to his daughter, Lucy Blair Linn, an interest amounting to $6,000 for the remainder of that calendar year, and to $9,000 in each calendar year thereafter, in the net income which the petitioner was then or might thereafter be entitled to receive during his life. At about the same time, he made like assignments of interest, amounting to $9,000 in each calendar year, in the net income of the trust to his daughter Edith Blair and to his son, Edward Seymour Blair, respectively. In later years, by similar instruments, he assigned to these children additional interests, and to his son William McCormick Blair other specified interests in the net income. The trustees accepted the assignments and distributed the income directly to the assignees.

[After holding that a judgment in an earlier proceeding involving the same trust was not conclusive in this proceeding as res judicata and that the assign-

ments were valid under local law, the Supreme Court turned to the third issue in the case.]

Third. The question remains whether, treating the assignments as valid, the assignor was still taxable upon the income under the federal income tax act. That is a federal question.

Our decisions in Lucas v. Earl, 281 U.S. 111, and Burnet v. Leininger, 285 U.S. 136, are cited. In the *Lucas* Case the question was whether an attorney was taxable for the whole of his salary and fees earned by him in the tax years or only upon one-half by reason of an agreement with his wife by which his earnings were to be received and owned by them jointly. We were of the opinion that the case turned upon the construction of the taxing act. We said that "the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skillfully devised to prevent the salary when paid from vesting even for a second in the man who earned it." That was deemed to be the meaning of the statute as to compensation for personal service and the one who earned the income was held to be subject to the tax. In Burnet v. Leininger, supra, a husband, a member of a firm, assigned future partnership income to his wife. We found that the revenue act dealt explicitly with the liability of partners as such. The wife did not become a member of the firm; the act specifically taxed the distributive share of each partner in the net income of the firm; and the husband by the fair import of the act remained taxable upon his distributive share. These cases are not in point. The tax here is not upon earnings which are taxed to the one who earns them. Nor is it a case of income attributable to a taxpayer by reason of the application of the income to the discharge of his obligation. . . . There is here no question of evasion or of giving effect to statutory provisions designed to forestall evasion; or of the taxpayer's retention of control. . . .

The Government points to the provisions of the revenue acts imposing upon the beneficiary of a trust the liability for the tax upon the income distributable to the beneficiary.* But the term is merely descriptive of the one entitled to the beneficial interest. These provisions cannot be taken to preclude valid assignments of the beneficial interest, or to affect the duty of the trustee to distribute income to the owner of the beneficial interest, whether he was such initially or becomes such by valid assignment. The one who is to receive the income as the owner of the beneficial interest is to pay the tax. If under the law governing the trust the beneficial interest is assignable, and if it has been assigned without reservation, the assignee thus becomes the beneficiary and is entitled to rights and remedies accordingly. We find nothing in the revenue acts which denies him that status.

The decision of the Circuit Court of Appeals turned upon the effect to be ascribed to the assignments. The court held that the petitioner had no interest in the corpus of the estate and could not dispose of the income until he received it. Hence it was said that "the income was *his*" and his assignment was merely a direction to pay over to others what was due to himself. The question was considered to involve "the date when the income became transferable." 83 F.(2d) at page 662. The Government refers to the terms of the assignment — that it was of the interest in the income "which the said party of the first part now is, or may hereafter be, entitled to receive during his life from the trustees." From this it is urged that the assignments "dealt only with a right to receive the income" and

* The provisions stated in general terms that the "beneficiary" of a trust was taxable on the income distributable to him. See §§652(a) and 662(a). — Ed.

that "no attempt was made to assign any equitable right, title or interest in the trust itself." This construction seems to us to be a strained one. We think it apparent that the conveyancer was not seeking to limit the assignment so as to make it anything less than a complete transfer of the specified interest of the petitioner as the life beneficiary of the trust, but that with ample caution he was using words to effect such a transfer. That the state court so construed the assignments appears from the final decree which described them as voluntary assignments of interests of the petitioner "in said trust estate," and it was in that aspect that petitioner's right to make the assignments was sustained.

The will creating the trust entitled the petitioner during his life to the net income of the property held in trust. He thus became the owner of an equitable interest in the corpus of the property. . . . By virtue of that interest he was entitled to enforce the trust, to have a breach of trust enjoined and to obtain redress in case of breach. The interest was present property alienable like any other, in the absence of a valid restraint upon alienation. . . . The beneficiary may thus transfer a part of his interest as well as the whole. See Restatement of the Law of Trusts, §§130, 132 et seq. The assignment of the beneficial interest is not the assignment of a chose in action but of the "right, title, and estate in and to property." . . . See Bogart, Trusts and Trustees, vol. 1, §183, pp. 516, 517; 17 Columbia Law Review, 269, 273, 289, 290.

We conclude that the assignments were valid, that the assignees thereby became the owners of the specified beneficial interests in the income, and that as to these interests they and not the petitioner were taxable for the tax years in question. The judgment of the Circuit Court of Appeals is reversed and the cause is remanded with direction to affirm the decision of the Board of Tax Appeals.

It is so ordered.

HELVERING v. HORST

311 U.S. 112 (1940)

MR. JUSTICE STONE delivered the opinion of the Court.

The sole question for decision is whether the gift, during the donor's taxable year, of interest coupons detached from the bonds, delivered to the donee and later in the year paid at maturity, is the realization of income taxable to the donor.

In 1934 and 1935 respondent, the owner of negotiable bonds, detached from them negotiable interest coupons shortly before their due date and delivered them as a gift to his son who in the same year collected them at maturity. The Commissioner ruled that under [§61(a)], the interest payments were taxable, in the years when paid, to the respondent donor who reported his income on the cash receipts basis. . . .

The court below thought that as the consideration for the coupons had passed to the obligor, the donor had, by the gift, parted with all control over them and their payment, and for that reason the case was distinguishable from Lucas v. Earl and Burnet v. Leininger, 285 U.S. 136, where the assignment of compensation for services had preceded the rendition of the services, and where the income was held taxable to the donor.

The holder of a coupon bond is the owner of two independent and separable kinds of right. One is the right to demand and receive at maturity the principal amount of the bond representing capital investment. The other is the right to demand and receive interim payments of interest on the investment in the amounts and on the dates specified by the coupons. Together they are an obliga-

tion to pay principal and interest given in exchange for money or property which was presumably the consideration for the obligation of the bond. Here respondent, as owner of the bonds, had acquired the legal right to demand payment at maturity of the interest specified by the coupons and the power to command its payment to others which constituted an economic gain to him.

Admittedly not all economic gain of the taxpayer is taxable income. From the beginning the revenue laws have been interpreted as defining "realization" of income as the taxable event rather than the acquisition of the right to receive it. And "realization" is not deemed to occur until the income is paid. But the decisions and regulations have consistently recognized that receipt in cash or property is not the only characteristic of realization of income to a taxpayer on the cash receipts basis. Where the taxpayer does not receive payment of income in money or property realization may occur when the last step is taken by which he obtains the fruition of the economic gain which has already accrued to him. . . .

In the ordinary case the taxpayer who acquires the right to receive income is taxed when he receives it, regardless of the time when his right to receive payment accrued. But the rule that income is not taxable until realized has never been taken to mean that the taxpayer, even on the cash receipts basis, who has fully enjoyed the benefit of the economic gain represented by his right to receive income, can escape taxation because he has not himself received payment of it from his obligor. The rule, founded on administrative convenience, is only one of postponement of the tax to the final event of enjoyment of the income, usually the receipt of it by the taxpayer, and not one of exemption from taxation where the enjoyment is consummated by some event other than the taxpayer's personal receipt of money or property. Cf. Aluminum Castings Co. v. Routzahn, 282 U.S. 92, 98. This may occur when he has made such use or disposition of his power to receive or control the income as to procure in its place other satisfactions which are of economic worth. The question here is, whether because one who in fact receives payment for services or interest payments is taxable only on his receipt of the payments, he can escape all tax by giving away his right to income in advance of payment. If the taxpayer procures payment directly to his creditors of the items of interest or earnings due him, see Old Colony Trust Co. v. Commissioner, 279 U.S. 716; Bowers v. Kerbaugh-Empire Co., 271 U.S. 170; United States v. Kirby Lumber Co. [supra p. 89], or if he sets up a revocable trust with income payable to the objects of his bounty, Corliss v. Bowers, 281 U.S. 376, he does not escape taxation because he did not actually receive the money. . . .

Underlying the reasoning in these cases is the thought that income is "realized" by the assignor because he, who owns or controls the source of the income, also controls the disposition of that which he could have received himself and diverts the payment from himself to others as the means of procuring the satisfaction of his wants. The taxpayer has equally enjoyed the fruits of his labor or investment and obtained the satisfaction of his desires whether he collects and uses the income to procure those satisfactions, or whether he disposes of his right to collect it as the means of procuring them. Cf. Burnet v. Wells, 289 U.S. 670.

Although the donor here, by the transfer of the coupons, has precluded any possibility of his collecting them himself he has nevertheless, by his act, procured payment of the interest, as a valuable gift to a member of his family. Such a use of his economic gain, the right to receive income, to procure a satisfaction which can be obtained only by the expenditure of money or property, would seem to be the enjoyment of the income whether the satisfaction is the purchase of goods at the corner grocery, the payment of his debt there, or such non-material satisfactions as may result from the payment of a campaign or community chest contribution, or a gift to his favorite son. Even though he never receives the money

he derives money's worth from the disposition of the coupons which he has used as money or money's worth in the procuring of a satisfaction which is procurable only by the expenditure of money or money's worth. The enjoyment of the economic benefit accruing to him by virtue of his acquisition of the coupons is realized as completely as it would have been if he had collected the interest in dollars and expended them for any of the purposes named. Burnet v. Wells, supra.

In a real sense he has enjoyed compensation for money loaned or services rendered and not any the less so because it is his only reward for them. To say that one who has made a gift thus derived from interest or earnings paid to his donee has never enjoyed or realized the fruits of his investment or labor because he has assigned them instead of collecting them himself and then paying them over to the donee, is to affront common understanding and to deny the facts of common experience. Common understanding and experience are the touchstones for the interpretation of the revenue laws.

The power to dispose of income is the equivalent of ownership of it. The exercise of that power to procure the payment of income to another is the enjoyment and hence the realization of the income by him who exercises it. We have had no difficulty in applying that proposition where the assignment preceded the rendition of the services, Lucas v. Earl, supra; Burnet v. Leininger, supra, for it was recognized in the *Leininger* case that in such a case the rendition of the service by the assignor was the means by which the income was controlled by the donor and of making his assignment effective. But it is the assignment by which the disposition of income is controlled when the service precedes the assignment and in both cases it is the exercise of the power of disposition of the interest or compensation with the resulting payment to the donee which is the enjoyment by the donor of income derived from them.

This was emphasized in Blair v. Commissioner, 300 U.S. 5, on which respondent relies, where the distinction was taken between a gift of income derived from an obligation to pay compensation and a gift of income-producing property. In the circumstances of that case the right to income from the trust property was thought to be so identified with the equitable ownership of the property from which alone the beneficiary derived his right to receive the income and his power to command disposition of it that a gift of the income by the beneficiary became effective only as a gift of his ownership of the property producing it. Since the gift was deemed to be a gift of the property the income from it was held to be the income of the owner of the property, who was the donee, not the donor, a refinement which was unnecessary if respondent's contention here is right, but one clearly inapplicable to gifts of interest or wages. Unlike income thus derived from an obligation to pay interest or compensation, the income of the trust was regarded as no more the income of the donor than would be the rent from a lease or a crop raised on a farm after the leasehold or the farm has been given away. . . .

The dominant purpose of the revenue laws is the taxation of income to those who earn or otherwise create the right to receive it and enjoy the benefit of it when paid. . . . The tax laid by the 1934 Revenue Act upon income "derived from . . . wages, or compensation for personal service, of whatever kind and in whatever form paid . . . ; also from interest . . ." therefore cannot fairly be interpreted as not applying to income derived from interest or compensation when he is entitled to receive it makes use of his power to dispose of it in procuring satisfactions which he would otherwise procure only by the use of the money when received.

It is the statute which taxes the income to the donor although paid to his donee. Lucas v. Earl, supra; Burnet v. Leininger, supra. True, in those cases the service

which created the right to income followed the assignment and it was arguable that in point of legal theory the right to the compensation vested instantaneously in the assignor when paid although he never received it; while here the right of the assignor to receive the income antedated the assignment which transferred the right and thus precluded such an instantaneous vesting. But the statute affords no basis for such "attenuated subtleties." The distinction was explicitly rejected as the basis of decision in Lucas v. Earl. It should be rejected here, for no more than in the *Earl* case can the purpose of the statute to tax the income to him who earns, or creates and enjoys it be escaped by "anticipatory arrangements . . . however skilfully devised" to prevent the income from vesting even for a second in the donor.

Nor is it perceived that there is any adequate basis for distinguishing between the gift of interest coupons here and a gift of salary or commissions. The owner of a negotiable bond and of the investment which it represents, if not the lender, stands in the place of the lender. When, by the gift of the coupons, he has separated his right to interest payments from his investment and procured the payment of the interest to his donee, he has enjoyed the economic benefits of the income in the same manner and to the same extent as though the transfer were of earnings and in both cases the import of the statute is that the fruit is not to be attributed to a different tree from that on which it grew. See Lucas v. Earl, supra.

Reversed.

The separate opinion of MR. JUSTICE MCREYNOLDS.

The facts were stipulated. In the opinion of the court below [107 F.2d 907], the issues are thus adequately stated:

> The petitioner owned a number of coupon bonds. The coupons represented the interest on the bonds and were payable to bearer. In 1934 he detached unmatured coupons of face value of $25,182.50 and transferred them by manual delivery to his son as a gift. The coupons matured later on in the same year, and the son collected the face amount, $25,182.50, as his own property. There was a similar transaction in 1935. The petitioner kept his books on a cash basis. He did not include any part of the moneys collected on the coupons in his income tax returns for these two years. The son included them in his returns. The Commissioner added the moneys collected on the coupons to the petitioner's taxable income and determined a tax deficiency for each year. The Board of Tax Appeals, three members dissenting, sustained the Commissioner, holding that the amounts collected on the coupons were taxable as income to the petitioner.

The decision of the Board of Tax Appeals was reversed and properly so, I think.

The unmatured coupons given to the son were independent negotiable instruments, complete in themselves. Through the gift they became at once the absolute property of the donee, free from the donor's control and in no way dependent upon ownership of the bonds. No question of actual fraud or purpose to defraud the revenue is presented. . . .

The general principles approved in Blair v. Commissioner, 300 U.S. 5, are applicable and controlling. The challenged judgment should be affirmed.

THE CHIEF JUSTICE and MR. JUSTICE ROBERTS concur in this opinion.

NOTE

1. *The basis of Horst.* Was the father taxed on the value of the coupons at the time of gift or on the full amount of the interest? What if the interest had been paid in the year after the gift? Was it crucial to the decision that the father retained the bond? If so, why? What if he had given the coupon to his son and the bond to his daughter?

In Smith's Estate v. Commissioner, 292 F.2d 478 (3d Cir. 1961), a closely-held corporation declared a dividend on April 17, 1953, to be paid on May 10th to shareholders then

of record. Dividends received by the donee of stock transferred by gift on May 9th were held taxable to the donor, on the ground that the shareholders as of April 17th acquired a "vested right" to payment of the dividend on May 10th. Relying on the *Horst* case, the court said:

> In exactly the same way [as in *Horst*] each parent here realized the economic benefit he wished to derive from his dividend rights through his gift, followed almost immediately by the corporation's payment to his child. Such dealing by a parent with his vested right to a lawfully declared dividend, is not significantly different from the gift of negotiable interest coupons in the *Horst* case.
>
> Seeking to avoid the impact of the Horst decision the petitioners point out that there the interest coupons alone were given away. But in both cases the right to the earnings in question was a vested right to receive a determined amount of fully earned gain. Such a right is distinct from the stock ownership, though derived from it. In the horticultural metaphor which has become familiar in cases of this type, "the fruit had ripened" before the gift. In these circumstances, we see no reason why the rule of the *Horst* case should not be as fully applicable to a gift of the fruit with the tree as to a gift of the fruit alone.

What if the shares had been donated in anticipation of, but before, the declaration of a dividend?

2. *Transfer of all future income.* If the taxpayer in *Horst* had detached all the interest coupons and given them to his son, but had retained the bond, would the income be taxable to him? Compare the *Blair* case, supra, with Harrison v. Schaffner, 312 U.S. 579 (1941), where the income beneficiary of a trust assigned to her children specified amounts in dollars to be paid from the income of the trust for the following year. The Court held that the assignor was taxable on these amounts:

> Taxation is a practical matter and those practical considerations which support the treatment of the disposition of one's income by way of gift as a realization of the income to the donor are the same whether the income be from a trust or from shares of stock or bonds which he owns. It is true, as respondent argues, that where the beneficiary of a trust had assigned a share of the income to another for life without retaining any form of control over the interest assigned, this Court construed the assignment as a transfer in praesenti to the donee, of a life interest in the corpus of the trust property, and held in consequence that the income thereafter paid to the donee was taxable to him and not the donor. Blair v. Commissioner, 300 U.S. 5. But we think it quite another matter to say that the beneficiary of a trust who makes a single gift of a sum of money payable out of the income of the trust does not realize income when the gift is effectuated by payment, or that he escapes the tax by attempting to clothe the transaction in the guise of a transfer of trust property rather than the transfer of income, where that is its obvious purpose and effect. We think that the gift by a beneficiary of a trust of some part of the income from the trust property for the period of a day, a month or a year involves no such substantial disposition of the trust property as to camouflage the reality that he is enjoying the benefit of the income from the trust of which he continues to be the beneficiary, quite as much as he enjoys the benefits of interest or wages which he gives away as in the *Horst* and *Eubank* cases. Even though the gift of income be in form accomplished by the temporary disposition of the donor's property which produces the income, the donor retaining every other substantial interest in it, we have not allowed the form to obscure the reality. Income which the donor gives away through the medium of a short term trust created for the benefit of the donee is nevertheless income taxable to the donor. Helvering v. Clifford [infra p. 372]; Hormel v. Helvering, 312 U.S. 552. We perceive no difference, so far as the construction and application of the Revenue Act is concerned, between a gift of income in a specified amount by the creation of a trust for a year, see Hormel v. Helvering, supra, and the assigment by the beneficiary of a trust already created of a like amount from its income for a year.
>
> Nor are we troubled by the logical difficulties of drawing the line between a gift of an equitable interest in property for life effected by a gift for life of a share of the

income of the trust and the gift of the income or a part of it for the period of a year as in this case. "Drawing the line" is a recurrent difficulty in those fields of the law where differences in degree produce ultimate differences in kind. . . . It is enough that we find in the present case that the taxpayer, in point of substance, has parted with no substantial interest in property other than the specified payments of income which, like other gifts of income, are taxable to the donor. Unless in the meantime the difficulty be resolved by statute or treasury regulation, we leave it to future judicial decisions to determine precisely where the line shall be drawn between gifts of income-producing property and gifts of income from property of which the donor remains the owner, for all substantial and practical purposes. [312 U.S. at 583.]

STRAUSS v. COMMISSIONER

168 F.2d 441 (1948), cert. denied, 335 U.S. 858 (1948), rehearing denied, 335 U.S. 888 (1948)

Before AUGUSTUS N. HAND, CHASE and FRANK, Circuit Judges.

CHASE, Circuit Judge.

The inventors of a process known as "Kodachrome," which is used in the manufacture of colored film, became entitled under a licensing agreement to receive royalties from the Eastman Kodak Company. On November 1, 1930, they assigned those royalties, except certain so-called flat royalties which may now be disregarded, to Kuhn, Loeb & Company as trustee to collect and pay them to those having the right to receive them.

The taxpayer was, on December 20, 1935, one of those who had a right to receive a certain percentage of such royalties from the trustee. He had acquired that right by performing certain personal services in connection with the financing of the Kodachrome process. On December 20, 1935, the petitioner assigned all his "right, title and interest in Kodachrome, manufactured by the Eastman Kodak Company," to his wife and the trustee was duly advised that he had done so. During 1938, the trustee paid $10,209.50 to the taxpayer's wife and during 1939 $14,183.94 which would, but for the assignment to her, have been paid to the taxpayer as his share of the royalties. The wife reported such payments in the respective years they were received and paid income taxes thereon. The commissioner, holding that the assignment was of future payments to the taxpayer for personal services performed by him, included them in his gross income for the proper years and determined deficencies accordingly. The taxpayer then petitioned the Tax Court to redetermine the deficiences, alleging, among other things, that in 1935 he was "the owner of an interest in the Kodachrome process of manufacturing color film." This was admitted in the respondent's answer and the Tax Court, three judges dissenting, expunged both deficiencies on the ground that the taxpayer had assigned property to his wife who received the payments from the trustee as income from that property and not as the assigned earnings of the taxpayer from his previously rendered personal services. This issue is reviewable as one of law, since it turns upon the proper construction of [§61(a)], in the light of undisputed facts. . . .

It is of little significance that the taxpayer in his petition in the Tax Court chose to call his right to receive part of the royalties paid by the Eastman Kodak Company "an interest in the Kodachrome process" and the Commissioner accepted that definition of it in his answer. It now appears that the "interest" was only the right to receive a percentage of the royalties. And the tax consequences of the assignment of that right are, needless to say, dependent upon the real

nature of what was assigned, not upon the label attached to it by the parties.

It has been well settled since Lucas v. Earl, 281 U.S. 111, that compensation derived from personal services is taxable to the one who performs the service whether or not he actually receives the compensation or transfers the right to receive it before it is earned. . . . In Helvering v. Eubank, 311 U.S. 122, the principle was extended to cover the assignments of compensation due in the future for personal services performed in the past. We think the last mentioned case* controlling in this instance. These payments were the result of personal services performed in the past by the taxpayer. The taxpayer did not receive for those services any part of the Kodachrome process itself or any right to control the disposition of that process. Rather, he obtained the enforceable promise of the owners of the process that he would be paid for his services a definite portion of the royalties they had the right to receive from the Eastman Kodak Company. That is to say, his "interest in the process" was never greater than a contract right to be paid certain ascertainable sums of money. From first to last his pay for his services was to be only in money determinable in amount by reference to a royalty agreement covering the process. This taxpayer's right to receive royalties, we think, is indistinguishable from the right, which was considered in Helvering v. Eubank, supra, to receive part of past earned commissions on future premiums on insurance contracts. There also the assignment was of the taxpayer's right, title, and interest in the contract as well as the renewal commissions. As was said in Commissioner v. Tower, supra,

> A person may be taxed on profits earned from property, where he neither owns nor controls it. Lucas v. Earl, supra. The issue is who earned the income.

The decision on the *Kodachrome* issue is reversed with directions to reinstate the deficiency for each year.

HEIM v. FITZPATRICK

262 F.2d 887 (2d Cir. 1959)

Before SWAN and MOORE, Circuit Judges, and KAUFMAN, District Judge.

SWAN, Circuit Judge.

This litigation involves income taxes of Lewis R. Heim, for the years 1943 through 1946. On audit of the taxpayer's returns, the Commissioner of Internal Revenue determined that his taxable income in each of said years should be increased by adding thereto patent royalty payments received by his wife, his son and his daughter. . . .

Plaintiff was the inventor of a new type of rod end and spherical bearing. In September 1942 he applied for a patent thereon. On November 5, 1942 he applied for a further patent on improvements of his original invention. Thereafter on November 17, 1942 he executed a formal written assignment of his invention and of the patents which might be issued for it and for improvements thereof to The Heim Company.[1] This was duly recorded in the Patent Office and in January 1945 and May 1946 plaintiff's patent applications were acted on favorably and patents thereon were issued to the Company. The assignment to the Company was made pursuant to an oral agreement, subsequently reduced to a writing

* Helvering v. Eubank was concerned with an assignment of renewal commissions, to become payable in the future for services performed in the past, by an insurance agent who had terminated his agency contracts and services. The Court held that the case was not distinguishable from the *Horst* case and that the assignor was taxable on the commissions paid to the assignee. — ED.

[1] The stock of The Heim Company was owned as follows: plaintiff 1%, his wife 41%, his son and daughter 27% each, and his daughter-in-law and son-in-law 2% each.

dated July 29, 1943, by which it was agreed (1) that the Company need pay no royalties on bearings manufactured by it prior to July 1, 1943; (2) that after that date the Company would pay specified royalties on 12 types of bearings; (3) that on new types of bearings it would pay royalties to be agreed upon prior to their manufacture; (4) that if the royalties for any two consecutive months or for any one year should fall below stated amounts, plaintiff at his option might cancel the agreement and thereupon all rights granted by him under the agreement and under any and all assigned patents should revert to him, his heirs and assigns; and (5) that this agreement is not transferable by the Company.

In August 1943 plaintiff assigned to his wife "an undivided interest of 25 per cent in said agreement with The Heim Company dated July 29, 1943, and in all his inventions and patent rights, past and future, referred to therein and in all rights and benefits of the First Party [plaintiff] thereunder . . ." A similar assignment was given to his son and another to his daughter. Plaintiff paid gift taxes on the assignments. The Company was notified of them and thereafter it made all royalty payments accordingly. As additional types of bearings were put into production from time to time the royalties on them were fixed by agreement between the Company and the plaintiff and his three assignees. . . .

The appellant contends that the assignments to his wife and children transferred to them income-producing property and consequently the royalty payments were taxable to his donees, as held in Blair v. Commissioner, 300 U.S. 5. Judge Anderson, however, was of opinion that [151 F. Supp. 576]:

> The income-producing property, i.e the patents, had been assigned by the taxpayer to the corporation. What he had left was a right to a portion of the income which the patents produced. He had the power to dispose of and divert the stream of this income as he saw fit.

Consequently he ruled that the principles applied by the Supreme Court in Helvering v. Horst, 311 U.S. 112, and Helvering v. Eubank, 311 U.S. 122, required all the royalty payments to be treated as income of plaintiff.

The question is not free from doubt, but the court believes that the transfers in this case were gifts of income-producing property and that neither *Horst* nor *Eubank* requires the contrary view. In the *Horst* case the taxpayer detached interest coupons from negotiable bonds, which he retained, and made a gift of the coupons, shortly before their due date, to his son who collected them in the same year at maturity. Lucas v. Earl, 281 U.S. 111, which held that an assignment of unearned future income for personal services is taxable to the assignor, was extended to cover the assignment in *Horst,* the court saying at page 120, of 311 U.S.:

> Nor is it perceived that there is any adequate basis for distinguishing between the gift of interest coupons here and a gift of salary or commissions.

In the *Eubank* case the taxpayer assigned a contract which entitled him to receive previously earned insurance renewal commissions. In holding the income taxable to the assignor the court found that the issues were not distinguishable from those in *Horst.* No reference was made to the assignment of the underlying contract.[2]

In the present case more than a bare right to receive future royalties was assigned by plaintiff to his donees. Under the terms of his contract with The Heim

[2] These decisions were distinguished by Judge Magruder in Commissioner v. Reece, 1 Cir., 233 F.2d 30. In that case, as in the case at bar, the taxpayer assigned his patent to a corporation in return for its promise to pay royalties, and later made a gift of the royalty contract to his wife. It was held that this was a gift of income-producing property and was effective to make the royalties taxable to her. See also Nelson v. Ferguson, 3 Cir., 56 F.2d 121, certiorari denied 286 U.S. 565; Commissioner v. Hopkinson, 2 Cir., 126 F.2d 406; and 71 Harvard Law Review 378.

Company he retained the power to bargain for the fixing of royalties on new types of bearings, i.e. bearings other than the 12 products on which royalties were specified. This power was assigned and the assignees exercised it as to new products. Plaintiff also retained a reversionary interest in his invention and patents by reason of his option to cancel the agreement if certain conditions were not fulfilled. This interest was also assigned. The fact that the option was not exercised in 1945, when it could have been, is irrelevant so far as concerns the existence of the reversionary interest. We think that the rights retained by plaintiff and assigned to his wife and children were sufficiently substantial to justify the view that they were given income-producing property.

In addition to Judge Anderson's ground of decision appellee advances a further argument in support of the judgment, namely, that the plaintiff retained sufficient control over the invention and the royalties to make it reasonable to treat him as owner of that income for tax purposes. Commissioner v. Sunnen, 333 U.S. 591, is relied upon. There a patent was licensed under a royalty contract with a corporation in which the taxpayer-inventor held 89% of the stock. An assignment of the royalty contract to the taxpayer's wife was held ineffective to shift the tax, since the taxpayer retained control over the royalty payments to his wife by virtue of his control of the corporation, which could cancel the contract at any time. The argument is that, although plaintiff himself owned only 1% of The Heim Company stock, his wife and daughter together owned 68% and it is reasonable to infer from depositions introduced by the Commissioner that they would follow the plaintiff's advice. Judge Anderson did not find it necessary to pass on this contention. But we are satisfied that the record would not support a finding that plaintiff controlled the corporation whose active heads were the son and son-in-law. No inference can reasonably be drawn that the daughter would be likely to follow her father's advice rather than her husband's or brother's with respect to action by the corporation. . . .

For the foregoing reasons we hold that the judgment should be reversed and the cause remanded with directions to grant plaintiff's motion for summary judgment.

So ordered.

2. *Trusts*

In the foregoing cases the courts had to determine which of *two* parties should be taxed on the income. We now turn to situations in which *three* (or more) parties are potential taxpayers: the owner of property transfers it to a trustee* to administer, with instructions for distributing the income, currently or at a later date, to one or more beneficiaries. Who — the grantor, the trust, or one of the beneficiaries — is taxed on the income? Occasionally there is another possibility: a person who under the trust instrument can get the income or corpus on demand.

In the ordinary case, where the trust is irrevocable and the grantor reserves little or no control over it, the trust income will be taxed either to the trust or to the beneficiaries. Trusts of this character, sometimes called "pure" or "ordinary" trusts, are governed by §§641-668 of the Code. In a few cases, however, the grantor retains so much power over the economic benefits of the trust property

* On the status of a legal life tenant of property, see United States v. De Bonchamps, 278 F.2d 127 (9th Cir. 1960), Security-First National Bank v. United States, 181 F. Supp. 911 (S.D. Cal. 1960), and Rev. Rul. 61-102, 1962-1 C.B. 245, treating the life tenant as though he were the trustee of a trust of which he and the remainderman were the beneficiaries; Note, Capital Gains Taxation of a Legal Life Tenant with a Limited Power to Consume Corpus, 28 U. of Chi. L. Rev. 520 (1961).

See generally Stephens and Freeland, The Federal Tax Meaning of Estates and Trusts, 18 Tax L. Rev. 251 (1963).

that he is taxed as the "substantial owner" thereof. These trusts, sometimes called "grantor" trusts, are governed by §§671-677 of the Code. Finally, where another person has the right to get the income or corpus of the trust upon demand, he may be taxed as the substantial owner under §678. Trusts of this type are sometimes called "Mallinckrodt" trusts, after a leading case (infra p. 381n) holding that such a person was to be taxed as the substantial owner of the income. Special rules are prescribed for employee's pension and similar trusts, §501(a); for certain tax-exempt organizations in trust form, §501(c); for alimony trusts, §682; and for certain other trusts, which are not discussed here.

The statutory provisions governing "pure" or "ordinary" trusts are exceedingly complex; they have been periodically revised, most recently in 1954, and the process of legislation is clearly not yet at an end. In an effort to make the statutory scheme less formidable, the Code distinguishes between "simple" trusts (those that are required to distribute all income currently and that have made no distributions of corpus and claim no charitable deduction in the taxable year) and "complex" trusts (all others). The statutory provisions applicable to "simple" trusts are to be found in Subpart B of Subchapter J (§§651-652), those applicable to "complex" trusts in Subparts C and D of Subchapter J (§§661-668).

The basic statutory principle, applicable to both "simple" and "complex" trusts, is that the beneficiary is taxed on income that is either distributed or distributable to him,* the trust being taxed on the balance of the income. Note that §102(a), providing that gifts are not includible in the donee's gross income, does not protect the beneficiary of trust income, because of §102(b). See page 146 supra. Thus the distinction between "gifts," which can be received tax-free under §102 (a), and gifts of "income from property," which are taxable to the recipient, is delegated, so far as trust income is concerned, to the trust income rules of Subchapter J.

Because the beneficiary, rather than the trust, is taxed on amounts which are distributable by the trust, it is often said that the trust is treated as a "conduit." This is true in the main, but it should be noted that accumulated income is taxed to the trust itself not only where the ultimate distributee is unidentifiable, but also where he is known and has an indefeasible interest in the accumulated income. The conduit principle is applied in many ways, however. See, for example, §652(b) and §662(b), which provide that distributed income shall have the same character in the hands of the beneficiary as in the hands of the trust. Thus, tax-exempt and partially tax-exempt interest, dividends subject to the dividends received credit, and capital gains preserve their special character in the hands of the beneficiary. If there is more than one beneficiary, each receives his appropriate share of these items, unless they are allocated differently by local law or the trust instrument. See Regs. §1.652 (b)-1 and §1.652(b)-2; similar, but more intricate, rules are applicable under §662(b).

The taxable income of a trust, whether "simple" or "complex," is computed in about the same manner as an individual's taxable income. The principal excep-

* The beneficiary must include trust income "which is required to be distributed currently," whether actually distributed or not. §§652, 662. Under a similar provision of pre-1954 law, there was a division of opinion over the proper treatment of income that the trustee wrongfully or mistakenly refused to pay over. Compare Bedford v. Commissioner, 150 F.2d 341, 345 (2d Cir. 1945) (beneficiary taxed), with Harrison v. Commissioner, 7 T.C. 1 (1946) (not taxed until dispute settled); Moore and Sorlien, Homeless Income, 8 Tax L. Rev. 425, 443 et seq. (1953). It would now appear that the correct tax treatment may depend retroactively upon the outcome of the local dispute. Rev. Rul. 62-147, 1962-2 C.B.151; United States v. Higginson, 238 F.2d 439 (1st Cir. 1956); Polt v. Commissioner, 233 F.2d 893 (2d Cir. 1956). The Supreme Court held under pre-1954 law that the beneficiary was not taxable on amounts erroneously distributed to him by the trustee. Freuler v. Helvering, 291 U.S. 35 (1934).

tions are: (1) in lieu of the deductions allowed to the individual for himself and his dependents, a trust is allowed a deduction of either $100 or $300 per year, §642(b); (2) the optional standard deduction is not allowed to trusts, §142(b)(4); and (3) a trust's deduction for charitable contributions is not restricted to amounts actually paid during the taxable year subject to the 20-30 per cent limits of §170, but instead is allowed for any amount of gross income which, pursuant to the terms of the trust instrument, is paid or "permanently set aside" for charitable purposes, §642(c). In addition, of course, the trust may deduct distributions which under the conduit principle are taxed to the beneficiaries.

Because a trust may distribute not only current income, but also corpus and accumulated income that was previously taxed to the trust, a method must be provided for determining what part of the year's distributions is taxable to the recipients. It will be recalled that a gift is ordinarily tax-exempt under §102(a), but that §102(b) denies the exclusion if the gift is "of income from property." One method of distinguishing between taxable and tax-free distributions by trusts, based on state law, would be to tax the beneficiaries to the extent that they receive amounts constituting "income" for trust accounting, exempting all other distributions. This method, which was the guiding premise of pre-1954 law, violated the conduit principle by taxing the recipients on some amounts that were receivable tax-free by the trust; and it could also result in "wasting" tax-deductible expenses that under state law were charged to corpus in a year when the trust distributed all of its income and consequently had no use for the deductions. The 1954 Code continued the basic attempt to tax all distributions which could reasonably be deemed income, but created a new concept to distinguish between taxable and tax-free distributions — "distributable net income" — which is based on the trust's taxable income (with appropriate adjustments), rather than on income as defined by state law for trust accounting, and which preserves corpus deductions from "waste" by making them available to the beneficiaries.

Except when the "throwback" device of §§665-669 is applicable (infra p. 364), the beneficiaries in the aggregate are taxed on the lesser of (1) the amounts distributable to them by the trust, and (2) the trust's "distributable net income." Even where the second limitation applies, however, they are not necessarily taxed on the distributable net income in full. This is because it may include tax-exempt interest or other items that, though not distributed from corpus, are receivable tax-free for some other reason and which, by virtue of the conduit principle, do not lose their character by passing through the trust. For an example of the computation of distributable net income, see Regs. §1.643(c)-2.

It should be noted that distributions by the trust are taxable to the recipients (and deductible by the trust) up to the amount of the trust's "distributable net income," even if charged by the trustee against corpus rather than income. Thus, if in the taxable year the trustee exercises his discretion to accumulate all current income, but invades corpus for the benefit of the remainderman, the distribution is taxable to the remainderman up to the amount of the trust's distributable net income. The introduction of the distributable net income limitation in the 1954 Code permits the application of a broadened rule that, subject to this limitation, all distributions are deemed taxable distributions of income. There are certain exceptions, primarily for a gift of a specific sum of money or of specific property, if (pursuant to the trust instrument) it is paid or credited all at once or in not more than three installments; such a distribution is treated as a tax-free gift under the spirit of §102(a) and is not taxed to the beneficiary, or deductible by the trust, even though the trust's entire income is accumulated in that year, §663(a)(1).

If the distributions for a given year exceed the trust's "distributable net income," a method of allocating taxable income among the beneficiaries must be

found. Under §662(a), income that the trust is required to distribute currently is taxed to the beneficiaries thereof, up to the amount of the distributable net income; and if this does not exhaust the distributable net income, the balance is taxed to those who have received discretionary current income, accumulated income, or corpus, §662. (Here again, a gift of a specific sum of money or of specific property is protected against tax by §663(a)(1).) This system of allocating the distributable net income first to the beneficiaries who are entitled to receive current income (or pro rata among them if distributable net income is less than currently distributable income), with only the excess distributable net income being taxed to other beneficiaries (or pro rata among them) was instituted in 1954, and is known as the "two-tier" system. It is illustrated by the following example in §1.662(a)-3(d) of the Regulations:

> The terms of a trust require the distribution annually of $10,000 of income to A. If any income remains, it may be accumulated or distributed to B, C, and D in amounts in the trustee's discretion. He may also invade corpus for the benefit of A, B, C, or D. In the taxable year, the trust has $20,000 of income after the deduction of all expenses. Distributable net income is $20,000. The trustee distributes $10,000 of income to A. Of the remaining $10,000 of income, he distributes $3,000 each to B, C, and D, and also distributes an additional $5,000 to A. A includes $10,000 in income under section 662(a)(1). The "other amounts distributed" amount to $14,000, includible in the income of the recipients to the extent of $10,000, distributable net income less the income currently distributable to A. A will include an additional $3,571 (5,000/14,000 × $10,000) in income under this section, and B, C, and D will each include $2,143 (3,000/14,000 × $10,000).

The two-tier system of allocating distributable net income is subject to an exception, the "separate share" rule of §663(c), which is designed to correct, in certain cases, an inequity that results from the fact that under the tier system a distribution charged to corpus may be taxed as income to the recipient. Assume a trust for the grantor's three children, under which the trustee has the discretion to distribute or accumulate one third of the income for each child, together with the power to invade one third of the corpus for each child, with each child's share of accumulated income and undistributed corpus to be paid over to him at a later date. Assume also that in the taxable year the trustee distributes one third of the income to one child, together with a portion of his share of the corpus, accumulates the remaining income, and makes no other distribution of corpus. Under the two-tier system of §662(a), both the income distribution (falling in the first tier) and the distribution of corpus (falling in the second tier) would be taxable to the recipient, up to the amount of the trust's distributable net income, although two thirds of the distributable net income is being accumulated for the other two children and would — but for the fortuitous distribution to the first child — have been taxed to them, if it had been distributed, or to the trust if accumulated (with the trust's taxes probably being charged by the trustee against their shares). To avoid taxing the first child on the entire distributable net income, the separate share rule of §663(c) requires each child's one-third interest in income and corpus to be treated as a separate trust for purposes of determining "distributable net income." Thus, no more than one third of the distributable net income can be allocated to any one child, no matter how large the distribution to him. For an illustration of the separate share rule, see Regs. §1.663(c)-4. The inequity that the separate share rule is designed to correct will not arise if the trust instrument can be construed to create separate trusts under state law, infra page 365, and in this event there will also be multiple exemptions and separately computed taxes on the three trusts.

One more important innovation of the 1954 Code remains to be described. It

was stated earlier that the beneficiaries of a trust are ordinarily taxed on the lesser of (1) the amounts distributable to them and (2) the trust's "distributable net income." By itself, the latter limit might have been an easy road to tax avoidance. If a trust accumulated its income in even years and distributed both accumulated and current income in odd years, the beneficiary would not be taxed on more than the distributable net income in the odd years and the rest of the income would be taxed to the trust, despite the fact that income was flowing regularly to the beneficiary. Indeed, if the trust distributed its 1964 income on January 1, 1965, its 1965 income on December 31, 1965, and so on, the beneficiary would enjoy the same economic status (save for one day's delay every second year) as the beneficiary of a trust distributing all of its income annually — but the former beneficiary would have a substantial tax saving if the trust tax bracket was lower than his.

The 1939 Code tried to cope with this device (called a "Dean" trust, after Commissioner v. Dean, 102 F.2d 699 (10th Cir. 1939), a leading case) by treating distributions in the first 65 days of a taxable year as having been made during the preceding taxable year if they could be traced to the earlier year's income. But the 65-day rule was open to many objections, and the 1954 Code attempts to combat the "Dean" trust and similar devices by shifting the attack. Under the five-year throwback of §§665-669, distributions in excess of distributable net income (which, as stated supra page 362, are ordinarily treated as tax-free distributions of corpus) are stripped of their tax-free character if enough income was accumulated in the five prior years so that the distributions would have been taxed to the beneficiary had they been made in those years. To prevent double taxation of these amounts, the beneficiary may credit the taxes previously paid by the trust on them, as though the trust had made down payments of tax on his behalf. §668(b). In keeping with this theory, the beneficiary is regarded as having received not only the earlier year's income, but also the tax paid by the trust thereon (since, had the amounts been distributed in the earlier years, the trust would not have been taxed on them and consequently could have distributed more). §666(b) and §666(c). The Code provides, also in harmony with the concept of a belated distribution of earlier income, that the beneficiary's tax for the year of receipt shall not exceed what he would have paid had the amounts been distributed when earned. §668(a). Certain distributions are exempted from the throwback, so that they cannot be taxed beyond the amount of distributable net income, on the ground that they are not likely to occur against a background of intended tax avoidance; the principal exceptions are for income accumulated during a beneficiary's minority, distributions to meet a beneficiary's "emergency needs," and distributions on the termination of a trust if made more than nine years after the last transfer to the trust. §665(b).

For more on these complexities, see Michaelson, Income Taxation of Estates and Trusts (P.L.I. 1963); Nossaman, Trust Administration and Taxation, c. 42 (1957); Kamin, Surrey, and Warren, The Internal Revenue Code of 1954: Trusts, Estates and Beneficiaries, 54 Colum. L. Rev. 1237 (1954); Fillman, Selections from Subchapter J, 10 Tax L. Rev. 453 (1955); Burke, Selected Problems in the Taxation of Trusts and Estates, 1961 So. Calif. Tax Inst. 463; and, for background, Holland, Kennedy, Surrey, and Warren, Proposed Revision of the Federal Income Tax Treatment of Trusts and Estates — The A.L.I. Draft, 53 Colum. L. Rev. 316 (1953).

On the impact of federal tax law on fiduciary administration, see Miller and Yellon, Frontiers of Trust Law, 26 U. of Chi. L. Rev. 562 (1959).

It is occasionally necessary to determine whether a single trust instrument creates several trusts or only one, since each trust is entitled to its own $100 or

$300 deduction and to a separately calculated tax. See United States Trust Co. v. Commissioner, 296 U.S. 481 (1936); Hale v. Dominion National Bank, 186 F.2d 374 (6th Cir. 1951), cert. denied, 342 U.S. 821; McHarg v. Fitzpatrick, 210 F.2d 792 (2d Cir. 1954).

Conversely, the Internal Revenue Service may wish to consolidate the income of two or more trusts and tax the combined income to a single entity. The issue may arise, for example, if a grantor creates two (or 10 or 100) trusts, all in identical terms and for the benefit of the same beneficiary, in an effort to obtain a $100 or $300 exemption for each trust and to compute the tax on each trust's taxable income separately. Another objective of multiple trusts may be to avoid a throwback of accumulated income. Since this device is not applicable to an accumulation of $2000 or less, §665(b), the grantor may create a trust with $50,000 of corpus invested at 4 per cent, providing that income shall be accumulated in odd years and distributed in even years. Assuming $2000 of annual income, the trust would be taxed in odd years and the beneficiary in even years. The grantor might then create a second trust, identical in all respects except that it is to accumulate in even years and distribute in odd years. The beneficiary would then receive $4000 per year, but this amount would have been divided each year for tax purposes between him and a trust. Another method of avoiding the throwback builds on the fact that the throwback does not apply to distributions on the termination of a trust, provided the termination occurs more than nine years after the last transfer to the trust. The plan is for the grantor to create a trust to accumulate income for nine years and terminate in the tenth, a second trust to accumulate for ten years and distribute in the eleventh, etc. Commencing in the tenth year, the beneficiary would receive the accumulated income and corpus of one trust each year; but all of the income (except that earned in the year of distribution) would have been taxed to the terminating trust.

While tax avoidance by the use of multiple trusts is not a new threat to the revenue, it became more acute with the 1954 Code. An Advisory Group to the Subcommittee on Internal Revenue Taxation of the House Ways and Means Committee has proposed a legislative solution, pointing out:

> Legislation directed at the most obvious cases would be easy to draft, but it would be equally easy to avoid. Conversely, simple legislation with a broad enough scope to prevent easy avoidance would apply equally to numerous innocent situations.

Is new legislation necessary? See Boyce v. United States, 190 F. Supp. 950 (W.D. La. 1961), aff'd per curiam, 296 F.2d 731 (5th Cir. 1961) (90 trusts, created by identical instruments on the same day, consolidated for tax purposes); Fillman and Barnet, Recent Proposals on the Taxation of Estates and Trusts, 41 B.U.L. Rev. 35 (1961); Ervin, Multiple Accumulative Trusts and Related Problems Under the Income Tax, 29 So. Calif. L. Rev. 402 (1956); Comment, Taxation of Multiple Trusts, 24 U. of Chi. L. Rev. 156 (1956); Soter, Federal Taxation Aspects of Multiple-Accumulation Trusts, 31 U. Cinc. L. Rev. 351 (1962).

Up to now we have focused on "ordinary" or "pure" trusts, where the taxable person is either the trust or the beneficiary. Overriding this statutory scheme, however, are the rules governing the "grantor" * and "Mallinckrodt" trusts re-

* A person may be the grantor of a trust in substance though he was not the one who formally established it. For example, a husband may give property to his wife with a tacit understanding that she will create a trust. The husband will then be regarded as the grantor. Or, Smith may create a trust for the benefit of Jones' children and Jones, by prearrangement, may create a trust of equal value for the benefit of Smith's children. Each may be regarded as the creator of the other's trust. See generally Colgan and Molloy, Converse Trusts — The Rise and Fall of a Tax Avoidance Device, 3 Tax L. Rev. 271 (1948); infra page 1170.

See also State Street Trust Co. v. United States, infra page 1193, in which the grantor of a

ferred to at the outset of this section. These rules have been codified by the 1954 Code, but before 1954 the legislation in this area was sparse and the most spectacular developments were of judicial and administrative origin. When applicable, the rules we are about to consider take precedence, and neither the trust nor the beneficiary is taxed.

As background for what follows, the student should examine §§676 and 677 with care. They are derived from, but are not identical with, §§166 and 167 of the 1939 Code.

CORLISS v. BOWERS

281 U.S. 376 (1930)

MR. JUSTICE HOLMES delivered the opinion of the Court.

This is a suit to recover the amount of an income tax paid by the plaintiff, the petitioner, under the Revenue Act of 1924. The complaint was dismissed by the District Court, 30 F.(2d) 135, and the judgment was affirmed by the Circuit Court of Appeals, 34 F.(2d) 656. A writ of certiorari was granted by this Court.

The question raised by the petitioner is whether Sec. 219(g) of the Revenue Act of 1924 * can be applied constitutionally to him upon the following facts. In 1922 he transferred the fund from which arose the income in respect of which the petitioner was taxed, to trustees, in trust to pay the income to his wife for life with remainder over to their children. By the instrument creating the trust the petitioner reserved power "to modify or alter in any manner, or revoke in whole or in part, this indenture and the trusts then existing, and the estates and interests in property hereby created," etc. It is not necessary to quote more words because there can be no doubt that the petitioner fully reserved the power at any moment to abolish or change the trust at his will. The statute referred to provides that "where the grantor of a trust has, at any time during the taxable year, . . . the power to revest in himself title to any part of the corpus of the trust, then the income of such part of the trust for such taxable year shall be included in computing the net income of the grantor." Section 219(g) with other similar provisions as to income in §219(h). There can be no doubt either that the statute purports to tax the plaintiff in this case. But the net income for 1924 was paid over to the petitioner's wife and the petitioner's argument is that however it might have been in different circumstances the income never was his and he cannot be taxed for it. The legal estate was in the trustee and the equitable interest in the wife.

But taxation is not so much concerned with the refinements of title as it is with actual command over the property taxed — the actual benefit for which the tax is paid. If a man directed his bank to pay over income as received to a servant or friend, until further orders, no one would doubt that he could be taxed upon the amounts so paid. It is answered that in that case he would have a title, whereas here he did not. But from the point of view of taxation there would be no difference. The title would merely mean a right to stop the payment before it took place. The same right existed here although it is not called a title but is called a power. The acquisition by the wife of the income became complete only when the plaintiff failed to exercise the power that he reserved. . . . Still speaking with reference to taxation, if a man disposes of a fund in such a way that another is allowed to enjoy the income which it is in the power of the first to appro-

---

trust who exercised his power to terminate it and cause the corpus to be distributed to the beneficiaries on condition that they create a new trust with the distributed property was held to be, in substance, the grantor of the new trust.

* The predecessor of §166 of the 1939 Code and §676 of the 1954 Code. — ED.

priate it does not matter whether the permission is given by assent or by failure to express dissent. The income that is subject to a man's unfettered command and that he is free to enjoy at his own option may be taxed to him as his income, whether he sees fit to enjoy it or not. We consider the case too clear to need help from the local law of New York or from arguments based on the power of Congress to prevent escape from taxes or surtaxes by devices that easily might be applied to that end.

Judgment affirmed.

The CHIEF JUSTICE took no part in this case.

NOTE

1. *Power to revest "at any time."* As the case indicates, originally the income of a trust was taxed to the grantor if he had a power to revest "at any time during the taxable year." This rule could be avoided, with little loss of control, by a provision in the trust instrument allowing the grantor to revest the corpus in himself only if he had given notice of his intention to do so during the previous year; if he had not signified his intent to exercise the power before the beginning of the taxable year, it could be argued that he had no power to revest "at any time during the taxable year." For this reason, the statute was amended in 1934; the current version, §676(a), speaks of a trust "where at any time the power to revest . . . is exercisable by the grantor. . . ." The signficance of §676(b) (exception for powers not affecting beneficial enjoyment for a 10-year period) is indicated infra page 379.

2. *"Totten trusts" and similar arrangements.* In Rev. Rul. 62-148, 1962-2 C.B. 153, the Internal Revenue Service ruled that a taxpayer who deposits funds in a savings account in his own name "as trustee" for another person is taxable on the income if under local law the transaction creates only a revocable trust (a so-called "Totten trust" in New York, sometimes also called a "tentative trust" or a "savings bank trust").

JOSELOFF v. COMMISSIONER
8 T.C. 213 (1947)

HARLAN, Judge: The respondent justifies the taxation of the income of the two trusts involved herein to the settlor on two propositions:

(1) The settlor retained dominion and control over the trust property and remained in substance the owner thereof, and

(2) The trust is revocable by the settlor's wife, who does not have a substantial adverse interest in the disposition of the corpus or the income thereof.

[The court held that the settlor was not taxable on the trust income under the first of the government's two contentions.]

The second reason which respondent advances as to why the income of this trust should be taxed to the grantor is that the trust is revocable during the life of the grantor and before the beneficiary reaches the age of twenty-five by direction of the grantor's wife. The Commissioner contends that, under the trust instrument and the conditions surrounding it, the grantor's wife has no interest in the preservation of the trust adverse to that of the grantor and that therefore the corpus of the trust may be revested in the grantor, and under the provisions of [1939 Code, §166] * the income thereof is taxable to him.

It therefore becomes necessary for us to determine precisely what the interests

* Under §166(a) of the 1939 Code, part or all of the trust income was taxable to the grantor if any part of the trust corpus could be revested in him under a power vested "in any person not having a substantial adverse interest in the disposition of such part of the corpus or the income therefrom."

The same idea is conveyed by §676(a) of the 1954 Code, but with the changes in language described in the editor's note following this case. — ED.

of Lillian L. Joseloff, the wife of the grantor, are in the preservation of the trusts. Petitioner enumerates these interests as follows:

1. A legal interest, with pecuniary value, consisting of a contingent remainder in each trust.

2. A non-legal interest, with possible pecuniary value, consisting of (a) her right to receive income distributed to her by the Trustee without any duty to account therefor, (b) to receive principal advances free of supervision by the Trustee, and (c) to exercise her dominant position on the Committee of Control to procure a termination of either or both trusts.

The question of the substantial value of a remote contingent remainder such as exists in this case has frequently been decided, not only by this Court, but in other tribunals. It must be remembered that if neither of these trusts is revoked, Lillian Joseloff, in order to realize on her contingent remainder, would be required to survive both of her daughters and the issue of both of her daughters. In the first taxable year Lillian was 44 years of age, Joan 13, and Carol 11. In a case almost identical with the one at bar, Claire R. Savage, 4 T.C. 286, the Court speaks of such a contingent remainder and says:

> We fail to see any substantial adverse interest in the respective grantor's spouse . . . which would deter his or her use of the power to amend for the grantor's benefit. . . . The interest of the spouse is that of a contingent remainderman, and it will vest, if at all, only upon the termination of the trust under almost impossible circumstances. . . . In order for her to benefit from either of these trusts she would have to outlive the survivor of the two minor children and their issue, if any. To hold that such a remote possibility of receiving benefit constitutes a "substantial adverse interest" would do violence to the meaning of the word "substantial" and to the intent of Congress. . . .

If it be contended that grantor's wife could at least remove the primary estate of one of her children and her living issue by revoking one of the trusts, her reversionary interest would still be contingent on surviving one minor daughter and the issue of this daughter and it could certainly not be contended that in revoking the trust to accomplish this very doubtful advantage to herself her act would be "adverse" to the interest of the grantor. Petitioner, however, argues that the grantor's wife has other interests in the preservation of this trust beside her contingent remainder, to wit, her right to receive income from the trustee without any duty to account therefor. The trust instrument, however, provides that all money so received shall be used for the "support, maintenance and education" of the beneficiary. For the wife to obtain any economic benefit from this money it would be necessary for her to misappropriate the funds and violate the terms of the trust. It could hardly be said that it would be to her interest to preserve a trust, the very terms of which prevent her from procuring any benefit from such income.

Petitioner says that the wife also has the right "to receive principal advances free of the supervision by the trustee." Such advances are those advanced from the principal recommended by the advisory committee to the trustee, but it is to be noted that the grantor himself, as long as he is living, has a very definite check on such advances, as the trust provides: "The trustee shall be under no obligation to act without the approval of said Morris Joseloff during his life." Thus the wife, without the consent of the grantor, in spite of the recommendation of the committee, would receive nothing from the trustee from the principal of the trust. Her interest in such funds is certainly not adverse to the grantor, who is in a position to authorize or disapprove such advancements.

Petitioner further says that the wife, through her dominant position in the committee of control, could procure a termination of either or both trusts. This

contention is far from clear. The committee has no power to terminate the trusts except by distributing portions of the corpus and, as shown above, this cannot be done without the approval of the settlor of the trusts. Furthermore, all of such disbursements must be "for her [the beneficiary's] benefit." Any benefit to Lillian Joseloff would be in the nature of an embezzlement under the terms of the trust.

Offsetting these speculative adverse interests of the wife in the preservation of the trust, it is at once evident that the wife possesses some very substantial interests, from a purely selfish viewpoint, in the revocation of the trusts. The grantor of this trust in 1938 was sixty years of age. If the corpora of these trusts had been revested in her husband in 1941, when he was sixty-three years of age, his estate would have been enriched by $666,201.02. The income of one-third of this, under the laws of Connecticut, would have inured to Mrs. Joseloff for life at the death of her husband. Furthermore, and from a practical viewpoint, if Morris Joseloff really desired the revocation of these trusts at any time, it would be much to Morris Joseloff's advantage to compensate his wife if necessary for any pecuniary interest she might think she would be losing by the revocation of the trusts. Furthermore, this trust is entirely a family affair. Both the settlor and his wife have but one interest, and that is the interest of the family unit. The fact that Mrs. Joseloff would deposit in these trust estates 2,000 shares of Sycamore Corporation common stock having a value of $61,174.49 and thereby make it possible for that stock, in the case of the revocation of the trust, to vest in her husband, without even requiring any agreement other than a receipt therefor, given not to her, but to Morris, certainly is ample evidence that there is no adversity of interest between this settlor and his wife. If, in the face of adversity, the family interest required that these trusts be revoked and these trust funds revested in the head of the family for the purpose of creating a new family income, it would require a mind wholly aloof from human affairs to imagine for a minute that Mrs. Joseloff would not revoke these trusts, even though her husband, the grantor of the trusts, would not compensate her for her lost "adverse" interest. As was said in the case of Fulham v. Commissioner, 110 Fed.(2d) 916, at page 918, in judging the adversary interest of the person having the power of revocation where a family trust is involved, "realistic appraisal" is called for rather than a purely legalistic one. See also Commissioner v. Casperson, 119 Fed.(2d) 94.

The tenuous interests that Mrs. Joseloff has, if any, in the preservation of these trusts, as compared with the obvious tangible and immediate interests which she would achieve by the revocation of the trusts, in our opinion, require that her selfish interests in the trust be wholly on the side of their revocation and that those interests are not at all adverse to the interests of the settlor. It is, therefore, our opinion that the contentions of the respondent in his case should be sustained, but in view of certain other issues not mentioned herein which have been conceded by the respondent,

Decision will be entered under Rule 50.

NOTE

1. *Effect of family solidarity.* On the effect of an adverse interest vested in a member of the family, compare Laganas v. Commissioner, 281 F.2d 731, 735 (1st Cir. 1960):

> It has been said that because of "family solidarity" a wife's interest in income is not truly adverse to her husband's. Altmaier v. Commissioner, 6 Cir., 1940, 116 F.2d 162, certiorari denied 312 U.S. 706; cf. Fulham v. Commissioner, 110 F.2d 916 (1st Cir.

1940). However, such a concept often counters reality. Is the commissioner to investigate the existing rapport, or lack of it, between a particular taxpayer and his wife before determining the incidence of the tax? We believe that a single rule must be adopted, and that the preferable one is to assume that each wife stands on her own feet.

2. *The "nonadverse party" under the 1954 Code.* The 1954 Code substituted the concept of a "nonadverse party" in §§676-677 for the 1939 Code's concept of a person "not having a substantial adverse interest," and in §672(b) defined the term "nonadverse party" as any person who is not an "adverse party." *This* phrase, in turn, is defined by §672(a) as a person "having a substantial beneficial interest in the trust which would be adversely affected by the exercise or nonexercise of the power which he possesses respecting the trust." The Senate Report on the 1954 Code (p. 365) implies, without being explicit, that no change of substance was intended.

Throughout the "grantor trust" provisions (§§671-678), a power vested in a nonadverse party, or in a nonadverse party jointly with the grantor, is treated the same as a power vested in the grantor alone — with a few exceptions to be noted later — and in the interest of brevity, this fact is taken for granted in the comments that follow rather than explicitly repeated.

3. *Income, estate, and gift tax consequences of an adverse interest.* Section 676 taxes the income of a trust to the grantor if a power to revest is exercisable by the grantor alone, by a nonadverse party alone, or by the grantor and a nonadverse party acting together. Under the federal estate tax, however, the corpus of a trust is includible in the grantor's gross estate if he retained until his death a right to revest, exercisable either alone or in conjunction with *any* other person. §2038(a)(1); Helvering v. City Bank Farmers Trust Co., infra page 1158. Is there any reason why the corpus of a trust should be included in the grantor's estate even if the person whose consent is required has a substantial adverse interest when the income of the trust was not taxed to the grantor during his lifetime? In another respect, the estate tax is less exacting: the corpus will not be part of the grantor's estate if the power to revest is entrusted to a third party alone, even if he does not have a substantial adverse interest. Why should such a trust insulate the grantor from estate tax but not from income tax?

The completeness of a transfer for *gift* tax purposes is governed by yet another set of rules. A transfer is subject to gift tax if the power to revest is entrusted to a third party alone, whether or not he has a substantial adverse interest. In this respect, the gift tax law resembles the estate tax law. At another point, however, the gift tax rule parallels the income tax, rather than the estate tax, rule: where the grantor retains the power to revest only with the consent of a person having a substantial adverse interest, the transfer is complete for gift tax purposes, as it is for income tax, although the trust will still be part of the grantor's estate.

See Camp v. Commissioner, infra page 1164; Advisory Committee to Treasury Department and Office of Tax Legislative Counsel, Federal Estate and Gift Taxes: A Proposal for Integration and for Correlation with the Income Tax 9-12 (1947).

4. *Grantor's right to receive income: §677.* Section 676 is concerned with trusts under which all or any part of the corpus may be revested in the grantor. Even if he divests himself of all rights to receive the corpus, however, he is treated as the owner under §677 if the income of the trust is or may be distributed, or held or accumulated for later distribution, to him without the consent of an adverse party.

Section 677 speaks of income that is, or "may be," distributed or held for future distribution to the grantor. Does this include income that may be distributed to him only in circumstances that are unlikely to occur or that are beyond his control, or both — e.g., his extreme poverty, the death of another person, or the dissolution of a charitable institution? Under the 1939 Code, the Regulations provided that the grantor was taxable if "he has failed to divest himself, permanently and definitively, of every right which might, by any possibility, enable him to have such income, at some time, distributed to him" and that the retention of any such interest was fatal even though a distribution was conditioned "on the happening of a specified event." Regs. 118, §39.167-1(b). The cases under the 1939 Code were less strict; see Boeing v. Commissioner, 37 B.T.A. 178, 185 (1938), rev'd on other grounds, 106 F.2d 305 (9th Cir. 1939), cert. denied, 308 U.S. 619;

Evans v. Commissioner, ¶46,048 P-H Memo T.C.; but see Kaplan v. Commissioner, 66 F.2d 401 (1st Cir. 1933); Rev. Rul. 54-306, 1954-2 C.B. 240. The Regulations under the 1954 Code are somewhat less emphatic about contingent distributions than the 1939 Regulations; see Regs. §1.677(a)-1. There is a similar problem under §676 if the grantor may revest corpus in himself only on a contingency that has not occurred. See Betts v. Commissioner, 123 F.2d 534 (7th Cir. 1941); Commissioner v. O'Keefe, 118 F.2d 639 (1st Cir. 1941); and note that §676 speaks of a power which is "exercisable" by the grantor, whereas its predecessor, §166 of the 1939 Code, referred to a power "vested" in the grantor, a term that, rightly or wrongly, the courts thought was freighted with meaning.

5. *Support trusts: §677(b).* In Helvering v. Stuart, 317 U.S. 154 (1942), it was held, under the predecessor of §677(a)(1) and §677(a)(2), that the grantor was taxable on income of a trust that, in the discretion of a trustee, could be applied to the support and education of the grantor's minor children, whether it was so applied or not. The year after the *Stuart* case was decided, the predecessor of §677(b) was enacted, providing that the grantor is not taxable merely because the income may be used to support his dependents. He is taxable, however, to the extent that the income is actually so used; and §677(b) affords no protection to the grantor (a) if he retains a non-fiduciary power to apply income to the support of his dependents or (b) if the income may be applied to discharge obligations of the grantor other than maintenance and support.

In Rhode Island, a minor's parents have no obligation to provide him with a college or private school education if "there is income or principal of any trust for his or her benefit, which may be used to provide such child with an education in a college, university or private school." General Laws of Rhode Island, §33-15-1, as amended in 1958. Does this provision of local law preclude taxing a father under §677(b) if the income of a trust created by him is used to provide his minor children with a college education?

See Note, Federal Tax Aspects of the Obligation to Support, 74 Harv. L. Rev. 1191 (1961). Pedrick, Familial Obligations and Federal Taxation: A Modest Suggestion, 51 Nw. U.L. Rev. 53 (1956).

6. *Life insurance trusts: §677(a)(3).* By virtue of §677(a)(3), the grantor is taxed on the income of a trust if its income (without the consent of an adverse party) is or may be applied to pay premiums on life insurance on his life. The constitutionality of this provision was upheld in Burnet v. Wells, 289 U.S. 670 (1933). If the grantor has irrevocably assigned the policies, and has relinquished all rights to them, what is the reason for taxing him on income used to preserve or increase the value of property he no longer owns or controls?

Some difficult questions of construction arise under §677(a)(3) if the income of the trust may be applied to pay premiums but no polices are in force, if premiums are paid in violation of a trust provision forbidding such payments, if the trust instrument is silent on the use of income to pay premiums, etc. See Iversen v. Commissioner, 3 T.C. 756, 774 (1944), and cases there cited; Foster v. Commissioner, 8 T.C. 197, 205 (1947).

7. *Power to revest, or receive income from, a "portion" of trust.* The "grantor trust" provisions are invoked if the grantor may revest, or obtain the income from, a "portion" of the trust, as well as when his rights extend to the whole corpus. If the grantor has the power to recapture one half of the corpus or to demand one half of the income, the applicability of these sections is clear enough. But is §677 applicable if the grantor is entitled to the capital gains produced by the entire corpus but to none of the ordinary income — or to all of the ordinary income but none of the capital gains? See Regs. §1.677(a)-1(g), Examples (1) and (2); Berger, Taxation of Capital Gains Realized by Trusts, 12 Tax L. Rev. 99 (1956).

The grantor's power may be explicitly limited to a portion of the trust, or it may be unlimited but exercisable only with the consent of a beneficiary with an adverse interest worth less than the value of the entire trust corpus. If the corpus of a trust has a fair market value of $100,000, and the grantor's power is exercisable jointly with an independent beneficiary having an adverse interest worth $50,000, is the grantor required to report half of the trust income, or none? In answering this question, should a distinction be made between an adverse remainder interest in the whole of the corpus, and an adverse interest consisting of a right to one half the income and one half the corpus? See Regs. §1.672(a)-1.

8. *Grantor "treated as owner" of trust property.* Although the principal effect of determining that a trust is a "grantor trust" is that the grantor must report its income, §§673-677 provide more broadly that the grantor "shall be treated as the owner" of the trust property. The Regulations under §671 interpret this language to mean that the grantor, in computing his personal income tax liability, is to take into account "all items of income, deduction, and credit (including capital gains and losses) to which he would have been entitled had the trust not been in existence during the period he is treated as owner." If he is treated as owner of specific trust property or of an undivided fractional interest of the whole corpus, the items to be taken into account must be appropriately allocated. Regs. §1.671-3.

HELVERING v. CLIFFORD

309 U.S. 331 (1940)

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

In 1934 respondent declared himself trustee of certain securities which he owned. All net income from the trust was to be held for the "exclusive benefit" of respondent's wife. The trust was for a term of five years, except that it would terminate earlier on the death of either respondent or his wife. On termination of the trust the entire corpus was to go to respondent, while all "accrued or undistributed net income" and "any proceeds from the investment of such net income" was to be treated as property owned absolutely by the wife. During the continuance of the trust respondent was to pay over to his wife the whole or such part of the net income as he in his "absolute discretion" might determine. And during that period he had full power (a) to exercise all voting powers incident to the trusteed shares of stock; (b) to "sell, exchange, mortgage, or pledge" any of the securities under the declaration of trust "whether as part of the corpus or principal thereof or as investments or proceeds and any income therefrom, upon such terms and for such consideration" as respondent in his "absolute discretion may deem fitting"; (c) to invest "any cash or money in the trust estate or any income therefrom" by loans, secured or unsecured, by deposits in banks, or by purchase of securities or other personal property "without restriction" because of their "speculative character" or "rate of return" or any "laws pertaining to the investment of trust funds"; (d) to collect all income; (e) to compromise, etc., any claims held by him as trustee; (f) to hold any property in the trust estate in the names of "other persons or in my own name as an individual" except as otherwise provided. Extraordinary cash dividends, stock dividends, proceeds from the sale of unexercised subscription rights, or any enhancement, realized or not, in the value of the securities were to be treated as principal, not income. An exculpatory clause purported to protect him from all losses except those occasioned by his "own wilful and deliberate" breach of duties as trustee. And finally it was provided that neither the principal nor any future or accrued income should be liable for the debts of the wife; and that the wife could not transfer, encumber, or anticipate any interest in the trust or any income therefrom prior to actual payment thereof to her.

It was stipulated that while the "tax effects" of this trust were considered by respondent they were not the "sole consideration" involved in his decision to set it up, as by this and other gifts he intended to give "security and economic independence" to his wife and children. It was also stipulated that respondent's wife had substantial income of her own from other sources; that there was no restriction on her use of the trust income, all of which income was placed in her personal checking account, intermingled with her other funds, and expended by her on herself, her children and relatives; that the trust was not designed to relieve respondent from liability for family or household expenses and that after exe-

cution of the trust he paid large sums from his personal funds for such purposes.

Respondent paid a federal gift tax on this transfer. During the year 1934 all income from the trust was distributed to the wife who included it in her individual return for that year. The Commissioner, however, determined a deficiency in respondent's return for that year on the theory that income from the trust was taxable to him. The Board of Tax Appeals sustained that redetermination. 38 B.T.A. 1532. The Circuit Court of Appeals reversed. 8 Cir., 105 F.2d 586. We granted certiorari because of the importance to the revenue of the use of such short term trusts in the reduction of surtaxes. . . .

The broad sweep of [the language of §22(a), 1939 Code; §61(a), 1954 Code] indicates the purpose of Congress to use the full measure of its taxing power within those definable categories. . . . Hence our construction of the statute should be consonant with that purpose. Technical considerations, niceties of the law of trusts or conveyances, or the legal paraphernalia which inventive genius may construct as a refuge from surtaxes should not obscure the basic issue. That issue is whether the grantor after the trust has been established may still be treated, under this statutory scheme, as the owner of the corpus. See Blair v. Commissioner, 300 U.S. 5, 12. In absence of more precise standards or guides supplied by statute or appropriate regulations, the answer to that question must depend on an analysis of the terms of the trust and all the circumstances attendant on its creation and operation. And where the grantor is the trustee and the beneficiaries are members of his family group, special scrutiny of the arrangement is necessary lest what is in reality but one economic unit be multiplied into two or more by devices which, though valid under state law, are not conclusive so far as [§61(a)] is concerned.

In this case we cannot conclude as a matter of law that respondent ceased to be the owner of the corpus after the trust was created. Rather, the short duration of the trust, the fact that the wife was the beneficiary, and the retention of control over the corpus by respondent all lead irresistibly to the conclusion that respondent continued to be the owner for purposes of [§61(a)].

So far as his dominion and control were concerned it seems clear that the trust did not effect any substantial change. In substance his control over the corpus was in all essential respects the same after the trust was created, as before. The wide powers which he retained included for all practical purposes most of the control which he as an individual would have. There were, we may assume, exceptions, such as his disability to make a gift of the corpus to others during the term of the trust and to make loans to himself. But this dilution in his control would seem to be insignificant and immaterial, since control over investment remained. If it be said that such control is the type of dominion exercised by any trustee, the answer is simple. We have at best a temporary reallocation of income within an intimate family group. Since the income remains in the family and since the husband retains control over the investment, he has rather complete assurance that the trust will not effect any substantial change in his economic position. It is hard to imagine that respondent felt himself the poorer after this trust had been executed or, if he did, that it had any rational foundation in fact. For as a result of the terms of the trust and the intimacy of the familial relationship respondent retained the substance of full enjoyment of all the rights which previously he had in the property. That might not be true if only strictly legal rights were considered. But when the benefits flowing to him indirectly through the wife are added to the legal rights he retained, the aggregate may be said to be a fair equivalent of what he previously had. To exclude from the aggregate those indirect benefits would be to deprive [§61(a)] of considerable vitality and to treat as immaterial what may be highly relevant considerations in the creation of such

family trusts. For where the head of the household has income in excess of normal needs, it may well make but little difference to him (except income-tax-wise) where portions of that income are routed — so long as it stays in the family group. In those circumstances the all-important factor might be retention by him of control over the principal. With that control in his hands he would keep direct command over all that he needed to remain in substantially the same financial situation as before. Our point here is that no one fact is normally decisive but that all considerations and circumstances of the kind we have mentioned are relevant to the question of ownership and are appropriate foundations for findings on that issue. Thus, where, as in this case, the benefits directly or indirectly retained blend so imperceptibly with the normal concepts of full ownership, we cannot say that the triers of fact committed reversible error when they found that the husband was the owner of the corpus for the purposes of [§61(a)]. To hold otherwise would be to treat the wife as a complete stranger; to let mere formalism obscure the normal consequences of family solidarity; and to force concepts of ownership to be fashioned out of legal niceties which may have little or no significance in such household arrangements.

The bundle of rights which he retained was so substantial that respondent cannot be heard to complain that he is the "victim of despotic power when for the purpose of taxation he is treated as owner altogether." See Du Pont v. Commissioner, 289 U.S. 685, 689.*

We should add that liability under [§61(a)] is not foreclosed by reason of the fact that Congress made specific provision in [§676] for revocable trusts, but failed to adopt the Treasury recommendation in 1934, Helvering v. Wood, 309 U.S. 344, that similar specific treatment should be accorded income from short term trusts. Such choice, while relevant to the scope of [§676], Helvering v. Wood, supra, cannot be said to have subtracted from [§61(a)] what was already there. Rather, on this evidence it must be assumed that the choice was between a generalized treatment under [§61(a)] or specific treatment under a separate provision[1] (such as was accorded revocable trusts under [§676]); not between taxing or not taxing grantors of short term trusts. In view of the broad and sweeping language of [§61(a)], a specific provision covering short term trusts might well do no more than to carve out of [§61(a)] a defined group of cases to which a rule of thumb would be applied. The failure of Congress to adopt any such rule of thumb for that type of trust must be taken to do no more than to leave to the triers of fact the initial determination of whether or not on the facts of each case the grantor remains the owner for purposes of [§61(a)].

In view of this result we need not examine the contention that the trust device

---

* In this case, the Supreme Court held that the income of a number of three-year trusts, established to pay the premiums on insurance on the grantor's life, was taxable to him although he had irrevocably relinquished all rights to the policies, saying that the grantor "did not divest himself of title in any permanent or definitive way, did not strip himself of every interest in the subject-matter of the trust estate. . . . The situation in its legal effect would not be greatly different if the trusts had been created for a month or from day to day." The trusts came within the terms of what is now §677(a)(3), and the Court's attention was directed to the constitutionality of this provision, but the language of the opinion foreshadows the approach of the Court to the five-year trust in the *Clifford* case. — Ed.

[1] As to the disadvantage of a specific statutory formula over more generalized treatment see Vol. I, Report, Income Tax Codification Committee (1936), a committee appointed by the Chancellor of the Exchequer in 1927. In discussing revocable settlements the Committee stated, p. 298: "This and the three following clauses reproduce section 20 of the Finance Act, 1922, an enactment which has been the subject of much litigation, is unsatisfactory in many respects, and is plainly inadequate to fulfill the apparent intention to prevent avoidance of liability to tax by revocable dispositions of income or other devices. We think the matter one which is worthy of the attention of Parliament."

falls within the rule of Lucas v. Earl, 281 U.S. 111, and Burnet v. Leininger, 285 U.S. 136, relating to the assignment of future income; or that respondent is liable under [§676] taxing grantors on the income of revocable trusts.

The judgment of the Circuit Court of Appeals is reversed and that of the Board of Tax Appeals is affirmed.

It is so ordered.

Reversed.

MR. JUSTICE ROBERTS.

I think the judgment should be affirmed.

The decision of the court disregards the fundamental principle that legislation is not the function of the judiciary but of Congress.

In every revenue act from that of 1916 to the one now in force a distinction has been made between income of individuals and income from property held in trust. It has been the practice to define income of individuals, and, in separate sections, under the heading "Estates and Trusts," to provide that the tax imposed upon individuals shall apply to the income of estates or of any kind of property held in trust. A trust is a separate taxable entity. The trust here in question is a true trust.

While the earlier acts were in force creators of trusts reserved power to repossess the trust corpus. It became common also to establish trusts under which, at the grantor's discretion, all or part of the income might be paid to him, and to set up trusts to pay life insurance premiums upon policies on the grantor's life. The situation was analogous to that now presented. The Treasury, instead of asking this court, under the guise of construction, to amend the act, went to Congress for new legislation. Congress provided, by §219(g)(h) of the Revenue Act of 1924, that if the grantor set up such a life insurance trust, or one under which he could direct the payment of the trust income to himself, or had the power to revest the principal in himself *during any taxable year,* the income of the trust, for the taxable year, was to be treated as his.

After the adoption of these amendments taxpayers resorted to the creation of revocable trusts with a provision that more than a year's notice of revocation should be necessary to termination. Such a trust was held not to be within the terms of §219(g) of the Revenue Act of 1924, 43 Stat. 277, because not revocable within the taxable year.

Again, without seeking amendment in the guise of construction from this court, the Treasury applied to Congress, which met the situation by adopting §166 of the Revenue Act of 1934 [1954 Code, §676], which provided that, in the case of a trust under which the grantor reserved the power *at any time* to revest the corpus in himself, the income of the trust should be considered that of the grantor.

The Treasury had asked that there should also be included in that act a provision taxing to the grantor income from short term trusts. After the House Ways and Means Committee had rendered a report on the proposed bill, the Treasury, upon examination of the report, submitted a statement to the Committee containing recommendations for additional provisions; amongst others, the following:

> (6) The income from short-term trusts and trusts which are revocable by the creator at the expiration of a short period after notice by him should be made taxable to the creator of the trust.

Congress adopted an amendment to cover the one situation but did not accept the Treasury's recommendation as to the other. The statute, as before, clearly

provided that the income from a short term irrevocable trust was taxable to the trust, or the beneficiary, and not to the grantor. . . .

If some short term trusts are to be treated as non-existent for income tax purposes, it is for Congress to specify them.

MR. JUSTICE MCREYNOLDS joins in this opinion.

NOTE

1. *Aftermath of Clifford: The "Clifford Regulations."* The vagueness of the Court's criteria and the fertility of the tax advisor's imagination conspired to monopolize the time of the lower courts for years after the *Clifford* case was decided. Countless cases involving application of the *Clifford* "doctrine" to trust income were decided between 1940 and 1946.

In 1945, the Treasury issued T.D. 5488, the so-called "Clifford Regulations," which, with minor modifications, appeared as §39.22(a)-21 of Regs. 118. The Regulations, instead of relying on a judicial balancing of all the circumstances, laid down mechanical rules for determining when the grantor should be regarded as the owner in substance of the trust and hence taxable on its income. If the trust was to last for less than ten years (or, in some cases, fifteen years), *or* if the grantor had the power to determine or control the beneficial enjoyment of the income or corpus, *or* if he had administrative control over the trust that could be exercised primarily in his own interest, the income was taxable to him under the Regulations. The rules embodied in the Regulations were derived from the *Clifford* line of cases, but they did not constitute a restatement of the law; a number of individual factors were singled out and made independently responsible for imputing the income to the grantor, where the courts had ordinarily relied on the combined effect of several factors. See Alexandre, A Case Method Restatement of the New Clifford Regulations, 3 Tax. L. Rev. 189 (1947). In promulgating the new Regulations, the Treasury announced that they would be applied prospectively only. Where the new rules were more favorable to the taxpayer than the case law, however, the Service announced that it would apply them even as to pre-1946 years if no inconsistent claims were asserted by the trustees or beneficiaries. Mim. 5968, 1946-1 C.B. 25; Mim. 6156, 1947-2 C.B. 13.

For a lively debate on the Clifford Regulations, see Pavenstedt, The Treasury Legislates: The Distortion of the Clifford Rule; Eisenstein, The Clifford Regulations and the Heavenly City of Legislative Intention; with a "reply" and a "supplemental reply" by Pavenstedt, and a "postscript" by Eisenstein, all to be found in 2 Tax. L. Rev. 7, 327, 476, 569, 578 (1946-1947).

2. *Legislative endorsement of the Clifford Regulations.* In 1954, §§673-675 were enacted to supply statutory rules in this area; in doing so, Congress endorsed the main principles of the Clifford Regulations by providing that the grantor is to be treated as the owner of a trust (or of a portion thereof) if the term is sufficiently short (usually ten years) (§673), if he can control the beneficial enjoyment of income or corpus (§674), or if he has unusual powers of administration (§675). These provisions also carry over many of the details of the Clifford Regulations, although some modifications and refinements were introduced.

3. *Reversionary interests: §673.* Section 673 provides that the grantor shall be treated as the owner of a trust if he has a reversionary interest in either the corpus or the income that will or may reasonably be expected to take effect in possession or enjoyment within ten years.

There are two exceptions. One is that a reversionary interest to take effect after the death of the income beneficiary, no matter what his life expectancy, does not count against the grantor. The other exception is a reversionary interest if the income is irrevocably payable for at least two years to a single designated church, hospital, or educational institution. As §673 was originally proposed by the House Committee on Ways and Means, the income of such a trust was excluded from the grantor's gross income, and he also would have been entitled to a charitable deduction for the present value of the income when the trust was established. It was pointed out in the minority report on the bill (H.R. Rept., pp. B10-11) that:

Accordingly, the taxpayer who owns income-producing property and whose highest tax rate is greater than 50 percent can actually make money by supposedly satisfying his philanthropic desires.

For example, if the taxpayer's highest tax rate is 90 percent and he owns property producing a yearly income of $5,000, over 2 years he will have $10,000 in income, pay $9,000 in taxes, and retain $1,000 after taxes. However, if the taxpayer desires to increase his retained income from the property 800 percent, he need only make a gift of the 2-year income in trust for a charity. The charitable deduction of approximately $10,000 to which he thereby becomes entitled will reduce the taxes he would otherwise pay by $9,000. Thus, by giving up, through the charitable gift, the $1,000 which he would have retained after taxes, he will receive in exchange a $9,000 reduction in taxes. The result is an increase of $8,000 in his income after taxes (the saving in taxes of $9,000 less the net gift, after taxes, of $1,000 of income).

Similarly, a taxpayer in the 75-percent bracket will double his retained income from the property through the 2-year gift in trust; the taxpayer in the 60-percent bracket will increase his retained income by 50 percent; and the taxpayer in the 50 percent bracket will be able to make the "gift" without giving up any money.

Obviously, the only charitable impulses that are involved in this provision are those toward the upper-income taxpayer. If it becomes law such 2-year trusts will mushroom and be, in time, a severe blow to the revenue.

We are pleased that the majority have agreed to offer a floor amendment which will eliminate this loophole.

The bill was amended on the floor of the House to disallow the charitable deduction for any property transferred in trust if the grantor has a reversionary interest therein worth more than 5 per cent. §170(b)(1)(D). The concept of a 5 per cent reversionary interest is borrowed from the estate tax law, infra page 1218. Although this provision prevents the taxpayer from getting a deduction for an amount that is excluded from income, it fails to safeguard the percentage limitations of §170; a taxpayer who owns income-producing property can establish a trust for two years (or more) and thus enable a charity to receive the income without having it included in his gross income or charged against his percentage allowance. Note also that §170(b)(1)(D) bars a charitable deduction only if the 5 per cent reversionary interest is vested in the grantor, not if it is vested in his wife or children.

4. *Additions to and extensions of existing trusts.* If a grantor transfers additional property to an existing trust, the reversionary interest rule of §673 is to be applied "as of the inception of that portion of the trust." Thus, even if a grantor's reversionary interest in the trust corpus or income is outside of §673 because the trust was created for a twelve-year period, an addition to the trust in its fourth year will create a reversionary interest to take effect in possession or enjoyment in eight years, and the grantor will be treated as owner of that portion of the corpus.

If the life of an existing trust is extended, the extension has the effect of a new transfer in trust, the term of which commences on the date of the extension and terminates on the trust's new terminal date. Thus, if a twelve-year reversionary trust is extended at the end of its tenth year for a period to end five years after the originally prescribed date, the grantor is treated as creating a seven-year trust. By virtue of the second sentence of §673(d), however, he is not treated as owner of the corpus during the two remaining years of the original term. It should be noted that an extension of time may confer immunity prospectively on a trust that was embraced by §673 when created: if a five-year trust is extended at the end of its first year for a period ending six years after its original term, for example, the grantor has under §673(d) created a ten-year trust by postponing the date for reacquisition of the corpus. This will not save him from being taxed on the trust's income for its first year of existence, but thereafter he is in the clear.

5. *Power to control beneficial enjoyment: §674.* Section 674(a) lays down the general rule that the grantor is to be treated as owner of any portion of a trust if its "beneficial enjoyment" is subject to a "power of disposition," exercisable by the grantor alone, by a nonadverse party, or by the grantor and a nonadverse party acting together, without the approval or consent of any adverse party. If the grantor retains the power to add beneficiaries to those named in the trust instrument, to vary the proportions in which corpus

or income is to be paid to specified beneficiaries, or to accelerate or postpone the time when distributions are to be made, "beneficial enjoyment" of the trust is subject to a "power of disposition" within the meaning of §674(a).

The general rule of §674(a) is subject, however, to a number of important exceptions. Section 674(b) consists of a list of powers that may be vested in anyone; §674(c) permits somewhat broader powers to be vested in trustees who are not "related or subordinate parties who are subservient to the wishes of the grantor," a term that is partly defined by §672(c); and §674(d) permits still other powers to be vested in trustees other than the grantor or his spouse. The delicacy of these distinctions can be appreciated only by an examination of §674.

Section 674 is described and criticized by Westfall, Trust Grantors and Section 674: Adventures In Income Tax Avoidance, 60 Colum. L. Rev. 326, 332-333, 345 (1960). Among his comments are the following:

> Section 674, as it now stands, appears to reflect a congressional belief that property owners should be accorded a large measure of flexibility in choosing the kinds of interests they may create by transfers in trust, without loss of the income tax benefits otherwise obtainable by immediate, absolute gifts. All should not be forced to pour their assets into receptacles fashioned from a common mold, to fit their varying dispositive desires into a Procrustean bed, even though such preferences may be shaped primarily by a desire to secure a lower effective income tax rate. Accordingly a grantor is given several alternatives.
>
> The basic choice that the grantor faces is whether he wants freedom in choosing the trustee or freedom in postponing the choice (by someone other than himself) of the beneficiaries who will actually enjoy income or principal. The Code also provides an intermediate alternative for grantors who would like a measure of each variety of freedom at the same time.
>
> If the grantor decides he is more interested in latitude in selecting the trustee or trustees, he can name anyone, including himself, without adverse income tax consequences to him by reason of the trustee's powers to control beneficial enjoyment, so long as those powers are limited in the manner prescribed by section 674(b). If, on the other hand, the grantor decides that what he wants is not so much a free hand in choosing the trustee as it is to postpone the determination of who will actually benefit from his gift, he may confer upon the trustees, if they are selected within the limitations of either section 674(c) or section 674(d), the broader discretionary powers authorized in those sections. Thus, the choice is essentially between giving the trustee the grantor really prefers limited discretionary powers and giving a trustee selected from a restricted list broader discretionary powers. . . .
>
> If tax-motivated transfers in trust are to be discouraged, revision of section 674 is necessary. Repeal of sections 674(c) and 674(d) would bring realism to bear upon the legislative assumptions concerning the ability of grantors to influence "independent" and "related and subordinate" trustees and would greatly restrict the opportunities that now exist to secure income tax benefits by making a gift in trust without deciding who is to receive the income from the trust property. It would also encourage the selection of trustees upon the basis of ability to render fiduciary service, rather than because of a trustee's formal qualifications to exercise discretionary powers without causing adverse tax consequences to the grantor. In addition, if income tax benefits are to be denied for the creation of trusts unless the grantor has determined, at the time of creation, who shall receive the income, sections 674(b)(4), 674(b)(5)(A) and 674(b)(6) should also be repealed.

See also Abramowitz, Clifford Trusts and the Control of Beneficial Enjoyment, 38 N.Y.U. Law Rev. 740 (1963).

6. *Administrative powers: §675.* Section 675(1) and §675(2) provide that the grantor is to be treated as owner of the trust property if certain unusual powers (e.g., to purchase trust property for less than adequate consideration) may be exercised by the grantor, a nonadverse party, or both, without the consent of any adverse party. Moreover, §675(3) treats the grantor as owner of the trust property if he has in fact borrowed from it, unless the loan was repaid before the beginning of the taxable year or was authorized by an inde-

pendent trustee and provided for adequate interest and security. Finally, certain powers of administration (e.g., the power to vote stock of a corporation in which the holdings of the grantor and trust are significant to voting control) are fatal under §675(4) if exercisable by anyone acting in a non-fiduciary capacity, unless the consent of a person in a fiduciary capacity is required.

The grantor in the *Clifford* case would have been taxed on its income under §673, because the term of the trust was only five years, had §673 been in effect for the taxable year involved. But would §675 have afforded an alternative ground for treating the grantor as the owner of the trust property? Consider also the income tax consequences of the administrative powers vested in the trustees in State Street Trust Co. v. United States, infra page 1193.

7. *Constitutional validity of §673.* In Commissioner v. Clark, 202 F.2d 94, 99 (7th Cir 1953), the "Clifford Regulations" were held to be unconstitutional, as well as "unreasonable and arbitrary," in providing that the income of a trust to terminate in less than ten years was ipso facto taxable to the grantor:

> As noted, the regulation which decrees that the income from a trust is that of the settlor for the sole reason that its duration is for a period of less than ten years creates a conclusive or irrebuttable presumption. Such a presumption states a rule of substantive law. This is in contrast to a rebuttable presumption which only states a rule of evidence and which the opposing party is entitled to overcome by proof. . . . And the Supreme Court has held that a statute which creates a conclusive presumption under circumstances closely akin to those of the instant case contravenes the Fourteenth Amendment if enacted by state legislature and the Fifth Amendment if enacted by Congress.

The decisions upon which the court relied were Heiner v. Donnan and Schlesinger v. Wisconsin (relating to death taxes on transfers in contemplation of death, infra p. 1121) and Hoeper v. Wisconsin (relating to a state income tax under which the income of husband and wife were aggregated, supra p. 333n). Although the court in the *Clark* case said that "even Congress would be without power to create the conclusive presumption which the Treasury has done in the regulation under attack," this warning did not deter Congress from enacting §673. It is possible that the special two-year rule applicable to charitable trusts under §673(b) owes something to the *Clark* case, which involved two short-term charitable trusts, although the *Clark* trusts themselves would not have qualified under §673(b) because their income was not dedicated to a single designated charity.

For criticism of the *Clark* rationale, see Note, The Seventh Circuit v. the Clifford Regulations: "Due Process" Emancipates the Tax Avoider, 62 Yale L.J. 1236 (1953); see also Rev. Rul. 54-48, 1954-1 C.B. 24.

8. *Relationship among §673, §676, and §677.* A trust to pay the income to A for fifteen years, corpus to revert to the grantor at the end of the period, is not taxable to the grantor under §673. What if the trust is to pay the income to A for twenty years, remainder to B, with a power in the grantor to revoke after the fifteenth year — is the grantor taxable under §676? He may have been before 1954, see Regs. 118, §39.166-1(b)(1)(ii) and (iii), and Helvering v. Dunning, 118 F.2d 341 (4th Cir. 1941), cert. denied, 314 U.S. 631. But note §676(b), which entered the Code in 1954. See also the second sentence of §677(a), similarly added in 1954. Do these 1954 changes carry the implication that a power to revoke (or to receive a distribution of income) that is not explicitly excepted (e.g., a power exercisable only after nine years or only upon the occurrence of some event) is necessarily fatal to the grantor?

Could the grantor in the *Clifford* case have been taxed under §676(a) on the ground that his reversionary interest was equivalent to a power to revoke at the end of five years? In a companion case to *Clifford,* the Supreme Court held that notwithstanding the lack of any practical difference between a revocable trust and one certain to be terminated soon, there were "nice distinctions" between them in the law of estates and that Congress intended §166 of the 1939 Code (1954 Code, §676(a)) to be applied only to revocable trusts. Helvering v. Wood, 309 U.S. 344, 347 (1940).

9. *Are §§673-677 the Treasury's exclusive weapon against grantor trusts?* The argument in the *Clifford* case over whether the sections specifically requiring the income of

certain trusts to be taxed to the grantor (1939 Code, §§166, 167; 1954 Code, §§676, 677) precluded resort to the more general language of §22(a) of the 1939 Code is echoed in §671 of the 1954 Code. It provides that the grantor shall not be taxed on the income of a trust "solely on the grounds of his dominion and control over the trust under section 61 (relating to definition of gross income) or any other provision of this title, except as specified in this subpart." Suppose the corpus of a trust consists of cash, and the grantor supervises the use of the funds in business transactions where his personal skill is great. Could the profits be taxed to him under the general language of §61? See S. Rept., p. 365:

> The effect of this provision [§671] is to insure that taxability of *Clifford* type trusts shall be governed solely by this subpart. However, this provision does not affect the principles governing the taxability of income to a grantor or assignor other than by reason of his dominion and control over the trust. Thus, this subpart has no application in situations involving assignments of future income to the assignor, as in Lucas v. Earl (281 U.S. 111), Harrison v. Schaffner (312 U.S. 579), and Helvering v. Horst (311 U.S. 112), whether or not the assignment is to a trust; nor are the rules as to family partnerships affected by this subpart. This subpart also has no application in determining the right of a grantor to deductions for payments to a trust under a transfer and leaseback arrangement.

See also Commissioner v. Hogle, infra page 1023; Rev. Rul. 55-2, 1955-1 C.B. 211.

10. *Assignments of trust income by beneficiaries.* See again Harrison v. Schaffner, supra page 356. In 1955, the Internal Revenue Service ruled that it would not seek to tax the income beneficiary of a trust if he assigned the income for ten years or more, provided he did not retain any strings that would be fatal under the "Clifford Regulations" if retained by the grantor of a trust. Rev. Rul. 55-38, 1955-1 C.B. 389.

FUNK v. COMMISSIONER
185 F.2d 127 (3d Cir. 1950)

Before Biggs, Chief Judge, and Kalodner and Hastie, Circuit Judges.

Kalodner, Circuit Judge.

The only substantial issue presented on this petition to review the decision of the Tax Court is whether there is taxable to the taxpayer under [1939 Code, §22 (a); 1954 Code, §61(a)], the income of four trusts of which she was the sole trustee in the taxable years 1938 to 1941 here involved. The trusts were created by the taxpayer's husband.

The Tax Court, four judges dissenting, held that the income of the trusts, without regard to the distributions made by the taxpayer, is taxable to her. 14 T.C. 198.

The details of the creation of the trusts in controversy are set out in our prior decision in this matter, 3 Cir., 163 F.2d 796, as a result of which the cause was remanded to the Tax Court. In its decision now under review, the Tax Court has again set forth in detail its findings concerning the creation of the trusts. We shall not repeat them here. It is sufficient to state that under the terms of four trusts, which in this respect were identical, the taxpayer, as trustee, was given the authority

> . . . in her discretion to pay all or a part of the net income annually to me (her husband, the settlor), or to herself, in accordance with our respective needs, of which she shall be

the sole judge, and to accumulate and add to principal the balance of such income, if any. Any income so accumulated and added to principal by the Trustee shall become a part of the corpus of the trust and may not thereafter be distributed by the Trustee.

Upon the death of the settlor-beneficiary, the corpus of each trust was to be distributed as he should appoint, but in default thereof, contingent beneficiaries were specified. The taxpayer and her husband were at all relevant times residents of New Jersey, where the trusts were created and administered.

The Commissioner, throughout this litigation, has contended that while the taxpayer was given control over the income of the trusts as trustee, nevertheless her control was "too little fettered to be regarded as less than absolute for tax purposes." Accordingly, he seeks to tax to her all of the income of the trusts, without regard to the manner of distribution, upon the example of Mallinckrodt v. Nunan, 8 Cir., 1945, 146 F.2d 1, certiorari denied, 324 U.S. 871, and Stix v. Commissioner, 2 Cir., 1945, 152 F.2d 562.*

The Tax Court determined that the taxpayer had

absolute control over the trusts' income; that she made distributions entirely by the exercise of her own discretion; that she took whatever she wanted each year, and gave some of the rest to her husband in certain years; that what she distributed to him was determined solely by herself without any consideration of whether or not he had any need for the income; that the petitioner's (taxpayer's) husband had no need for any of the distributions which she made to him in 1939, 1940, and 1941; and that the sums which she did distribute to him were gifts." [1]

---

* Mallinckrodt v. Nunan, the leading case in this area, concerned a trust established by the taxpayer's father, under which the net income was to be employed to pay off certain debts of the grantor, then to pay $10,000 per year to the taxpayer's wife, and then to be paid to the taxpayer to the extent that he should request it. Accumulated income was to be added to corpus, to go as the taxpayer should direct by will; in default of an appointment by him, the trust was to continue for the benefit of his widow and issue. There were provisions for certain other contingencies, including a power in the taxpayer to receive corpus upon his request and with the trustees' approval, but the critical fact was that the taxpayer could get the entire income (less the amount used to pay debts and the fixed amount of $10,000 payable to his wife) upon request. The court upheld the Commissioner's determination that the undistributed income was taxable to the taxpayer, even though "[i]t is a fair assumption that the grantor contemplated that petitioner would not, during his lifetime, seek to withdraw either income or principal from the trust estate unless he needed it or unless he believed that it could be used advantageously by him for the benefit of the family." The court went on:

"We agree with the majority of the Tax Court that implications which fairly may be drawn from the opinions of the Supreme Court in Corliss v. Bowers, 281 U.S. 376, Helvering v. Clifford, 309 U.S. 331, and other cases relative to the taxability of trust income to one having command over it, justify, if they do not compel, the conclusion that the undistributed net income of the trust in suit, during the years in question, was taxable to petitioner under section 22(a) [1939 Code]. This, because the power of petitioner to receive this trust income each year, upon request, can be regarded as the equivalent of ownership of the income for purposes of taxation. In Harrison v. Schaffner, 312 U.S. 579, 580, the Supreme Court approved 'the principle that the power to dispose of income is the equivalent of ownership of it and that the exercise of the power to procure its payment to another, whether to pay a debt or to make a gift, is within the reach of the statute taxing income "derived from any source whatever."' It seems to us, as it did to the majority of the Tax Court, that it is the possession of power over the disposition of trust income which is of significance in determining whether, under section 22(a), the income is taxable to the possessor of such power, and that logically it makes no difference whether the possessor is a grantor who retained the power or a beneficiary who acquired it from another. . . . Since the trust income in suit was available to petitioner upon request in each of the years involved, he had in each of those years the 'realizable' economic gain necessary to make the income taxable to him." 146 F.2d at 5. — Ed.

[1] In its statement, "Findings of Fact," the Tax Court also determined that in making distributions for the taxable years 1938 through 1941, the taxpayer, as trustee, did not make the respective distributions to herself and to her husband upon the basis of the needs of either one of them. It also found that the taxpayer's opinion was that neither she nor her husband had any

It then concluded that the evidence showed that the taxpayer, as trustee

followed to the letter the provisions in the trust instruments that she should distribute the trust income in her discretion, and that she should be the "sole judge" of how she would distribute the income.

Thus, the Tax Court agreed with the Commissioner that the quoted clause in the trust instruments gave the taxpayer such unfettered command of the income therefrom as to bring her within the bounds of the *Mallinckrodt* and *Stix* cases. It held, too, after the manner of the *Stix* case, that the taxpayer had not shown what amount of the trusts' income she would have been compelled to pay to her husband, qua beneficiary, and hence, she had not proved what amount of the income was not within her absolute control.

It is our view that the Tax Court erred. But for the purpose of disposing of the instant petition of review we need not disagree on any principle of tax law. As the Tax Court recognized, the issue here turns on the provisions in the trust instruments[2] relating to the power of the taxpayer-trustee over the income of the trusts. . . .

. . . [W]e are impelled to the conclusion that the trustee was not clothed with either the power or right to enjoy the trust income at her option; that is, unless the word "needs" be construed in such fashion as to permit it, a point which we shall shortly reach. The authorization to the trustee to act as the "sole judge" did not convey the trust income to her alone. To the contrary, only upon a determination of "needs," however that term may be defined, was she authorized to exercise her discretion in the matter of distributions. Patently, she would not be permitted to apply one definition of the word "needs" to her co-beneficiary and at the same time another more indulgent definition to herself, qua beneficiary. For it has been specificially held in New Jersey that a trustee-beneficiary cannot use his fiduciary capacity to prefer himself, and that where the trustee is a beneficiary his conduct will be scrutinized and weighed in the ultimate determination of the issue of the propriety of his exercise of discretion. Nor does it follow, when the settlor lays down a standard, here "respective needs," that the designation of the trustee as "sole judge," or even the grant to him of "absolute discretion," obviates the necessity of exercising his judgment in a sound and honest manner, or relieves him of the duty to act in good faith and with a proper motive within the reasonable boundaries of such standard. Thus, if the trustee here neglected or refused to make a sound determination of needs, or even honestly believed that there were no needs, and acted upon the extravagance of whim and caprice, made her own desires to predominate, and distributed any part of the trusts' income as a gift, then we should think such brazen abuse of her fiduciary obligations under the terms of the trusts here involved would be universally condemned. Restatement, Trusts, Section 187; 2 Scott on Trusts (1939) Section 187.

---

need for any part of the income of the trusts in the taxable years because both had their own separate and independent income of substantial proportions. Finally, it found that taxpayer "took what money she wanted, if any, for her personal use, or to satisfy some desire to be extravagant, and gave her husband whatever was left, or whatever sum she wished to give him."

2 If the empowering clauses of the trusts are clear and unambiguous, it would follow that the evidence of the settlor's intent and of the trustee's conduct would not be admissible in New Jersey; Central Hanover B. & T. Co. v. Herbert, 1949, 1 N.J. 426, 429, 64 A.2d 75, 76: "The rule is that parol evidence is admissible to explain an ambiguity in a writing, or when the intent of the donor is not clear. But where the language employed has an ordinary meaning or where the meaning is plain and unambiguous on its face, there is no ground for the application of the above rule and parol or extrinsic evidence is inadmissable." [This note has been transposed. — Ed.]

Since the single question in the case sub judice turns upon the provisions of the trust instruments, the trustee's actual conduct cannot be confused with her authorized powers. The Commissioner is not now asserting, nor did the Tax Court hold, that the trustee is taxable because she treated the trust income as her own regardless of her right to do so. The very minimum of difference between this and the *Mallinckrodt, Stix* and kindred cases, at once becomes apparent. In those two cases, the taxpayers had for their own undesignated use the primary right to, and the command of, the income involved. There was no duty to relinquish except to provide for others what they might consider proper; hence, the determination that the taxpayers should have shown what they could be required to distribute. Here, the trustee had no a fortiori right to the income, nor did the absence of any "needs" on the part of either her co-beneficiary or herself confer such right upon her. What was not needed was directed by the settlor to be accumulated and added to principal, and the trustee's discretionary power to distribute conclusively terminated. She did not even have the authority to invade the principal in the event the income proved inadequate. On the basis of the decisions already cited, it seems, therefore, beyond dispute that if the taxpayer, as the Tax Court found, was of the opinion that neither she nor her husband had any needs, however she defined that term, yet made distributions to her husband and herself, she was patently acting outside the scope of the authority conferred upon her as trustee and in violation of the confidence reposed in her.

Further, we should point out, as we once did,[3] that the fact that the taxpayer's husband, as a beneficiary, might not be in a position to compel payments to himself is not determinative of his standing to compel the trustee to accumulate, or at least to prevent her arbitrary administration of the trusts, whether for her own advantage or not. In point of law, it is not alone for him to complain, for clearly the contingent beneficiaries have a position in any proceeding involving the discharge by the trustee of her fiduciary duties, and so, too, successor or substituted trustees may maintain an action to redress a breach of trust particularly if it constitutes an appropriation of trust property.

In view of the foregoing, it must be apparent that in the final analysis the primary source of difficulty in this case, as the Commissioner contends, concerns the meaning of the word "needs." The Commissioner says that the term means, and was intended by the settlor* to mean, the equivalent of "desires," and that under the trust instruments the trustee was obliged only to distribute the income as she thought "fit" or "proper." The argument is based upon the determination that the taxpayer and her husband, qua beneficiaries, were in the taxable years independently wealthy and had no "needs" in the sense of necessities of life. The intention of the settlor, in addition, is culled by the Commissioner from an exchange of letters between the settlor and his wife at the time of the creation of the trusts,† as well as from the failure of the settlor to take any action to correct

---

3 163 F.2d 796, 803.

* The settlor was president of Funk & Wagnalls Company, whose New Standard Dictionary of the English Language (1945) defines "need" as follows: "*need*, n. 1. A lack of something necessary or very desirable; want; hence, destitution or deprivation, especially of the necessaries of life; indigence; poverty; as, the poor man was in great need." — Ed.

† The letters, quoted in the Tax Court's opinion, 14 T.C. 198, 205n, were as follows:

Letter of Wilfred J. Funk to Eleanor M. Funk:

"Dear Eleanor: As you know, I have to-day made you the Trustee of four trusts designated as Trusts A, B, C, and D, the property transferred to each trust consisting of 125 shares of the capital stock of Erwin Park, Inc. Under the terms of these trusts you are to have discretion annually to divide the income between us or to accumulate and add it to the principal of the trust.

"My objective in setting up the trusts in this way is to provide substantial amounts of income

his wife if in fact she were conducting herself as trustee contrary to his design and the declarations in the trusts.

The term "needs" is not, of course, one the content of which can be defined precisely. Nevertheless, we think it establishes a standard effectively distinguishing this case from, and taking it out of the rule of, the *Mallinckrodt* and *Stix* decisions. If, as the Tax Court observed, the trusts are unambiguous and specific, it can only be said of the term "needs" that it must be construed according to its ordinary meaning. While obviously it must include the essentials of life, it has been construed in New Jersey to mean that which is reasonably necessary to maintain a beneficiary's station in life. It is not indicative of an unqualified gift, nor is it dependent upon the fancy of the administrator. Thus, its use confined the trustee to limits objectively determinable, and any conduct on her part beyond those limits would be unreasonable and a breach of trust; certainly it did not countenance extravagance, whim, or caprice. And, as we have already noted, the absence of "needs," contrary to the situation of Mallinckrodt and Stix, did not result in the entitlement of the taxpayer to the trust income.

Assuming that the letters were admissible nothing in them demonstrates an intent on the part of the settlor, or even an understanding on the part of the trustee, to incorporate into the word "needs" something other than its common sense content. Indeed, the settlor's letter suggests the correctness of the result we have reached. True, he emphasizes therein the independence of the trustee from control by himself or any other person.[4] But he refers to the trustee's "discretion," states that she is to act upon the circumstances which she finds to exist at the end of each year, and declares it his intention to put her in a position where she can exercise her own judgment as to how the circumstances should be met. Thus, the settlor has conveyed, as clearly as one might wish, his intent that the trustee should investigate and judge. His letter is inconsistent with any notion that she may act arbitrarily or capriciously. And the mandate of the trusts to accumulate, without right of re-entry by the trustee, lends weight to the conclusion that the settlor's state of mind did not encompass the thought that his wife should become the practical owner of the trusts' income. Similarly, her response to his letter emphasizes her independence of decision. It accepts the responsibility of administering the trusts and expressly acknowledges a duty with respect thereto. It is not a detailed attempt to state her understanding of her obligations, but it does not deny any of the terms of the trusts. If she has not

---

which you may dispose of according to the circumstances which you find to exist at the end of each year. No one can foretell with certainty what those circumstances will be, and it is my desire to put you in a position to exercise your own judgment as to how such circumstances shall be met, to the extent of the income arising from these trust funds.

"It is your legal right and duty to exercise this discretion each year as may seem best to you, and in the exercise of this discretion you are not subject to my control or to the control of any other person."

Letter from Eleanor M. Funk to Wilfred J. Funk:

"Dear Wilfred: I have read your letter of to-day with reference to the four new trusts which you are setting up, of which you have made me Trustee.

"I understand that at the end of each year I am to decide whether I will pay the income which I have received as Trustee to you or to myself or divide it between us or accumulate and add it to principal. I am to do any or all of these things in such amounts and in such proportion as I see fit.

"I understand that the effect of these trusts is to place upon me the duty of deciding how the money shall be disposed of and that in making this decision I am not subject to your control or that of any other person." — Ed.

4 Patently, the purpose of the settlor was to avoid finding himself within the doctrine of Helvering v. Clifford, 1940, 309 U.S. 331, and the Tax Court has determined him to have successfully achieved this aim: Funk v. Commissioner, ¶44,030 P-H Memo TC (1944).

acted since then within the scope of her fiduciary duties, it is not inferable from the mere failure of her husband to complain in the taxable years that she was therefore acting within the scope of those duties. We should not speculate upon the reasons for his failure to act, but, as we have pointed out, others may still do so.

We conclude, therefore, that the taxpayer was not endowed in the trust instruments with such unfettered command that the income therefrom became, for all intents and purposes, her own money. Accordingly, the decision of the Tax Court will be reversed.

NOTE

1. *The "Mallinckrodt Regulations."* As the *Funk* case indicates, the 1939 Code contained no statutory provision explicitly governing this area, and the income of the trust could be taxed to the petitioner only under the general language of §22(a) of the 1939 Code, now §61(a). When the "Clifford Regulations" were issued in 1945, however, the Treasury issued Regulations (the "Mallinckrodt Regulations") to cover this area, and they were accepted by Congress, with minor modifications, when it enacted §678(a) of the 1954 Code.

See Trust No. 3 (Brehm) v. Commissioner, 285 F.2d 102 (7th Cir. 1960) (§678 applicable even though beneficiaries who could demand corpus were minors under state disabilities).

Note how the person who can get the corpus or income of a trust is treated if he renounces, disclaims, or partially releases his power: §678(a)(2) and §678(d). When §678 overlaps §§673-677, the grantor is treated as owner, by virtue of §678(b). Section 671 (precluding resort to §61(a) in certain circumstances) is applicable to §678, as well as to §§673-677.

Does §671 preclude taxing the beneficiaries as substantial owners if, in violation of the trust instrument, they act as though they were? See Kanter v. United States, 262 F.2d 761 (9th Cir. 1959).

2. *Under which shell is the pea hidden?* In a related case, Funk v. Commissioner, ¶44,030 P-H Memo T.C. (1944), referred to in footnote 4 of the principal case, it was held that the husband was not taxable under the *Clifford* case:

> Here Mrs. Funk was not only trustee but she was an income beneficiary under all four trust instruments. When she made payments to petitioner there remained just that much less for herself. It can not be gain-said that her interest in the income was adverse to petitioner. . . . In New Jersey the courts will not substitute their judgment for that of a trustee where discretion is given the trustee, even at the behest of a beneficiary not the grantor, except upon proof that the exercise of the discretion has been in bad faith. . . . In view of the New Jersey law, it is inconceivable that this petitioner, having voluntarily placed such obviously broad discretionary powers in another and having no real need for the trust income during the taxable years, could successfully complain had the trustee elected to pay him no income.

Did the Internal Revenue Service appeal the wrong case to the Court of Appeals? Could Mr. Funk have been taxed on the income of the trust under §677(a)(1), because Mrs. Funk could have distributed it to him to satisfy his "needs," or under §674(a), because of Mrs. Funk's control over the income?

See Note, Conclusiveness of Trust Terms in Tax Litigation: Circumvention of the Clifford Rule, 60 Yale L.J. 1426 (1951).

3. *Trusts for support of a third person's children.* If the income of a trust created by A is payable to B's minor children, can B be taxed to the extent that he is relieved of his duty to support the children? Is §678 applicable? If not, can B be regarded as a "beneficiary" of the trust under §662? See Regs. §1.662(a)-4, §1.643(c)-1; Winton, Taxation of Nongrantors Under Trusts for Support of Their Dependents, 33 Taxes 804 (1955); Sayles, Tax Consequences of "Grandfather" Trusts, 1959 So. Calif. Tax Inst. 675.

REV. RUL. 56-484

1956-2 C.B. 23

In Revenue Ruling 56-86, C.B. 1956-1, 449, it was held that a transfer of securities to a minor donee pursuant to the model custodian act adopted by the State of Colorado constitutes a completed gift for Federal gift tax purposes at the time the transfer was made and that such gift qualifies for the annual gift tax exclusion authorized by §2503(b) of the Internal Revenue Code of 1954 [infra p. 1053]. The Internal Revenue Service has been requested to consider the Federal income tax consequences of such transfers.

In Colorado, as in most jurisdictions, a father, if of sufficient ability, must support, maintain, and educate his minor children without resorting to their separate estates or their income derived from property, trusts, or annuities. See Perkins v. Westcoat (1893), 3 Colo. App. 338, 33 P. 139. However, where a gift expressly provides for the support of a child, the gift may be so applied without reference to the ability of the parent to furnish such support.

Under the Colorado custodian act, the custodian is authorized to apply so much of the income from the securities as he may deem advisable for the support of the minor, in his absolute discretion without court order, and without regard to the duty of any person to support the minor and without regard to any other funds which may be applicable or available for the purpose. The existence of this provision specifically permitting the use of the income for the support of the donee regardless of the surrounding circumstances distinguishes the instant case from the ordinary case where securities or other property are given to a minor. Compare Revenue Ruling 55-469, C.B. 1955-2, 519, which holds that dividends received by minors on stock which had been given them by their grandparents and placed in a separate bank account under the names of the parents as "trustees" are taxable to the grandchildren as beneficial owners thereof. . . .

As was indicated in the case of Miller [v. Commissioner, 2 T.C. 285 (1943)], it is assumed in these latter cases that income from the property which is the subject of the gift is the income of the child and that his father, therefore, holding the property in a fiduciary capacity as legal guardian, or otherwise, would not legally be permitted the use of any of these funds to satisfy his obligation to support the child. The same point is made in the case of Herberts [v. Commissioner, 10 T.C. 1053 (1948)], holding taxpayer's minor children taxable on income from stock which they had received as outright gifts (at page 1063), but holding their father taxable on income from a gift in trust to the extent used for the support and maintenance of the minor beneficiary for the reason that a power to make payments for the minor's support was expressly granted to the trustee at the time of the gift (at page 1070). Where a trustee is not given such power, he is not ordinarily permitted under state law to apply the income from the minor's trust for the support of the minor. Such a provision in a trust or in a statute, however, qualifies the property interest transferred to the minor under such trust or statute so as to permit the use of all or a part of the income therefrom to be diverted to another. . . .

In view of the foregoing, it is held that, regardless of the relationship of the donor or of the custodian to the donee, income derived from property transferred under the model custodian act adopted by the State of Colorado and a number of other states which is used in the discharge or satisfaction, in whole or in part, of a legal obligation of any person to support or maintain a minor is, to the extent so used, taxable to such person under section 61 of the Internal Revenue Code of 1954. However, the amount of such income includible in the gross income of a

person obligated to support or maintain a minor is limited by the extent of his legal obligations under local law. To the extent that income derived from the property in question is not so includible in the gross income of the person obligated to support or maintain the minor (donee), such income is taxable to the minor.

NOTE

1. *Status of "custodian."* Is the legal device created by this act a "trust"? If so, why does the ruling rely upon §61(a) rather than on the trust provisions of the Code? If not, would the result be different if the donor used a trust? If the minor's father is the custodian, could the income be taxed to him whether used for the child's support or accumulated? What if the father were the donor?

In Rev. Rul. 59-357, 1959-2 C.B. 212, the Internal Revenue Service ruled that the same principles are to be applied to transfers under the Uniform Gifts to Minors Act, notwithstanding minor variations between this act and the Model Gifts of Securities to Minors Act (similar to the Colorado statute discussed in the ruling above).

In Rev. Rul. 58-65, 1958-1 C.B. 13, the Service ruled that the trust provisions are not controlling when a savings account (in a savings and loan association) for a minor child is placed in the name of the parents as trustees, pursuant to an established practice, if the trustees are not subject to court order or other agreement and no trust is intended. If under local law the account belongs to the child and cannot legally be used to discharge the parents' obligation to support him, the earnings are taxable to the child as beneficial owner. The ruling cites Rev. Rul. 56-484 as authority.

2. *Reference.* Note, Recent Legislation to Facilitate Gifts of Securities to Minors, 69 Harv. L. Rev. 1476 (1956).

3. *Family Partnerships*

Section 704(e), relating to family partnerships, carries forward §191 and §3797(a)(2) of the 1939 Code.

Unlike the trust, the partnership is not a separate taxable entity. A partnership return must be filed for the Treasury's information, reporting all partnership income and deductions, but the firm's net income is taxed to the partners individually, whether withdrawn or not, in accordance with their respective interests. §§701-704. Losses of the firm are similarly allocated among the partners and deducted by them on their individual returns. The 1954 Code allows certain partnerships to be taxed, if they so elect, as corporations. See page 612 infra.

With the decline of the trust as a tax avoidance device came, fortuitously or not, the rise of the "family partnership" as a means of splitting income. Typically, the head of the family, doing business as an individual proprietor, would create a partnership by transferring by gift portions of his business capital to his wife and children, and by agreeing that thereafter the income of the enterprise would be distributed among the partners in an agreed proportion, usually according to their interests in the firm's capital. Ordinarily the new partners took no part in the management of the firm, though occasionally they served in clerical or other minor capacities. Sometimes the donor would reserve a "salary" for his own services, to be deducted before the profits accruing to capital were calculated. The high-water mark in this area is Tinkoff v. Commissioner, 120 F.2d 564 (7th Cir. 1941), involving an accountant who took his son into his accounting firm as a partner on the day the boy was born.

The Supreme Court's first direct sally into this field was in 1946, when Commissioner v. Tower, 327 U.S. 280, and Lusthaus v. Commissioner, 327 U.S. 293, were

decided. Although the lower courts could easily discern which way the wind was blowing, they were unsure of its velocity. The Supreme Court then tried again.

COMMISSIONER v. CULBERTSON

337 U.S. 733 (1949)

MR. CHIEF JUSTICE VINSON delivered the opinion of the Court.

This case requires our further consideration of the family partnership problem. The Commissioner of Internal Revenue ruled that the entire income from a partnership allegedly entered into by respondent and his four sons must be taxed to respondent, and the Tax Court sustained that determination. The Court of Appeals for the Fifth Circuit reversed. We granted certiorari to consider the Commissioner's claim that the principles of Commissioner v. Tower, 1946, 327 U.S. 280, and Lusthaus v. Commissioner, 1946, 327 U.S. 293, have been departed from in this and other courts of appeals decisions.

Respondent taxpayer is a rancher. From 1915 until October 1939, he had operated a cattle business in partnership with R. S. Coon. Coon, who had numerous business interests in the Southwest and had largely financed the partnership, was 79 years old in 1939 and desired to dissolve the partnership because of ill health. To that end, the bulk of the partnership herd was sold until, in October of that year, only about 1,500 head remained. These cattle were all registered Herefords, the brood or foundation herd. Culbertson wished to keep these cattle and approached Coon with an offer of $65 a head. Coon agreed to sell at that price, but only upon condition that Culbertson would sell an undivided one-half interest in the herd to his four sons at the same price. His reasons for imposing this condition were his intense interest in maintaining the Hereford strain which he and Culbertson had developed, his conviction that Culbertson was too old to carry on the work alone, and his personal interest in the Culbertson boys. Culbertson's sons were enthusiastic about the proposition, so respondent thereupon bought the remaining cattle from the Coon and Culbertson partnership for $99,440. Two days later Culbertson sold an undivided one-half interest to the four boys, and the following day they gave their father a note for $49,720 at 4 per cent interest due one year from date. Several months later a new note for $57,674 was executed by the boys to replace the earlier note. The increase in amount covered the purchase by Culbertson and his sons of other properties formerly owned by Coon and Culbertson. This note was paid by the boys in the following manner:

Credit for overcharge	$ 5,930
Gifts from respondent	21,744
One-half of a loan procured by Culbertson & Sons partnership	30,000

The loan was repaid from the proceeds from operation of the ranch.

The partnership agreement between taxpayer and his sons was oral. The local paper announced the dissolution of the Coon and Culbertson partnership and the continuation of the business by respondent and his boys under the name of Culbertson & Sons. A bank account was opened in this name, upon which taxpayer, his four sons and a bookkeeper could check. At the time of formation of the new partnership, Culbertson's oldest son was 24 years old, married, and living on the ranch, of which he had for two years been foreman under the Coon and Culbertson partnership. He was a college graduate and received $100 a month plus board and lodging for himself and his wife both before and after formation of Culbertson & Sons and until entering the Army. The second son was 22 years old,

was married and finished college in 1940, the first year during which the new partnership operated. He went directly into the Army following graduation and rendered no services to the partnership. The two younger sons who were 18 and 16 years old respectively in 1940, went to school during the winter and worked on the ranch during the summer.

The tax years here involved are 1940 and 1941. A partnership return was filed for both years indicating a division of income approximating the capital attributed to each partner. It is the disallowance of this division of the income from the ranch that brings this case into the courts.

First. The Tax Court read our decisions in Commissioner v. Tower, supra, and Lusthaus v. Commissioner, supra, as setting out two essential tests of partnership for income-tax purposes: that each partner contribute to the partnership either vital services or capital originating with him. Its decision was based upon a finding that none of respondent's sons had satisfied those requirements during the tax years in question. Sanction for the use of these "tests" of partnership is sought in this paragraph from our opinion in the *Tower* case:

> There can be no question that a wife and a husband may, under certain circumstances, become partners for tax, as for other, purposes. If she either invests capital originating with her or substantially contributes to the control and management of the business, or otherwise performs vital additional services, or does all of these things she may be a partner as contemplated by [§701]. The Tax Court has recognized that under such circumstances the income belongs to the wife. A wife may become a general or a limited partner with her husband. But when she does not share in the management and control of the business, contributes no vital additional service, and where the husband purports in some way to have given her a partnership interest, the Tax Court may properly take these circumstances into consideration in determining whether the partnership is real within the meaning of the federal revenue laws. (327 U.S. at page 290).

It is the Commissioner's contention that the Tax Court's decision can and should be reinstated upon the mere reaffirmation of the quoted paragraph.

The Court of Appeals, on the other hand, was of the opinion that a family partnership entered into without thought of tax avoidance should be given recognition taxwise whether or not it was intended that some of the partners contribute either capital or services during the tax year and whether or not they actually made such contributions, since it was formed "with the full expectation and purpose that the boys would, in the future, contribute their time and services to the partnership." We must consider, therefore, whether an intention to contribute capital or services sometime in the future is sufficient to satisfy ordinary concepts of partnership, as required by the *Tower* case. The sections of the Internal Revenue Code involved are [§§701 and 702], which set out the method of taxing partnership income, and [§§1 and 61(a)], which relate to the taxation of individual incomes.*

In the *Tower* case we held that despite the claimed partnership, the evidence fully justified the Tax Court's holding that the husband, through his ownership of the capital and his management of the business, actually created the right to receive and enjoy the benefit of the income and was thus taxable upon that entire income under [§§1 and 61(a)]. In such case, other members of the partnership cannot be considered "Individuals carrying on business in partnership" and thus "liable for income tax . . . in their individual capacity" within the meaning of [§701]. If it is conceded that some of the partners contributed neither capital nor services to the partnership during the tax years in question, as the Court of Ap-

* Section 191 of the 1939 Code (§704(e) of the 1954 Code), relating specifically to family partnerships, was not enacted until 1951. — Ed.

peals was apparently willing to do in the present case, it can hardly be contended that they are in any way responsible for the production of income during those years.[1] The partnership sections of the Code are, of course, geared to the sections relating to taxation of individual income, since no tax is imposed upon partnership income as such. To hold that "Individuals carrying on business in partnership" include persons who contribute nothing during the tax period would violate the first principle of income taxation: that income must be taxed to him who earns it. Lucas v. Earl, 1930, 281 U.S. 111; Helvering v. Clifford, 1940, 309 U.S. 331; National Carbide Corp. v. Commissioner, 1949, 336 U.S. 422.

Furthermore, our decision in Commissioner v. Tower, supra, clearly indicates the importance of participation in the business by the partners during the tax year. We there said that a partnership is created "when persons join together their money, goods, labor, or skill for the purpose of carrying on a trade, profession, or business and when there is community of interest in the profits and losses." This is, after all, but the application of an often iterated definition of income — the gain derived from capital, from labor, or from both combined — to a particular form of business organization. A partnership is, in other words, an organization for the production of income to which each partner contributes one or both of the ingredients of income — capital or services. Ward v. Thompson, 1859, 22 How. 330, 334. The intent to provide money, goods, labor, or skill sometime in the future cannot meet the demands of [§§1 and 61(a)] of the Code that he who presently earns the income through his own labor and skill and the utilization of his own capital be taxed therefor. The vagaries of human experience preclude reliance upon even good faith intent as to future conduct as a basis for the present taxation of income.

Second. We turn next to a consideration of the Tax Court's approach to the family partnership problem. It treated as essential to membership in a family partnership for tax purposes the contribution of either "vital services" or "original capital." Use of these "tests" of partnership indicates, at best, an error in emphasis. It ignores what we said is the ultimate question for decision, namely, "whether the partnership is real within the meaning of the federal revenue laws" and makes decisive what we described as "circumstances [to be taken] into consideration" in making that determination.

The *Tower* case thus provides no support for such an approach. We there said that the question whether the family partnership is real for income-tax purposes depends upon

> whether the partners really and truly intended to join together for the purpose of carrying on the business and sharing in the profits and losses or both. And their intention in this respect is a question of fact, to be determined from testimony disclosed by their "agreement, considered as a whole, and by their conduct in execution of its provisions." Drennen v. London Assurance Co., 113 U.S. 51, 56; Cox v. Hickman, 8 H.L. Cas. 268. We see no reason why this general rule should not apply in tax cases where the Government challenges the existence of a partnership for tax purposes. (327 U.S. at page 287).

The question is not whether the services or capital contributed by a partner are of sufficient importance to meet some objective standard supposedly established by the *Tower* case, but whether, considering all the facts — the agreement, the conduct of the parties in execution of its provisions, their statements, the testimony of disinterested persons, the relationship of the parties, their respective

---

1 Of course one who has been a bona fide partner does not lose that status when he is called into military or government service, and the Commissioner has not so contended. On the other hand, one hardly becomes a partner in the conventional sense merely because he might have done so had he not been called.

abilities and capital contributions, the actual control of income and the purposes for which it is used, and any other facts throwing light on their true intent — the parties in good faith and acting with a business purpose intended to join together in the present conduct of the enterprise. There is nothing new or particularly difficult about such a test. Triers of fact are constantly called upon to determine the intent with which a person acted.[2] . . .

But the Tax Court did not view the question as one concerning the bona fide intent of the parties to join together as partners. Not once in its opinion is there even an oblique reference to any lack of intent on the part of respondent and his sons to combine their capital and services "for the purpose of carrying on the business." Instead the court, focusing entirely upon concepts of "vital services" and "original capital," simply decided that the alleged partners had not satisfied those tests when the facts were compared with those in the *Tower* case. The court's opinion is replete with such statements as

> we discern nothing constituting what we think is a requisite contribution to a real partnership. . . . We find no son adding "vital additional service" which would take the place of capital contributed because of formation of a partnership . . . it is clear that the sons made no capital contribution within the meaning of the *Tower* case.

Unquestionably a court's determination that the services contributed by a partner are not "vital" and that he has not participated in "management and control of the business" or contributed "original capital" has the effect of placing a heavy burden on the taxpayer to show the bona fide intent of the parties to join together as partners. But such a determination is not conclusive, and that is the vice in the "tests" adopted by the Tax Court. It assumes that there is no room for an honest difference of opinion as to whether the services or capital furnished by the alleged partner are of sufficient importance to justify his inclusion in the partnership. If, upon a consideration of all the facts, it is found that the partners joined together in good faith to conduct a business, having agreed that the services or capital to be contributed presently by each is of such value to the partnership that the contributor should participate in the distribution of profits, that is sufficient. The *Tower* case did not purport to authorize the Tax Court to substitute its judgment for that of the parties; it simply furnished some guides to the determination of their true intent. Even though it was admitted in the *Tower* case that the wife contributed no original capital, management of the business, or other vital services, this Court did not say as a matter of law that there was no valid partnership. We said, instead, that "There was, thus, more than ample evidence to support the Tax Court's finding that no genuine union for partnership purposes *was ever intended*, and that the husband earned the income." 327 U.S. at page 292. (Italics added.)

Third. The Tax Court's isolation of "original capital" as an essential of membership in a family partnership also indicates an erroneous reading of the *Tower* opinion. We did not say that the donee of an intra-family gift could never become a partner through investment of the capital in the family partnership, any more than we said that all family trusts are invalid for tax purposes in Helvering v. Clifford, supra. The facts may indicate, on the contrary, that the amount thus contributed and the income therefrom should be considered the property of the donee for tax, as well as general law, purposes. In the *Tower* and *Lusthaus* cases this Court, applying the principles of Lucas v. Earl, supra; Helvering v. Clifford,

---

[2] Nearly three-quarters of a century ago, Bowen, L. J., made the classic statement that "the state of a man's mind is as much a fact as the state of his digestion." Edgington v. Fitzmaurice, 29 L.R. Ch. Div. 459, 483. State of mind has always been determinative of the question whether a partnership has been formed as between the parties. . . .

supra; and Helvering v. Horst, 311 U.S. 112, found that the purported gift, whether or not technically complete, had made no substantial change in the economic relation of members of the family to the income. In each case the husband continued to manage and control the business as before, and income from the property given to the wife and invested by her in the partnership continued to be used in the business or expended for family purposes. We characterized the results of the transactions entered into between husband and wife as "a mere paper reallocation among the family members," noting that "The actualities of their relation to the income did not change." This, we thought, provided ample grounds for the finding that no true partnership was intended; that the husband was still the true earner of the income.

But application of the *Clifford-Horst* principle does not follow automatically upon a gift to a member of one's family, followed by its investment in the family partnership. If it did, it would be necessary to define "family" and to set precise limits of membership therein. We have not done so for the obvious reason that existence of the family relationship does not create a status which itself determines tax questions, but is simply a warning that things may not be what they seem. It is frequently stated that transactions between members of a family will be carefully scrutinized. But more particularly, the family relationship often makes it possible for one to shift tax incidence by surface changes of ownership without disturbing in the least his dominion and control over the subject of the gift or the purposes for which the income from the property is used. He is able, in other words, to retain "the substance of full enjoyment of all the rights which previously he had in the property." Helvering v. Clifford, supra, 309 U.S. at page 336.

The fact that transfers to members of the family group may be mere camouflage does not, however, mean that they invariably are. The *Tower* case recognized that one's participation in control and management of the business is a circumstance indicating an intent to be a bona fide partner despite the fact that the capital contributed originated elsewhere in the family. If the donee of property who then invests it in the family partnership exercises dominion and control over that property — and through that control influences the conduct of the partnership and the disposition of its income — he may well be a true partner. Whether he is free to, and does, enjoy the fruits of the partnership is strongly indicative of the reality of his participation in the enterprise. In the *Tower* and *Lusthaus* cases we distinguished between active participation in the affairs of the business by a donee of a share in the partnership on the one hand, and his passive acquiescence to the will of the donor on the other. This distinction is of obvious importance to a determination of the true intent of the parties. It is meaningless if "original capital" is an essential test of membership in a family partnership.

The cause must therefore be remanded to the Tax Court for a decision as to which, if any, of respondent's sons were partners with him in the operation of the ranch during 1940 and 1941. As to which of them, in other words, was there a bona fide intent that they be partners in the conduct of the cattle business, either because of services to be performed during those years, or because of contributions of capital of which they were the true owners, as we have defined that term in the *Clifford, Horst,* and *Tower* cases? No question as to the allocation of income between capital and services is presented in this case, and we intimate no opinion on that subject.

The decision of the Court of Appeals is reversed with directions to remand the cause to the Tax Court for further proceedings in conformity with this opinion.

Reversed and remanded.

MR. JUSTICE BLACK and MR. JUSTICE RUTLEDGE think that the Tax Court prop-

erly applied the principles of the *Tower* and *Lusthaus* decisions in this case. However, they consider it of paramount importance in this case to have a court interpretation of the applicable taxing statute, for guidance in its application. Accordingly, they acquiesce in the Court's opinion and judgment.

MR. JUSTICE BURTON, concurring, states that, upon remand of the cause to the Tax Court, there is nothing in the facts which have been presented here which, as a matter of law, will preclude that court from finding that the 1940 and 1941 income was properly taxable on a partnership basis. The physical absence of some of the Culbertson boys from the ranch does not necessarily preclude them or others from the obligations or the benefits of the partnership for tax purposes. Their contributions of capital, their participation in the income and their commitments to return to the ranch or otherwise to render service to the partnership are among the material factors to be considered. A present commitment to render future services to a partnership is in itself a material consideration to be weighed with all other material considerations for the purposes of taxation as well as for other partnership purposes.

MR. JUSTICE JACKSON would affirm on the opinion of the court below, being of the view that the ordinary common-law tests of validity of partnerships are the tests for tax purposes and that they were met in this case.

MR. JUSTICE FRANKFURTER, concurring.

. . . The Tax Court's decision rested on a misconception of our decision in Commissioner v. Tower. It is, however, fair to say that it was led into that misconception by phrases which it culled from the *Tower* opinion with inadequate attention to the opinion in its entirety — both what it said and what it significantly did not say. . . .

A fair reading of our *Tower* opinion in its entirety reflects the formulation of the concept of partnership which is set forth at the beginning of its analysis and which the Court now quotes. While recognizing the importance of the question "who actually owned a share of the capital attributed to the wife on the partnership books," the *Tower* opinion states the ultimate issue to be "whether this husband and wife really intended to carry on business as a partnership." To that determination it was of course relevant that no new capital was brought into the business as a result of the formation of the partnership, that the wife drew on income of the partnership only to pay for the type of things she had previously bought for the family, and that the consequence was a mere paper reallocation of income. But these circumstances were not cited as giving the term "partnership" a content peculiar to the Internal Revenue Code. They were characterized, rather, simply as "more than ample evidence to support the Tax Court's finding that no genuine union for partnership business purposes was ever intended" and, as a corollary, "that the husband earned the income."

Recognition of the importance, in applying [§§701 and 702], of the appraisal of facts makes manifest why, quite apart from the definition contained in [§7701], a determination by a State court should not, as the *Tower* opinion pointed out, foreclose a contrary determination by a federal tribunal charged with administration of the tax laws. Such an inconsistency would not mean that the legal standards applied by each were inconsistent; it would be a result simply of the commonplace that no finder of fact can see through the eyes of any other finder of fact. See Texas v. Florida, 306 U.S. 398, 411. Nor would inconsistency be created by a State court's concern for the protection of creditors which lead it to seize upon adoption of the outward form as the vital fact. So, indeed, might the taxing authorities refuse to be precluded from holding the taxpayer to his election to adopt the form of a partnership. Cf. Higgins v. Smith, 308 U.S. 473, 477. The need for guarding against misuse of the outward form of a partnership as a

device for obtaining tax advantages is properly satisfied by reliance on the vigilance of the Tax Court, not by distorting the concept of partnership. It is not for this Court, by redefinition or the erection of presumptions, to amend the Internal Revenue Code so as virtually to ban partnerships composed of the members of an intimate family group.

The present case, nevertheless, is not the first manifestation of an impression that the *Tower* opinion had precisely such an effect. It seems to me important, therefore, to make crystal clear that there is no special concept of "partnership" for tax purposes, while at the same time recognizing that in view of the temptations to assume a virtue that they have not for the sake of tax savings, men and women may appear in a guise which the gimlet eye of the Tax Court is entitled to pierce. We should leave no doubt in the minds of the Tax Court, of the Courts of Appeals, of the Treasury and of the bar that the essential holding of the *Tower* case is that there is "no reason" why the "general rule" by which the existence of a partnership is determined "should not apply in tax cases where the Government challenges the existence of a partnership for tax purposes."

In plain English, if an arrangement among men is not an arrangement which puts them all in the same business boat, then they cannot get into the same boat merely to seek the benefits of [§§701 and 702]. But if they are in the same business boat, although they may have varying rewards and varied responsibilities, they do not cease to be in it when the tax collector appears.

NOTE

1. *The result on remand.* On remand, the Tax Court found that the taxpayers did not intend in good faith to become partners. The court relied in part on a statement made by the father to a creditor that he and his wife had reserved unrestricted control over the property until the sons reached their majority. Rather than assume that this document was invalid, and that the father was guilty of obtaining credit under false pretenses, the court concluded that "it stated the real and true situation." Other facts inconsistent with a bonafide partnership were also found by the court. Culbertson v. Commissioner, ¶50,187 P-H Memo T.C. The Tax Court was again reversed by the Court of Appeals. As authority for the reversal, the Court of Appeals relied both on the Supreme Court's decision and on its own previous decision which had been reversed by the Supreme Court. The Court of Appeals found that the Tax Court had no more, and possibly less, evidence for its decision than it had had previously. The Court of Appeals also stated that the Supreme Court had misunderstood its "thoroughly considered and carefully reasoned opinion" and denied that "we held on the former opinion, hold now, or ever did hold to" the view attributed to it by the Supreme Court. Culbertson v. Commissioner, 194 F.2d 581 (5th Cir. 1952).

2. *The "Culbertson" ruling.* After watching the courts struggle with the *Culbertson* criteria for several years, the Internal Revenue Service in 1952 issued Mim. 6767, 1952-1 C.B. 111, "to clarify" its position "with respect to some aspects of the family partnership problem . . . concerning which there appears [!] to be uncertainty." But it was not possible in this area to single out relatively precise criteria for taxability, as was done in the Clifford Regulations, and the Service's position was consequently less clearly delineated. Moreover, since Congress intervened in 1951 with legislation, now §704(e), the ruling applied only to pre-1951 taxable years.

SENATE REPORT NO. 781

Senate Finance Committee, 82d Cong., 1st Sess. (1951)
1951-2 C.B. 458, 485-486

[Section 704(e)] is intended to harmonize the rules governing interests in the so-called family partnership with those generally applicable to other forms of

property or business. Two principles governing attribution of income have long been accepted as basic: (1) income from property is attributable to the owner of the property; (2) income from personal services is attributable to the person rendering the services. There is no reason for applying different principles to partnership income. If an individual makes a bona fide gift of real estate, or of a share of corporate stock, the rent or dividend income is taxable to the donee. Your committee's amendment makes it clear that, however the owner of a partnership interest may have acquired such interest, the income is taxable to the owner, if he is the real owner. If the ownership is real, it does not matter what motivated the transfer to him or whether the business benefited from the entrance of the new partner.

Although there is no basis under existing statutes for any different treatment of partnership interests, some decisions in this field have ignored the principle that income from property is to be taxed to the owner of the property. Many court decisions since the decision of the Supreme Court in Commissioner v. Culbertson (337 U.S. 733) have held invalid for tax purposes family partnerships which arose by virtue of a gift of a partnership interest from one member of a family to another, where the donee performed no vital services for the partnership. Some of these cases apparently proceed upon the theory that a partnership cannot be valid for tax purposes unless the intrafamily gift of capital is motivated by a desire to benefit the partnership business. Others seem to assume that a gift of a partnership interest is not complete because the donor contemplates the continued participation in the business of the donated capital. However, the frequency with which the Tax Court, since the *Culbertson* decision, has held invalid family partnerships based upon donations of capital, would seem to indicate that, although the opinions often refer to "intention," "business purpose," "reality," and "control," they have in practical effect reached results which suggest that an intrafamily gift of a partnership interest, where the donee performs no substantial services, will not usually be the basis of a valid partnership for tax purposes. We are informed that the settlement of many cases in the field is being held up by the reliance of the field offices of the Bureau of Internal Revenue upon some such theory. Whether or not the opinion of the Supreme Court in Commissioner v. Tower and the opinion of the Supreme Court in Commissioner v. Culbertson, which attempted to explain the *Tower* decision, afford any justification for the confusion is not material — the confusion exists.

The amendment [§704(e)] leaves the Commissioner and the courts free to inquire in any case whether the donee or purchaser actually owns the interest in the partnership, which the transferor purports to have given or sold him. Cases will arise where the gift or sale is a mere sham. Other cases will arise where the transferor retains so many of the incidents of ownership that he will continue to be recognized as a substantial owner of the interest which he purports to have given away, as was held by the Supreme Court in an analogous trust situation involved in the case of Helvering v. Clifford (309 U.S. 351). The same standards apply in determining the bona fides of alleged family partnerships as in determining the bona fides of other transactions between family members. Transactions between persons in a close family group, whether or not involving partnership interests, afford much opportunity for deception and should be subject to close scrutiny. All the facts and circumstances at the time of the purported gift and during the periods preceding and following it may be taken into consideration in determining the bona fides or lack of bona fides of a purported gift or sale.

Not every restriction upon the complete and unfettered control by the donee of the property donated will be indicative of sham in the transaction. Contractual restrictions may be of the character incident to the normal relationships

among partners. Substantial powers may be retained by the transferor as a managing partner or in any other fiduciary capacity which, when considered in the light of all the circumstances, will not indicate any lack of true ownership in the transferee. In weighing the effect of a retention of any power upon the bona fides of a purported gift or sale, a power exercisable for the benefit of others must be distinguished from a power vested in the transferor for his own benefit.

Since legislation is now necessary to make clear the fundamental principle that, where there is a real transfer of ownership, a gift of a family partnership interest is to be respected for tax purposes without regard to the motives which actuated the transfer, it is considered appropriate at the same time to provide specific safeguards — whether or not such safeguards may be inherent in the general rule — against the use of the partnership device to accomplish the deflection of income from the real owner.

Therefore, [§704(e)] provides that in the case of any partnership interest created by gift the allocation of income, according to the terms of the partnership agreement, shall be controlling for income tax purposes except when the shares are allocated without proper allowance of reasonable compensation for services rendered to the partnership by the donor, and except to the extent that the allocation to the donated capital is proportionately greater than that attributable to the donor's capital. In such cases a reasonable allowance will be made for the services rendered by the partners, and the balance of the income will be allocated according to the amount of capital which the several partners have invested. However, the distributive share of a partner in the earnings of the partnership will not be diminished because of absence due to military service.

When more than one member of a family is a member of a partnership, all interests purchased by one member of the family from another will be treated as though the transfer were made by gift. For this purpose the family of an individual includes his spouse, ancestors, lineal descendants, and any trust for the primary benefit of such persons.

NOTE

1. *The Regulations under §704(e).* The student should examine the Regulations issued pursuant to §704(e), with respect to minors, trustees as partners, and limited partnerships. Regs. §704-1(e)(2). The tax treatment of these situations will greatly influence the use of §704(e) because by and large the donor of an interest in a family partnership will wish to retain control over its management, especially in view of the fact that any general partner may always bring a partnership to an end and force dissolution. Uniform Partnership Act, §§31(1)(b) and 31(2). Can the head of the family maintain control over the enterprise by taking in the children as limited partners only? By transferring their shares in the firm into trusts of which he is the trustee? By relying simply on his powers as the natural guardian of the children? For a discussion of the use of limited partnerships and trusts as partners under the pre-1951 law, see Toor v. Westover, 200 F.2d 713 (9th Cir. 1952).

Section 704(e)(1) applies only if capital is "a material income-producing factor." (Is §704(e)(2) similarly restricted?) For personal service family partnerships, see Poggetto v. United States, 306 F.2d 76 (9th Cir. 1962), applying the pre-1951 judicial criterion of "good faith intent to join together in the conduct of the enterprise."

2. *Section 704(e) in practice.* There has been surprisingly little litigation on the validity of §704(e) partnerships since its enactment in 1951. The following extracts from two cases — one honoring, the other rejecting, the partnership form — are typical of judicial attitudes.

Reddig v. Commissioner, 30 T.C. 1382, 1392, 1393 (1958):

When we consider all of the factors in this case, as disclosed by the circumstances at the time the trust and partnership agreements were executed, the terms of said instru-

ments, and the conduct of the parties thereafter, we are convinced respondent was correct in holding the trustee for the Reddig and Kalat children was not the real owner of partnership interests for income tax purposes in the Maxwell Company within the meaning of the statute. The donors of the capital interests to their children in trust retained too many controls over the subject matter of the gifts to warrant a holding that the trustee in each instance was the real owner of the capital interests conveyed within the meaning of the statute.

In the trust agreements, we find the trustee selected is the law partner of petitioners' attorney representing them in this case. The undivided interest in the property is given in trust to the children but the same sentence in the two instruments directs the trustee to contribute the interest to the partnership. The trust agreements use language of absolute conveyance as if the donors were parting with all of their interests in the donated partnership interests but actually the instruments are loaded with clauses and provisos designed to curtail the ownership rights of the donees and make sure important controls will be retained by the donors.

The trustee is given the right to pay income or corpus to or for the benefit of the beneficiaries but also "in his sole and absolute discretion" to make such payments to the persons "with whom such beneficiary shall reside." In 1952 the Reddig children were 12 and 15 years old and the three Kalat children were 2, 8, and 10 years old. Presumably the children beneficiaries resided with their parents, the grantors. The clause would seem to authorize the trustee to pay corpus and income to the grantors.

Clause 5 of the trust instruments, which we have set forth in our Findings of Fact, is replete with confusing language, but the general design seems to be to have the trustee act, especially with regard to the distribution of partnership earnings, in the interest of the partnership, as the donor partners shall determine even though such action would conflict with the duty of the trustee to act in the best interest of the beneficiaries. The trustee is not to be held accountable so long as he acts in good faith "in the furtherance of Grantors' intentions as expressed in or implied by this instrument." It is perfectly apparent from a reading of the entire trust agreement the donees received much less than full and complete ownership and the donors emerged from the gift transaction with strings over the donated property that they could pull for their own advantage.

The retention of control on the part of the donors is increased when we turn to the next instrument, the partnership agreement. By the trust agreement the undivided interest in the property that made up the trust estate in each trust had to be contributed to the Maxwell Company partnership. The partnership was completely dominated and controlled by the "individual parties" or the grantors of the trust agreements. Henry S. Reddig had more control than the others but the point is the trustee partner had almost no voice in the conduct of the business.

While any partner was given the right to withdraw, liquidation and dissolution would not result unless those owning more than one-half of the capital interest elected to so do. Those owning more than one-half of the capital interest were the individual partners or grantors of the trusts. It is clear that if the trustee partner chose to withdraw he could not sell his interest at fair market value. Cf. Hargrove Bellamy, 14 T.C. 867. If there were no election to dissolve or liquidate, the withdrawing partner was deemed to have elected to sell his interest at book value without allowance for goodwill, trade names, patents, or other intangible assets. Provision is made in the partnership agreement for Elmer Kalat to purchase the capital interest of any of his children who die and for the Reddigs to purchase the capital interest of any of their children who die but if Kalat should die, the partnership is to terminate and the trustee for the Kalat children is to withdraw and Kalat's estate and the trustee for his children are to be paid *from the partnership*, for the value of the Kalat interest, and the value of the trust interest for the Kalat children, and Henry and Thelma Reddig "shall be deemed to own an equal portion of such interests so acquired by the partnership." In the latter contingency it is to be noted partnership earnings in which the trustee of the Reddig children would have a 40 per cent interest, would be devoted to purchasing a capital interest of other partners.

We do not feel that further detailed analysis of the trust and partnership agreements is necessary to show that the transactions were each nothing more than a sham

or pretense of donating capital interests in the Maxwell Company. The ownership of the donees was not the real ownership contemplated by the statute and the Commissioner's regulations. They were not bona fide gifts of capital interests uncontrolled by the donors.

Smith v. Commissioner, 32 T.C. 1261, 1269, 1270 (1959):

> Respondent argues the retention of control over the interests purportedly given to the trusts can be found in the trust instruments, partnership agreement, and other documents and it is also revealed by the conduct of the parties. The documents were legally sufficient to accomplish the gifts. It is true the partnership agreement gave broad management control to Jack and the capital ownership of Jack and Rose together gave them a dominant interest in the partnership. However, it seems quite normal that petitioners, who ran the business, and especially Jack, who had started it, should have superior management control. The mere fact that the trusts had a minority voting position does not mean the donors retained control over the donated interests. We have not set forth the documents, but insofar as they speak for themselves, each establishes its own validity on its face. Respondent admits the validity of the trusts and recognizes them as taxable entities. Respondent does not assail the sufficiency of the partnership instrument to create a partnership at least as to Jack and Rose. As stated, we do not think the mere presence in the partnership agreement of clauses giving Jack superior management control should mean the trusts should be excluded. We do not find anything in the instruments providing retention of control by the donor sufficient to show the donees were not the real owners of the partnership interests.
>
> The reality of the donees' ownership of interests in the partnership is not established by the legal sufficiency of the instruments of gift and partnership. In these family partnership cases the donor parents often are, as respondent suggests in the instant case, in a position to impose their will as parents, and reduce what appears to be a gift, to a mere sham. This is especially true when the donees are young children. The conduct of the parties is to be closely scrutinized to see if the parents treated all the related transactions as creating, in reality, bona fide gifts of the partnership interests. Here the record shows the parents' general recognition of the trusts as owners of partnership interests; their disclosure to the partnership customers, creditors, and bank that the trusts were partners; the fact that they filed notice under fictitious name statutes that the trusts were partners; a recognition of the trusts as partners in the partnership returns; the proper distribution of the partnership profits to the trusts as partners; and, finally, recognition of each trust as owner of a 15 per cent capital interest in the 1956 incorporation of the partnership business where each trust received a 15 per cent stock interest.
>
> Respondent points to petitioners' acts in having the partnership's donations to charities charged to their shares of partnership profits so they could take the deductions on their individual income tax returns, as showing retention of control. We fail to see how such acts demonstrate any nonrecognition of the trusts as partners.
>
> The conduct of petitioners with respect to the trusts is also to be examined. Here the record shows the trust funds were invested in bonds, savings and loan associations, and real estate ventures. Trust funds were not spent for the support or education of the children. Partial distribution was made to Howard when he reached 25 years of age, as the trust provided.

See also Pflugradt v. United States, 310 F.2d 412 (7th Cir. 1962); Spiesman v. Commissioner, 260 F.2d 940 (9th Cir. 1958); Stanback v. Commissioner, 271 F.2d 514 (4th Cir. 1959); Finlen v. Healy, 187 F. Supp. 434 (D. Mont. 1960).

3. *Reasonable compensation for donor's services.* What criteria will determine whether "reasonable compensation" has been allowed to the donor for his services? See Patton v. Commissioner, supra page 267. Does the requirement of such an allowance destroy the usefulness of the family partnership as a tax reduction device? Under the pre-1951 law, it was held in several cases that a family partnership was either valid in toto or invalid in toto. Thus, in Canfield v. Commissioner, 168 F.2d 907 (6th Cir. 1948), the Tax

Court was reversed for holding, in disregard of the partnership agreement, that 75 per cent of the firm's income should be attributed to the husband's services (and taxed to him) and that the remaining 25 per cent should be attributed and taxed to husband and wife in proportion to their capital interests. See also Hartz v. Commissioner, 170 F.2d 313, 318 (8th Cir. 1948), stating, however, that an "artificial" allocation of income among the partners "might constitute sufficient ground for a finding that the alleged partnership was a sham or a device to avoid the payment of taxes." Mim. 6767, supra page 394, however, expressed the view (for years before 1951) that in some cases the partnership should not be totally disregarded, but income should be allocated according to the values of services and capital rather than according to the agreement itself. Reallocation in appropriate cases was endorsed in Weiss v. Johnson, 206 F.2d 350, 354 (2d Cir. 1953):

> No reason is perceived in either law or logic why, if a partnership may be found wholly invalid for a misuse of this business device as an instrument of tax evasion, it may not also be found partially invalid for a like ground.

See also Wofford v. Commissioner, 207 F.2d 749 (5th Cir. 1953), where, although an alleged partner was not recognized as such, its ownership of a portion of the capital used by the firm was acknowledged, and part of the firm's income was held to be compensation for the use of the "partner's" capital.

4. *Disregard of partnership form at behest of taxpayer.* Occasionally the head of the family wishes to disregard a purported partnership in order to apply the firm's entire loss against his own (high-bracket) income, rather than allowing some of the loss to be "wasted" on a child's return. See Maletis v. United States, 200 F.2d 97 (9th Cir. 1952), cert. denied, 345 U.S. 924 (taxpayer estopped to deny partnership); Bialock v. Commissioner, 35 T.C. 649 (1961) (on facts, no estoppel).

5. *Pooling of "outside" income by partners.* A and B are members of an admittedly valid partnership for the conduct of a real estate and accounting business. The partnership agreement provides that all "outside" income received by either of them shall be contributed to the partnership and distributed between them in the same proportion as the income from the business activities of the firm. Is the arrangement as to "outside" income effective for federal income tax purposes? Mayes v. United States, 207 F.2d 326 (10th Cir. 1953); Mayes v. Commissioner, 21 T.C. 286 (1953). Can two lawyers, each having a retainer from a separate client, become partners by pooling their income and expenses, if neither performs any services except for his "own" client?

OVERTON v. COMMISSIONER
OLIPHANT v. COMMISSIONER

162 F.2d 155 (2d Cir. 1947)

Before SWAN, AUGUSTUS N. HAND and FRANK, Circuit Judges.

SWAN, Circuit Judge.

These appeals involve gift tax liability of petitioner Overton for the years 1936 and 1937 and income tax liability of petitioner Oliphant for the year 1941. Each petitioner was held liable on the theory that dividends received by his wife in the year in question on stock registered in her name on the books of Castle & Overton, Inc., a New York corporation, were income of the husband for tax purposes. No gift tax return with respect to such dividends was filed by Mr. Overton in 1936 or 1937, and the dividends received by Mrs. Oliphant in 1941 were not included in her husband's return for that year.

There is no dispute as to the evidentiary facts. They are stated in detail in the opinion of the Tax Court, 6 T.C. 304, and will be here repeated only so far as may be necessary to render intelligible the discussion which follows. On May 26, 1936 the corporation had outstanding 1,000 shares of common stock without par value but having a liquidating value of at least $120 per share. On that date, pursuant to a plan devised to lessen taxes, the certificate of incorporation was amended to provide for changing the outstanding common stock into 2,000 shares without par value, of which 1,000 were denominated Class A and 1,000 Class B. The old stock was exchanged for the new, the shareholders then gave the B stock to their respective wives, and new certificates therefor were issued to the wives. The B stock had a liquidating value of one dollar per share; everything else on liquidation was to belong to the holders of the A stock, who had also the sole voting rights for directors and on all ordinary matters.[1] By virtue of an agreement made in April 1937 restricting alienation of their stock, the wives were precluded from realizing more than one dollar a share by selling their shares.* The A stock was to receive noncumulative dividends at the rate of $10 a share per year before payment of any dividend on the B stock; if dividends in excess of $10 per share were paid on the A stock in any year, such excess dividends were to be shared by both classes of stock in the ratio of one-fifth thereof for the A stock and four-fifths for the B stock. During the six year period ending in December 1941, the dividends paid on B stock totaled $150.40 a share as against $77.60 a share paid on A stock. In 1941 the A stock had a book value of $155 per share.

The Tax Court was of opinion that the 1936 arrangement, though made in the form of a gift of stock, was in reality an assignment of part of the taxpayers' future dividends. Unless form is to be exalted above substance this conclusion is inescapable. Since the total issue of B stock represented only $1,000 of the corporate assets, it is plain that the property which earned the large dividends received by the B shareholders was the property represented by the A stock held by the husbands. In transferring the B shares to their wives they parted with no substantial part of their interest in the corporate property. Had they been content to transfer some of the original common stock, they could have accomplished their purpose of lessening taxes on the family group,[2] but they would then have made substantial gifts of capital. The arrangement they put into effect gave the wives nothing, or substantially nothing, but the right to future earnings flowing from property retained by the husbands. That anticipatory assignments of income, whatever their formal cloak, are ineffective taxwise is a principle too firmly established to be subject to question. . . . We think the Tax Court correctly applied this principle to the facts of the case at bar.

Orders affirmed.

---

[1] Whether the amendment of the certificate of incorporation excluded B shareholders from voting on extraordinary matters specified in section 51 of the Stock Corporation Law of New York, McK. Consol. Laws, c. 59, in effect on May 26, 1937, the Tax Court did not find it necessary to determine; nor do we.

* The Tax Court did not find that the 1937 shareholders' agreement was planned when the stock was transferred in 1936; indeed, the court implied that it was not prearranged. 6 T.C. 304, 313 ("This restrictive agreement was entered into after the transactions of June 10, 1936, and is therefore not controlling. Nevertheless, it is, in our view, corroborative, for it demonstrates the willingness of the wives unhesitatingly to give up valuable rights without consideration, even in the face of prior receipt of large dividend payments"). — Ed.

COMMISSIONER v. LAUGHTON

113 F.2d 103 (9th Cir. 1940)

Before DENMAN, MATHEWS, and STEPHENS, Circuit Judges.

DENMAN, Circuit Judge.

This is a review of a decision of the Board of Tax Appeals holding Laughton not liable for income taxation for moneys paid in the tax years 1934 and 1935 by various American motion picture producers to Motion Pictures & Theatrical Industries, Ltd., a British corporation, hereafter called Industries, Ltd., all of whose shares, except those qualifying the directors, were owned by Laughton, for services in the United States rendered by that company to the American producers by supplying Laughton, an employee of Industries, Ltd., as an actor in their motion pictures.

Laughton was employed as an actor by the company under an exclusive contract for five years at a salary very much less than that the company received for "loaning" him to the producers. Such hiring and loaning is established practice in the moving picture industry. The Commissioner contends that the corporate entity should be ignored for income tax purposes and the compensation deemed paid directly from the producers to Laughton. The Board held the corporation had a business purpose and hence its entity intervened.

The Board decision was made before the Supreme Court decided Higgins v. Smith, 308 U.S. 473, which we consider controlling this proceeding. In that case Smith, the taxpayer, dominated a corporation of which he owned all the shares through

> officers and directors [who] were [his] subordinates. . . . While its accounts were kept completely separate from those of the taxpayer, there is no doubt that Innisfail [the corporation] was his corporate self.

That is to say, the corporation was "wholly owned" both as to management by the taxpayer's subordinates and as to stock interest.

Smith, having in mind reducing his taxes, sold to this "corporate self" certain of his shares of stock at a loss, which he claimed as a deduction from his taxable income. It was held that, assuming title had passed to his corporate self, he had such a command of the securities thereafter that "There is not enough of substance in such a sale finally to determine a loss."

In a long discussion the court, inter alia, states that

> Indeed this domination and control is so obvious in a wholly owned corporation as to require a peremptory instruction that no loss in the statutory sense could occur upon a sale by a taxpayer to such an entity.

That the phrase "wholly owned" in this dictum regarding an instruction to the jury means something more than mere stock ownership is to be inferred from a ruling at the end of the opinion. There certain evidence of past transactions between taxpayer and corporation was admissible because the court thought "it apparent that this evidence was entirely relevant to the present issue; the history of the taxpayer's relations with the corporation shed considerable light on the actual effect of the sale in question."

Later, considering Burnet v. Commonwealth Improvement Company, 287 U.S. 415, in which the sole stockholder so utilized the corporation that it made a book profit and the corporation was held liable as a separate taxable entity, the court says:

. . . A taxpayer is free to adopt such organization for his affairs as he may choose and having elected to do some business as a corporation, he must accept the tax disadvantages. On the other hand, the Government may not be required to acquiesce in the taxpayer's election of that form for doing business which is most advantageous to him. The Government may look at actualities and upon determination that the form employed for doing business or carrying out the challenged *tax event is unreal or a sham* may sustain or disregard the effect of the fiction as best serves the purposes of the tax statute. To hold otherwise would permit the schemes of taxpayers to supercede legislation in the determination of the time and manner of taxation. It is command of income and its benefits which marks the real owner of property. (Emphasis supplied.)

It is arguable that the *Higgins* decision means that no matter what the particular "tax event" may be, if it be more profitable to the tax collector to disregard the intervening corporate entity this must be done. However, it seems to us that if this were the intent of the court it would have said so and not spread its consideration of the cases over many pages of the opinion with such qualifying language as is quoted above.

We take the opinion to mean that the "tax event" is not an unreal attempt to use a corporation for a sham transaction, procuring an advantageous tax consequence to the taxpayer, if it may be considered as one primarily for an independent business purpose and not a transfer of assets (here Laughton's services), with a retention of their control, solely to reduce tax liability.

Applying this criterion to the instant case the question here is not whether Industries, Ltd., was formed for a business purpose. The corporation in Higgins v. Smith, supra, was formed and used for profitable business purposes causing it to pay federal and state income taxes. The question is whether Laughton's hiring of himself to Industries, Ltd., for a salary substantially less than the compensation for which the corporation supplied his services as its employee to various motion picture producers, constituted, in effect, a single transaction by Laughton in which he received indirectly the larger sum paid by the producers.

The Board made no finding on this issue. It seemed to think it sufficient to find no more than that the corporation itself had a business purpose. This places before us the determination whether the evidence warrants us to return the case to the Board with the freedom to make such a finding, or whether it permits only the finding that Laughton's transaction with regard to his services to the corporation is an "unreal and/or a sham" attempt at tax avoidance.

There is evidence here from which it might be inferred that tax avoidance by a sham transfer by Laughton of his services was the primary purpose of the use of the corporation. There is also evidence from which it may be inferred that it was not. The testimony is uncontradicted that Laughton had no intention to avoid taxes; that the purpose of engaging himself for five years as an employee of Industries, Ltd., was to join his efforts with other employees of the company to create motion pictures; that he contributed six thousand pounds to the capital of the company for his stock interest, other than the qualifying shares of his directors, and also royalties in certain enterprises in which he was interested; that he contemplated that the corporation would gather further accretions of capital by its use of his services as its agent for a time to other motion picture producers.

It is also uncontradicted that during the two tax years in question, 1934 and 1935, sufficient capital was accumulated from all these sources for the corporation's active engagement in motion picture production at a later date; that the directors of his company were not dominated and controlled by him as in the case of Higgins v. Smith, supra, that, on the contrary, they were business men who ran the business with a free hand and never asked Laughton's permission in its conduct.

It is a matter of law that the stockholders have no right to direct the conduct of the board of directors.

It is also uncontradicted that Laughton's motive was based on the theory

> that as an actor he would die poor. He had a Gerald DuMaurier in mind who died poor and he said that he was determined while he was on the crest of the wave to safeguard his resources, that he would engage the services of the finest writers in New York and technicians and cameramen and form a renaissance of the British film industry.

Laughton is an English actor and was then an artist of international renown. The Board properly could infer that one with the artistic temperament is likely to dissipate his income and that Laughton was farseeing enough to desire that compensation for his genius should be handled by independent business men.

On the other hand, it appears that Laughton borrowed heavily on secured loans from Industries, Ltd., during the tax years in question. He had a previous engagement for his services which was surrendered to the company, followed by a similar engagement directly with the company to furnish them as its employee. The minutes of the company show that he was present at many of the directors' meetings. Also there was a very wide disparity between the salary he received from the company and what he had previously been receiving as a motion picture actor, and a still wider disparity between his company salary and what was received by the company for his subsequent services.

We cannot say as a matter of law that findings of ultimate fact must be made one way or the other with reference to the issue as stated above. The administrative body must be left free to make its own inferences relevant to that issue. Our sole function with regard to administrative findings is to determine whether there is any substantial evidence to support them.

We hold that the case must be returned to the Board to make the findings this opinion indicates are required.

Remanded.*

NOTE

1. *A "family corporation" doctrine?* As is indicated infra page 629, a corporation like the one organized by Laughton may be subject to the virtually confiscatory personal holding company surtax if the bulk of its income comes from "hiring out" the services of a stockholder unless the income is distributed annually as earned. Many family corporations can avoid these special provisions, however, even though the corporate income may be created largely by the personal skill or services of the head of the family. By giving some of the stock to members of the family, he may reduce income taxes unless the corporate entity is disregarded and the income of the corporation is taxed to him.

Note the court's remark in the *Overton* case, supra:

> Had they been content to transfer some of the original common stock, they could have accomplished their purpose of lessening taxes on the family group, but they would then have made substantial gifts of capital. [162 F.2d at 156.]

Suppose the husband's services are a principal source of the corporation's earnings, and his compensation is inadequate. Could the Commissioner include in the husband's income a "constructive" salary to give him adequate compensation for his services? Or could the Commissioner treat dividends subsequently paid to the wife and children as assignments of the husband's past earnings? If a family partnership, after being held invalid for tax purposes, is incorporated, and the stock is divided among the former "partners" in proportion to their capital interests, will the Commissioner have any ground for attacking the arrangement? See Alexandre, The Corporate Counterpart of the Family

* The proceedings on remand are not reported. — Ed.

Partnership, 2 Tax L. Rev. 493 (1947); Johnson, Taxing Dividends of Family Corporations — A Dissent, id. at 566.

2. *Effect of separate corporate tax.* Assuming that the husband can take an inadequate salary without jeopardizing the normal tax treatment of a corporation (separate tax on corporate earnings; dividends taxed to stockholders only when paid), what are the tax pressures that discourage use of this device for income-splitting?

3. *Subchapter S corporations as an income-splitting device.* By virtue of §§1371-1377, enacted in 1958, many closely held corporations are entitled to elect to be taxed, in many respects, as partnerships: the electing corporation pays no corporate income tax, its income being taxed directly to the shareholders, whether it is distributed to them or accumulated by the corporation. On the use of such "Subchapter S corporations" as a means of splitting income within the family without incurring a separate income tax or running afoul of the "imputed compensation" provision of §704(e) (family partnerships), see page 744 infra.

5. *Other Intra-Family Arrangements and Transactions*

HENSON v. COMMISSIONER
174 F.2d 846 (5th Cir. 1949)

Before SIBLEY, HOLMES, and McCORD, Circuit Judges.

McCORD, Circuit Judge.

This is an appeal from a decision of the Tax Court sustaining a deficiency assessment against petitioner on income taxes alleged to be due for the year 1943.

The question presented is whether the Tax Court properly held $22,348.78 profit of the J. M. Henson Company for the period from August 1, 1943, to December 31, 1943, was taxable to petitioner as his income, even though on the former date he had executed a valid and complete gift of this Company to his wife.

The material facts are without dispute, and reveal that petitioner and his wife were married in the year 1925, and reside in Atlanta, Georgia. Sometime prior to August 1, 1943, petitioner became the owner of two business concerns known as the J. M. Henson Company, a baker's supply business, and the Dairy and Ice Cream Supply Company. The two businesses were located in the same building, used the same offices, equipment, bookkeeper and stenographic help, but did not have the same salesmen or customers. Separate sets of books were kept and different letterheads were used, and the inventories and bank accounts were maintained separately. There were three other people besides petitioner who shared in the profits of the Dairy and Ice Cream Supply Company, while petitioner alone received the profits of the J. M. Henson Company.

On August 1, 1943, petitioner conveyed to his wife, a woman of little business experience, his entire ownership and interest in the J. M. Henson Company. On the same day, Mrs. Henson wrote their bank in Atlanta a letter giving petitioner, her husband, authority to sign checks, drafts and notes for the company.[1] Later, petitioner filed an affidavit with the clerk of the county court, stating that his wife was the sole owner of the business. A similar notice was published in a paper of general circulation throughout the county. In 1944, petitioner filed a gift tax return, disclosing the gift of this Company to his wife, and paid the gift tax thereon. His wife also filed a donee's information return, and paid the tax on income earned by the Company from the date of the gift until the end of the year 1943.

After August 1, 1943, the J. M. Henson Company continued to operate under

[1] It is without dispute that after receiving such notice the bank would not lend money to the Henson Company unless the notes were signed by Mrs. Henson.

substantially the same conditions and under the same name, except that petitioner was retained by his wife as manager of the company at a salary of $300.00 per month, which was substantially the same amount he had withdrawn for his services prior to the transfer. He maintained a personal account for himself and charged his expenses to it. His wife had no office in the place of business and was not normally consulted as to its operation and direction. Petitioner alone drew checks on the Company's bank account, in accordance with the grant of such authority from his wife. However, it is undisputed that after the date of the transfer, which was admittedly a bona fide gift and effective to pass title to the property under Georgia law, that petitioner's wife was the sole and absolute owner of the Company, with no strings attached. She had the right and absolute power to dispose of it by gift, sale, or will. She further had the power to borrow money on account of the business, and to employ and discharge managers or other company employees at will, although she never saw fit to exercise her prerogative in the latter respect during the tax year involved. Under and by virtue of the gift to his wife, petitioner had irrevocably divested himself of all legal title, right, interest, and control over the business, and remained as manager of the Company solely at his wife's pleasure. In fact, it appears that since March 1, 1944, or shortly thereafter, petitioner has no longer managed the Company, nor has he drawn any salary whatever from the Company account for his services, at least insofar as this record reveals.

We are of opinion the Tax Court erred in holding petitioner taxable on the income from the Company after he had executed an absolute gift of such business to his wife. Blair v. Commissioner [supra page 350]. . . . This case involves a valid and unconditional gift, complete and effectual for all purposes, and is clearly distinguishable from those family partnership tax cases relied upon by the Commissioner. . . .

The Tax Court has evidently, in its decision, failed to recognize the distinction between actual control over income-producing property with consent of the true owner, and the absolute right of control over both the property and the income derived therefrom which adheres in a valid and legal title. The controlling question in such cases is, therefore, not whether actual control over the property is exercised, but whether the right of control in fact exists; not who earns the income from such property, but who has the right to receive it. Cf. Werner v. Commissioner, 7 T.C. 39.

Every owner of a business, particularly those of limited business experience, has the undoubted right to have it managed by another, even though that person be married to the owner. Moreover, every husband has a legal right to create a valid gift of his property in favor of his wife without being held liable for the income tax thereon, provided, of course, there are no conditions attached which would enable him to retain a legal dominion and control over the property, or to revoke the transfer. No such conditions are found to exist here. In this case, the wife was no partner, but became the undisputed and absolute owner of the business, under and by virtue of the gift from her husband. Under such circumstances, the income therefrom was taxable to her alone, and not to the petitioner. . . .

It follows that the decision of the Tax Court should be, and the same is hereby reversed.

NOTE

1. *Transfers of a family business.* Was it crucial that the husband's salary was equal to his previous withdrawals? Was $300 per month the value of the husband's services, the rest of the profits being attributable to capital?

In Visintainer v. Commissioner, 187 F.2d 519 (10th Cir. 1951), part of the income of a sheep ranch business was held taxable to minor children. Their father, who managed the business, gave some of the sheep to the children. The transferred sheep were branded, but were not separated from the herd. The income and expenses of the entire business were divided among the father and children in proportion to the sheep owned. The Tax Court held that, although the father "stopped one step short of the usual family partnership — the execution of the partnership agreement," the entire income of the business should be taxed to him under the *Tower* case. The Court of Appeals reversed, holding that there were bona fide gifts of the sheep to the children and that the income followed the sheep. See also Alexander v. Commissioner, 190 F.2d 753 (5th Cir. 1951); Sandberg v. Commissioner, 8 T.C. 423 (1947); Fellows Sales Co. v. United States, 200 F. Supp. 347 (D.S.D. 1961). For another approach in a comparable context, see Hogle v. Commissioner, 132 F.2d 66 (10th Cir. 1942), which is summarized in Commissioner v. Hogle, infra page 1023.

2. *Sale of property, payment to be made with income.* See Fitzgibbon v. Commissioner, 19 T.C. 78 (1952), involving a "sale" of stock by a mother to her children, the purchase price to be paid in installments out of the dividends received (less income tax thereon) by the children. The court found that the transaction was not a bona fide sale, and held that the dividends were taxable to the donor. See also the cases involving sales of businesses to charities, payment to be made largely or solely from future income, infra pages 512-513.

WHITE v. FITZPATRICK

193 F.2d 398 (2d Cir. 1951), cert. denied, 343 U.S. 928 (1952)

Before AUGUSTUS N. HAND, CHASE, and CLARK, Circuit Judges.

CLARK, Circuit Judge.

Involved in this appeal is the recurring problem of tax savings claimed as a consequence of a transfer of property from husband to wife with resulting lease or license back. Here neither the Commissioner of Internal Revenue nor the district court has accepted the taxpayer's view of the transactions; and he now appeals from the judgment against him in his action for a refund of the deficiency assessed against him by the Commissioner upon his income and victory taxes for the years 1941, 1943, and 1944.

The following are the facts of the case as stipulated by the parties and found by the trial court. During the years in question and for some time prior thereto, plaintiff engaged in the manufacture of chokes for use on the barrels of shotguns, as sole proprietor of the Poly Choke Company, an unincorporated business. Beginning in 1939 the company occupied certain properties — land, three factories, a garage, and an office — under a lease coupled with a nontransferable option to purchase for $15,370. Plaintiff had developed the basic invention for this device himself and obtained a United States patent for it on December 27, 1932.

On January 21, 1941, he entered into a written agreement with his wife, transferring "the entire right, title and interest in and to" the patent, "to the full end of the term of said patent," for a stated consideration of $10. The following day his wife licensed the exclusive manufacturing right back to him "to the full end of the entire term of said patent." The assignment back was subject to cancellation only if (a) payments fell into sixty days' arrears, or (b) receivership, bankruptcy, forced assignment, or other financial difficulty made it impossible for her husband to carry on his manufacturing concern. It provided for royalties of $1 on each product marketed. Plaintiff filed a gift tax return for the year declaring the fair market value of the patent to be $10,000 and for the next four years, 1941-1944 inclusive, paid his wife some $60,000 as royalties.

At about the same time, December 27, 1940, plaintiff's wife also purchased the property on which the company was located for $16,800 and immediately leased

it to her husband orally. On the next day plaintiff made a gift to his wife of $16,175 to cover the purchase price and filed a gift tax return for that amount. Rental payments for the years 1941-1944 inclusive were $1,500 a year, which was the amount that plaintiff had been paying to the original lessor; in 1944, plaintiff in addition paid his wife some $5,000 as "an adjustment in rent."

During the years in question plaintiff deducted both rental payments and royalties as business expenses. After investigation and audit, the Commissioner of Internal Revenue issued a deficiency notice disallowing the deductions in 1948. Plaintiff paid the total deficiency of about $47,000 thus assessed and brought this action for refund. The district court found (1) that the plaintiff's motivation was to make good certain losses in the value of securities held by his wife and to minimize income taxes for the family group, but (2) that

> it was the taxpayer's expectation that no action would be taken by the wife in exercise of her rights of ownership of the patent or real property which would be detrimental to the plaintiff's interests.

The court then concluded that by the gifts and license and lease back

> by reason of the family relationship the husband retains effective control of the patent and real property, while valid transfers for other purposes, will not form a valid basis for deduction of royalties and rent paid by the husband to the wife as business expenses in arriving at the taxpayer's net income for income tax purposes.

The bare assignment of the patent was legally adequate to transfer all rights adhering thereto to the wife. Likewise the land was purchased in the name of the wife alone. From this plaintiff contends on appeal that the wife's legal title and power were absolute and subject to no conditions or future claims whatsoever. Moreover, there is no evidence, nor does defendant contend, that the plaintiff derived any direct benefit in the form of income from these transactions. Therefore, plaintiff argues that, since the royalties and rents were both ordinary in nature for his type of business and reasonable in amount, they constitute valid business expenses under [§162(a)], which authorizes the deduction from gross income of "ordinary and necessary expenses" paid "in carrying on any trade or business."

Underlying reality, however, contradicts this appearance of a complete assignment. "Title" to the patent and land may legally reside in the plaintiff's wife; practically and actually, as the district court concluded, control rests with the husband as effectively as if he had never made the gift of the patent to his wife or given her the money with which to buy the property.* Assignment and gift cannot be divorced for tax purposes from their accompanying agreements whereby the husband retained dominion. And in fact plaintiff never intended that it should be; he admitted the impossibility of conducting the business without this basic patent or of finding a comparable factory site in Connecticut. His wife was neither equipped nor evinced any desire to exercise or transfer any rights to the use of either of the properties; in the case of the patent at least, it is clear that she had no legal right to do so, save in the unlikely event of the husband's default.

---

* From the District Court's opinion: "Mr. White, after the assignment and the contemporaneous license agreement, retained a substantial measure of control over the patent. His determination of the most desirable volume of production of the poly choke would govern the amount which his wife would receive as royalties; he had the right to decide whether or not to grant sublicenses under the patent. And in addition, it may be assumed that, owing to the marital relationship, he had a degree of control, not readily measurable in legal terms, over the patent and license agreement. It is not to be thought, in the light of Mr. White's testimony, that his wife would have been unwilling to submit to any alteration or modification of the existing arrangement which he might deem expedient. As he put it, he 'owns the wife.'" 43 A.F.T.R. 1169, 1174 (D. Conn. 1951) (not officially reported). — Ed.

The sole practical effect of these transactions, therefore, was to create a right to income in the wife, while leaving untouched in all practical reality the husband-donor's effective dominion and control over the properties in question. It is not without significance on this point that the arrangement made was actually disadvantageous to the business. For it passed over the reduction of land charges which the taxpayer might have made by taking up his option to purchase in order to create the income right in the donor's wife, and that, too, at a greater capital cost. For the statutory purposes, the mere creation of a legal obligation to pay is not controlling. Interstate Transit Lines v. C.I.R., 8 Cir., 130 F.2d 136, affirmed 319 U.S. 590.

In this respect, then, the case before us does not involve the definite problem presented by the completed assignment of a created product which divided our court and the Fourth Circuit, both inter- and extra-murally, in the two cases of Wodehouse v. C.I.R., 2 Cir., 177 F.2d 881, Id., 4 Cir., 178 F.2d 987. Gift and retained control must be regarded as inseparable parts of a single transaction, especially since it was only in their sum total that they had any reality in regard to the conduct of plaintiff's business. To isolate them, as would be necessary to bring them within the rationale of our own majority ruling in Wodehouse v. C.I.R., supra, is to hide business reality behind paper pretense.

For the question here is as to the tax consequences of a formal gift of certain income-producing properties by the husband to his wife coupled with the informal retention of administrative control — the transfer, in effect, of the right to receive income and the retention of those complex of "use rights" which are usually compressed in the term "ownership." In the context of [§162(a)], the question is a rather new one; under [§61(a)], where it arises in the definition of gross income problems, it is not. And we think the line drawn in the precedents under the latter section is the same as that in the field of deductibility of business expenses. Plaintiff here, for example, accepts as his own the income he has received on the patent equivalent to the royalties he is paying his wife, but then seeks to deduct it as a business expense; in effect this is not different from claiming that the gift itself made the original income hers in the first place.

We think, therefore, that the principles governing the intermarital transfer of income enunciated in Helvering v. Clifford, 309 U.S. 331, and re-enforced by later cases, are also decisive here. In the case at bar, plaintiff assigned the "legal title" to the patent and provided for his wife's assumption of the "legal title" to the land; but he retained, by formal agreement in the first case, by informal arrangement in the second, the administrative control of these properties. His wife had the right to income, but he had a right to the use of the patent and land. Henson v. C.I.R., 5 Cir., 174 F.2d 846, is thus distinguishable. The *Clifford* rule is clear, that this direct control, when fused with the indirect control which we must imply from a formal but unsubstantial assignment within the closed family group displaying no obvious business purpose, renders the assignment ineffective for federal tax purposes. The same result should obtain whether the question arises under [§61(a) or §162(a)] of the Internal Revenue Code.

Plaintiff relies heavily on Skemp v. C.I.R., 7 Cir., 168 F.2d 598, and Brown v. C.I.R., 3 Cir., 180 F.2d 926, certiorari denied, 340 U.S. 814. These cases, which are criticized in reasoned discussions in 51 Col. L. Rev. 247 and 59 Yale L.J. 1529, may be thought to go to the verge of the law in support of what are essentially intrafamily transfers. But both, being to trustees, were sufficiently outright, to be distinguishable from our present case. Both involved claimed deductions under [§162(a)]. In the first, a plaintiff-physician had deeded the building in which he had his office in irrevocable trust for twenty years or until the prior deaths of both himself and his wife, with their children as beneficiaries. He then

leased the building back for ten years. In the second, there were two trusts, also irrevocable, terminating on the majority of the beneficiaries who were children of the settlor, coupled with an immediate lease back of the corpus properties. In upholding the deductions, both courts expressly emphasized the independence of the trustees. It is probable that a like result would probably have obtained had the question been one of gross income under I.R.C. [§61(a)]. For three factors determine attributability of income to the settlor of a family trust. Whether these are conjunctive tests, see Helvering v. Clifford, supra, 309 U.S. at 335, or alternative, under the new *Clifford* regulations, U.S. Treas. Reg. No. 118, §39.22(a)-21; Kay v. C.I.R., 3 Cir., 178 F.2d 772, it seems likely that in both the cases relied on, income would have been attributable to the trusts and thus to the beneficiaries, rather than the settlors. For (1) the settlors retained no reversionary interests; (2) they retained no dispositive power over either corpus or income; [1] and (3) administrative control was not exercisable primarily for the benefit of the settlors.[2] See Alexandre, "Case Method Restatement of the New Clifford Regulations," 3 Tax L. Rev. 189.

The Supreme Court has long emphasized the test of retention of practical ownership in passing on the tax consequences of intra-family assignment. Soll, Intra-Family Assignments: Attribution and Realization of Income, 6 Tax L. Rev. 435. In the recent case of C.I.R. v. Sunnen, 333 U.S. 591, involving the assignment by the inventor-husband of patent licensing contracts to his wife, the court said, "The crucial question remains whether the assignor retains sufficient power and control over the assigned property or over receipt of the income to make it reasonable to treat him as the recipient of the income for tax purposes," 333 U.S. at 604, and went on to note that "The taxpayer's controlling position in the corporation also permitted him to regulate the amount of royalties payable to his wife." 333 U.S. at 609. In essence the assignment in the present case was effective only to the extent of transferring the single right to receive income. It is now too late to question the well-established proposition that mere assignment of such a right will not suffice to insulate the grantor from tax liability under [§61(a)], and we think like tax results must obtain under [§162(a)]. See Lucas v. Earl; Helvering v. Horst; Helvering v. Eubank, 311 U.S. 122. The recent case of C.I.R. v. Culbertson, 337 U.S. 733, has established the test in the family-partnership field, whether or not there existed as part of the arrangement a "bona fide intent" to have the donee exercise a real part in management, thus giving a final blessing to the doctrine that "true ownership" is decisive in matters of federal taxation. . . .

Since here we find no evidence of a potential exercise of "control and management" on the part of the donee, only of "passive acquiescence to the will of the donor," C.I.R. v. Culbertson, supra, 337 U.S. at 747, 748, since the transaction is in all practical respects a "mere paper reallocation of income among the family members," C.I.R. v. Tower, 327 U.S. [280], 292, and since the husband has remained the actual enjoyer and owner of the property, payments to the wife do not constitute valid business deductions within the statute. . . .

Affirmed.

CHASE, Circuit Judge (dissenting).

Perhaps it would be desirable to protect the revenue by amending [§162(a)] to exclude from the business expense deductions now allowed those which be-

---

[1] In the *Skemp* case, 7 Cir., 168 F.2d 598, 599, "the taxpayer . . . did reserve the right to rent all or a part of the building 'at a rental to be determined by the trustee' "; but this does not constitute "beneficial enjoyment" of the property in the *Clifford* sense. Moreover, both leases back were for a term and were not coextensive with the life of the trust.

[2] Here the factor of independent trusteeship is crucial. And it is in this respect that the instant case differs on its facts from the *Skemp* and *Brown* results.

come necessary only because of intrafamily gifts of property used, or to be used, in the business. But that is a matter to be determined by Congress and, until it acts, I think courts are bound to give effect taxwise to gifts which are fully effective otherwise.

There is, I think, some distinction between the disallowance of the royalty and the disallowance of the rent deductions. It is that the transfer of the patent by gift to the wife was a transfer of needed business property already owned by the taxpayer which was intended to, and did, make it necessary to pay her the royalties. The gift of the money, however, which she used together with some of her own to buy the building never owned by the taxpayer was not shown to have been of money which had any connection with the business at all and the net result from the standpoint of the taxpayer and his business was merely a change in landlord. However, as I view this case, it is not necessary to rely upon this distinction.

In respect to the claimed deductions, the decisive factor as the statute is now, is whether the rent and royalty payments were

> required to be made as a condition to the continued use or possession, for purposes of the trade or business, of property to which the taxpayer has not taken or is not taking title or in which he had no equity.

[§162(a)(3).] The findings, based on evidence adequately supporting them, show that everything was done to transfer the legal and equitable titles both to the patent and to the building absolutely to the wife, and the ownership she thereby acquired gave her the right to whatever she could get by way of royalties and rents which were, of course, taxable to her as income. And, as [§162(a)(3)] is now so broad that no exception is made because of the way in which business expenses become necessary, i.e., by gift or otherwise, the reasonable royalties and rents the husband paid her were, I think, well within the scope of the statute, being "required" by the license and lease arrangements, and therefore deductible. Skemp v. Commissioner, 7 Cir., 168 F.2d 598; Brown v. Commissioner, 3 Cir., 180 F.2d 926, certiorari denied, 340 U.S. 814. See also Henson v. Commissioner, 5 Cir., 174 F.2d 846. The fact that in the *Skemp* and *Brown* cases the transfers were to independent trustees for the benefit of family members is a distinction without a difference since that bore only on the completeness of the gifts and reasonableness of the royalties and rentals paid, both here shown and found. W. H. Armston Co. v. Commissioner, 5 Cir. 188 F.2d 531, is distinguishable as an instance of a disguised transfer of dividends to a large stockholder of the corporation.

The cases dealing with problems arising under [§61(a)] as to the identity of the taxpayer liable for taxes payable by some one, on which my brothers so much rely, help little, if any, in determining what deductions an identified taxpayer may take under [§162(a)(3)] in computing his net income. Assuming, arguendo, that these cases are relevant,[1] factually they are inapplicable. The only basis pointed out by the majority for applying these cases to the facts before us is that the license of the patent and the lease of the buildings given to the taxpayer left "untouched in all practical reality the husband-donor's effective dominion and control over the properties in question." But whatever control the taxpayer received was the control of a licensee and lessee and was conditioned upon making

[1] The only issue to which these cases could be relevant is whether or not the taxpayer was "required" to pay the royalties and rents as a condition to using the property since that is the test set forth in the statute. In order to be relevant to this issue, and to hold as the majority does, it would seem that one must accept the premise that a donor who retains sufficient control over property transferred by him so as to make any income from that property includible in the donor's gross income under [§61(a)], is not, as matter of law, "required" to pay the donee for its use even though he has entered into a firm, and legally enforceable, obligation so to do.

the payments here claimed to be deductible. It would seem erroneous, therefore, to deny the claimed deduction on this basis.

One other point warrants brief mention. My brothers apparently think that the taxpayer is no longer entitled to any rent deduction because, presumably, he could have used the money he gave his wife to buy the building himself and then he would have had no rent to pay. If he had done so, no doubt he would have been allowed as deductions the maintenance costs, taxes, etc., which must have been included in the rent he paid his wife to make it reasonable over all but the effect of his decision may deprive him of even them. I cannot help but think that my brothers have mistakenly applied the business purpose rule of cases like Gregory v. Helvering, 293 U.S. 465, to a situation where what the taxpayer did was merely to use permissible business judgment as to whether he would increase his business investment or continue to pay reasonable rent.

I would reverse and remand for a judgment for the appellant.

NOTE

Other cases. In addition to the cases cited by the court, see Preston v. Commissioner, 132 F.2d 763 (2d Cir. 1942), and Commissioner v. Park, 113 F.2d 352 (3d Cir. 1940), allowing taxpayers to deduct interest paid on their own bonds which had been transferred by gift, directly or in trust, to members of their families. For an extensive review of the cases, see Woodward v. United States, 106 F. Supp. 14 (N.D. Iowa, 1952).

REV. RUL. 59-110

1959-1 C.B. 45

Advice has been requested whether reasonable wages paid by a father to his children are deductible as ordinary and necessary expenses [under §162(a)] for Federal income tax purposes where the children use the money for part of their own support.

The taxpayer owns and operates a "Drive Inn" restaurant. During the summer months of 1958, he employed his three children to work in the restaurant. Each child worked an average of seven and one-half hours per day. Each child was paid approximately $.75 per hour. Two of the children were minors and the third, who was 21, was a full-time university student during the regular college sessions. All the money earned by the children was expended for clothing, education and miscellaneous personal expenditures. . . .

Reasonable wages paid by a father to his child for personal services actually rendered as a bona fide employee in the conduct of a trade or business have been held deductible as ordinary and necessary expenses. See I.T. 3767, C.B. 1945, 101; Estate of K. Threefoot v. Commissioner, 9 BTA 499, acquiescence, C.B. VII-1, 31 (1928). The fact that there may be a legal obligation to support the person to whom the wages are paid and that such person utilizes the wages for his own support is not determinative of their deductibility as a business expense by the employer. These circumstances merely subject the relationship to a closer scrutiny to determine whether there is in fact a bona fide employment situation.*

* I.T. 3812, 1946-2 C.B. 29: "In determining whether there is in fact such a relationship, consideration must be given to whether the father is dealing with his minor child, for the purpose of employment, as he would deal with a stranger under the same circumstances. Thus, there should be a satisfactory showing by the father that the usual conditions of employment, such as duties, hours of work, amount of wages, and time of payment of wages, had been agreed upon to the same extent as they would have been had the father been engaging the services of a stranger. If wages are paid pursuant to an arrangement in the guise of an employer-employee relationship, entered into either before or after the services are performed, a claimed deduction for wages paid will not be allowed." — Ed.

It is the nature of the wages as an ordinary and necessary expense in the operation of a business, as well as the character of the relationship between the parties as that of employer and employee, which are controlling for purposes of the deduction of wages paid as a business expense.

The facts in this case show that actual services were rendered by each of the taxpayer's children as a bona fide employee in the operation of the taxpayer's business, and that the compensation paid each child for such service was reasonable and constituted an ordinary and necessary expense of carrying on such business. Hence, such wage payments are deductible from gross income as provided in section 162 of the Code. To hold otherwise would be tantamount to penalizing the father for employing his own children inasmuch as the deduction would be allowable if he had employed someone else's children under the same circumstances.

Accordingly, it is held that reasonable wages paid by a father to his children for services rendered by them as his employees in his trade or business are deductible as ordinary and necessary business expenses for Federal income tax purposes even though the children use the wages for part of their own support. For the circumstances under which a parent may also claim a dependency exemption by reason of his contribution to the support of such children, see sections 151 and 152 of the Code.

I.T. 3812, C.B. 1946-2, 29, held that the value of meals and lodging furnished by a father to his unemancipated minor child is not includible, for Federal income tax purposes, in the gross income of the child and is not deductible as wages in computing the net income of the father, even though an employer-employee relationship exists between them. It also held that if the father takes the child's earnings and utilizes them for his own purposes, or if the father requires the child to purchase his own clothing or other necessities which the father is obligated to furnish, the deduction of the child's earnings as a business expense should be disallowed.

I.T. 3812, C.B. 1946-2, 29, is hereby modified to the extent that it may be construed to mean that regardless of the bona fides of an employment relationship between a parent and a child, the deductibility of wages paid as an ordinary and necessary business expense shall be conditioned upon the use to which the child puts such wages.

NOTE

1. *Dependency exemption.* How will the father's right to a $600 dependency exemption for his children be affected by his payment of wages to them?

2. *Child's earnings.* What is the purpose of §73, providing that amounts "received in respect of the services of a child" are includible in the child's gross income (rather than the parent's), even though the amounts are not received by the child? If the child's earnings are received by the parent, when are expenditures for supporting the child "attributable" to the child's earnings so as to be treated as made by the child by virtue of §73(b)? See Dick v. United States, 218 F. Supp. 839 (E.D. Wis. 1963) (expenses of supporting child defrayed with child's earnings; held, these amounts are not attributable to father in determining whether he provided more than one-half of support for purposes of dependency exemption).

McWILLIAMS v. COMMISSIONER

331 U.S. 694 (1947)

MR. CHIEF JUSTICE VINSON delivered the opinion of the Court.

The facts of these cases are not in dispute. John P. McWilliams, petitioner in

No. 945, had for a number of years managed the large independent estate of his wife, petitioner in No. 947, as well as his own. On several occasions in 1940 and 1941 he ordered his broker to sell certain stock for the account of one of the two, and to buy the same number of shares of the same stock for the other, at as nearly the same price as possible. He told the broker that his purpose was to establish tax losses. On each occasion the sale and purchase were promptly negotiated through the Stock Exchange, and the identity of the persons buying from the selling spouse and of the persons selling to the buying spouse was never known. Invariably, however, the buying spouse received stock certificates different from those which the other had sold. Petitioners filed separate income tax returns for these years, and claimed the losses which he or she sustained on the sales as deductions from gross income. . . .

Petitioners contend that Congress could not have intended [by §267(a)(1)] to disallow losses on transactions like those described above, which, having been made through a public market, were undoubtedly bona fide sales, both in the sense that title to property was actually transferred, and also in the sense that a fair consideration was paid in exchange. They contend that the disallowance of such losses would amount, pro tanto, to treating husband and wife as a single individual for tax purposes.

In support of this contention, they call our attention to the pre-1934 rule, which applied to all sales regardless of the relationship of seller and buyer, and made the deductibility of the resultant loss turn on the "good faith" of the sale, i.e., whether the seller actually parted with title and control. They point out that in the case of the usual intra-family sale, the evidence material to this issue was peculiarly within the knowledge and even the control of the taxpayer and those amenable to his wishes, and inaccessible to the Government. They maintain that the only purpose of the provisions of the 1934 and 1937 Revenue Acts — the forerunners of [§267(a)(1)] — was to overcome these evidentiary difficulties by disallowing losses on such sales irrespective of good faith. It seems to be petitioners' belief that the evidentiary difficulties so contemplated were only those relating to proof of the parties' observance of the formalities of a sale and of the fairness of the price, and consequently that the legislative remedy applied only to sales made immediately from one member of a family to another, or mediately through a controlled intermediary.

We are not persuaded that Congress had so limited an appreciation of this type of tax avoidance problem. Even assuming that the problem was thought to arise solely out of the taxpayer's inherent advantage in a contest concerning the good or bad faith of an intra-family sale, deception could obviously be practiced by a buying spouse's agreement or tacit readiness to hold the property sold at the disposal of a selling spouse, rather more easily than by a pretense of a sale where none actually occurred, or by an unfair price. The difficulty of determining the finality of an intra-family transfer was one with which the courts wrestled under the pre-1934 law, and which Congress undoubtedly meant to overcome by enacting the provisions of [§267(a)(1)].

It is clear, however, that this difficulty is one which arises out of the close relationship of the parties, and would be met whenever, by prearrangement, one spouse sells and another buys the same property at a common price regardless of the mechanics of the transaction. Indeed, if the property is fungible, the possibility that a sale and purchase may be rendered nugatory by the buying spouse's agreement to hold for the benefit of the selling spouse, and the difficulty of proving that fact against the taxpayer, are equally great when the units of the property which the one buys are not the identical units which the other sells.

Securities transactions have been the most common vehicle for the creation of

intra-family losses. Even if we should accept petitioners' premise that the only purpose of [§267(a)(1)] was to meet an evidentiary problem, we could agree that Congress did not mean to reach the transactions in this case only if we thought it completely indifferent to the effectuality of its solution.

Moreover, we think the evidentiary problem was not the only one which Congress intended to meet. Section [§267(a)(1)] states an absolute prohibition — not a presumption — against the allowance of losses on any sales between the members of certain designated groups. The one common characteristic of these groups is that their members, although distinct legal entities, generally have a near-identity of economic interests. It is a fair inference that even legally genuine intra-group transfers were not thought to result, usually, in economically genuine realizations of loss, and acordingly that Congress did not deem them to be appropriate occasions for the allowance of deductions.

The pertinent legislative history lends support to this inference. The Congressional Committees, in reporting the provisions enacted in 1934, merely stated that "the practice of creating losses through transactions between members of a family and close corporations has been frequently utilized for avoiding the income tax," and that these provisions were proposed to "deny losses to be taken in the case of [such] sales" and "to close this loophole of tax avoidance." Similar language was used in reporting the 1937 provisions. Chairman Doughton of the Ways and Means Committee, in explaining the 1937 provisions to the House, spoke of "the artificial taking and establishment of losses where property was shuffled back and forth between various legal entities owned by the same persons or person," and stated that "these transactions seem to occur at moments remarkably opportune to the real party in interest in reducing his tax liability but, at the same time allowing him to keep substantial control of the assets being traded or exchanged."

We conclude that the purpose of [§267(a)(1)] was to put an end to the right of taxpayers to choose, by intra-family transfers and other designated devices, their own time for realizing tax losses on investments which, for most practical purposes, are continued uninterrupted.

We are clear as to this purpose, too, that its effectuation obviously had to be made independent of the manner in which an intra-group transfer was accomplished. Congress, with such purpose in mind, could not have intended to include within the scope of [§267(a)(1)] only simple transfers made directly or through a dummy, or to exclude transfers of securities effected through the medium of the Stock Exchange, unless it wanted to leave a loophole almost as large as the one it had set out to close.

Petitioners suggest that Congress, if it truly intended to disallow losses on intra-family transactions through the market, would probably have done so by an amendment to the wash sales provisions,* making them applicable where the seller and buyer were members of the same family, as well as where they were one and the same individual. This extension of the wash sales provisions, however, would bar only one particular means of accomplishing the evil at which [§267(a)(1)] was aimed, and the necessity for a comprehensive remedy would have remained.

Nor can we agree that Congress' omission from [§267(a)(1)] of any prescribed time interval, comparable in function to that in the wash sales provisions, indicates that [§267(a)(1)] was not intended to apply to intra-family transfers through the Exchange. Petitioners' argument is predicated on the difficulty which courts may have in determining whether the elapse of certain periods of time between

* Section 1091 of the 1954 Code, which re-enacts §§118 and 113(a)(10) of the 1939 Code. — Ed.

one spouse's sale and the other's purchase of like securities on the Exchange is of great enough importance in itself to break the continuity of the investment and make [§267(a)(1)] inapplicable.

Precisely the same difficulty may arise, however, in the case of an intra-family transfer through an individual intermediary, who, by pre-arrangement, buys from one spouse at the market price and a short time later sells the identical certificates to the other at the price prevailing at the time of sale. The omission of a prescribed time interval negates the applicability of [§267(a)(1)] to the former type of transfer no more than it does to the latter. But if we should hold that it negated both, we would have converted the section into a mere trap for the unwary.[1]

Petitioners also urge that, whatever may have been Congress' intent, its designation in [§267(a)(1)] of sales "between" members of a family is not adequate to comprehend the transactions in this case, which consisted only of a sale of stock by one of the petitioners to an unknown stranger, and the purchase of different certificates of stock by the other petitioner, presumably from another stranger.

We can understand how this phraseology, if construed literally and out of context, might be thought to mean only direct intra-family transfers. But petitioners concede that the express statutory reference to sales made "directly or indirectly" precludes that construction. Moreover, we can discover in this language no implication whatsoever that an indirect intra-family sale of fungibles is outside the statute unless the units sold by one spouse and those bought by the other are identical. Indeed, if we accepted petitioners' construction of the statute, we think we would be reading into it a crippling exception which is not there. . . .

Affirmed.

MR. JUSTICE BURTON took no part in the consideration or decision of these cases.

NOTE

1. *Scope of §267(a)(1).* Is the husband's nondeductible loss to be taken into account when the wife later sells the shares? See §267(d), enacted in 1954; and note that the adjustment thus allowed is less comprehensive than is allowed to the taxpayer who engages in a "wash" sale under §1091.

Section 267 disallows losses; it does not exempt gain. Suppose A buys a vacant city lot for $5000 and during a boom buys an identical adjacent lot for $15,000. Later he sells the lots to his wife for the price of $10,000 each, the market value at that time. For tax purposes, does he break even or have a gain of $5000? See Morris Investment Co. v. Commissioner, 156 F.2d 748 (3d Cir. 1946).

Section 267 is not exhaustive; loss may be disallowed if the transaction is devoid of economic reality even though the vendee is not in the prohibited group. Crown Cork International Corp. v. Commissioner, 4 T.C. 19 (1944), aff'd per curiam, 149 F.2d 968 (3d Cir. 1945); cf. Higgins v. Smith (cited and summarized in the *Laughton* case, supra page 401), disallowing loss on a sale by a shareholder to his wholly owned corporation for a year before the enactment of §267(a)(1)); Dupont v. Commissioner, 118 F.2d 544 (3d Cir. 1941).

See Anthoine, Transactions Between Related Taxpayers, 1956 Tulane Tax Inst. 269.

2. *Section 267's concept of "related taxpayers."* The blanket disallowance of losses incurred in sales between related taxpayers reaches not only sales between husband and

---

[1] We have noted petitioners' suggestion that a taxpayer is assured, under the wash sales provisions, of the right to deduct the loss incurred on a sale of securities, even though he himself buys similar securities thirty-one days later; and that he should certainly not be precluded by [§267(a)(1)] from claiming a similar loss if the taxpayer's spouse, instead of the taxpayer, makes the purchase under the same circumstances. We do not feel impelled to comment on these propositions, however, in a case in which the sale and purchase were practically simultaneous and the net considerations received by one spouse and that paid by the other differed only in the amount of brokers' commissions and excise taxes.

wife, but transactions between a wide range of other related individuals and entities. The concept of "related taxpayers" requires a statutory determination of what members of a family (siblings? cousins? in-laws?) are to be included, of what entities are to be pierced (trusts? estates? partnerships?) and, if the corporate veil is to be pierced, what shareholders (in terms of voting power, number and value of shares, etc.) shall be taken into account. It is also necessary to decide whether stock owned constructively by one individual shall be attributed from him to another person (e.g., if Jones is treated as owning all of the stock of a corporation because it is actually owned by his son, so that Jones could not deduct a loss on a sale of property to the corporation, is Jones' brother related to the corporation so that he too cannot deduct a loss on a sale to it?).

There are many places in the Code where a concept of "relatedness" is employed, ordinarily because of a fear that transactions between related taxpayers may not have the same effect in real life that they have on paper, but there is no uniform definition of the concept. The three principal definitions are to be found in §267, §318 (applicable to many corporate transactions), and §544 (applicable in defining the term "personal holding company"); many other provisions use one of these prototypes as a base, but impose their own refinements. In addition to these variations in the degree of relationship required, there are differences in the number of constructive links to be taken into account, in the direction in which attribution of stock is to run, etc. See Reilly, An Approach to the Simplification and Standardization of the Concepts "The Family," "Related Parties," "Control," and "Attribution of Ownership," 15 Tax L. Rev. 253 (1960); Ringel, Surrey, and Warren, Attribution of Stock Ownership in the Internal Revenue Code, 72 Harv. L. Rev. 209 (1958); Advisory Group Recommendations on Subchapter C, House Committee on Ways and Means, 86th Cong., 1st sess. (1959) 610-613.

SECTION D. INCOME-SPLITTING AMONG CORPORATIONS

Section 482, permitting the Treasury to allocate income, deductions, etc. among related taxpayers to prevent tax evasion or to reflect income clearly, is a re-enactment of §45 of the 1939 Code.

Section 269, disallowing deductions, credits, etc. in certain controlled corporation transactions if the principal purpose is tax avoidance, is based on §129 of the 1939 Code.

Section 1551, disallowing the surtax exemption and accumulated earnings credit, when property is transferred to a controlled corporation and the corporation fails to establish that tax avoidance was not a major purpose, is based on §15(c) of the 1939 Code, with important changes in 1964.

Sections 1561-1563, relating to the surtax exemptions of affiliated corporations, were enacted in 1964.

Since corporate income tax rates are not as steeply progressive as the individual income tax rates, there is less to be gained by the splitting of income among affiliated corporations. For 1964, the corporation must pay a normal tax of 22 per cent and, on its income in excess of $25,000, a surtax of 28 per cent. Section 11(b) and §11(c). (The normal tax and surtax are imposed on the same base, except that "partially tax-exempt interest" is subject to the surtax but not to the normal tax.) If business income of $50,000 can be divided equally between two corporations, the additional surtax exemption of $25,000 will save the group $7000 in taxes, i.e., 28 per cent of $25,000. If a business income of $1,000,000 is similarly divided between two corporations, precisely the same saving, $7000, will result. Splitting $1,000,000 of income equally among forty corporations, however, would result in a saving of $273,000, since forty surtax exemptions, instead of only one, would be allowed.

With the reduction of the surtax rate to 26 per cent in 1965, the tax savings

from an additional surtax exemption will become $6500 (26 per cent of $25,000), instead of $7000.

Corporate income can often be split by having separate corporations carry on different branches of an enterprise: a factory may be owned by a real estate corporation, which leases it to a second corporation engaged in manufacturing; the latter may buy its supplies from a third corporation and in turn sell its manufactured goods to one or more sales corporations, all corporations being under common control. A combination of corporate and individual or partnership activity is also possible. Within limits, a division of income by such means is possible. The student should examine §482, authorizing the Commissioner "to distribute, apportion, or allocate gross income, deductions, credits or allowances" among any two or more taxable entities that are under common ownership or control so as "clearly to reflect the income" of such entities. Section 482 has been the Commissioner's principal weapon where transactions between two related business units are manipulated for tax purposes, e.g., sales at artificial prices to increase the income or losses of one of the entities in an arbitrary fashion, but cases like Lucas v. Earl, *Clifford*, and *Horst* have also proved to have much vitality in the area of corporate income-splitting. As will be seen (infra pages 427-428), the government may also invoke a number of statutory provisions: §269 (dating from 1943); §1551 (originally enacted in 1951, but extensively revised in 1964); and §§1561-1563 (enacted in 1964).

While primary attention is now being directed to income-splitting by the use of subsidiary and affiliated corporations, the student should recognize that sometimes an enterprise that is carried on through a complex of separate corporations may prefer to disregard all intra-family transactions and report its income on a consolidated basis. A simple illustration may make the problem clear. Assume Corporation A owns both B and C, that B manufactures widgets and sells them at current wholesale prices to C, which sells them to the public. B and C both distribute part of their profits as dividends to A. In any given year, B may be operating at a profit while C is operating at a loss; and some or all of the dividends paid by B to A may represent intra-company, rather than "real," profits. By reason of the dividends-received deduction of §243(a) (infra p. 606), A would ordinarily be taxed on only 15 per cent of the dividends received from B, but even this amount may exceed the "real" profits of the whole group.

By filing a consolidated return, as authorized by §1501, the corporate group will be taxed only on the profits represented by its transactions with the outside world. In effect, C's loss is offset against B's gain, and the dividends paid to A by B and C are disregarded. The group is treated as a single entity, so that only one surtax exemption is allowed; with this exception, however, the tax rate is the same on a consolidated return as on a separate return. (Before 1964, the surtax was increased by two percentage points for taxpayers filing a consolidated return.) Once a consolidated return has been filed, the group must continue to report on a consolidated basis, unless (1) a new corporation (other than one organized or created by a member of the affiliated group) becomes a member of the group, (2) the Commissioner consents to the use of separate returns, or (3) the statute or Regulations are amended so as to make consolidated returns less advantageous to affiliated groups as a class. See Hellerstein, Consolidated Federal Income Tax Returns, 5 Amer. U. Tax Inst. Lectures 415 (1953); Blitman, Consolidated Returns in the Federal Tax System, 8 Nat. Tax J. 260 (1955); Cuddihy, Consolidated Returns, 16 N.Y.U. Inst. on Fed. Taxation 351 (1958).

COMMISSIONER v. CHELSEA PRODUCTS, INC.

197 F.2d 620 (3d Cir. 1952)

Before McLaughlin, Staley and Hastie, Circuit Judges.

Staley, Circuit Judge.

The Commissioner of Internal Revenue has petitioned for a review of two decisions of the Tax Court. The principal issue presented is whether [§482] . . . authorizes the Commissioner to combine the net income of three corporations with that of taxpayer where all are owned by the same interests. We are in accord with the Tax Court's conclusion that [§482] was erroneously applied.

Between 1941 and 1944, taxpayer was engaged in the manufacture and sale of fans and blowers under the name of Chelsea Fan & Blower Co., Inc. During this period the sole stockholders, officers, and directors of taxpayer were William J. Lohman, Sr., who held 50% of the common stock outstanding, and his two sons, Eugene W. and William J., Jr., each of whom held 25%.

In 1944 the three Lohmans, after consultations with their attorney, decided to separate taxpayer's manufacturing functions from its sales. The new plan was carried out by forming a sales corporation in each of three states: Missouri, Georgia, and New Jersey. These new corporations bore the respective names Chelsea Fan and Blower Company of Missouri, Chelsea Fan & Blower Company of Georgia, and Chelsea Fan and Blower Co., Inc. Each of the sales companies issued 1200 shares of stock at $1 a share, which was subscribed to in equal amounts by each of the three Lohmans. As in the case of taxpayer, the three Lohmans constituted the Board of Directors of each of the sales companies during the taxable years involved. At the same time, the taxpayer changed its name to Chelsea Products, Incorporated, and therafter confined its activities principally to manufacturing.

Prior to the creation of the new corporate structure in 1944, taxpayer had sold its products through its officers and through "manufacturer's agents." Taxpayer had entered into contractual arrangements with these agents whereby they were paid commissions of about 10% on sales. After July 11, 1944, taxpayer no longer employed these manufacturer's agents. On that date the sales companies were designated exclusive agents, each company being assigned a different area of the country, and they in turn proceeded to employ sales agents. The arrangements between taxpayer and the sales companies were formalized by written agreements entered into between taxpayer and each sales company. These agreements, signed by William J. Lohman as president of taxpayer and Eugene W. Lohman as vice president of the sales companies, provide that each sales company is to "employ a sufficient number of salesmen to properly canvass its territory" and is to be charged the list price less 50% and 25%. The former discount was the standard one given by those in the industry to wholesale jobbers and was passed on to the wholesale jobbers who bought the products. The 25% discount, the Tax Court found, includes the 10% commission normally paid to the agent, thus leaving 15% for the operation of the business of the sales companies.

Although the Missouri and Georgia companies had mailing addresses in their respective states of incorporation, neither had an office there. Each of the sales companies maintained its office in New Jersey at 1206 South Grove Street, Irvington — the same address which had been occupied by taxpayer. Each of the companies had separate books and records and separate bank accounts. The records of the sales companies were kept by the same bookkeeper who kept taxpayer's books and were audited by an outside accounting firm.

During the taxable years involved, all the fans and blowers sold by the sales companies were manufactured by taxpayer. A sales agent, upon receiving an order, would send it to Irvington, N.J., to the sales company which employed him. The order was then turned over to taxpayer which shipped the merchandise directly to the customer and invoiced the sales company. The latter, in turn, submitted an invoice to the customer and received payment from him.

The business reasons which prompted the organization of the sales companies are set forth in the record. The attorney whom the Lohmans consulted in 1944 testified that he had advised them that taxpayer's tort liability arising from accidents in the use of the fans could thereby be "minimized." The record also reveals that the Lohmans had intended that the sales companies establish assembly plants in several states in order to reduce freight costs. Further, the Lohmans believed that sales, especially in the South, would be increased if promoted by a local firm.*

The Commissioner determined that there was a deficiency of $110.58 in taxpayer's income tax liability and $37,091.85 in its excess profits tax liability for the year 1944. He also determined that there was a deficiency of $165.62 in its income tax liability and $25,519.13 in its excess profits tax liability for the year 1945. In arriving at these deficiencies, the Commissioner allocated the net income of the three sales companies to that of taxpayer. The latter then sought a redetermination before the Tax Court. The Tax Court found that each sales company was a business enterprise separate and distinct from taxpayer and that no part of the income of the sales companies constituted income to it. Moreover, that Court determined that the principal purpose for the organization of the sales companies was to carry on business and not to aid taxpayer in evading or avoiding Federal income or excess profits taxes. The Tax Court, five judges dissenting, held that the Commissioner's action was not authorized.

The Commissioner asserts that he acted within the broad discretionary power conferred upon him by [§482] which . . . has been a part of our Revenue Laws since 1928. It is in some sense an offspring of Section 240(f) of the Revenue Act of 1926, which gave the Commissioner the right to consolidate the accounts of business controlled by the same interests where he finds it necessary to make an accurate distribution of profits and deductions. Section 240(f) was a part of the Consolidated Returns section of the 1926 Act. In drafting the new [§482], important changes were made and, significantly enough, the offspring became a new section, separate and apart from the Consolidated Returns section.

Section [482] grants to the Commissioner power to allocate "gross income, deductions, credits, or allowances." There is no mention of authority to disregard completely the corporate entity by combining the net income of controlled corporations. The plain language of [§482] must prevail. . . . The Report of the House Ways and Means Committee states that the evil for which [§482] was designed was the arbitrary shifting of profits from one corporation to another by such devices as fictitious sales. House Rep. No. 2, 70th Cong., 1st Sess., p. 16. . . . Whenever the lack of an arm's length relationship produces a different economic result from that which would ensue in the case of two uncontrolled taxpayers dealing at arm's length, the Commissioner is authorized to allocate gross income and deductions.

* In Napier Furniture Co., Inc. v. Commissioner, ¶63,124 P-H Memo T.C., the taxpayer asserted that an Alabama corporation had been organized to avoid prejudice against a "Yankee" firm. On finding that nothing had been done to communicate to Southern customers that the corporation was from Dixie rather than from the North, however, the court concluded that the alleged reason for a separate entity had not been established. — Ed.

Section [482], based upon a recognition of the various corporate entities, merely allows the Commissioner to prevent distortions in income between controlled corporations. In fact, the Treasury Regulation itself states that [§482] is

> not intended (except in the case of the computation of consolidated taxable income under a consolidated return) to effect in any case such a distribution, apportionment, or allocation of gross income, deductions . . . as would produce a result equivalent to a computation of consolidated taxable income. . . . [Regs. §1.482-1(b)(3).]

The Commissioner, in disregarding the corporate entities of the sales companies and lumping together all net incomes, has proceeded beyond his statutory bounds.[1]

[The court also held that the deficiency notices were defective in that they failed to give the taxpayer notice of the Commissioner's reliance on §482. Finally, the court suggested that an attempt by the Commissioner to rely on §269 (infra page 428) had come too late, but that this procedural issue need not be decided because "the Tax Court has found as a fact that the principal purpose of the organization of the sales companies was to carry on business and not to aid in the evasion or avoidance of Federal income or excess profits taxes."]

For the above reasons, the decisions of the Tax Court will be affirmed.

TWIN OAKS CO. v. COMMISSIONER

183 F.2d 385 (9th Cir. 1950)

Before MATHEWS, BONE and LINDLEY, Circuit Judges.

LINDLEY, Circuit Judge.

This is a petition to review a decision of the United States Tax Court sustaining the assessment of income taxes against the corporate petitioner for the years 1941-44 inclusive.

Prior to January, 1941, the Petitioner had, for many years, been engaged in the purchase and sale of builders' materials. During all this period the business had

---

[1] The Court of Appeals for the Second Circuit has recently handed down its decision in Advance Machinery Exchange, Inc. v. Commissioner, 2 Cir., 196 F.2d 1006. The taxpayer there was organized by one Blachman to deal in used machinery. Subsequently, two corporations (which we denominate A and B) were formed to engage in the same business and Blachman proceeded to engage in the same business individually. All four businesses were controlled by Blachman and his son. All the entities conducted their businesses at the same office and all used the identical employees and equipment. Each enterprise had many customers in common. In contrast to the instant case, *there was no separation of business functions* as among the four enterprises. The Tax Court's conclusion is well expressed in the following statement in its opinion: "All four businesses were controlled by J. Blachman and Seymour Blachman, father and son. The two operated the business and kept the books and records of all four businesses in such a way that the net profit of each could be manipulated as they saw fit, and, in general, so conducted the business that *it is impossible to determine where the activities of one or the other begin and end.*" (Italics supplied.)

The Commissioner allocated the net income of Corporation A, Corporation B, and Blachman individually to the taxpayer, relying on both [§61(a) and §482] of the Internal Revenue Code. The Tax Court, 8 T.C.M. 84 (1949), held that the Commissioner's determination was proper under the broad scope of [§61(a)] but was silent on the applicability of [§482]. The Tax Court was clearly of the opinion that the three enterprises other than taxpayer were mere shams. The Tax Court concluded with the following words: *"In reality, therefore, there is but one taxable entity, the petitioner, and all of the income of the business is attributable to it."* (Italics supplied.) The finding is thus in marked contrast with the Tax Court's finding in the case at bar that each of the sales companies was a business enterprise separate from the taxpayer and that the principal purpose for their organization was to carry on business.

In affirming the decision of the Tax Court, the Court of Appeals for the Second Circuit relied on [§482] rather than [§61(a)]. We consider the Court's observation with respect to [§482] to be essentially dicta, for, since the Tax Court had determined that there was but one taxable entity, all the net income was necessarily taxable to taxpayer under [§61(a)].

been managed by Rogers, who, with 473 shares of the corporate stock, was the corporation's principal stockholder, and Scharpf, who held 35.3 shares and whose wife owned the remaining 437.7 shares. In January, 1941, after the corporation had for some time realized unsatisfactory profits, pursuant to a plan suggested by Scharpf and, after some opposition, agreed to by Rogers, the latter and his wife and Scharpf and his wife executed a partnership agreement whereby the four, as equal partners, were to take over the business of the corporation, purchasing its operating assets and leasing from it the real estate on which the business had been and was then being conducted. The two men were to continue to manage the business; each was to receive an annual salary of $6,600 in addition to one-fourth of the partnership profits; their wives were to furnish lesser services for which they were to receive salaries of $300 per annum each.

Petitioner, in consideration of the assumption by the partnership of the corporation's accounts payable and of the partnership's promissory note in an amount which, added to the liabilities assumed, equaled the book value of the petitioner's assets other than real estate, transferred to the partnership all its assets except the premises on which the business had been and was thereafter to be conducted, which land it leased to the partnership for an annual rental of $3000. Each of the four partners contributed $2000 in additional capital. Petitioner caused its corporate name to be changed from Twin Oaks Builders Supply Company to Twin Oaks Company, and the partnership, after registration with proper public authorities, engaged in business under the name by which petitioner had formerly been known. The corporation and the partnership thereafter maintained different and separate sets of books, records and bank accounts.

In the years 1941-44, petitioner's income, duly reported, included only (1) the rent received from the partnership under the lease, (2) the interest paid by the partnership on its note, and (3) a few petty miscellaneous items. The Commissioner asserted tax deficiencies against the corporation on the theory that the partnership had been created solely as a device improperly to effectuate reallocation of income among family groups to defeat taxes and, hence, that the profits of the partnership, reported in the individual returns filed by Rogers and Scharpf and their wives, were properly taxable to petitioner. A single-judge Tax Court sustained the deficiency assessments, agreeing with the Commissioner that the creation of the partnership and the transfer to it of petitioner's operating assets had been "forms without substance" which were not entitled to recognition, in so far as taxes were concerned.

It is, as the Tax Court observed, well settled that a taxpayer is free to adopt such legal organization for the conduct of his affairs as he may choose; he may convert from the corporate method to the partnership method of doing business and, though his motive in so doing be to reduce taxes, the conversion must be accorded recognition unless it is such a sham, such a change in form only, without substance, as to require that it be disregarded for tax purposes. Helvering v. Clifford, 309 U.S. 331. It seems clear to us, however, that the Tax Court, in its characterization of the change in business structure involved in the instant case as a sham and a mere form without substance, has, in effect denied the taxpayers the legal right to conduct their business affairs through a medium of their own choice.

There can be no doubt that it was the intent of the parties that the partnership should thereafter conduct the supply business which, prior to the formation of the partnership, had been conducted by petitioner; that the partnership was actually formed; that petitioner's stockholders were, as members of the partnership, subjected to unlimited personal liability not only for the old corporate debts but also for any which might grow out of the operation of the business thereafter by

the partnership, in place of the limited liability to which they had previously been subject, and that the profits of the business were not thereafter distributed among the partners in proportion to their respective holdings of stock in the corporate petitioner. These changes, all made without thought of or intent to achieve tax advantages, were, we think, far more than mere changes in form. The Tax Court felt that the fact that profits were distributed in a different manner and in different proportions, but to the same people, indicated that the changes were formal only. The logic of this position escapes us, for it ignores the reality of the conversion from corporate to partnership operation of the business and tends in no way to show that the corporation, rather than the partnership, earned the income.

It seems obvious that if petitioner's affairs had been completely liquidated, the income in question would necessarily have been regarded as earned by the partnership. The mere fact that the parties stopped one step short of liquidation, i.e., kept the corporation alive for the sole purpose of holding title to the real estate, while selling and transferring the operating business itself to the partnership, does not, we believe, detract from the reality or substance of what was done or require that all the income of the business be taxed to petitioner. As a matter of fact, the decision of the Tax Court itself, in such cases as Seminole Flavor Co., 4 T.C. 1215; Buffalo Meter Co., 10 T.C. 83; and Miles-Conley Co., 10 T.C. 754, would seem to impel a decision that the partnership was entitled to full recognition for tax purposes even though the corporation continued to exist and to function in a rather close relationship with it. The Tax Court sought to distinguish these cases by saying that the businesses involved therein were capable of being broken down into distinct divisions, whereas the builders supply business was "unitary in character," but it certainly could be and was easily separated from the real estate and was thereafter conducted solely by the partnership.

We conclude that the Tax Court erred in sustaining the Commissioner's deficiency assessments against petitioner. The decision is reversed.

JAMES REALTY CO. v. UNITED STATES

280 F.2d 394 (8th Cir. 1960)

Before GARDNER, WOODROUGH, and BLACKMUN, Circuit Judges.

WOODROUGH, Circuit Judge.

The taxpayer James Realty Company, a corporation, prosecutes this appeal from that part of a judgment which denies it recovery of refund of its payment of deficiency assessed for corporate surtax and excess profits tax for its taxable year ending November 30, 1953. It received and made return of income of $24,699.05 for the period and claimed deduction under the $25,000 corporate surtax exemption and $25,000 minimum excess profits tax credit* . . .

The Commissioner disallowed the deduction and credit on the ground that the corporation was created solely for the purpose of tax avoidance and was deprived of the right to the exemption and credit by [§269(a) and §1551]. The resulting deficiency was paid and this action followed. After partial trial before a jury, the issues were submitted to the Court by stipulation of the parties. The opinion of the Court is published at 176 F. Supp. 306.

* The "$25,000 corporate surtax exemption" is a shorthand reference to the fact that the first $25,000 of corporate income is taxed at only 22 per cent, while amounts above $25,000 are subject to both the normal tax of 22 per cent and the surtax of 28 (or, after 1965, 26) per cent. The "$25,000 minimum excess profits tax credit" refers to the fact that the excess profits tax (in force during World War II and 1950-1953) was not applicable to the first $25,000 of corporate income. — ED.

It appeared on the trial that Adolph Fine organized Adolph Fine, Inc. in 1944 to engage in the construction business and later in 1949 he incorporated Fine Realty, Inc., whose principal activity was to sell homes built by Adolph Fine, Inc. Both of these corporations were controlled and managed by Adolph Fine and his wife, Mildred, who owned the stock of such corporations individually or in trust for their children. Also, at all times pertinent hereto, Adolph Fine was president and treasurer, Mildred Fine was vice president and secretary, and June Myslajek was assistant secretary to Adolph Fine, Inc.; Mildred Fine was president and treasurer, M. L. Grossman was vice president, and June Myslajek was secretary of Fine Realty, Inc.

In 1952, Adolph Fine, as an individual, owned certain undeveloped land located in the village of St. Louis Park, Minnesota, which he caused to be subdivided and platted for the purpose of home development, and named it the Jeffrey, James Fine Addition to St. Louis Park.

On November 20, 1952, Adolph Fine caused the taxpayer, James Realty Company, to be organized with an initial authorized capital of $25,000, consisting of ten shares of Class A common stock at a par value of $100 (voting) and two hundred and forty shares of Class B common stock at a par value of $100 (non-voting). According to the articles of incorporation, the purpose of the corporation was, among other things:

> To acquire, improve, and develop real property; to erect dwellings of all kinds and to sell, or rent the same; also to acquire, by purchase, lease, or otherwise, and to take, own, hold, sell, exchange, transfer, lease, repair, maintain, improve, mortgage, or in any other manner deal in and with real property . . .

On November 24, 1952, Adolph Fine conveyed eighteen of the lots in the Jeffrey, James Fine Addition to the taxpayer corporation in exchange for two shares of its Class A common stock and thirty-four shares of its Class B common stock. The value of the lots in terms of the thirty-six shares was $200 per lot or $3,600. On the same day, Adolph Fine transferred seventeen shares of the Class B stock to his wife Mildred in trust for their sons Jeffrey and James.

Also on November 24, 1952, the taxpayer corporation, acting through its president, Adolph Fine, entered into two written contracts. The first was an agreement with Adolph Fine, Inc., by which that corporation would construct houses on the lots owned by the taxpayer James Realty Co., at cost plus 12½%. By the terms of a second contract, with Fine Realty, Inc., that corporation was made the exclusive selling agent of the homes to be constructed for taxpayer by Adolph Fine, Inc. Sales commissions were to be from 5% to 7½% depending upon financing arrangements and costs.

In August, 1953, taxpayer purchased thirty-six lots located in the neighboring West Tonka Hills Addition from Fine Realty, Inc. at a price of $650 per lot, or a total price of $23,000.

During its fiscal year ended November 30, 1953, when taxpaper reported taxable income in the amount of $24,699.05, only $355.56 of this amount was attributable to the sale of lots purchased from Fine Realty, Inc., while the remaining income was derived from sales of houses built on lots acquired from Adolph Fine.

Taxpayer was one of nine development companies formed by Adolph Fine between 1950 and 1954. All of them occupied offices owned by Adolph Fine, Inc., and were supplied with bookkeeping services by the same personnel who kept the books of Adolph Fine, Inc. . . .

The determination by the District Court that Mr. Fine organized and acquired control of the taxpayer corporation for the principal purpose of tax avoidance was a finding of fact which is conclusive on this appeal if supported by substan-

tial evidence and not clearly erroneous. Although Mr. Fine testified that in forming the taxpayer and eight other corporations he had in mind the two purposes of implementing his estate plan and of spreading and minimizing risks of loss from business reversal or tort liability and that tax saving was not the principal purpose, he admitted that he was aware of the tax consequences of the multiple corporate set up and testimony of his secretary and bookkeeper was to the effect that "she made adjusting entries" in the books of Adolph Fine, Inc., Fine Realty, Inc., and the development companies including taxpayer; that "a great deal of consideration was given to taxes" by Mr. Fine and his accountants and that "we were very careful to keep the figures under $25,000.00, the profit figures." An office memorandum from Mr. Fine made in 1957 concerning "the land status" of "the following companies" "to determine what company should own and develop" certain lands included the statement: "This will depend upon the possible profit status for the year 1957 in each of the companies." The tax returns of the various corporations formed by Mr. Fine as shown in the Exhibit B which the District Court included in its opinion shows that in 1950 the income from development and sale of homes reported by Adolph Fine, Inc. and Fine Realty, Inc. was $202,268.00 and $34,212.00. For the ensuing years 1951-1956 following the creation of the various development companies the taxable income of the two named companies dropped with but few exceptions to less than $25,000.00 and each of those companies reported less than $25,000.00. Notwithstanding Mr. Fine's testimony that avoidance of tax was not a prime consideration in splitting his home building business, there was substantial evidence to support the finding of the Court that the principal purpose was to avoid federal income or excess profit tax by securing the benefit of deductions and credits which he would not otherwise enjoy.

Appellant contends here as it did below that creation of a new corporation and obtaining its stock is not an acquisition of the control of a corporation within the meaning of [§269(a)]. The Court in rejecting the contention said [176 F. Supp. 310]:

> Although the legislative history and the case law under [§269] indicate that it was aimed at the abuses of one corporation acquiring going concerns which had accrued certain tax exemptions, see J. E. Dilworth Co. v. Henslee, D.C. Tenn. 1951, 98 F. Supp. 957, 960 (dictum); Rudick, Acquisitions to Avoid Income or Excess Profits Tax: Section 129 of the Internal Revenue Code, 58 Harv. L. Rev. 196 (1944), there is no settled view that "acquisition of control" cannot and should not include the organization of a new corporation such as was done here. See Alcorn Wholesale Co., 1951, 16 T.C. 75, 88; 7 Mertens, Federal Taxation §38.66, n.75 (1956). The regulations promulgated under the 1939 Code provide that acquisition of control of a corporation may be accomplished by acquiring the stock of a newly organized corporation.

We find no error in the Trial Court's ruling on this contention.

Appellant also contends that [§269(a)] cannot be used to deny an acquired corporation its normal surtax deduction and excess profits credit but is limited in its application to denying an acquiring corporation which has acted to evade federal tax the "credit, deduction or allowance" it attempts to obtain through the acquired corporation. In ruling against this contention, the District Court said:

> Grammatically, this issue is presented in the interpretation of the words describing the method of tax avoidance. These are "by securing the benefit of a deduction, credit, or other allowance which such [acquiring] person or corporation would not otherwise enjoy." If the antecedent of "which" is "deduction, credit, or other allowance," then [§269] should be limited to disallowing deductions of the acquiring person. However, if the antecedent of "which" is "benefit," then the section can logically be applied to the deduc-

tions of the acquired corporation also, since the acquiring person will be benefiting from them. See Bernard, Acquisitions for Tax Benefit, 34 Cal. L. Rev. 36, 99-100 (1945).

A line of Tax Court cases had established the former interpretation by enunciating the basic principle that [§269] applies only to deductions of the acquiring person and not to those of the acquired corporation. . . . However recent courts of appeal cases reflecting, I think, the better reasoning, have held that deductions of the acquired corporation may also be properly disallowed. Mill Ridge Coal Co. v. Patterson, 5 Cir., 1959, 264 F.2d 713; Coastal Oil Storage Co. v. Commissioner, 4 Cir., 1957, 242 F.2d 396.

In the *Coastal Oil Storage* case, a parent corporation organized a subsidiary by transferring oil storage tanks to the subsidiary in exchange for its capital stock and a note. The business purpose motivating the transaction was allegedly to separate storage business under government contract from ordinary business. The Court found that the major purpose was tax avoidance and that [§269(a)] could be employed to disallow the acquired subsidiary its normal surtax exemption and its minimum excess profits credit. . . .

Whether the land transferred came from Fine himself, or from one of his corporations, the tax avoidance purpose seems clear. The potential income of Adolph Fine, Inc., and Fine Realty, Inc., were siphoned off to James Realty Co. and the evidence shows that the income from ownership of the developmental property was arbitrarily fragmentized into corporate units conveniently accruing just under $25,000 per year. Adolph Fine thus obtained the benefit of an extra set of surtax exemptions and excess profits credits that he would not otherwise have enjoyed and to which he was not entitled. . . .

[The court also referred to British Motor Car Distributors, Ltd. v. Commissioner, 278 F.2d 392 (9th Cir. 1960), similarly holding that §269 applies to the acquired corporation, and to Thomas S. Snyder Sons Co. v. Commissioner, 34 T.C. 400 (1960), in which the Tax Court abandoned its earlier approach to §269 and accepted the reasoning of the *British Motor Car* case.]

We are in accord with the interpretation of [§269(a)] in Mill Ridge Coal Co. v. Patterson, 5 Cir., 1959, 264 F.2d 713; Coastal Oil Storage v. Commissioner, 4 Cir., 1957, 242 F.2d 396; Commissioner v. British Motor Car Distributors, Ltd., 9 Cir., 1960, 278 F.2d 392, and Thomas S. Snyder Sons Co. v. Commissioner [supra], and hold that the Trial Court was not in error in applying [§269(a)] and upholding the disallowance made by the Commissioner of the deduction and credit claimed by the taxpayer.

In view of our conclusion in this case that the deduction claimed by the taxpayer was forbidden by [§269(a)] it is not necessary for us to pass upon the application and effect of [§1551] and we expressly refrain from doing so.

The judgment appealed from is affirmed.

NOTE

1. *Business purposes for multiple corporations.* In Aldon Homes, Inc. v. Commissioner, 33 T.C. 582, 597-600 (1959), the court commented as follows on the business purposes that, according to the taxpayers, were served by the use of multiple corporations in the development of a real estate subdivision:

Petitioners argue that the development of Tract 17169 through 16 corporations rather than through 1 served a number of business purposes: (1) That it enabled the avoidance of a possible general claim against the entire project in the event the development of any portion of the tract was a business failure; (2) that it limited possible tort liability; (3) that it eased the handling of mechanics' liens; and (4) that it facilitated the attraction of capital by reducing corporate taxes and thereby increasing the return to the parties. We are convinced, however, from our study of all the facts and circumstances that none of the alleged advantages in the use of multiple corporations in the development of Tract 17169 constituted any actual business purpose in the instant case. The alleged business purposes impressed us simply as a lawyer's marshaling of

possible business reasons that might conceivably have motivated the adoption of the forms here employed but which in fact played no part whatever in the utilization of the multiple corporate structure. Cf. Clearview Apartment Co., 25 T.C. 246, 253.

The enumerated purposes were little more than mere recitals by the witness Albert H. Allen, an attorney for Aldon Construction Company, who, with other tax counsel, recommended the multiple corporation plan and performed the legal work in connection with the organization of Aldon and the alphabet corporations, and who was also one of the investors in the project. There was little or no demonstration as to how they would operate to the economic benefit of Aldon or the alphabet corporations. Particularly is this true of the purpose to avoid the possibility of a "general claim" against the total project. We are left to surmise what the nature of such a claim might be with little to stimulate our imagination in this respect, except the reference to a suit resulting from an accident in the development of another tract. This, however, would appear to fall under the limitation of tort liability purpose. The benefits to be derived in this area from the use of multiple corporations are likewise unclear, particularly in view of the known custom of construction companies, as well as most businesses, to carry liability insurance, and the operation of workmen's compensation laws. The income tax returns filed by the alphabet corporations wherein deductions were claimed by each, in substantially the same amounts, for both "General" and "Workmen's Compensation" insurance, indicate they were fully protected in both respects. The stockholders already had the benefit of a "corporate shield" in Aldon, and on the evidence shown, the seeking of additional insulation through the formation of 16 more "corporate shields" was at best of minimal business significance. The first two enumerated purposes are further minimized by reason of the promises made (and later carried out) by the management group to share 50-50 with the investor group all profits derived from the development of the entire tract. Thus, the recovery of a "general" or "tort" claim against any portion would be spread over the entire tract.

We also see little merit in the contention that the use of multiple corporations was necessary to facilitate the handling of mechanics' liens. As a general rule mechanics' as well as materialmen's liens, are related in time of filing and in liability to the particular building or improvement for which they are furnished, though this may be and frequently is changed by the contract or arrangement under which they are supplied. See 36 Am. Jur., Mechanics' Liens, secs. 167-175. Here the houses were built on a mass production basis, that is, construction was initiated on lots in the first block of the subdivision and progressed lot by lot up and down the streets until the entire tract was completed. Workers moved from house to house as their phase of the work was ready to be done. Presumably materialmen's and mechanics' liens attached to the houses as completed and it is not made clear to us how the use of multiple corporations would "ease the handling of mechanics' liens" to any greater extent. As to the amounts of such liens, they too would be spread over the entire project if necessary to carry out the 50-50 division of profits. The recited purpose relating to the handling of mechanics' liens, as in the case of the first two enumerated purposes, was but a "make weight" factor secondary to the parties' primary objective of avoiding taxes.

Petitioners' argument that the use of the multiple corporate structure facilitated the attraction of capital by reducing corporate taxes and thereby increasing the return to the parties must also fail as a substantial business purpose. To hold otherwise would enable the clothing of any tax avoidance or tax evasion scheme with a business purpose, contrary to the statement of the Court of Appeals in National Investors Corp. v. Hoey, [144 F.2d 466, 468 (2d Cir. 1944)], that "escaping taxation is not a 'business' in the ordinary meaning." No difficulty whatever was experienced in obtaining sufficient capital to purchase the raw land and begin operations prior to the establishment of the 16 alphabet corporations. Some of the investor group testified they would have invested more if they had been permitted. The entire $300,000 was advanced to Aldon in the first instance and only later transferred to the alphabet corporations through a "round-robin" series of transactions. Not only were the advances by the investor group made to Aldon prior to the formation of the alphabet

corporations, but even after the latter were organized, as the evidence indicates, the individual investors were given no choice as to the particular alphabet corporation or corporations to which their interests would be transferred; they were merely furnished a mimeographed document showing the various assignments of interest which had been made by those in control of the project.

Also, the development of Tract 17169 was virtually guaranteed to be a business success before any part of it was transferred to the alphabet corporations. Metz and Woodrow, through Aldon Construction Company, had successfully developed a number of tracts and built thousands of houses prior to the development of Tract 17169. Their reputations as builders and the reputation of Aldon Construction were excellent. The president of one savings and loan institution testified, "There was competition for loans on houses which he [Metz] had built." In a letter dated July 20, 1951, Donna notified the Veterans' Administration that "the entire 237-house tract has been sold prior to the start of construction." Work had started on the project on or about December 18, 1950, several days before Aldon transferred the land to the various alphabet corporations. In an attempt to discount the above statement, petitioners argue that there could have been no "completed sale" prior to completion of the house. True, but there could have been "contracts to purchase" if and when completed, or escrow arrangements, which was the case here.

In Shaw Construction Co. v. Commissioner, 323 F.2d 316 (9th Cir. 1963), another subdivision case, the taxpayers asserted that they employed "multiples" because the lending institutions which supplied construction funds would not lend more than $100,000 to any one corporation and suggested dividing the property among a number of corporations, introducing in evidence a letter from one of the lending institutions to this effect. This argument collapsed when the lender's president testified that the idea of limiting the loans originated with the taxpayers or their attorney, who drafted the letter and requested that it be retyped on the lender's business stationery. Query: Does this kind of "window-dressing" constitute fraud?

Outside the real estate subdivision area, where the "balancing out" of income by the multiplication of corporate entities has been carried to a fine art, taxpayers have been somewhat more successful in establishing that two or more corporations were justified by the exigencies of business conditions. See Hiawatha Home Builders, Inc. v. Commissioner, 36 T.C. 491 (1961) (home construction business separated from cement subcontracting business, to protect latter from financial risks and to avoid direct competition with customers in construction industry); Cronstroms Manufacturing Co. v. Commissioner, 36 T.C. 500 (1961) (enterprise's two operating divisions and real estate transferred to separate corporations to reduce conflicts between divisional managers, facilitate profit-sharing plans, permit future sale of operating divisions, etc.); Pre-Mixed Concrete, Inc. v. Commissioner, ¶63,301 P-H Memo T.C. (delivery operations separated from manufacturing, in hope that organizational drive by Teamsters Union would ignore manufacturing employees); Sno-Frost, Inc. v. Commissioner, 31 T.C. 1058 (1959) (business divided under pressure from licensor of taxpayer's franchise).

2. *The government's weapons.* In addition to its "common law" weapons (Lucas v. Earl, *Clifford*, etc.) and its power to re-allocate gross income, deductions, etc. under §482, the government's arsenal includes two provisions that were specifically designed for corporations: §269 (the basis of the decision in *James Realty*) and §1551 (the alternative ground of the government's argument in *James Realty*, on which the court found it unnecessary to comment). In *Aldon Homes*, the government relied on §61(a) and §482 (citing §269 and §1551 only as alternatives); the court rested its decision solely on §61(a). Three judges concurred on the ground that a consolidation of income was authorized by §482, as interpreted by the *Advance Machinery Exchange* case (summarized supra p. 420n).

Section 1551, which was extensively revised in 1964, applies to certain transfers of property (other than money) to a corporation controlled by the transferor, if the transferee corporation was created to acquire the transferred property or was previously inactive. Unlike §269, which when applicable can result in a loss of any type of "deduction, credit, or other allowance," §1551 operates only to deny the surtax exemption and accumulated earnings credit. In another respect, however, §1551 is more sweeping than

§269, since the exemption and credit are denied whenever a transfer described by §1551 occurs, unless the transferee corporation "shall establish by the clear preponderance of the evidence that the securing of such exemption or credit was not a major purpose of such transfer." (Section 269 speaks of "principal purpose" and does not expressly place the burden of proof on the taxpayer.) In 1964, §1551 was enlarged to apply to certain transfers by individuals, whereas it had previously applied only to transfers by one corporation to another, and it was also amended to refer, explicitly, to "indirect" as well as "direct" transfers. For cases under the pre-1964 statute, see Truck Terminals, Inc. v. Commissioner, 33 T.C. 876 (1960) (tax-avoidance need not be sole or principal purpose; term "transfer" includes a sale of property by one corporation to another); Theatre Concessions, Inc. v. Commissioner, 29 T.C. 754 (1958) ("transfer" includes lease).

On reducing the corporate normal tax in 1964 from 30 per cent to 22 per cent (which increased the value of the surtax exemption), Congress acted to reduce the use of multiple corporations as a device for multiplying surtax exemptions, even in those instances where tax avoidance is not present (or cannot be proved). By virtue of §§1561-1563, certain related corporations are put to an election: they must either divide a single surtax exemption among themselves, or pay an additional tax of 6 per cent on the first $25,000 of taxable income. Since the additional tax does not eliminate the controlled group's extra surtax exemptions, but only reduces their potential value by $1,500 per exemption, it will ordinarily be the preferable alternative. Sections 1561-1563 apply to a "controlled group of corporations" (as defined), including "brother-sister" relationships as well as parent-subsidiary relationships. An election under §1562 to pay the additional 6 per cent tax for multiple surtax exemptions does not preclude a denial of the exemptions under §269 or §1551, but the additional 6 per cent tax will be taken into account in computing the deficiency resulting from disallowance of the exemption.

3. *Acquisition of "loss" corporations under the 1954 Code.* Section 269, discussed in the *James Realty Co.* case, was enacted in 1940 to combat the acquisition of corporations for the principal purpose of taking advantage of a tax history. The most spectacular transactions involved dormant corporations, with no tangible assets whatsoever, that had suffered a series of business losses that would have been depressing except for the operating loss carryforward that could be used — it was hoped — by transferring a profitable enterprise to the "loss" corporation or by merging it with a profitable corporation. Although §269 discouraged such transactions, it did not eliminate them entirely,* and in 1954 Congress attempted to sidestep the "principal purpose" requirement of §269 by

* "Loss" corporations are sometimes offered for sale in the Wall Street Journal and in the financial pages of other metropolitan newspapers. Their attractions have been noted even in the sport pages, as witness the following from the New York Times for November 3, 1953:

ORIOLES TO REBUILD CLUB WITH HELP OF INCOME TAX "CARRY BACK" ON $500,000

Baltimore Gains by Brown Losses

Tidy Sum Above Tax Saving to be Spent for Players

Oriole President Says

The Orioles disclosed today that their purchase of the Browns included a provision that makes the first half million dollars of net income tax free and every cent will go toward rebuilding the American League team.

And that isn't all.

"Over and above that half million we have a very tidy and substantial figure to spend this year for new players," said Clarence W. Miles, president of the new Orioles.

"I'm 56 years old," he continued. "I'd like to live long enough to win a pennant and a world series. I have only a few years left."

Miles told a luncheon of the Baltimore Sports Reporters Association that he was "letting his hair down" to them.

"We are blessed with one asset, the most important except for the franchise," he said. "That's a tax carry-back."

He explained that the Browns had lost half a million dollars "which we can take as a loss. It means that Baltimore won't have to pay taxes to that extent."

All to Be "Plowed Back"

He then promised that it all "will be plowed back into building up this ball club. No purchaser of a ball club ever enjoyed that before."

enacting two statutory provisions that operate in a more mechanical manner: §382(a), which reduces the net operating loss carryover if (roughly speaking) there is a major change in ownership of the loss corporation by virtue of purchases of stock within a specified period of time and the corporation abandons a business that was conducted before the change in ownership; and §382(b), which reduces the carryover if the loss corporation goes through a corporate reorganization and its shareholders acquire less than 20 per cent of the stock of the resulting corporation. See also Libson Shops, Inc. v. Koehler, 353 U.S. 382 (1957); Rev. Rul. 63-40, 1963-1 C.B. 46.

4. *Consolidated returns and the "loss" corporation.* An alternative mode of using a loss corporation's carryovers would be to acquire the corporation and cause it to file a consolidated income tax return with profitable corporations in the same affiliated group. Without waiting for legislation, however, the Treasury has used its power to prescribe regulations for the filing of consolidated returns (§1502) to permit pre-affiliation losses to be applied only against the post-affiliation profits of the loss corporation; similarly, the regulations permit a post-affiliation loss on the sale of depreciated property to be used only against the loss corporation's profits unless the loss is attributable to post-affiliation events. Regs. §1.1502-31(b)(3) and §1.1502-31(b)(9). In promulgating these restrictive rules, the Treasury had the support of some judicial decisions: Woolford Realty Co. v. Rose, 286 U.S. 319 (1932) ("The mind rebels against the notion that Congress in permitting a consolidated return was willing to foster an opportunity for juggling [by offsetting pre-affiliation losses against post-affiliation profits of other corporations] so facile and so obvious"); J. D. & A. B. Spreckels Co. v. Commissioner, 41 B.T.A. 370 (1940).

There remain some situations in which a loss corporation's carryovers can be utilized on a consolidated return. Does the management of a corporation that can bring a tax loss (or some other tax advantage) to a consolidated return have a fiduciary obligation to its minority shareholders or creditors to demand a quid pro quo before consenting to the filing of such a return? Mr. Justice Jackson had this to say (in a dissenting opinion) of an action brought by a subsidiary corporation's receiver against the parent corporation for unjust enrichment in "appropriating" the subsidiary's tax loss for use on a consolidated return, with a savings to the parent of $17,000,000 in taxes:

> Each of these corporations had something to contribute to a tax-saving plan. . . . It was as if a treasure of seventeen million dollars were offered by the Government to whomever might have two keys that would unlock it. Each of these parties had but one key, and how can it be said that the holder of the other key had nothing worth bargaining for? The management, probably without improper intent, failed to claim for the plaintiff the advantages of its position, turning them over without compensation for the advantage and profit of another affiliated corporation. On the face of it, the conclusion would seem to be warranted that the plaintiff is entitled to what fair arm's-length bargaining would probably have yielded. [Western Pacific R.R. Corp. v. Western Pacific R.R. Co., 345 U.S. 247, 276-277 (1953).]

The Court of Appeals had the last word, however, and the petition was dismissed:

> How could this court or the district court determine "what fair arm's-length bargaining would probably have yielded"? Bargaining presupposes negotiations to determine the maximum amount a buyer is willing to pay and the minimum amount a seller is willing to accept. Such activity is a matter of business administration, and is not a judicial function. [Western Pacific R.R. Corp. v. Western Pacific R.R. Co., 206 F.2d 495, 499-500 (9th Cir. 1953).]

See Case v. New York Central Railroad Co., 243 N.Y.S.2d 620 (1963) (agreement between parent and subsidiary for sharing the tax savings resulting from consolidated returns held unfair to minority shareholders of subsidiary).

5. *Other statutory restrictions on the use of multiple corporations.* Some of the recently enacted "incentive" provisions of the Code have contained dollar limitations that are applied to affiliated corporations as a group, rather than to each corporation as a separate entity. Thus, not more than $10,000 of investment may qualify in any one taxable year for the additional first-year depreciation allowance of §179, and this amount must be divided among the corporations that are members of an affiliated group (as defined).

Similarly, the $50,000 limit on the amount of used property that may qualify for the investment credit of §38 is applied to affiliated corporations as a group. So far as *individual* taxpayers are concerned, however, each person stands on his own feet; the fact that Smith has claimed the full allowance under §179 or §38 does not restrict the amount that may be claimed by his children, not even if he and they are members of a family partnership. (Special provisions are applicable to married taxpayers, because they may elect to file either joint or separate returns.)

CHAPTER 5

Sales and Other Dispositions of Property

Despite some early judicial suggestions to the contrary, it has long been established that appreciation in the value of property may be taxed in toto in the year of sale, even though the appreciation accrued over a long period of time. The cases are reviewed in Merchants' Loan & Trust Co. v. Smietanka, supra page 69, which also held that the term "income" as used in the Sixteenth Amendment includes the gain on "a single isolated sale of property" as well as the profits from sales of property in the course of trade or business. Since Eisner v. Macomber, supra page 56, it has often been assumed that appreciation in the value of property cannot be taxed until it has been "realized" in some fashion. This assumption has not been subjected to a judicial test, however, because Congress has never required taxpayers to take unrealized appreciation into account in computing the year's taxable income.*

Whether a "realization" is required by the Constitution or not, however, it is implicit in §61(a)(3), which provides that gross income includes "gains derived from dealings in property." Presumably this provision is to be taken in conjunction with §1001, prescribing the method of determining the amount of gain or loss "from the sale or other disposition of property." But we have intimations, both from the courts and the Treasury, that the catch-all language of §61(a) — "gross income means all income from whatever source derived" — may reach peripheral items despite the lack of a "sale or other disposition." In Herbert's Estate v. Commissioner, 139 F.2d 756 (3d Cir. 1943), for example, it was held that a taxpayer who collected a debt from the obligor had engaged in a "sale or other disposition" of his claim, the issue arising because the taxpayer's basis for his claim was less than the amount collected. The court went on, however, to say that the taxpayer's gain could have been taxed under the more general language of §61(a), thus implying that §1001 was unnecessary to the result. This alternative theory is explicitly endorsed by Regs. §1.1001-1(c). In *Herbert's Estate*, it was irrelevant to the result whether the difference between the taxpayer's basis for the property and the amount collected was taxed under §1001 or under §61(a).

---

* Security dealers may value their inventory of securities at market, and thus take unrealized appreciation and depreciation into account each year, under Regs. §1.471-5(c), but this method of computing income is optional rather than compulsory.

Although, as stated in the text, the courts have not been called upon to say whether Congress could *require* appreciation to be taken into account annually, the Court of Appeals for the Second Circuit stated in Shahmoon v. Commissioner, 185 F.2d 384 (2d Cir. 1950), that its discussion of a problem under §127 of the 1939 Code (relating to war losses) should not be understood as intimating "that we think taxation of appreciation would ever be unconstitutional."

The President's 1963 tax message to Congress (Jan. 24, 1963) recommended that the transfer of capital assets by gift or at death be treated as a taxable event. This proposal (which was not enacted) was a less drastic break with tradition than a tax based on an annual computation of the taxpayer's unrealized gain or loss on assets that have not in any way passed out of his possession, control, or enjoyment, since a transfer of property by gift or bequest is a disposition, even though the transferor receives nothing in return. The proposal might be regarded as presaged by several existing provisions requiring a corporation to report income on a distribution of certain types of appreciated property to its shareholders, e.g., §311(c) (relating to property subject to liability in excess of basis) and §1245(a)(1) (certain depreciable property).

But on other facts, the difference in theories may be crucial; consider the question whether a recovery in an unfair competition or private antitrust case is compensation for loss of profits or for destruction of goodwill. Note how the *Raytheon Production Corp.* case, supra page 86, would have been decided if the taxpayer had proved a basis for its goodwill.

Just as a transaction in property may produce income under §61(a) even though there is no "sale or other disposition," so §165(a) may permit the taxpayer to deduct a loss on property resulting from an event (such as theft or fire) that is not easily fitted into §1001's concept of a "sale or other disposition." Thus, abandonment of business property gives rise to a deductible loss, even though the taxpayer has not consigned the property to the junk heap or formally renounced title. See Helvering v. Gordon, infra page 582; Regs. §1.1001-1(c) (sale or other disposition "ordinarily," but presumably not always, required).

Although a "sale or other disposition" may not always be essential to the realization of gain or loss, the overwhelming mass of transactions in property fit easily within the language of §1001. It should be noted, however, that §1001 provides no more than a method for *computing* gain or loss; it does not tell us whether the gain or loss thus computed is to be recognized or otherwise taken into account in computing taxable income. Section 1001(c) explicitly refers us to §1002 for the "recognition" rules, and §1002 in turn provides that the entire amount of gain or loss is to be recognized unless one of the many "non-recognition" provisions is applicable. Some of these provisions are examined later in this chapter. When a loss is incurred on the sale or other disposition of property, however, it is especially important to recognize that neither §1001 nor §1002 authorizes the taxpayer to *deduct* the loss — §1001 and §1002 are wholly subordinate to such provisions as §165(c) (individual taxpayer may deduct only business, profit-oriented, and casualty losses), §267(a)(1) (no deduction for losses on sales of property between certain related taxpayers), §1091 (losses on "wash sales" nondeductible), and the like.

Finally, §61(a)(3), §1001, and §1002 are applicable with equal force whether the property involved is a "capital asset" or not. The special rules that determine whether the taxpayer's income or loss on the disposition of property will be treated as short-term or long-term capital gain or loss, rather than as ordinary income or loss, are considered in the next chapter. By way of anticipation, it may be noted that the capital gain and loss provisions ordinarily come into play only if the property in question is a "capital asset" and has been disposed of by the taxpayer in a transaction that constitutes a "sale or exchange." As will be seen, a transaction may be a "sale or other disposition" within the meaning of §1001(a) — so that gain or loss is realized — without qualifying as a "sale or exchange" for capital gain or loss purposes.

SECTION A. THE TAXABLE EVENT

Section 61(a)(3), providing that gross income includes "gains derived from dealings in property," carries forward, in abbreviated form, a similar provision of §22(a) of the 1939 Code.

Sections 1001 and 1002, providing for the computation and recognition of gain or loss, are virtually identical with §111 and §112(a) of the 1939 Code.

UNITED STATES v. DAVIS

370 U.S. 65 (1962)

MR. JUSTICE CLARK delivered the opinion of the Court.

These cases involve the tax consequences of a transfer of appreciated property

by Thomas Crawley Davis to his former wife pursuant to a property settlement agreement executed prior to divorce, as well as the deductibility of his payment of her legal expenses in connection therewith. The Court of Claims upset the Commissioner's determination that there was taxable gain on the transfer but upheld his ruling that the fees paid the wife's attorney were not deductible. We granted certiorari on a conflict in the Court of Appeals and the Court of Claims on the taxability of such transfers.[1] We have decided that the taxpayer did have a taxable gain on the transfer and that the wife's attorney's fees were not deductible.

In 1954 the taxpayer and his then wife made a voluntary property settlement and separation agreement calling for support payments to the wife and minor child in addition to the transfer of certain personal property to the wife. Under Delaware law all the property transferred was that of the taxpayer, subject to certain statutory marital rights of the wife including a right of intestate succession and a right upon divorce to a share of the husband's property. Specifically as a "division in settlement of their property" the taxpayer agreed to transfer to his wife, inter alia, 1,000 shares of stock in the E. I. duPont de Nemours & Co. The then Mrs. Davis agreed to accept this division "in full settlement and satisfaction of any and all claims and rights against the husband whatsoever (including but not by way of limitation, dower and all rights under the laws of testacy and intestacy). . . ." Pursuant to the above agreement which had been incorporated into the divorce decree, one-half of this stock was delivered in the tax year involved, 1955, and the balance thereafter. Davis' cost basis for the 1955 transfer was $74,775.37, and the fair market value of the 500 shares there transferred was $82,250. The taxpayer also agreed orally to pay the wife's legal expenses, and in 1955 he made payments to the wife's attorney, including $2,500 for services concerning tax matters relative to the property settlement.

I

The determination of the income tax consequences of the stock transfer described above is basically a two-step analysis: (1) Was the transaction a taxable event? (2) If so, how much taxable gain resulted therefrom? Originally the Tax Court (at that time the Board of Tax Appeals) held that the accretion to property transferred pursuant to a divorce settlement could not be taxed as capital gain to the transferor because the amount realized by the satisfaction of the husband's marital obligations was indeterminable and because, even if such benefit were ascertainable, the transaction was a nontaxable division of property. Mesta v. Commissioner, 42 B.T.A. 933 (1940); Halliwell v. Commissioner, 44 B.T.A. 740 (1941). However, upon being reversed in quick succession by the Courts of Appeals of the Third and Second Circuits, Commissioner v. Mesta, 123 F.2d 986 (C.A. 3d Cir. 1941); Commissioner v. Halliwell, 131 F.2d 642 (C.A. 2d Cir. 1942), the Tax Court accepted the position of these courts and has continued to apply these views in appropriate cases since that time. . . . In *Mesta* and *Halliwell* the Courts of Appeals reasoned that the accretion to the property was "realized" by the transfer and that this gain could be measured on the assumption that the relinquished marital rights were equal in value to the property transferred. The matter was considered settled until the Court of Appeals for the Sixth Circuit, in reversing the Tax Court, ruled that, although such a transfer might be a taxable event, the gain realized thereby could not be determined because of the impossibility of evaluating the fair market value of the

[1] The holding in the instant case is in accord with Commissioner v. Marshman, 279 F.2d 27 (C.A. 6th Cir. 1960), but is contra to the holdings in Commissioner v. Halliwell, 131 F.2d 642 (C.A. 2d Cir. 1942), and Commissioner v. Mesta, 123 F.2d 986 (C.A. 3d Cir. 1941).

wife's marital rights. Commissioner v. Marshman, 279 F.2d 27 (1960). In so holding that court specifically rejected the argument that these rights could be presumed to be equal in value to the property transferred for their release. This is essentially the position taken by the Court of Claims in the instant case.

II

We now turn to the threshold question of whether the transfer in issue was an appropriate occasion for taxing the accretion to the stock. There can be no doubt that Congress, as evidenced by its inclusive definition [in §61(a)] of income subject to taxation, i.e., "all income from whatever source derived, including . . . [g]ains derived from dealings in property," intended that the economic growth of this stock be taxed. The problem confronting us is simply when is such accretion to be taxed. Should the economic gain be presently assessed against taxpayer, or should this assessment await a subsequent transfer of the property by the wife? The controlling statutory language, which provides [§§1001 and 1002] that gains from dealings in property are to be taxed upon "sale or other disposition," is too general to include or exclude conclusively the transaction presently in issue. Recognizing this, the Government and the taxpayer argue by analogy with transactions more easily classified as within or without the ambient of taxable events. The taxpayer asserts that the present disposition is comparable to a nontaxable division of property between two co-owners,[2] while the Government contends it more resembles a taxable transfer of property in exchange for the release of an independent legal obligation. Neither disputes the validity of the other's starting point.

In support of his analogy the taxpayer argues that to draw a distinction between a wife's interest in the property of her husband in a common-law jurisdiction such as Delaware and the property interest of a wife in a typical community property jurisdiction would commit a double sin; for such differentiation would depend upon "elusive and subtle casuistries which . . . possess no relevance for tax purposes," Helvering v. Hallock, 309 U.S. 106, 118 (1940), and would create disparities between common-law and community property jurisdictions in contradiction to Congress' general policy of equality between the two. The taxpayer's analogy, however, stumbles on its own premise, for the inchoate rights granted a wife in her husband's property by the Delaware law do not even remotely reach the dignity of co-ownership. The wife has no interest — passive or active — over the management or disposition of her husband's personal property. Her rights are not descendable, and she must survive him to share in his intestate estate. Upon dissolution of the marriage she shares in the property only to such extent as the court deems "reasonable." 13 Del. Code Ann. §1531-(a). What is "reasonable" might be ascertained independently of the extent of

---

[2] Any suggestion that the transaction in question was a gift is completely unrealistic. Property transferred pursuant to a negotiated settlement in return for the release of admittedly valuable rights is not a gift in any sense of the term. To intimate that there was a gift to the extent the value of the property exceeded that of the rights released not only invokes the erroneous premise that every exchange not precisely equal involves a gift but merely raises the measurement problem discussed in Part III [of this opinion]. Cases in which this Court has held transfers of property in exchange for the release of marital rights subject to gift taxes are based not on the premise that such transactions are inherently gifts but on the concept that in the contemplation of the gift tax statute they are to be taxed as gifts. Merrill v. Fahs, 324 U.S. 308 (1945); Commissioner v. Wemyss, 324 U.S. 303 (1945); see Harris v. Commissioner, 340 U.S. 106 (1950). In interpreting the particular income tax provisions here involved, we find ourselves unfettered by the language and considerations ingrained in the gift and estate tax statutes. See Farid-Es-Sultaneh v. Commissioner, 160 F.2d 812 (C.A. 2d Cir. 1947).

the husband's property by such criteria as the wife's financial condition, her needs in relation to her accustomed station in life, her age and health, the number of children and their ages, and the earning capacity of the husband. See, e.g., Beres v. Beres, 52 Del. 133, 154 A.2d 384 (1959).

This is not to say it would be completely illogical to consider the shearing off of the wife's rights in her husband's property as a division of that property, but we believe the contrary to be the more reasonable construction. Regardless of the tags, Delaware seems only to place a burden on the husband's property rather than to make the wife a part owner thereof. In the present context the rights of succession and reasonable share do not differ significantly from the husband's obligations of support and alimony. They all partake more of a personal liability of the husband than a property interest of the wife. The effectuation of these marital rights may ultimately result in the ownership of some of the husband's property as it did here, but certainly this happenstance does not equate the transaction with a division of property by co-owners. Although admittedly such a view may permit different tax treatment among the several States, this Court in the past has not ignored the differing effects on the federal taxing scheme of substantive differences between community property and common-law systems. E.g., Poe v. Seaborn, 282 U.S. 101 (1930). To be sure Congress has seen fit to alleviate this disparity in many areas, e.g., Revenue Act of 1948, 62 Stat. 110, but in other areas the facts of life are still with us.

Our interpretation of the general statutory language is fortified by the long-standing administrative practice as sounded and formalized by the settled state of law in the lower courts. The Commissioner's position was adopted in the early 40's by the Second and Third Circuits and by 1947 the Tax Court had acquiesced in this view. This settled rule was not disturbed by the Court of Appeals for the Sixth Circuit in 1960 or the Court of Claims in the instant case, for these latter courts in holding the gain indeterminable assumed that the transaction was otherwise a taxable event. Such unanimity of views in support of a position representing a reasonable construction of an ambiguous statute will not lightly be put aside. It is quite possible that this notorious construction was relied upon by numerous taxpayers as well as the Congress itself, which not only refrained from making any changes in the statutory language during more than a score of years but re-enacted this same language in 1954.

III

Having determined that the transaction was a taxable event, we now turn to the point on which the Court of Claims balked, viz., the measurement of the taxable gain realized by the taxpayer. The Code defines the taxable gain from the sale or disposition of property as being the "excess of the amount realized therefrom over the adjusted basis. . . ." I.R.C. (1954) §1001(a). The "amount realized" is further defined as "the sum of any money received plus the fair market value of the property (other than money) received." I.R.C. (1954) §1001(b). In the instant case the "property received" was the release of the wife's inchoate marital rights. The Court of Claims, following the Court of Appeals for the Sixth Circuit, found that there was no way to compute the fair market value of these marital rights and that it was thus impossible to determine the taxable gain realized by the taxpayer. We believe this conclusion was erroneous.

It must be assumed, we think, that the parties acted at arm's length and that they judged the marital rights to be equal in value to the property for which they were exchanged. There was no evidence to the contrary here. Absent a readily ascertainable value it is accepted practice where property is exchanged

to hold, as did the Court of Claims in Philadelphia Park Amusement Co. v. United States, 130 Ct. Cl. 166, 172, 126 F. Supp. 184, 189 (1954), that the values "of the two properties exchanged in an arms-length transaction are either equal in fact, or are presumed to be equal." Accord, United States v. General Shoe Corp., 282 F.2d 9 (C.A. 6th Cir. 1960); International Freighting Corp. v. Commissioner, 135 F.2d 310 (C.A. 2d Cir. 1943). To be sure there is much to be said of the argument that such an assumption is weakened by the emotion, tension and practical necessities involved in divorce negotiations and the property settlements arising therefrom. However, once it is recognized that the transfer was a taxable event, it is more consistent with the general purpose and scheme of the taxing statutes to make a rough approximation of the gain realized thereby than to ignore altogether its tax consequences. Cf. Helvering v. Safe Deposit & Trust Co., 316 U.S. 56, 67 (1942).

Moreover, if the transaction is to be considered a taxable event as to the husband, the Court of Claims' position leaves up in the air the wife's basis for the property received. In the context of a taxable transfer by the husband,[3] all indicia point to a "cost" basis for this property in the hands of the wife [under §1012]. Yet under the Court of Claims' position her cost for this property, i.e., the value of the marital rights relinquished therefor, would be indeterminable, and on subsequent disposition of the property she might suffer inordinately over the Commissioner's assessment which she would have the burden of proving erroneous, Commissioner v. Hansen, 360 U.S. 446, 468 (1959). Our present holding that the value of these rights is ascertainable eliminates this problem; for the same calculation that determines the amount received by the husband fixes the amount given up by the wife, and this figure, i.e., the market value of the property transferred by the husband, will be taken by her as her tax basis for the property received.

Finally, it must be noted that here, as well as in relation to the question of whether the event is taxable, we draw support from the prior administrative practice and judicial approval of that practice. See supra. We therefore conclude that the Commissioner's assessment of a taxable gain based upon the value of the stock at the date of its transfer has not been shown erroneous.

IV

[Discussion of attorney fee question omitted.]

Reversed in part and affirmed in part.

MR. JUSTICE FRANKFURTER took no part in the decision of these cases.

MR. JUSTICE WHITE took no part in the consideration or decision of these cases.

NOTE

1. *The scope of the Davis case.* The following is from the cross-examination of Mr. Davis at the trial (Record, p. 54):

Q. Did you consider the delivery of the stock to be a gift to Mrs. Davis?
A. No. I considered it an exaction from me.
Q. And what do you mean by "an exaction"?

---

3 Under the present administrative practice, the release of marital rights in exchange for property or other consideration is not considered a taxable event as to the wife. For a discussion of the difficulties confronting a wife under a contrary approach, see Taylor and Schwartz, Tax Aspects of Marital Property Agreements, 7 Tax L. Rev. 19, 30 (1951); Comment, The Lump Sum Divorce Settlement as a Taxable Exchange, 8 U.C.L.A.L. Rev. 593, 601-602 (1961).

A. What do you mean by a "gift"? . . .
Q. Let me put it like this: isn't it true, Mr. Davis, that in return for her separation you agreed to do certain things, one of which was the transfer of the stock?
A. No.
Q. How would you —
A. I have answered your question.
Q. I don't think you have, sir.
A. What I did was under duress, under pressure. The only way to continue to live.

In rejecting as "completely unrealistic" the suggestion that the transfer by Mr. Davis was a gift (footnote 2), was the Court relying on the facts of this case, or does it hold that a transfer in settlement of a wife's marital rights is a taxable event no matter how amicable the parting may be? Was it crucial that the settlement was in contemplation of divorce, or that it was incorporated in a divorce decree? Consider whether the husband in the *Farid-es-Sultaneh* case (supra page 133) realized gain by reason of his foresighted pre-marital transfer of property to his fiancee. If depreciated securities had been transferred in the *Davis* case, would the taxpayer have been entitled to deduct his loss, in the light of United States v. Gilmore (supra page 236)? What about §267(a)(1), disallowing the loss incurred on a sale of property to the taxpayer's "spouse"? In Pullian v. Commissioner, 39 T.C. 883 (1963), applying the *Davis* case, the court apparently allowed the taxpayer's gain on the transfer of property to his wife in a divorce settlement to be computed on a consolidated basis, so that depreciation in the value of one item of property was set off against the appreciation on others; but depreciation in the value of his personal residence was disregarded on the ground that "loss from the disposition of one's residence is personal and not deductible."

If the settlement in the *Davis* case had taken the form of a trust under which the wife was given the right to the income for life, with remainder to their children, would the transfer have been a taxable event? Consider the applicability of Regs. §1.1001(c)(1):

> Even though property is not sold or otherwise disposed of, gain is realized if the sum of all the amounts received which are required by section 1016 and other applicable provisions of subtitle A of the Code to be applied against the basis of the property exceeds the basis.

If the taxpayer realizes gain on transferring a life estate in appreciated property to the wife, what about a trust under which she has more limited rights (e.g., the 1933 trust in the *Mahana* case, supra page 178, the income from which was to go to the wife only if the income from the 1923 trust fell short of $17,500 per year)?

Is the *Davis* principle confined to divorce settlements, or does it also embrace transfers in connection with legal and informal separation agreements? Transfers to children, parents, or others in discharge of the taxpayer's duty of support?

Mr. Davis testified at the trial of the tax case that in 1953 (the year before the property settlement) his wife repeatedly requested him to transfer part of his duPont stock to her, that "because of this, our continual friction and bickering, in September of 1953, I made a donation to Mrs. Davis, a gift to Mrs. Davis of 200 shares of duPont stock" (Record, p. 41), and that this event preceded any discussion of divorce or separation. Did he realize gain on this transfer? He also testified that in 1954 his wife said that she would sign no more joint income tax returns "until you have met my demands." Would a transfer of appreciated property under these circumstances have been a taxable event?

For the gift tax problems arising out of marital settlements, see pages 1025-1048 infra.

See generally Kilbourn, Puzzling Problems in Property Settlements — The Tax Anatomy of Divorce, 27 Mo. L. Rev. 354 (1962) (written after the Court of Claims decided the *Davis* case, but before the Supreme Court decision).

2. *The transferee in the Davis case.* Did Mrs. Davis realize a taxable gain on her receipt of the stock? The Court indicates that Mrs. Davis gave up some rights in exchange for the stock: was this a "sale or other disposition of property" by her? Even if it was not a transaction within the ambit of §1001, did she realize gain under §61(a)? What if she received more than the estimated value of her right to be supported by her husband?

3. *Non-taxable divisions of property.* As to the taxpayer's contention in *Davis* that the

transfer should have been viewed as a "non-taxable division of property between two co-owners," see Rev. Rul. 56-437, 1956-2 C.B. 507:

> The conversion, for the purpose of eliminating a survivorship feature, of a joint tenancy in capital stock of a corporation into a tenancy in common is a nontaxable transaction for Federal income tax purposes. Likewise, the severance of a joint tenancy in stock of a corporation, under a partition action instituted under [a Colorado statute, similar to those in force elsewhere], compelling partition and the issuance of two separate stock certificates in the names of each of the joint tenants, is a nontaxable transaction. In each case there was no sale or exchange and the taxpayers neither realized a taxable gain nor sustained a deductible loss.

If the record ownership of a married couple's securities, residence, or other property is in their joint names, with right of survivorship, will a division of the property upon divorce be a non-taxable event under Rev. Rul. 56-437, or can the government go behind the record ownership to ascertain whether joint ownership was "really" intended? Conversely, does the *Davis* case preclude a showing that investments acquired during marriage were intended to be jointly owned, notwithstanding a failure to record title in both names?

The Court in the *Davis* case accepts the previously applied principle that a division of community property upon the dissolution of a marriage is not a taxable event. If one spouse takes substantially all the community property and compensates the other spouse in cash, however, the transaction will be treated as a sale by the latter spouse of his or her one-half interest in the community property. See Edwards v. Commissioner, 22 T.C. 65 (1954), and cases there cited.

4. *Payment of debt with appreciated or depreciated property.* The use of appreciated or depreciated property to pay a debt is a taxable event, because of its similarity to a sale of the property followed by a payment of the proceeds to the creditor. Simms v. Commissioner, 28 B.T.A. 988, 1029 (1933) (third issue). In International Freighting Corp. v. Commissioner, cited in the *Davis* case, an employer was taxed on the difference between the adjusted basis and the fair market value of stock transferred to employees under a bonus plan, presumably on the theory that the employer had received the benefit of the property's fair market value although there was no pre-existing debt. See also United States v. General Shoe Corp., 282 F.2d 9 (6th Cir. 1960). Would the result be the same if the taxpayer was not entitled to deduct the payment (for example, because the property was used to pay a bribe)?

As to transfers of appreciated or depreciated property to a charity in discharge of a pledge, see Rev. Rul. 55-410, supra page 176. If the reasoning of the ruling does not seem entirely persuasive, note that taxpayers have long been permitted to deduct the fair market value of appreciated property donated to charities (up to the amount of §170's percentage limitation) without recognizing any gain; and consider whether the result should be different if the taxpayer impulsively fills out a pledge card with a specific dollar amount rather than following the more prudent course of promising merely to give specified property in kind. For an attempt to limit the no-taxable-event doctrine where the charity is under an express or implicit obligation to dispose of the property, see Rev. Rul. 60-370, 1960-2 C.B. 203 (sale imputed to donor, in "Pomona Plan" transaction); see Trautman, Taxation of Gifts in Trust to Charities Reserving a Life Income Interest, 14 Vanderbilt L. Rev. 597 (1961).

5. *Cash bequests satisfied with property.* When a decedent's estate transfers property to an heir in satisfaction of a bequest of specific property, the transfer is not a taxable event, even though the property may have appreciated in value while held by the estate. Since a legacy of a specific monetary sum creates a debt running from the decedent's estate to the legatee, however, it has been held that a transfer of appreciated property in satisfaction of such a legacy is a "sale or other disposition" on which the estate realizes income. Suisman v. Eaton, 15 F. Supp. 113 (D. Conn. 1935), aff'd per curiam, 83 F.2d 1019 (2d Cir. 1936). As to a legacy calling for the payment of a stated sum in either money or property, see Kenan v. Commissioner, 114 F.2d 217, 219 (2d Cir. 1940):

> In the present case, the legatee had a claim which was a charge against the trust estate for $5,000,000 in cash or securities and the trustees had the power to determine

> whether the claim should be satisfied in one form or the other. The claim, though enforceable only in the alternative, was, like the claim in Suisman v. Eaton . . . a charge against the entire trust estate. If it were satisfied by a cash payment securities might have to be sold on which (if those actually delivered in specie were selected) a taxable gain would necessarily have been realized. Instead of making such a sale the trustees delivered the securities and exchanged them pro tanto for the general claim of the legatee, which was thereby satisfied.

See also Spedden v. Commissioner, ¶39,038 P-H Memo T.C., where the executor was directed by the decedent's will to sell all of his property, to pay several monetary legacies, and to pay the residue to his widow. The executor sold enough property to pay the legacies, and transferred the balance of the property (which had appreciated in value after the decedent's death) to the widow in a "sale" in which no money changed hands because the "proceeds" realized by the estate were credited to her as residuary legatee. The transfer to the widow was held to be a taxable event. How could the will have been drafted to avoid this result?

For an application of these principles to testamentary transfers under marital deduction clauses, see Regs. §1.1014-4(a)(3); infra page 1314.

See generally Roberts and Muller, Constructive Receipt of Income by Estates and Trusts Through Distribution in Kind to Beneficiaries, 4 Tax L. Rev. 372 (1949).

6. *Date of "sale or other disposition."* Ordinarily it is not difficult to determine the taxable year in which the sale or other disposition of property occurred, but uncertainty may be introduced by an escrow arrangement, a provision for deferred payments with a retention of control in the vendor, etc. Because much of the litigation in this area has arisen under the "holding period" requirement of the capital gain and loss provisions, the problems are examined infra page 585. A dispute over the year of disposition is also not uncommon when the taxpayer claims a loss on the ground that he disposed of property by abandoning it. For this problem, see Hillcone Steamship Co. v. Commissioner, ¶63,220 P-H Memo T.C.

WOODSAM ASSOCIATES, INC. v. COMMISSIONER

198 F.2d 357 (2d Cir. 1952)

Before SWAN, Chief Judge, and CHASE and CLARK, Circuit Judges.

CHASE, Circuit Judge. . . .

[The taxpayer's adjusted basis for certain real estate depended upon its basis in the hands of a shareholder, Mrs. Wood, from whom the property had been received in a non-taxable exchange in 1934.

[Much simplified, the relevant facts were: Mrs. Wood purchased the property in 1922 for about $300,000. In 1931, when her adjusted basis had been reduced to about $270,000 by reason of depreciation deductions, she obtained a mortgage in the amount of $400,000 on the property, using a "dummy" so that she incurred no personal liability on the mortgage. Disregarding this transaction, the government asserted that the taxpayer's adjusted basis for the property was its original cost to Mrs. Wood, plus the cost of certain improvements, and less the depreciation deducted by her between 1922 and 1934 and by the taxpayer thereafter.]

The contention of the petitioner may now be stated quite simply. It is that, when the borrowings of Mrs. Wood subsequent to her acquisition of the property became charges solely upon the property itself [in 1931], the cash she received for the repayment of which she was not personally liable was a gain then taxable to her as income to the extent that the mortgage indebtedness [$400,000] exceeded her adjusted basis in the property [$270,000]. That being so, it is argued that her tax basis was, under familiar principles of tax law, increased by the amount of such taxable gain [$130,000] and that this stepped up basis carried over to the petitioner in the tax free exchange by which it acquired the property.

While this conclusion would be sound if the premise on which it is based were

correct, we cannot accept the premise. It is that the petitioner's transferor made a taxable disposition of the property, within the meaning of [§1001(a)], when the [$400,000] mortgage was executed, because she had, by then, dealt with it in such a way that she had received cash, in excess of her basis, which, at that time, she was freed from any personal obligation to repay. Nevertheless, whether or not [the mortgagor is] personally liable on the mortgage, "The mortgagee is a creditor, and in effect nothing more than a preferred creditor, even though the mortgagor is not liable for the debt. He is not the less a creditor because he has recourse only to the land, unless we are to deny the term to one who may levy upon only a part of his debtor's assets." C.I.R. v. Crane, 2 Cir., 153 F.2d 504, 506. Mrs. Wood merely augmented the existing mortgage indebtedness when she borrowed each time and, far from closing the venture, remained in a position to borrow more if and when circumstances permitted and she so desired. And so, she never "disposed" of the property to create a taxable event which [§1001(a)] makes a condition precedent to the taxation of gain. "Disposition," within the meaning of [§1001(a)], is the " 'getting rid, or making over, of anything; relinquishment.' " Herbert's Estate v. Commissioner, 3 Cir., 139 F.2d 756, 758, certiorari denied 322 U.S. 752. Nothing of that nature was done here by the mere execution of the [1931] mortgage; Mrs. Wood was the owner of this property in the same sense after the execution of this mortgage that she was before. As was pointed out in our decision in the *Crane* case, supra, 153 F.2d 505-506, ". . . the lien of a mortgage does not make the mortgagee a cotenant; the mortgagor is the owner for all purposes; indeed that is why the 'gage' is 'mort,' as distinguished from a 'vivum vadium.' Kortright v. Cady, 21 N.Y. 343, 344. He has all the income from the property; he manages it; he may sell it; any increase in its value goes to him; any decrease falls on him, until the value goes below the amount of the lien." Realization of gain was, therefore, postponed for taxation until there was a final disposition of the property at the time of the foreclosure sale. See Lutz & Schramm Co., 1 T.C. 682; Mendham Corp., 9 T.C. 320. Therefore, Mrs. Wood's borrowings did not change the basis for the computation of gain or loss.

Affirmed.

NOTE

1. *Gain on excessively mortgaged property.* If Mrs. Woods had retained the property, instead of transferring it to a controlled corporation, her gain on ultimately disposing of it would have reflected the unrecognized increment which she received in 1931. To illustrate, assume that the depreciation deductions taken after 1931 amounted to $50,000, so that her adjusted basis at the time of sale was $220,000, and that the sale price was $450,000 (i.e., $50,000 above the mortgage). Her gain would have been $230,000, which would have corresponded to her cash receipts of $450,000 ($400,000 in 1931 plus $50,000 on the sale), less her original cash outlay ($300,000) plus her depreciation deductions ($80,000). In the *Woodsam Associates* case itself, the same principle was employed in computing the gain, but it was taxed to the corporation, rather than to Mrs. Woods. (In fact, the property was transferred by the corporation to the mortgagee for the unpaid principal of the mortgage, so that the gain was restricted to the excess of the mortgage over the corporation's basis, an aspect of the case that is considered infra pages 463-466.) But what if the property had been abandoned to the municipality for non-payment of local taxes, or transferred by gift to a charity? If Mrs. Woods had held the property until her death, would its basis to her heirs be its fair market value at death under §1014, so that the "excess" cash received by her in 1931 would never be taken into account?

If the court had held in the *Woodsam* case that gain is realized on mortgaging property for more than its adjusted basis when the taxpayer is not personally liable on the debt, would it be necessary to treat cases in which the mortgagor is ostensibly personally liable in the same fashion if the personal liability exceeded his present or probable future net

worth? In the case of a corporation that owns only a single parcel of property (e.g., an apartment house), is it realistic to distinguish between a mortgage with personal liability and one without?

2. *Step transactions.* In Simon v. Commissioner, 285 F.2d 422 (3d Cir. 1960), the taxpayer mortgaged property for more than its adjusted basis, using a "dummy" to avoid personal liability, and immediately thereafter transferred the property (subject to the mortgage) to a corporation of which he owned half the stock, the purpose of the transaction being to improve the financial position of a wholly owned subsidiary of the transferee corporation. The court held that the excess of the mortgage proceeds over the adjusted basis of the property was taxable gain to the taxpayer, on the ground that the transaction was in substance the same as a sale of the property to the transferee corporation for the amount of the mortgage proceeds, with the transferee obtaining the necessary funds by mortgaging the property. Note that there was a long interval in *Woodsam Associates* between the mortgage and the transfer of the property, whereas in *Simon* the court held that the mortgage and the transfer constituted "a single integrated transaction." See also Magnolia Development Corp. v. Commissioner, ¶60,177 P-H Memo T.C. (taxpayer satisfied pledge of $500 to charity by transferring stock worth $42,500 but subject to loan of $42,000, the loan having been obtained in anticipation of a sale by the charity to a person with whom the taxpayer had negotiated; held, transaction was in substance a sale by taxpayer for $42,500, followed by a charitable gift of $500).

3. *Statutory provisions taxing gain on excessively mortgaged property.* Section 357(c), enacted in 1954 and not applicable to the taxable years involved in either *Woodsam Associates* or *Simon*, provides for the recognition of gain on certain transfers of property (primarily in transfers to controlled corporations and in corporate reorganizations) if the property is subject to a liability in excess of its basis. A similar provision, applicable if a corporation transfers excessively mortgaged property to its shareholders, is §311(c); see also §312(j). These provisions may come into play even though the mortgage did not originally exceed the adjusted basis of the property; it is enough that there is a disparity (possibly resulting from depreciation deductions) when the property is transferred.

4. *Federal crop loans.* Federal loans to farmers under the agricultural price support program are made on the sole security of the commodities, without personal liability, and §77 permits the farmer, at his election, to report such a loan as income when received. The election protects the farmer against having "useless" deductions in the year the crop is raised, and an excessive amount of income in the year it is sold or forfeited to the government. If the taxpayer does not make an election under §77, he may be able to use any excessive business deductions arising in the year the crop is raised as part of an operating loss carryover to other years, but the election affords greater assurance that his expenses will be brought into conjunction with his receipts. An alternative way of accomplishing a similar result is the crop inventory method of reporting income. See Thompson v. Commissioner, 322 F.2d 122 (5th Cir. 1963).

Rev. 319 (1951) (by counsel for the taxpayer in the *Woodsam Associates* case); Neuhoff, Mortgaging Out and Related Problems, 1961 Wash. U.L.Q. 1.

STARR'S ESTATE v. COMMISSIONER

[See opinion in this case supra page 249.]

NOTE

1. *Sale vs. lease.* Should the manufacturer in *Starr's Estate* treat the transaction as a sale? If so, should the amounts to be received be accrued as income in the year the "lease" is executed, or only as the annual payments are received? In Rev. Rul. 55-540, 1955-2 C.B. 39, the Internal Revenue Service states that if a "lease" is determined to be a sale, "the amounts received under the contract by the vendor will be considered to be payments on the sales price of the equipment to the extent such amounts do not represent interest or other charges." If — contrary to expectation — the "lessee" does not take up his

option to acquire the property, how should the "lessor" reflect this fact on his tax returns?

See Lukins, Tax Treatment of the Lease with Option to Purchase: Is Allocation the Answer, 11 Tax L. Rev. 65 (1955).

The effect of sale-and-leaseback transactions is considered infra pages 466-470.

2. *Sale vs. loan.* Just as a lease in form may be a sale in substance, so a sale with the "vendor" retaining the right to repurchase the property may be treated as a secured loan and hence not a taxable event. In Blake v. Commissioner, 8 T.C. 546 (1947), the taxpayer avoided foreclosure of a mortgage by conveying the mortgaged property to the mortgagee and retaining an option to reacquire the property for an amount approximating the unpaid portion of the purchase price. Finding that the transaction was intended to give the taxpayer more time to satisfy the mortgage and to obviate the cost and delay of foreclosure proceedings in case of final default, the court held that the transaction was a loan rather than a sale. But in Resthaven Memorial Cemetery, Inc. v. Commissioner, 43 B.T.A. 683 (1941), a repurchase option that could be defeated by the occurrence of an event within the control of someone other than the option holder was held to be consistent with a completed sale.

3. *Easements.* If the taxpayer is paid for an easement over his real estate, is the payment taxable (a) to the extent that it exceeds the adjusted basis of the entire property, (b) to the extent it exceeds the adjusted basis of that part of the property that is most directly affected by the easement, or (c) in full, without being offset by any part of the property's basis? See Scales v. Commissioner, 10 B.T.A. 1024 (1928) (perpetual easement to flood part of taxpayer's land was granted to a levee improvement district; held, a sale of the portion of the land that was flooded by the district for 10 out of 12 months every year); Rev. Rul. 59-121, 1959-1 C.B. 212 (easement of indefinite duration granted by owner of cattle-grazing land to industrial plant for construction of a dam on part of property and for use of portions of land to dump waste; held, taxpayer's retention of mineral rights, etc., means that transaction is not a sale of part of the land, with result that amount received is to be applied against basis of property subject to easement, any excess over basis being taxable income); Rev. Rul. 60-170, 1960-1 C.B. 357 (payments received by farmers from neighboring steel plant for damage from fumes, gases, etc. held to be "rent," for purposes of self-employment tax).

See also the *Inaja Land Co.* case, supra page 68.

4. *Amounts received for options.* If the taxpayer receives payment for an option under which the optionee can purchase the taxpayer's property (e.g., a "call" on corporate securities) at a stipulated price for a limited period of time, Rev. Rul. 58-234, 1958-1 C.B. 279, provides that the transaction is not closed until the option is either exercised (in which event the "amount realized" in computing the taxpayer's gain or loss is the sum of the amount received for the option and the amount received on its exercise) or is allowed to expire (in which event the amount received for the option is reported as income at that time). Similarly, if the taxpayer is paid for agreeing to buy the optionee's property at a stipulated price within a specified period of time (a so-called "put"), he realizes income if the option expires without exercise; if it is exercised, his "cost" for the property is the amount he pays less the amount he previously received on granting the option. Although Rev. Rul. 58-234 is primarily concerned with "puts" and "calls" on marketable securities, it apparently applies to options covering any type of property; nor does the ruling appear to be restricted to options for the short terms (e.g., 30 days up to one year) that are typical in the "put" and "call" market. See also Commissioner v. Dill Co., 294 F.2d 291 (3d Cir. 1961).

See Bennion, Current Developments in Tax Planning with Securities Transactions: "Puts"; "Calls"; "Straddles"; "Short Sales"; "Arbitrage," 1961 So. Calif. Tax Inst. 489.

COMMISSIONER v. OLMSTED INC. LIFE AGENCY

304 F.2d 16 (8th Cir. 1962)

Before VOGEL and RIDGE, Circuit Judges, and DEVITT, District Judge.

VOGEL, Circuit Judge.

The Commissioner of Internal Revenue, petitioner herein, seeks review and

reversal of a decision by the Tax Court of the United States holding that Olmsted Incorporated Life Agency, respondent, did not realize taxable income upon the receipt by it in 1956 of a contract whereby it was to be paid monthly payments for a period of fifteen years in consideration for its surrender of all rights to future renewal commissions on previously written life insurance policies.

The facts, mainly stipulated, are not in dispute. Respondent is an Iowa corporation having its principal place of business in Des Moines, its main activity, beginning June 15, 1929, being that of exclusive general insurance agent in the State of Iowa for the Peoples Life Insurance Company of Frankfort, Indiana (hereinafter Peoples). The original agency contract between respondent and Peoples was signed on respondent's behalf by Oliver C. Miller, its president and principal stockholder who died in 1957. Two or three years prior to 1956, Peoples, because of its desire to develop insurance sales in Iowa by dividing the state into smaller territories, indicated its wish to terminate its exclusive contract with respondent. Under that contract Peoples was paying more favorable commissions to respondent than it was paying to other agencies under contracts executed subsequent to 1950. Miller did not at first accept Peoples' proposal, but subsequently, because of failing health, he did enter into a new agreement whereby the old agency agreement between respondent and Peoples was canceled as of midnight December 31, 1955. Under the terms of the new agreement, respondent assigned to Peoples all of its rights in and to renewal commissions earned and payable after January 1, 1956. Respondent and its three stockholders agreed not to sell life insurance contracts for any other than Peoples within the State of Iowa. Respondent agreed to turn over to Peoples all papers, documents and records pertaining to its business, and Peoples agreed to issue, payable to the order of respondent or to such person or persons as respondent might direct, an annuity or annuities calling for a total payment of $500 per month beginning February 1, 1956, for a total of 180 months. Peoples based the total amount of consideration it would pay to respondent under the new agreement upon the present value of respondent's renewal commissions that would be due after January 1, 1956. As a further consideration, Peoples agreed to pay the agents theretofore employed by the respondent such renewal commissions as might be required by their contracts with respondent.

In its 1956 corporate income tax return respondent reported $5,500, being the total of payments actually received that year pursuant to the new contract. The Commissioner determined a deficiency in the respondent's return for 1956 in the amount of $27,009.34, taking the position that the entire fair market value ($67,924.47) of the new contract, whereby respondent gave up its rights to future renewal commissions and received in place thereof a fixed income over a period of fifteen years, should have been included in respondent's gross income for the year 1956. The Tax Court, in 35 T.C. 429, rejected the Commissioner's contention, holding that the case was ruled by James F. Oates, 18 T.C. 570, affirmed in Commissioner v. Oates, 7 Cir., 1953, 207 F.2d 711. . . .

The Commissioner relies on Bueltermann v. United States, 8 Cir., 1946, 155 F.2d 597, and Herbert's Estate v. Commissioner, 3 Cir., 1943, 139 F.2d 756, certiorari denied 322 U.S. 752, as support for his contention that there was a "sale or other disposition" within the meaning of Section 1001, supra. However, it should be noted that in both of the cases cited there was a transfer of property involved. In *Bueltermann*, a lease required the lessee to erect a building. The lessor died and devised the rights and land to the taxpayer. The lessee breached the contract, and the taxpayer, in accordance with provisions therein, took over the land including the building that the lessee had erected thereon. It was stated there that the phrase "sale or other disposition of property" was sufficiently

broad to include such transaction within the meaning of [§1001(a)].* However, the factual situation there involved has no applicability here.

In *Herbert's Estate,* where the decedent had a claim for $531,817.75, though the fair market value of said claim at the time of decedent's demise was $200,191.-90, and where recovery on the claim to the extent of $295,803.61 was made, it was held there was a gain of some $95,000. In that case, the court said the issue was whether there was "a disposition" under Section 1001 where one receives payment for a claim he has against another. The court answered in the affirmative. However, there the money was received. That is not the situation before us. Payment here (other than the $5,500 received in 1956 and included in respondent's report) is absent. All that has occurred is the exchange of one contract for another, the principal change therein being the rate of payment. . . .

Inasmuch as the Tax Court held this case to be controlled by *Oates,* supra, and the Commissioner seeks to distinguish that case,[1] detailed consideration is indicated to determine its applicability.

In *Oates,* the taxpayers were general insurance agents who, at retirement, amended their agency agreement with the insurance company by providing that future renewal commissions should be paid to them in specified equal monthly amounts over a fifteen-year period irrespective of when and in what amounts the renewal commissions would have become due and payable under the original agency contract. The obvious reason was that under the taxpayers' old contracts, the bulk of their renewal commissions would be collected by them in the first years after retirement and toward the end of the ninth year collections would dwindle off to little or nothing. Thereafter, and in accordance with the election given by the amended contract, the taxpayers elected to receive their payments in equal amounts over a fifteen-year period with a provision for a lump sum final payment if anything remained in the agents' renewal commission account. The Commissioner determined that the taxpayers there were taxable on the renewal commissions as they accrued under the terms of the original agency contract prior to its amendment. In rejecting the Commissioner's contention, the Tax Court in 18 T.C. 570 said that the taxpayers

> . . . under their amended contracts which were signed prior to their retirement . . . were not entitled to receive any more than they did in fact receive and that being on the cash basis they can only be taxed on these amounts [actually received] and that the remainder will be taxed to them if and when received by them. [18 T.C. at 585.]

By unanimous decision, the Seventh Circuit affirmed the Tax Court. In doing so, that court said that the amended contract was a novation, that the old contract was extinguished, and that the taxpayer had no right to demand any additional compensation other than that which was listed in the new contract. Then after discussing Massachusetts Mutual Life Ins. Co. v. United States, 1933, 288 U.S. 269, as support for its affirmance of the Tax Court, Judge Lindley, referring to cases relied upon by the Commissioner wherein each taxpayer had "effectually

---

* In the *Bueltermann* case, the government argued that the value of the building erected by the lessee was taxable income to the lessor under the *Bruun* case when the lease was terminated because of the lessee's default in performance. The taxpayer's claim — upheld by the court — was that the transaction constituted a "sale or other disposition" of his inherited interest in the property, that this interest had a basis equal to its value on the date of his father's death, and that he realized no gain because the value of the property received was less than the adjusted basis of the property he gave up. — ED.

1 We are advised that on February 1, 1960, the Commissioner withdrew his 1952 non-acquiescence in this decision and substituted his acquiescence therefor. [Rev. Rul. 60-31, 1960-1 C.B. 174, 180.]

received the accrued income with which he was charged," said at pages 713-714 of 207 F.2d:

> This case is far removed from such decisions. Here the parties were confronted by a situation where inconvenience and resulting dissatisfaction came to the retired agents by reason of the constantly decreasing payments made by the company under the original contract. To relieve the situation, the company and the taxpayer, after full and complete negotiations, before retirement of the agent, agreed to abrogate and annul the old contract, to substitute a new one and thus to improve the unsatisfactory posture of affairs. *The taxpayer did not reduce to his immediate possession or to his present enjoyment anything that might thereafter accrue to him. He made no assignment; he took no dominion over the accrued commissions other than to agree to receive them in cash installments as they matured under the contract. He did nothing to charge himself with the economic benefit to be derived from the accruing commissions but, on the contrary, let them accumulate under an agreement whereby the company was to pay the same amount every month rather than constantly decreasing amounts.* (Emphasis supplied.)

We think the Tax Court shows sound basis for its reliance on *Oates*, convincingly pointing out its applicability here. Just as cogently has the Tax Court pointed out the insignificance of the distinguishing factors the Commissioner considers to be of importance. It said at pages 434-437 of 35 T.C.:

> Respondent seeks to distinguish the *Oates* case by arguing that in that case the contract was not transferable and the rights thereunder nonassignable, while here the petitioner's rights to the periodic payments were assignable. We cannot conceive what difference in principle this would make. Also in the *Oates* case the rights and interests under the contract were subject to assignment with the written consent of the insurance company, and a careful examination of the amendment to the general agent's contract indicates quite clearly that the periodic payments to the taxpayers were "subject to the rights of any assignee."
>
> Respondent also makes much of the testimony that Peoples was ready in December 1955 to pay the commuted value of the renewal commissions to petitioner in a lump-sum payment. The Executive Officer of Peoples testified that "We told him he could have it either way but we decided upon the annuity. We knew that Mr. Miller wanted to prolong his income." It would seem from this that Peoples decided upon the annuity. However, even if the choice were up to petitioner, it is clear that he had no right to demand cash as of December 1955. Nothing was due and payable at that time. The parties were simply bargaining for a suitable agreement and it is this agreement, which was bona fide and legally binding, that determined the rights of petitioner in 1956.
>
> Respondent seeks to distinguish the *Oates* case in that there the agency agreement was only amended while here it was extinguished and a new contract executed. Also in the *Oates* case the contract amendment merely bound the insurance company to pay the agents their renewal commissions (over 15 instead of 9 years) while here the new contract extinguished petitioner's old contract and gave the agent an annuity for 15 years.
>
> The contract amendment in the *Oates* case was virtually a new contract. We called it that in our opinion. In the affirming opinion in Commissioner [of Internal Revenue] v. Oates, supra, the court stated: "The amended contract was in the nature of a novation, that is, a substitution of a new agreement or obligation for an old one which was thereby extinguished." . . .
>
> The fact that here the new contract was an annuity and in the *Oates* case it was not, points up no difference that would warrant different tax treatment. In both, the deferred payments were computed to return to the agents their future renewal commissions. The only difference is that in the *Oates* case the company set up a renewal commission account for the agents on its books and made disbursements to the agents from these accounts. Here the company received the full renewal premiums without deduction for commissions and paid the agent what would be his commissions from its general funds. It is of passing interest to note the insurance official here testified Peoples actually did set up a ledger account of petitioner's renewals "just to see how we would come out on this thing" and he added "so far we are all right." . . .

What was said in *Motor Products Corporation*, supra, [1942, 47 B.T.A. 983, affirmed 6 Cir., 1944, 142 F.2d 449] can be said here. The insurance company's obligation to pay petitioner his future renewal commissions was the obligation of the old contract. When this was canceled and the new contract executed the insurance company had substantially the same obligation to pay the same party the same amounts of the agent's commissions on future renewals. The only change here was the change in payment dates which, as held in the cited cases, is immaterial on the issue we are considering.

We hold there is no significant difference in the facts between this case and the *Oates* case and the same rule applies, to wit: The periodic payments are taxable to petitioner as ordinary income under the annuity contract when and if received. There was no "sale or other disposition" of the agent's right to renewals under the agency contract within the meaning of section 1001(b), I.R.C. 1954, and petitioner realized no gain taxable under said statute.

We agree with the Tax Court in its conclusion that there was no "sale or other disposition" within the meaning of Section 1001, and that the new contract merely provided for a different rate or manner of payment whereby the insurance company could discharge its liability under its agency contract.

The Commissioner's alternative argument here is that even if there is found to be no sale or other disposition within the meaning of Section 1001, this is an annuity contract and that to the extent of its fair market value, such contract constituted gross income to the respondent under the provisions of Section 61. In support of his argument, the Commissioner cites Oberwinder v. Commissioner, 1945, 147 F.2d 255, a case from the Eighth Circuit, as controlling. He also lists United States v. Drescher, 2 Cir., 1950, 179 F.2d 863, certiorari denied 340 U.S. 821; Hackett v. Commissioner, 1 Cir., 1946, 159 F.2d 121; Hubbell v. Commissioner, 6 Cir., 1945, 150 F.2d 516; Percy S. Lyon, 1954, 23 T.C. 187; and Renton K. Brodie, 1942, 1 T.C. 275, as clearly establishing "that receipt of a valuable commercial annuity contract in lieu of compensation (or in lieu of renewal commissions, as in the case at bar) is the equivalent of cash for tax purposes and constitutes taxable income in the year of receipt, to the extent of the fair market value thereof." However, analysis of those cases points up that the court, in each, relied upon a factor absent herein — in each of those cases an employer had paid out, and deducted for that year, money to an insurance company for an annuity for the employees as added compensation. The courts there held that the amount paid out in that year was for the benefit of the employee, and therefore the employee was taxable to that extent, though he had not yet received any payment under the annuity. In the case before us, there is, of course, no payment made by Peoples, no deduction claimed by Peoples, no intended compensation from Peoples to the taxpayers for employment other than what had already been earned. There is, on the other hand, consideration running both ways in that Peoples obtained a cancellation of the exclusive territorial contract held by respondent, as well as respondent's promise to sell for no one but Peoples in the State of Iowa, and respondent received the new contract with its payments distributed evenly over a fifteen-year period. All that was intended here, as found by the Tax Court, was to substitute one contract for another — in other words, a novation. At no time was respondent in a position to demand more than the stipulated monthly payments. It did not reduce future payments to possession. It did not assign the contract. It did nothing to indicate it had assumed dominion over the installments to be made in the future.

We hold with the Tax Court that this cash basis taxpayer is to be taxed only on the payments as it receives them in accordance with the new agreement.

Affirmed.

NOTE

1. *Sale vs. novation.* The Tax Court found that the taxpayer was on the cash basis of accounting. Was this relevant to the outcome of the case? See page 783 infra. Did the government's case rest on the fact that the 1955 contract was called an "annuity" by the parties and called for payments by a life insurance company? Assume that a client owes a law firm $10,000 for services rendered, and that they subsequently agree that payment shall be made at the rate of $2500 annually for four years. Would a government victory in the *Olmsted* case have required this arrangement to be treated as a taxable disposition of the original claim?

Would it have been appropriate to treat the *Olmsted* transaction as a "sale" by the taxpayer of a going business? What if the original contract had been assignable and the taxpayer had transferred its rights to a third party for $90,000, to be paid at the rate of $500 per month for 180 months?

2. *Securities: refunding operations and conversions.* The exchange of defaulted bonds for new instruments in a refunding operation is treated as a non-taxable event if the terms of the new bonds are substantially the same, except for the maturity date, as those of the surrendered bonds. West Missouri Power Co. v. Commissioner, 18 T.C. 105 (1952). and cases there cited. In a series of rulings, the Internal Revenue Service has also held that the exercise of a conversion privilege contained in convertible securities is a non-taxable event ("a transformation of the [securities] pursuant to a right contained therein rather than a disposition thereof"). Rev. Rul. 57-535, 1957-2 C.B. 513. These rules rest on the theory that there has been no sale or other disposition of the original securities (no "closed transaction"), rather than on any one of the many explicit "non-recognition" provisions (infra page 466) that are applicable to exchanges of corporate stock and securities. See also Regs. §1.1001-1(a), speaking of a conversion of property into cash or "the exchange of property for other property differing materially either in kind or in extent."

3. *Constructive receipt.* On the doctrine of constructive receipt, see pages 780 et seq. infra.

SECTION B. UNADJUSTED BASIS

Section 1012, providing that (unless otherwise provided) the basis of property shall be its "cost," is identical with §113(a) of the 1939 Code.

ALBANY CAR WHEEL CO., INC. v. COMMISSIONER
40 T.C. 831 (1963)

RAUM, Judge: On June 9, 1955, petitioner acquired by purchase the operating assets of a corporation [the "Old Company"] engaged in the business of manufacturing and selling chilled iron wheels. The Commissioner's adjustments here in issue relate to his reduction in the basis of the assets thus acquired, which in turn resulted in a disallowance of part of the cost of goods sold as well as in a reduction of the depreciation allowance. The total reduction in basis presently in dispute is $46,089.05.

The starting point in this case is Section 1012 of the 1954 Code which provides that "The basis of property shall be the cost of such property . . . [except in certain situations not applicable here]." Accordingly, the decisive question before us is: what did petitioner pay for the assets that it acquired from the Old Company?

According to the stipulation of facts and the evidence before us, petitioner paid $15,000 in cash on a note to the Old Company, and assumed certain specified liabilities of the Old Company in the net amount of $74,360.35. The Commissioner insists that the sum of these two figures, namely, $89,360.35, represents

the "cost" of the assets purchased. Petitioner, on the other hand, claimed a cost of $137,543.95, which was the book value of the assets in the hands of the Old Company. Petitioner undertook to support its higher cost basis by contending that, in addition to the foregoing $89,360.35 which it paid for the assets in the manner described, it also assumed an obligation of the Old Company for severance pay to its employees under a Union contract, that such obligation was equal to at least the difference between the $89,360.35 and the book value of the assets in the hands of the Old Company, and that it therefore represented an additional item of cost for the assets which it thus acquired. We disagree. We hold that although petitioner did in fact procure the cancellation of the Old Company's contingent liability in respect of severance pay by executing a new and different type of contract with the Union, petitioner's obligation under the new contract was of such contingent character that it could not be considered part of the cost of the assets which it acquired, and that any such obligation which might actually result in a fixed liability in a later year may properly be taken into account in petitioner's behalf as a deduction in such later year.

The Old Company's contract with the Union provided that, upon permanent closing of the plant, employees with from one to five years of service were to be allowed four weeks' severance pay and employees with five or more years of service were to be allowed eight weeks' severance pay. It had 111 employees in 1955, and when Cooley [taxpayer's president] was negotiating for the purchase of the assets, he was naturally concerned about any liability that might result in respect of severance pay, particularly since the chilled iron wheel industry was moribund. Indeed the evidence shows that he had calculations made showing that if the plant were to close at that time, the liability for severance pay would be approximately $48,000 in respect of the employees then working for the Old Company. Had the petitioner assumed fixed obligations in any such amount we would agree that such assumption would constitute a part of its cost of the assets acquired. But that is not what occurred.

In the first place, and perhaps of lesser importance, the Old Company's contract in respect of severance pay spelled out a liability to employees as of the time of closing. There was no liability for severance pay in respect of those employees who had died or who voluntarily terminated their employment.[1]

In the second place, and of greater significance here, petitioner did not assume the Old Company's liabilities in respect of severance pay. While it is true that Section XXII of petitioner's new agreement with the Union recites that "The Union recognizes that by entering into this Agreement the present Company has in effect assumed substantially the same obligations to the Union and to the employees as those which had been undertaken by the predecessor Company," the fact is that petitioner did not assume the Old Company's obligations and that its own obligations under the new contract were radically different from those of the Old Company.

Petitioner's obligations, set forth in Section XIV of the new contract, revolved primarily around notice. Under these provisions petitioner's liability to its employees at the time of permanent closing of the plant could be met by giving six weeks' written notice to employees with from one to five years of service and 12 weeks' written notice to employees with five or more years of service. Petitioner

1 Thus, of the 111 employees in 1955, only 58 remained in 1960 when the plant was actually closed, and if petitioner had in fact assumed the Old Company's obligations under the contract in force in 1955, its contingent liability in respect of the 111 employees would have become fixed only as to 58 of them. And of course, any liability to employees hired after petitioner began business could not properly be regarded as part of the cost of the assets acquired from the Old Company.

was liable for severance pay under the new contract only where it failed to give the specified notice. And the record shows that when petitioner in fact determined to close its plant in 1960 it gave the required notice to its employees. As a consequence, it paid their wages for work performed during the 6 or 12 week periods prior to closing, but they received no severance pay whatever. Those wages were deducted in petitioner's 1960 income tax return, in determining cost of goods sold in that year. Petitioner recognizes that it cannot have it both ways — i.e., it concedes that if it is entitled to have severance pay included as part of the cost of assets acquired in 1955, the deduction for wages paid in 1960 must be reduced by a like amount. However, we think that petitioner's method of reporting for 1960 was correct, that the wages paid in that year during the notice period prior to closing were properly deductible in 1960, and that they were not in any part a component of the "cost" of the assets acquired in 1955.

Of course, there was always the possibility that petitioner might become liable for severance pay, if, for example, the plant should burn down and the employees were thrown out of work without having received the required notice. But petitioner protected itself against this contingency by insurance, and the premiums paid therefor were plainly deductible as a business expense. We think that petitioner's liability for severance pay, in view of the notice provisions, was so speculative that its obligations under the Union contract cannot fairly be regarded as part of the "cost" of the assets acquired from the Old Company. To the extent that any liability might accrue in a later year as a result of that contract, payments thereunder may properly be taken into account at such later time; they may not be used to increase the cost of goods sold in an earlier year or to increase the amount of the depreciation allowance for such earlier year. . . .

NOTE

1. *Inclusion of indebtedness in cost basis.* Would the result have been different if the taxpayer had assumed its predecessor's obligations under the original contract? If it had assumed these obligations and then paid a lump sum to all of the employees to obtain a release of the assumed obligations? On acquiring its predecessor's business, the taxpayer agreed (as is not uncommon on the purchase of a going concern) to assume and pay the obligations listed in a schedule attached to the contract (trade accounts payable, accrued taxes and wages, etc., for which it received credit in computing its cost) as well as "all liabilities and obligations whether or not reflected on the books of the [Old Company] which may arise or have arisen from the operations of [its] facilities at [a named plant] up to the date of the closing." If the latter clause required the taxpayer to pay the claims of injured workmen, dissatisfied customers, etc., would the amounts claimed by the injured persons, the amounts actually paid, or the estimated settlement "value" of such claims be includible in the taxpayer's "cost" for the business? The contract also provided that the taxpayer was not to be liable for the Old Company's federal or state income taxes. If this provision, though binding between the parties to the contract, did not protect the purchaser against liability to the United States as "transferee" of the Old Company's assets (see p. 929 infra), could the taxpayer's potential liability to the United States for its predecessor's unpaid taxes be included in its "cost" if reimbursement by the predecessor was unlikely because of its absence from the jurisdiction, financial difficulties, or other cause?

In the *Albany Car Wheel Co.* case, the Internal Revenue Service itself acknowledged that the taxpayer's "cost" under §1012 included about $75,000 of specified liabilities that were assumed under the contract. Even if the taxpayer had not assumed these liabilities, they would be includible in its "cost" basis for the property if it had taken the property subject to them. See Parker v. Delaney, infra page 463 (taxpayer paid nothing for property, but took it subject to a mortgage; held, his "cost" was the amount of the mortgage).

It is not yet clear, however, whether the full amount of an unassumed liability enters into the taxpayer's cost if it exceeds the fair market value of the property.

2. *Purchase commissions.* For many years the Regulations have provided that commissions paid in purchasing securities are a part of the cost price of such securities. Regs. §1.263(a)-2(e). This provision of the Regulations was upheld in Helvering v. Winmill, 305 U.S. 79 (1938), against the contention of the taxpayer that the commissions were compensation for personal services deductible under §162(a)(1). The Court rested its decision largely on the fact that the provision was a long-standing administrative interpretation that presumably had received Congressional sanction. Even apart from the Regulations, should the commissions have been capitalized rather than deducted? What is the status of finders' fees, brokerage commissions, and similar expenses incurred in connection with other types of property? Should the salary of a corporate purchasing agent be capitalized as part of the cost of the materials he buys? If the president of a corporation spends part of his time planning and supervising the construction of a new plant, should an appropriate portion of his salary be capitalized instead of being deducted? See Rev. Rul. 59-380, 1959-2 C.B. 87, ruling that depreciation may not be taken on construction equipment employed in making capital improvements to the taxpayer's own property, and that the depreciation in question should be treated as part of the cost of the improvements, to be recovered by depreciating the improvements; cf. Great Northern Ry. Co. v. Commissioner, 30 B.T.A. 691 (1934) (contra).

3. *Inclusion of cost of collateral or related property.* If property is acquired by exercising an option, the transaction is not regarded as a taxable disposition of the option itself, but the "cost" of the property presumably includes both the cost (or other basis) of the option and the additional amount paid when it is exercised. Helvering v. San Joaquin Fruit & Investment Co., 297 U.S. 496 (1936) (alternative contention); Stires Corp. v. Commissioner, 28 B.T.A. 1 (1933). A somewhat analogous line of cases permits a taxpayer engaged in subdividing real property to include the cost of water and sewage systems in its basis for the buliding lots, even though these systems are not sold to the purchasers of the lots, if the systems are constructed to enhance the value of the lots and if the taxpayer's retained rights to the utilities are of minimal value or constitute a burden rather than a benefit. See Willow Terrace Development Co. v. Commissioner, 40 T.C. 689 (1963), and cases there cited.

4. *"Tax cost."* Property that is includible in the taxpayer's income on acquisition (e.g., stock received by an employee as compensation) is treated as having a "cost" equal to its fair market value at the time of acquisition (sometimes referred to as "tax cost"), at least if the taxpayer properly reported it. Even if he neglected to report it, however, there is authority for allowing him the benefit of the proper basis, since his use of this basis in the year the property is sold will ordinarily permit a deficiency to be assessed for the year of acquisition, despite the running of the statute of limitations, under §§1311-1315. See Bennet v. Helvering, infra page 869; Regs. §1.1312-6, Example (1)(ii). Query: what is the basis of property received as compensation that was not includible in income when acquired because the taxpayer was then a nonresident alien, or that was acquired when the taxpayer was entitled to the $20,000 or $25,000 exclusion of §911(a) (bona fide residence or extended physical presence in a foreign country)?

The property's "cost" may be a combination of a cash outlay and an amount included in income: e.g., when the taxpayer in the *LoBue* case, supra page 41, sells his stock, its basis will be his cash outlay plus the "spread" at the time the option was exercised.

5. *Property acquired by relinquishing a claim.* In the *Davis* case, supra page 432, the Court held that Mrs. Davis' basis for the shares transferred to her was their market value. This conclusion evidently did not rest on the assumption that the shares were includible in *her* income on acquisition, thus giving her a "tax cost"; instead, the Court seems to regard the value of the marital rights she surrendered to acquire the stock as her cost, and to derive the value of the rights by looking to the value of the stock, in keeping with its theory that the rights and the shares can be assumed to be equal in value. See also *Farid-es-Sultaneh,* supra page 133. The same approach would seem appropriate in determining the basis of property acquired in settlement of a claim for personal injury, if the value of the taxpayer's rights is not susceptible to direct measurement and he has no "tax cost" because the property is not includible in income upon acquisition.

6. *Exchange of properties of unequal value.* In the *Davis* case, the Court used the value of the stock to ascertain the "amount realized" by Mr. Davis (i.e., the value of the marital rights): "Absent a readily ascertainable value it is accepted practice where property is exchanged to hold, as did the Court of Claims in Philadelphia Park Amusement Co. v. United States . . . that the values 'of the two properties exchanged in an arm's length transaction are either equal in fact, or are presumed to be equal.'" But what if both properties have a readily ascertainable value, and their values are unequal? Consider these possibilities:

(a) A exchanges property worth $100,000 for stock worth $75,000 but falsely represented as worth $100,000.

(b) B exchanges property worth $100,000 for stock that is worth $100,000 to him (because when added to other shares he already owns, it will give him control of a corporation), but that is worth only $75,000 to other persons (using stock market quotations to determine value).

(c) C exchanges property worth $100,000 for real estate worth $75,000, the excess being paid because the property is his family's ancestral home or because he wants to forestall Negro occupancy.

Would the "cost" of the properties in the foregoing cases be $100,000 or $75,000? If the latter, could the $25,000 "gap" be reflected for tax purposes in any way? Would the result be different if in each case the taxpayer had paid $100,000 in cash for the property, rather than exchanging other property?

There may be a disparity in values when properties are exchanged because the transaction is not "merely" an exchange. Thus A may exchange property worth $100,000 for property worth $75,000 because he wishes to make a gift of the difference to the transferee. For the effect of such a part-sale-part-gift, see Regs. §1.1001-1(e) (transferor's gain or loss) and §1.1015-4 (basis to transferee). Taxpayers sometimes sell appreciated property to charities for an amount equal to the property's adjusted basis (thus avoiding the recognition of gain), and deduct the excess of value over the sales proceeds as a charitable contribution. See Potter v. Commissioner, 38 T.C. 951 (1962). There are a number of other situations in which property is sold or exchanged for less than its fair market value: the "spread" may be an indirect method of compensating an employee, paying a dividend to a shareholder, making a contribution to the capital of a corporation, settling a family dispute, paying a business debt, etc.

7. *Identification of property sold.* If the taxpayer owns fungible property that was acquired in separate lots at different times and prices, how is his gain or loss (and, when relevant, his holding period) on a sale of the property to be determined? If the property is includible in inventory (e.g., merchandise held for sale to customers in the ordinary course of business), the taxpayer's inventory method will be controlling; ordinarily, gain or loss will be computed on the assumption that the items acquired first are sold first ("FIFO"), but some other method of matching costs against receipts may be applicable. (See page 811 infra.) If the property is not includible in inventory (e.g., securities held by an investor), the taxpayer may pick and choose among his certificates and thus control, within limits, the tax consequences of a sale. If he cannot adequately identify the certificates delivered for sale, however, his basis and holding period are to be determined on the first-in-first-out principle. Regs. §1.1012-1(c); see also Haynes v. Commissioner, 17 T.C. 772 (1951). Sometimes stock acquired at different times or prices is represented by a single certificate, because the original certificates were surrendered in a merger, destroyed by fire and replaced by the corporation, etc. In such cases, it is not clear whether a taxpayer who can establish the facts may announce that he is selling shares acquired at one price rather than those acquired at a different price. Compare Bloch v. Commissioner, 148 F.2d 452 (9th Cir. 1945), with Fleischmann v. Commissioner, 40 B.T.A. 672 (1939); see also Rev. Rul. 56-653, 1956-2 C.B. 185. It is also unclear in such cases whether, when identification is impossible, the cost of the shares sold is to be determined on the first-in-first-out or the average cost principle. See Arrott v. Commissioner, 136 F.2d 449 (3rd Cir. 1943); but cf. Curtis v. Helvering, 101 F.2d 40 (2d Cir. 1939). See also Regs. §1.1012-1(c)(3) and Rev. Rul. 61-97, 1961-1 C.B. 394, providing that adequate identification is made when a taxpayer directs a broker who holds securities for him to sell specific shares and receives confirmation from the broker; and Regs.

§1.1012-1(c)(4), providing that a fiduciary who holds shares with different bases and holding periods may preserve these characteristics for the distributees by appropriate red tape, regardless of what certificates are actually distributed. See Colgan, Identification of Securities Sold or Transferred, 18 N.Y.U. Inst. on Fed. Taxation 323 (1960).

8. *Allocation of basis.* Property is often acquired in a single transaction but disposed of piecemeal. When this occurs, the cost (or other basis) for the whole must be allocated among the parts. A common example is the subdivider who acquires a large tract of land and sells off small lots; he must allocate his cost among the lots in proportion to their market values. If the lots are fungible, the allocation may be based on size alone, but location or other elements of value may require the cost to be allocated in a different manner, and resort may be had to assessments, appraisals, purchase offers, resale prices of similar property, etc., in establishing the proper allocation. The relative values are to be determined as of the date of acquisition, disregarding later shifts in relative values; the cost of later improvements that benefit the entire tract, however, might have to be allocated in a different proportion from the original cost, if the separate lots do not receive the same relative benefit from the improvements. See Fairfield Plaza, Inc. v. Commissioner, 39 T.C. 706 (1963); Ayling v. Commissioner, 32 T.C. 704 (1959); Regs. §1.61-6(a). Another common example of the allocation of the taxpayer's cost basis is the acquisition of a going business for a lump sum; see discussion in the note following Williams v. McGowan, infra page 570.

If the taxpayer sells a partial interest in property and cannot establish a reasonable method of allocating his basis, is the entire amount received taxable because the relinquished interest has no basis, or is it a return of capital, taxable only to the extent that it exceeds the basis of the entire property? See Inaja Land Co. v. Commissioner, supra, page 68; but query the result if the taxpayer had sold the land, retaining only the right to fish; see also Black v. Commissioner, 38 T.C. 675 (1962).

If property that has been acquired piecemeal is sold in a single transaction, it will ordinarily not matter whether gain and loss is computed item by item or for the lot as a whole. Where a difference would arise (e.g., if the capital gain and loss provisions are applicable and the items have different holding periods; or if the buyer is a related person so that losses are non-deductible under §267(a)(1) but gains are taxable, supra page 415), it is necessary to apply §1001 to the individual items separately. In Paul v. Commissioner, infra page 591, the theory of separate transactions was applied to the sale of a recently constructed building, the taxpayer being allowed to show that part of his gain was attributable to construction more than six months before the sale, so as to report long-term rather than short-term capital gain on that part of his profit.

9. *Basis other than cost.* There are many exceptions to the general principle, embodied in §1012, that the basis of property is its "cost." If a taxpayer sells a residence at a profit and buys a second residence within a year of the sale, the basis of the second residence is determined by reference to the basis of the first rather than solely by its cost, infra page 473; and a "substituted basis" * is similarly employed if the taxpayer acquires property to replace other property lost by an involuntary conversion (fire, theft, condemnation, etc.), infra page 471, if he engages in a "wash sale," see §1091(d), or if he exchanges property for other property of a like kind in a transaction meeting the requirements of §1031. The Code also prescribes a basis for property that has no "cost," e.g., property acquired from a donor or a decedent, §1015 and §1014, supra pages 102 and 146.

See also page 245 supra for the basis of property acquired for personal use and subsequently converted to a business purpose; and §1053, for the basis of property acquired before March 1, 1913.

Special basis rules are also applicable to many transactions involving the organization, reorganization, and liquidation of corporations; see generally Chapter VII.

10. *Reference.* Greenbaum, The Basis of Property Shall Be the Cost of Such Property: How Is Cost Defined? 3 Tax L. Rev. 351 (1948).

* For this term, see §1016(b).

Section C. Adjusted Basis

Section 1016, providing that the basis of property shall be adjusted for improvements, depreciation, etc., is identical in basic principle with §113(b) of the 1939 Code, but there are some differences in detail.

COMMISSIONER v. SUPERIOR YARN MILLS, INC.
228 F.2d 736 (4th Cir. 1955)

Before Parker, Chief Judge, Soper, Circuit Judge, and Bryan, District Judge.

Bryan, District Judge.

On its petition for a redetermination of deficiency assessments of income and excess profits taxes for 1944, 1945 and 1946, Superior Yarn Mills, Inc. has been allowed by the Tax Court to increase from $243,000 to $316,000 — an added $73,000 — the sum originally allocated by the taxpayer as the cost basis of the depreciable items of the plant it purchased in 1929 for $500,000. In framing an order to effectuate the Tax Court's conclusion, under its Rule 50, 26 U.S.C. §7453, the Commissioner of Internal Revenue insisted that for use in 1944 the new cost base must be adjusted by deduction of the amount of depreciation theretofore allowed for the period 1929 to 1944, as well as of the sum allowable over the same years for depreciation on the cost-accession [$73,000]. Contra, the taxpayer contended that to find the adjusted cost basis for 1944, the only depreciation deductible was the amount which had actually been allowed for the 1929-1944 depreciation — that no deduction could be made in those years for depreciation of the [$73,000] increment.

[Somewhat simplified, the facts were: In 1929, the taxpayer paid $500,000 for an industrial plant (consisting of machinery, buildings, water power equipment, land, and certain riparian rights to use the water of an adjacent river for power). In 1934, it allocated this payment among the constituent assets, assigning $243,000 to the depreciable property. In 1945, on the basis of a report by a tax consultant, the taxpayer reallocated the original cost of $500,000, assigning about $485,000 to the depreciable property. The taxpayer used the 1945 allocation in computing its 1944-46 depreciation deductions, as well as in computing losses on abandonment of certain of the depreciable assets in the years 1944-1946. The Internal Revenue Service asserted deficiencies for 1944-1946 based on use of the 1934 allocation. The Tax Court rejected both allocations, and held that about $316,000 of the $500,000 cost should have been assigned in 1929 to the depreciable assets.

[Having held that the cost, or unadjusted basis, of the depreciable assets was $316,000, the Tax Court then held that their adjusted basis as of 1944 was this amount less the depreciation deducted during the period 1929-1943. The taxpayer and the government accepted the Tax Court's determination of cost (i.e., $316,000), but the government appealed on the ground that this amount should be reduced by the depreciation that would have been deducted if the proper allocation had been made in 1929. After holding that the government had not waived this point by failing to raise it before the Tax Court at the proper time, the court addressed itself to the substantive issue.]

II. The Tax Court has held that the new cost base could not be made effective from 1929 for computing depreciation, but that it was usable for that purpose only for 1944 and later years. This meant that the old cost figure would be the basis for ante-1944 depreciation and that no depreciation was "allowable" from

1929 to 1944 against the addition [$73,000] made to the cost in the new base. The Court reasoned that "not having been known, the bases may not be revised by a retroactive application of the Court's decision." Related to this conclusion of the Court are two of the propositions pressed by the taxpayer. Superior contends that it should not be charged with depreciation on the increase prior to 1944 because the increase was not then known, and for this argument, it draws on the implication of Treasury Regulations [§1.1016-3(a)(1)(ii)], to the effect that a taxpayer is held to allowable depreciation, if exceeding the allowed, only when the allowability appears from "facts reasonably known to exist at the end of such year or period." The taxpayer's other proposition is that the Tax Court cannot depreciate the increase during 1929-44 for that would constitute forbidden retroactive depreciation.

The duty of the Tax Court on the petition for redetermination was to declare the adjusted cost bases for 1944-46, respectively. In so doing it was bound to adhere to the statute and regulations. As we see it, the statute required the Court to start with the original cost; and the regulations required, in the circumstances here, that the cost "should be the value of the depreciable property at the time of acquisition." Thereafter, the statute directed, the original cost must be reduced by the aggregate annual depreciation allowed, not less than the allowable. The failure of the Tax Court in this instance to carry the new cost base back to 1929 and adjust it by subtraction of the depreciation allowable from then until 1944, was error, a violation of the statute and regulations. Blackhawk-Perry Corp. v. Commissioner, 8 Cir., 1950, 182 F.2d 319, certiorari denied 340 U.S. 875.

True, the new 1929 base was not declared in any year prior to 1945, but that is no reason for not making it effective as of 1929. No matter when found, it is still the 1929 base, and must be subjected to the depreciation of subsequent years.

Irrespective of its power, the Tax Court has not been asked to apply depreciation retroactively. That process connotes the application to earlier years of a rate affected by conditions of a later date. Here the process will involve a contemporaneous rate contemporaneously applied. Having found the 1929 cost basis, the Court should for that, and every year thereafter through 1946, ascertain, as of the end of each year, what amount represents the exhaustion for such year, using a rate determined by the conditions prevalent in that year. The new 1929 cost basis will in this manner be downgraded annually for wear and tear and the remaining unrecovered cost will be the adjusted cost basis. If this be depreciating retroactively, it is nevertheless valid, for it is the prescription of the statute and regulations.

Taxpayer dubs this procedure as hindsight calculation, said to be unacceptable in taxation. As just explained, we do not think it can be so impugned. But it was the taxpayer who first invoked the Tax Court's hind-vision; it asked the Court to revert to 1929 and enlarge the 1929 cost base. More, Superior candidly concedes in its brief that the Government could have "raised the issue as to prior year allowable depreciation upon the trial of this case or upon a duly granted motion for rehearing"—seemingly a concession that prior allowable depreciation was a subject justiciable by the Tax Court.

The resulting hybrid adjusted basis exposes the frailty of the Tax Court's conclusion. One portion of the value in each item of the properties would be depreciated, while the remaining value therein would be undepreciated. Besides, it is contrary to reality—a touchstone in taxation—since the increment, in truth, was not preserved intact until 1944 but suffered depreciation in the same degree and at the same time as did the original valuation.

Both the Tax Court and the taxpayer feel their reciprocal and complementing

positions — that the new base cannot be used as the depreciation multiplicand in the 1929-1944 period and that the increment of cost is not depreciable earlier than 1944 — are precedented by such decisions as Sample-Durick Co. Inc., 35 B.T.A. 1186; Commissioner v. Mutual Fertilizer Co., 5 Cir., 159 F.2d 470; and Commissioner v. Cleveland Adolph Mayer Realty Corp., 6 Cir., 160 F.2d 1012. These cases only declare that the annual rate of depreciation must be fixed on the strength of circumstances obtaining before and during the year of the charge, and that, once so fixed for any year or period of years, the rate cannot be changed retroactively by an alteration in the estimated life of the property. But this is not to say that original cost cannot in a subsequent year be determined from conditions existing in the year of acquisition, and then be used as the cost in reaching an adjusted base; if it were, then original cost could never be ascertained in the years following. Adding to the cost base, through recalculation of it as of the time of acquisition, is not a modification of the estimated life of the property. Furthermore, the very nature of original cost renders any subsequent change in it a retroactive change.

III. No inequity is imposed upon the taxpayer by relating the new cost basis to 1929 for purposes of adjustment. If, as Superior complains, it has not received the credits to which it would have been entitled, for the depreciation to be charged to the new increment of cost, and is prevented now by time limitations from procuring the credits,* the ready response is that the taxpayer will, nevertheless, profit by the increase of the cost base and it must accept the burdens with the benefits. The taxpayer and not the Government was responsible for the lapse of the opportunity to claim the credits; not until 1945 did the taxpayer ask for the increase in cost.

Superior contends that it claimed, but was refused, a depreciation greater than was allowed each year from 1929 to 1944. Accordingly, it denounces as unfair the enforcement now by the Commissioner of any assessment which penalizes the taxpayer by charging allowable but not allowed depreciation. Perkins v. Thomas, 5 Cir., 1936, 86 F.2d 954. Though not clear with respect to the years 1929 to 1932, inclusive, the record discloses no refusal by the Commissioner to accord the taxpayer every depreciation allowance requested from 1933 to 1944. Of course, this position of the taxpayer is at odds with its contention that the depreciation now asked by the Commissioner should not be charged because it was not known in the period 1929-44. Obviously, too, the taxpayer did not previously seek the depreciation now asserted by the Commissioner, for the increment was not established for 1929 until 1945. The taxpayer also protests that it has never been heard by the Tax Court on whether the allowed depreciation was not in fact actually the equivalent of the allowable deduction from 1929 to 1944. An opportunity to be heard on both of these grievances, if such they be, will be afforded the respondents in the Tax Court under the terms of our remittitur.

We hold that the [$73,000] increase placed by the Tax Court upon the 1929 cost of depreciables . . . must be depreciated annually from that year through the tax years. Therefore, we reverse the decision of the Tax Court and remand the case to it for a redetermination of the taxpayer's liability. The redetermination should be made in the light of our decision on depreciation and upon consideration of the taxpayer's contentions, if sustained in the evidence upon further

---

* On the possibility of opening up the pre-1944 returns, despite the running of the statute of limitations, see §§1311-1315, infra page 877; query whether the taxpayer's failure to deduct as much depreciation as was proper constituted an "erroneous inclusion in gross income" within the meaning of §1312(7)(C)(i) that will permit the old returns to be reopened. In any event, §1314(d) forbids opening up pre-1932 returns. — Ed.

hearing, that in prior years taxpayer was refused greater depreciation than has been taken, and that, even with the [$73,000] increment included, the sums already deducted for depreciation represent all the depreciation chargeable against the exhaustible property.*

Reversed and remanded.

PARKER, Chief Judge (dissenting).

I think that the decision of the Tax Court should be affirmed for reasons adequately stated in its opinion. The question before that court was the proper allocation between depreciable and non-depreciable assets of the price of $500,000 paid for the property in 1929. This was not a matter readily determinable, like the price paid for a piece of machinery, but rested largely in opinion. The valuation of $243,000 placed upon the depreciable assets in 1934 was found by the Tax Court to be too low after the abandonment of the water power in 1945; and that court after a careful hearing found that the depreciable assets at the time of their purchase in 1929 had a value of $316,000. In the meantime taxpayer had been taking depreciation on only $243,000, or depreciation considerably less than would have been taken on the basis of $316,000.

The question here involved is not the simple one of valuing the property as of 1944 but whether, when it is valued as of 1929, it should be depreciated for the intervening years in the full amount allowable on that valuation or in the amount actually allowed, which was the maximum then allowable on the existing valuation. If depreciated for the intervening years on the full 1929 valuation as made in 1944, taxpayer will lose the benefit of depreciation to which it is justly entitled, as it cannot go back and amend its returns. If depreciated in accordance with the amount of depreciation actually allowed during the intervening years, the value added by the reappraisal will be depreciated through the remaining life of the property, which will result in substantial justice, even though there is a "bunching" of depreciation on the added value in the remaining years. The real question then is whether the right to this depreciation has been permanently lost to the taxpayer or whether the increased value found by the Tax Court may be depreciated through the remaining life of the property. It seems clear to me that the Tax Court has given the correct answer to this question.

A change in original valuation based on fuller knowledge of the facts should no more be made retroactive for purposes of computing depreciation than a change of depreciation rate based on fuller knowledge. As said by the Court of Appeals of the Sixth Circuit in Commissioner v. Cleveland Adolph Mayer Realty Corp., 160 F.2d 1012, 1015, a case involving a change in the depreciation rate: "And if depreciation is to be taken each year, it must perforce be taken upon the basis of the understanding of value, existing at that time (at the end of the accounting period), and not, as has been said, in the light of 'hindsight.'" See also Commissioner v. Mutual Fertilizer Co., 5 Cir., 159 F.2d 470, 471 which quotes [Regs. §1.1016-3(a)(1)(ii)] providing "The determination of the amount properly allowable shall, however, be made on the basis of facts reasonably known to exist at the end of such year or period." . . .

NOTE

1. *Adjustment to basis for depreciation.* As the *Superior Yarn* case illustrates, the taxpayer's basis must be adjusted (downward) for depreciation that was "allowable," whether it was in fact deducted or not. Note that §1016(a)(2) (second sentence) provides for the use of the straight-line method of computing depreciation if the taxpayer neglected to

* The proceedings on remand are not reported. — ED.

adopt a method. If the taxpayer deducted more depreciation than was allowable, the full amount "allowed" (i.e., deducted and not disallowed) must be applied against his basis except to the extent that the excess was of no "tax benefit." See §1016(a)(2)(B), overruling Virginian Hotel Corp. v. Helvering, 319 U.S. 523 (1943), which had held that basis must be reduced by the full amount of depreciation deducted by the taxpayer even though the excess over the amount properly "allowable" produced no tax benefit.

2. *Adjustments for items chargeable to capital account.* Under §1016(a)(1), the property's basis is adjusted (upward) for the cost of capital improvements and similar items chargeable to capital account. An adjustment is explicitly forbidden by §1016(a)(1)(A), however, if the taxpayer elected to deduct taxes or other carrying charges that would otherwise have been capitalized; and other subsections of §1016(a) similarly forbid adjusting the basis of property for a variety of other items that the taxpayer elected to deduct, such as research and experimental expenditures, circulation expenditures, and expenditures for the exploration and development of mines. If a taxpayer erroneously deducts an item that should be capitalized (e.g., by classifying an expenditure as a deductible repair rather than an improvement), may he later add the same expenditure to basis? Note that §1016(a)(1) speaks of amounts "properly" chargeable to capital account, that Regs. §1.1016-6(b) provides that "the principles of estoppel" apply in determining basis and adjustments to basis, and that §1312(7)(C)(iii) would ordinarily permit the earlier year to be reopened, despite the statute of limitations, for the purpose of disallowing the erroneous deduction under §1311.

Section 1016(a)(1) also requires receipts, losses, and other items, as well as expenditures, to be taken into account if properly chargeable to capital account. Under this provision, the Inaja Land Company, supra page 68, would have to reduce its basis for its property from $61,000 to $11,000 to reflect the $50,000 received from the city of Los Angeles; a taxpayer whose property is partly damaged by casualty would reduce his basis by the amount of the deductible casualty loss; and a taxpayer who writes off property as worthless must reduce its basis to zero. If the taxpayer derived no "tax benefit" from the write-off, however, it is possible that his basis will remain intact. See page 867 infra.

3. *Other adjustments.* Many other adjustments to basis are required by §1016, including a reduction in the basis of stock if the shareholder received a tax-free distribution, an increase in the basis of commodities pledged for a federal price support loan if the taxpayer elects under §77 to treat the amount of the loan as income, supra page 441, and a reduction in the basis of property if the taxpayer elects under §108, supra page 93, not to recognize income on the discharge of indebtedness for less than its face amount.

4. *"Recomputed basis."* With the enactment of §1245 in 1962, a new concept — "recomputed basis" — entered the Code. Its meaning and function are considered infra pages 561 et seq.

Section D. Amount Realized

Section 1001(b), providing that the "amount realized" from a sale or other disposition of property shall be the sum of any money received and the fair market value of other property, is identical with §111(b) of the 1939 Code.

BURNET v. LOGAN

283 U.S. 404 (1931)

Mr. Justice McReynolds delivered the opinion of the Court.

These causes present the same questions. One opinion, stating the essential circumstances disclosed in No. 521, will suffice for both.

Prior to March, 1913, and until March 11, 1916, respondent, Mrs. Logan, owned 250 of the 4,000 capital shares issued by the Andrews & Hitchcock Iron Company. It held 12% of the stock of the Mahoning Ore & Steel Company, an operating concern. In 1895 the latter corporation procured a lease for 97 years upon the "Mahoning" mine and since then has regularly taken therefrom large,

but varying, quantities of iron ore — in 1913, 1,515,428 tons; in 1914, 1,212,287 tons; in 1915, 2,311,940 tons; in 1919, 1,217,167 tons; in 1921, 303,020 tons; in 1923, 3,029,865 tons. The lease contract did not require production of either maximum or minimum tonnage or any definite payments. Through an agreement of stockholders (steel manufacturers) the Mahoning Company is obligated to apportion extracted ore among them according to their holdings.

On March 11, 1916, the owners of all the shares in Andrews & Hitchcock Company sold them to Youngstown Sheet & Tube Company, which thus acquired, among other things, 12% of the Mahoning Company's stock and the right to receive the same percentage of ore thereafter taken from the leased mine.

For the shares so acquired the Youngstown Company paid the holders $2,200,000 in money and agreed to pay annually thereafter for distribution among them 60 cents for each ton of ore apportioned to it. Of this cash Mrs. Logan received 250/4000ths — $137,500; and she became entitled to the same fraction of any annual payment thereafter made by the purchaser under the terms of sale.

Mrs. Logan's mother had long owned 1100 shares of the Andrews & Hitchcock Company. She died in 1917, leaving to the daughter one-half of her interest in payments thereafter made by the Youngstown Company. This bequest was appraised for federal estate tax purposes at $277,164.50.

During 1917, 1918, 1919 and 1920 the Youngstown Company paid large sums under the agreement. Out of these respondent received on account of her 250 shares $9,900.00 in 1917, $11,250.00 in 1918, $8,995.50 in 1919, $5,444.30 in 1920 — $35,589.80. By reason of the interest from her mother's estate she received $19,790.10 in 1919, and $11,977.49 in 1920.

Reports of income for 1918, 1919 and 1920 were made by Mrs. Logan upon the basis of cash receipts and disbursements. They included no part of what she had obtained from annual payments by the Youngstown Company. She maintains that until the total amount actually received by her from the sale of her shares equals their value on March 1, 1913, no taxable income will arise from the transaction. Also that until she actually receives by reason of the right bequeathed to her a sum equal to its appraised value, there will be no taxable income therefrom.

On March 1, 1913, the value of the 250 shares then held by Mrs. Logan exceeded $173,089.80 — the total of all sums actually received by her prior to 1921 from their sale ($137,500.00 cash in 1916 plus four annual payments amounting to $35,589.80). That value also exceeded original cost of the shares. The amount received on the interest devised by her mother was less than its valuation for estate taxation; also less than the value when acquired by Mrs. Logan.

The Commissioner ruled that the obligation of the Youngstown Company to pay 60 cents per ton had a fair market value of $1,942,111.46 on March 11, 1916; that this value should be treated as so much cash and the sale of the stock regarded as a closed transaction with no profit in 1916. He also used this valuation as the basis for apportioning subsequent annual receipts between income and return of capital. His calculations, based upon estimates and assumptions, are too intricate for brief statement.* He made deficiency assessments according

* The government placed a value on the Youngstown contract by estimating the total amount of ore in the Mahoning mine as 82.9 million tons, of which about 10 million tons (12 per cent) was allocable to Youngstown; at 60 cents per ton, Youngstown would be required to pay a total of about $6 million. On the assumption that this amount would be paid in equal installments over a period of 45 years — the life of the mine, as estimated by the government — the 1916 value of the future payments was calculated as about $1.9 million.

The "amount realized" by the shareholders of Andrews & Hitchcock was thus, on the government's theory, $4.1 million ($2.2 million in cash plus $1.9 million in the form of a promise), or about $1035 per share. The Court was not called upon to pass on the tax consequences in 1916

to the view just stated and the Board of Tax Appeals approved the result. The Circuit Court of Appeals held that, in the circumstances, it was impossible to determine with fair certainty the market value of the agreement by the Youngstown Company to pay 60 cents per ton. Also, that respondent was entitled to the return of her capital — the value of 250 shares on March 1, 1913, and the assessed value of the interest derived from her mother — before she could be charged with any taxable income. As this had not in fact been returned, there was no taxable income.

We agree with the result reached by the Circuit Court of Appeals.

The 1916 transaction was a sale of stock — not an exchange of property. We are not dealing with royalties or deductions from gross income because of depletion of mining property. Nor does the situation demand that an effort be made to place according to the best available data some approximate value upon the contract for future payments. This probably was necessary in order to assess the mother's estate. As annual payments on account of extracted ore come in they can be readily apportioned first as return of capital and later as profit. The liability for income tax ultimately can be fairly determined without resort to mere estimates, assumptions and speculation. When the profit, if any, is actually realized, the taxpayer will be required to respond. The consideration for the sale was $2,200,000.00 in cash and the promise of future money payments wholly contingent upon facts and circumstances not possible to foretell with anything like fair certainty. The promise was in no proper sense equivalent to cash. It had no ascertainable fair market value. The transaction was not a closed one. Respondent might never recoup her capital investment from payments only conditionally promised. Prior to 1921 all receipts from the sale of her shares amounted to less than their value on March 1, 1913. She properly demanded the return of her capital investment before assessment of any taxable profit based on conjecture.

"In order to determine whether there has been gain or loss, and the amount of the gain, if any, we must withdraw from the gross proceeds an amount sufficient to restore the capital value that existed at the commencement of the period under consideration." Doyle v. Mitchell Bros. Co., 247 U.S. 179, 184, 185. Ordinarily, at least, a taxpayer may not deduct from gross receipts a supposed loss which in fact is represented by his outstanding note. Eckert v. Commissioner of Internal Revenue, 283 U.S. 140. And, conversely, a promise to pay indeterminate sums of money is not necessarily taxable income. "Generally speaking, the income tax law is concerned only with realized losses, as with realized gains." Lucas v. American Code Co., 280 U.S. 445, 449.

From her mother's estate Mrs. Logan obtained the right to share in possible proceeds of a contract thereafter to pay indefinite sums. The value of this was assumed to be $277,164.50 and its transfer was so taxed. Some valuation — speculative or otherwise — was necessary in order to close the estate. It may never

of the government's theory that there was a "closed transaction" in that year; the taxpayer would evidently have incurred a loss on the government's theory, since the "amount realized" for her 250 shares was less than their value as of March 1, 1913. (Section 5(a)(4) of the Revenue Act of 1916, unlike §1053 of the 1954 Code, provided that the 1913 value of property acquired before that date was its basis for computing loss as well as gain.) Consistently with its theory that the transaction was closed in 1916, the government conceded that the taxpayer was entitled to treat part of each payment received by her from Youngstown as a return of her investment in the contract, i.e., the 1916 value of her interest in the contract. This allowance was effected by amortizing the 1916 value of the contract over its 45-year estimated life, with the result that the net income would be the difference between the aggregate amount received by her from Youngstown and the 1916 value of the contract. (In the case of the contract inherited from her mother, the amount to be amortized was $277,164, its value for estate tax purposes.) — Ed.

yield as much, it may yield more. If a sum equal to the value thus ascertained had been invested in an annuity contract, payments thereunder would have been free from income tax until the owner had recouped his capital investment.* We think a like rule should be applied here. The statute definitely excepts bequests from receipts which go to make up taxable income. See Burnet v. Whitehouse, 283 U.S. 148.

The judgments below are affirmed.

NOTE

1. *Inability to establish fair market value.* According to Regs. §1.1001-1(a), "only in rare and extraordinary cases will property be considered to have no fair market value." In Helvering v. Walbridge, infra page 752, Judge L. Hand expressed the view that fair market value "is not nearly so universal a phenomenon as to justify such a comment." Is the approach of the Supreme Court in the *Davis* case, where the value of the marital rights received was determined by looking to the value of the stock exchanged on the assumption that their values were equal, in harmony with the result in Burnet v. Logan? Does the case rest on an assumption that *neither* the stock surrendered by the taxpayer *nor* the rights received by her could be valued?

For the possibility that payments may be classified as capital gain rather than ordinary income if the transaction from which they stem is not "closed," see page 649 infra.

2. *Relation of "amount realized" to taxpayer's accounting method.* The impact of the taxpayer's accounting method on the "amount realized" is quite murky. A merchant will ordinarily accrue his accounts receivable at face value, and either set up a bad debt reserve for uncollectible accounts or write off such accounts as they go sour. In the case of a casual sale, not in the ordinary course of business, however, a claim against the buyer is ordinarily not taken into income until payment, at least if the taxpayer is on the cash basis of accounting and the claim is non-negotiable. Infra page 816. If the taxpayer in Burnet v. Logan was on the cash basis, this might have afforded an alternative basis for decision.

3. *Settlement of debt as "amount realized."* It has already been noted, supra page 438, that the transfer of property in satisfaction of a debt is a taxable event. If the amount owing is in dispute, however, what is the "amount realized"? In United States v. Hall, 307 F.2d 238 (10th Cir. 1962), involving a taxpayer who transferred property worth $150,000 in settlement of a gambling debt variously estimated to be between $145,000 and $478,000, the court held that the taxpayer's gain on the property should be computed as though it had been sold for cash and the proceeds had been paid to the winner; the debt being unenforceable under state law, the court held that the excess (if any) of the debt over the value of the property was not taxable income. What if the taxpayer in the *Bradford* case, supra page 89, had discharged her liability to the bank by transferring stock with a basis of $20,000 and a fair market value of $50,000?

4. *Services as the "amount realized."* Section 1001(b) provides that the "amount realized" by the transferor of property is the sum of the money received and the fair market value of any "property" received. If the transferor receives services rather than property, however, the courts have included their fair market value in the "amount realized," and the value of the services seems ordinarily to be ascertained in an arm's-length transaction by assuming that they had the same value as the transferred property. Riley v. Commissioner, 37 T.C. 932 (1962); International Freighting Corp. v. Commissioner, 135 F.2d 310 (2d Cir. 1943).

5. *Expenses of sale as reducing the "amount realized."* Commissions and other selling expenses, unless incurred in the ordinary course of the taxpayer's business, are not deductible under §162 but are instead applied to reduce the "amount realized" in computing his gain or loss. Regs. §1.263(a)-2(e); Spreckels v. Helvering, 315 U.S. 626 (1942); see also Ward v. Commissioner, 224 F.2d 547 (9th Cir. 1955) (selling expenses not deductible under §212); Teschner, Expenses of Sale: Law-Making by the Commissioner, 35 Taxes 574 (1957).

* Under the pre-1934 law, described in the *Egtvedt* case, supra page 150. — ED.

COMMISSIONER v. KANN'S ESTATE

174 F.2d 357 (3d Cir. 1949)

Before BIGGS, Chief Judge, and MCLAUGHLIN and O'CONNELL, Circuit Judges.

BIGGS, Chief Judge.

Mrs. Bertha F. Kann, the decedent, sold certain securities to her children in return for their unsecured promises to pay her life annuities. The question presented for our determination is: Did the Tax Court err in holding that the decedent realized no taxable gain under [§1001(a)], and the applicable regulation [Regs. §1.1001-1(a)] on the ground that annuity contracts undertaken by individual obligors do not have an ascertainable fair market value as a matter of law? . . .

As the Tax Court pointed out it is not necessary to decide whether the entire capital is to be recouped before any amount becomes taxable, Lloyd v. Commissioner, 33 B.T.A. 903; Deering v. Commissioner, 40 B.T.A. 984, or whether a 3% annual return on an investment computed at insurance company rates, Raymond v. Commissioner, 40 B.T.A. 244, affirmed 7 Cir., 114 F.2d 140, certiorari denied 311 U.S. 710, is to be charged as ordinary income under [§22(b)(2) of the 1939 Code] * until the capital expended has been recovered. See Gillespie v. Commissioner, 43 B.T.A. 399, reversed on other grounds, 9 Cir., 128 F.2d 140. The question at bar turns on the meaning to be ascribed to the phrase "fair market value" in [§1001(b)] and the regulation.

The petitioner would have us change what we believe to be a salutary rule of law established by the Board of Tax Appeals in the *Lloyd* case, supra, that where both the annuitant's life span and the obligor's ability to pay are uncertain no fair market value should be ascribed to the contract or obligation. That rule was again enunciated in the *Deering* case, supra, and was viewed with approval in Hommel v. Commissioner, 7 T.C. 992. To elaborate a little, the Tax Court has held in the instant case, as in the past, that where obligors are individuals, whether rich or poor, their obligations to pay in the future do not possess such standing as to come within the purview of the statute, that such obligations possess no value by way of ordinary business. It should be noted that this court took a similar view in Evans v. Rothensies, 3 Cir., 114 F.2d 958, and in Cassatt v. Commissioner, 3 Cir., 137 F.2d 745, wherein, it will be observed, the Commissioner took a position diametrically opposed to that which he seeks to maintain in the case at bar. See also Burnet v. Logan, 283 U.S. 404. Like the Tax Court we think that there is little to be gained by giving up the principle, now well established, that an agreement by an individual to pay a life annuity to another has no "fair market value" for purpose of computing capital gain. In conclusion we state parenthetically that there is little in the record which can support the Commissioner's view that the transactions between Mrs. Kann and her children were ordinary arm's length business transactions. See the *Raymond* case, supra.

The decision of the Tax Court will be affirmed.

O'CONNELL, Circuit Judge (dissenting).

I agree with my brethren that the record before us offers little to support the assertion that decedent engaged in "ordinary arm's length business transactions" when she transferred to her children and their respective spouses the 1,120 shares of stock in return for their unsecured promises to pay her $24,672 per annum. The considerable doubt I have concerning the purported nature of the transac-

* Described in the *Egtvedt* case, supra page 150. — ED.

tions dictates to me the appropriate action to be taken by this court on the tax liability of decedent on those shares of stock.

Decedent was 77½ years of age at the time. Each of her eight children received an identical number of shares of the stock, and each made an unsecured promise to pay her $3,084 per annum. The stock was in a company over which her family had the controlling interest. The executed instruments themselves disclose that retention of family control over the company was an integral element in the transactions. That the value of the shares which she transferred was greater than that necessary to purchase the so-called annuity of $24,672 per annum is demonstrated by the fact that, the same year, she paid a gift tax on what was computed to be the $22,733.89 difference in value between the 1,120 shares of stock and what (according to the American Annuitance Mortality Table) was the total consideration necessary to derive annual installments of $24,672. There is still another indication of how decedent viewed the transactions: despite the provisions of Section 22(b)(2) of the [1939] Internal Revenue Code, calling for inclusion each year of 3% of the aggregate premiums paid for an annuity, decedent made no such inclusions in her tax returns after these transactions were consummated.*

Perhaps an explanation, credible and consistent with an annuity motive, could be offered to show why the same arrangement was made with all eight children, and why no security was required of them; but the combination of all the circumstances outlined above, particularly the payment of a gift tax on what was reputed to be a "sale," seems to me to lead to no conclusion other than that an aged woman made what she believed to be an inter vivos disposition, substitutional of a testamentary one, of that part of her estate represented by the shares of stock. The facts are to me consonant only with the inference that, for federal tax purposes, what decedent really did was to create eight trusts, in each of which she made herself life beneficiary to the extent of $3,084 per annum.

That decedent and her children chose to designate the agreements as private annuity contracts can and should be no obstacle to an inquiry into the real nature of the transactions here involved. Indeed, decedent herself recognized the apparent absence of a bona fide sale when she accepted the Commissioner's valuation and paid the gift tax.

Consequently, as I analyze this case, neither [the annuity provision nor §1002 (a)] is properly applicable, there being no sale or capital gain involved. In practical effect, decedent seems to me to have done no more than pass legal title to 1,120 shares, in return for a reserved life estate as to $24,672 per annum of the income therefrom, and a power to invade the corpus, if necessary, to supplement the income if less than $24,672 per annum. On principles not unlike those enunciated in Commissioner v. Tower, 1946, 327 U.S. 280, and Lusthaus v. Commissioner, 1946, 327 U.S. 293, the Commissioner and the Tax Court should have pierced the window-dressing and determined whether the income from the 1120 shares was taxable to decedent under the provisions of [§61(a)], as long as she remained alive, the shares being part of her estate at her death. . . .

NOTE

1. *An annuity as the "amount realized."* Is the holding in *Kann's Estate* equally applicable to an arm's-length transaction? If the transferred property had been pledged to insure payment of the annuity, and the amount to be paid by the transferee had been calculated on the basis of the transferor's life span as estimated by reference to mortality

* Amended returns, reporting 3 per cent of the amount received, were filed by the decedent's executors. — ED.

tables, would it have been proper to ascribe a "fair market value" to the transferee's agreement?

If the transferee is an organization (e.g., a trust or foundation) rather than an individual, the Internal Revenue Service has ruled that the transaction is a taxable event even though the transferee is not a commercial insurance company, the value of the annuity being determined by reference to the cost of comparable commercial annuities. Rev. Rul. 62-136, 1962-2 C.B. 12. See also Rev. Rul. 60-370, 1960-2 C.B. 203, involving a transfer of appreciated securities to a tax-exempt educational institution under an agreement requiring the securities to be sold and the proceeds invested in tax-exempt bonds, the interest to be paid to the transferor for life (the so-called "Pomona Plan"); the ruling states that the sale is to be imputed to the transferor (so that he is taxable on the gain), even though the value of the life interest is less than the value of the securities or their basis in the transferor's hands.

With the dissenting judge's suggestion in *Kann's Estate* that the annuity payments were not an "amount realized" because they were reserved, rather than received, by the transferor, see Kruesel v. United States, — F. Supp. — (D. Minn. 1963), involving a sale of farm property for $225,000, subject to the vendors' right to occupy the property rent-free for life. The court held that the life estate was reserved by the vendors, and hence was not part of the "amount realized." If so, was the basis of the property sold the full adjusted basis of the fee, or that amount less the basis of the reserved rights?

2. *Tax consequences to the transferee.* If the annuity arrangement, though between private persons, is an arm's-length transaction, and the property transferred is depreciable, the transferee's basis for depreciation is the value of the prospective payments, based on the annuitant's life expectancy, increased if and when payments in excess of this value are made. See Rev. Rul. 55-119, 1955-1 C.B. 352, for this and other aspects of the transferee's basis.

PARKER v. DELANEY

186 F.2d 455 (1st Cir. 1950)

Before MAGRUDER, Chief Judge, and WOODBURY and FAHY, Circuit Judges.

FAHY, Circuit Judge.

Appellant paid a federal income tax for 1945 on the basis of a long term capital gain which he then thought he had realized from the disposition of certain apartment houses during that year. Thereafter, becoming of a different view, he applied for refund of the amount paid. Six months having elapsed without action on his application he brought suit in the District Court against the Collector of Internal Revenue, as authorized by United States Code Annotated, Title 28, §1340. He appeals from judgment rendered for the Collector.

The essential facts were stipulated. In 1933, 1934 and 1936, taxpayer made arrangements with two banks to take over and manage four apartment house properties held by the banks after foreclosure proceedings. The same general factual pattern of transactions applies to each property. It was deeded by the bank to a straw man who acted for taxpayer. The straw gave the bank a note in a stated amount secured by a first mortgage on the property. He gave taxpayer second mortgages on each of the properties, and powers of attorney to operate the same. He also gave the taxpayer a deed to each of the properties, but these deeds were not recorded.

Appellant for tax purposes reported each year all income and took all deductions to which he would be entitled as owner, including deductions for depreciation. In 1945 the mortgages were in default and by agreement the banks took back the properties, the straw giving quitclaim deeds. The second mortgages

upon such properties were discharged of record. In his federal income tax return for 1945 appellant stated the sale prices to the banks to be the face amounts of the mortgages at the time of the conveyances to the banks. He reported the excess of these amounts over the amounts of the mortgages when he acquired the properties, less depreciation, as a long term capital gain.[1]

Appellant's position essentially is that he realized nothing when the properties were reconveyed to the banks in 1945 and so there was legally nothing to tax as a gain under the applicable provisions [§1001(a) and (b)] of the Internal Revenue Code. . . .

That there was a disposition of the properties by appellant in 1945 seems clear. The quitclaim deeds to the banks, though executed by the straw man, covered properties to which title had been conveyed to appellant though the deeds to him were unrecorded. The straw acted for him in transferring the properties to the banks. Appellant had regularly reported for tax purposes all income and had taken all deductions, including those for depreciation, to which he would be entitled as owner. The serious question is not whether there was a disposition within the meaning of [§1001(a)], as to which we are clear, but . . . whether taxpayer received from his disposition of the apartment houses money or other property of a value in excess of the amount of their adjusted basis, that is, in excess of the cost of the properties less depreciation.

In applying the foregoing formula to the facts we may conveniently consider first the question of the cost of the properties to appellant. During the years of his operation of them he took deductions for depreciation on a cost basis equal to the amount of the first mortgage liens. In this court he expressly disclaims any contention that their value for depreciation purposes was less than those liens. These mortgages represented the prices paid, or the consideration, for the properties. The properties became subject to these liens and appellant considered them as the cost in deducting depreciation. Nothing appears to the contrary and we must, as did the court below, accept these figures of cost used by appellant. Indeed we do not understand him to dispute this treatment of the cost question.

The depreciation deductions, taken on the basis discussed above, amounted to $45,000. We come to the time of disposition, therefore, with that amount having been set aside from gross income and put in capital account for replacement purposes, the justification for permitting depreciation deductions in computing taxable income. . . . The adjusted basis in 1945 accordingly was $273,000 less $45,000, or $228,000. The question is whether more than this was realized from disposition of the properties in that year. . . . It is here the real controversy arises. Appellant contends that he realized nothing or in any event nothing in excess of the adjusted basis of $228,000, though the amount of the mortgages then was $31,000 in excess of said adjusted basis. See footnote 1, supra.

The burden of deciding whether or not the last named figure was gain we think has been assumed by Crane v. Commissioner, 331 U.S. 1. In that case there was a sale of improved real estate to a third party subject to the amount of the mortgage, plus $3,000 boot paid to the seller. The latter, like appellant here, was not personally liable on the mortgage. In the instant case the disposition was to the mortgagees instead of to a third party purchaser and no boot was paid.

In the *Crane* case the taxpayer contended that all she received was the boot, and that its amount, less expenses of the sale, was the amount of gain realized.

---

1 The first mortgage liens totaled $273,000 at the time of appellant's acquisition of the properties. During the period of his operation he paid on these mortgages a total of $14,000. He charged and deducted depreciation in the amount of $45,000. When, therefore, the apartments were conveyed to the banks in 1945, the gain was $31,000. The disputed tax resulted. . . .

[In the interest of simplicity, the amounts have been rounded off, here and in the text. — ED.]

But the Supreme Court held that the taxpayer received benefit in the amount of the mortgage as well as the boot. We see no logical or practical distinction which takes the present case out of the rationale of that decision. If the amount of the unassumed mortgage in the *Crane* case was properly included in the amount realized on the sale, the amounts of the unassumed mortgages should be held to have been realized on the disposition in this case. In both, such amounts had been considered in determining the unadjusted basis. Since in the *Crane* case taxpayer obtained the property by devise, the basis was the fair market value at the time of acquisition. [§1014.] In the case at bar the basis was cost. [§1012.] Depreciation had been computed and deducted on such amounts; and their relationship under [§1016(a)(2)] to the question of gain realized under [§1001(a)] requires that account be taken of such value or cost in determining the realization on disposition. Furthermore, the property in the hands of appellant was relieved at the time of disposition of the mortgage liens and obligations. So far as appellant was concerned as owner these were paid even though he was not personally liable for them. The matter was so treated in the *Crane* case, 331 U.S. at 13. The added factor there, not present here, that boot was paid over and above the mortgage, is not material so long as the value of the properties was not less than the liens. Boot served to show this in the *Crane* case, but the payment of boot is of course not the only means of showing whether or not value is equal to or more than the liens on the property disposed of.

This brings us to appellant's contention that in fact the value was less and the *Crane* doctrine accordingly does not apply. He points out that the Supreme Court, in such a situation, reserved decision: "Obviously, if the value of the property is less than the amount of the mortgage, a mortgagor who is not personally liable cannot realize a benefit equal to the mortgage. Consequently, a different problem might be encountered where a mortgagor abandoned the property or transferred it subject to the mortgage without receiving boot. That is not this case." Footnote 37, 331 U.S. at 14.

This statement is predicated upon a situation where the value of the property when disposed of is less than the mortgage. There is no evidence to that effect in this case. The District Court treated the value as equal to the mortgages and we have no basis for doing otherwise. The critical point is that the value equaled the mortgages, not that it exceeded them, and on this factual matter we must on the record support the conclusion of the District Court.

[Discussion of whether the taxpayer's gain was capital gain or ordinary income omitted.]

The judgment of the District Court is affirmed.

MAGRUDER, Chief Judge (concurring).

I concur. The logic of the court's opinion is inescapable, with Crane v. Commissioner, 331 U.S. 1, as the starting point.

As an original matter, I would have had some difficulty in understanding how the taxpayer in the *Crane* case realized more than $3,000 from her sale of the mortgaged property there involved, in view of the definition of "amount realized" in [§1001(b)]. By the same token in the case at bar, under the more natural and obvious reading of [§1001(b)], it would seem that the amount realized by the taxpayer herein was zero, when he caused his straw man to quitclaim to the banks, for no cash consideration, properties then subject to mortgages up to their full value, the taxpayer not being liable on the mortgage debt. To reach the conclusion that the taxpayer thereby "realized" the amount of the outstanding mortgage debt would seem to require a somewhat esoteric interpretation of the statutory language. Also, I do not clearly understand why the Treasury allowed the taxpayer deductions for depreciation, under [§167(g)], in the total amount of $45,000,

taking the taxpayer's original "cost" basis as the amount of the mortgages, though he made no cash investment in the properties upon acquisition, nor did he obligate himself on the mortgage debt. But that matter need not concern us here, because depreciation in the amount of $45,000 was in fact "allowed"; and under [§1016(a)(2)] the adjusted basis for determining gain or loss from the sale or other disposition of the property takes account of depreciation "to the extent allowed (but not less than the amount allowable)" under the income tax laws.

Perhaps the net result reached by the court here might be arrived at by another mode of computation with less strain upon the statutory language. Thus, the adjusted basis for determining gain or loss under [§1016(a)(2)] might be computed as follows: Original cost, zero, plus $14,000, the total amount which taxpayer paid in reduction of the mortgage debt while he held the properties, minus $45,000, the amount of depreciation "allowed," which comes out to an adjusted basis of minus $31,000. Now, apply that adjusted basis of minus $31,000 to the computation of gain or loss under the formula in [§1001(b)]: The "amount realized" upon taxpayer's disposition of the properties, zero (as suggested above), minus the adjusted basis as computed under [§1016(a) (2)], or in other words, minus $31,000, subtracted from zero, comes out to a plus figure of $31,000, representing the amount of the taxpayer's gain, upon which the tax would be computed.

NOTE

1. *Unassumed mortgage as "amount realized."* In what sense was "the property in the hands of appellant [taxpayer] . . . relieved at the time of disposition of the mortgage liens and obligations"? Did the taxpayer derive any economic benefit from this discharge of the first mortgages? Would his benefit (if there was any) have been any the less if the property had been worth less than the unpaid principal when it was turned over to the mortgagee? Does Parker v. Delaney imply that the taxpayer would have realized a gain if the property was not insured and had been destroyed by fire during the period of his ownership?

2. *Negative basis.* Would Judge Magruder's use of a negative basis as a means of computing a gain of $31,000 have led to the same result if the properties had been worth less than the mortgage debt when they were reconveyed by the taxpayer to the banks in 1945? On the still exotic concept of negative basis, see Cooper, Negative Basis, 75 Harv. L. Rev. 1352 (1962).

Section E. Non-Recognition Transactions

Section 1031, providing for the non-recognition of gain or loss on the exchange of "like kind" property, is identical with §112(b)(1) of the 1939 Code.

Section 1033, providing for the non-recognition of gain on certain involuntary conversions of property, is similar to §112(f) of the 1939 Code.

Section 1034, providing for the non-recognition of gain on a sale or exchange of the taxpayer's personal residence if he acquired another residence within a specified period, is similar to §112(n) of the 1939 Code.

JORDAN MARSH CO. v. COMMISSIONER

269 F.2d 453 (1959) *

Before Hincks, Lumbard and Moore, Circuit Judges.

* Non-acquiescence, Rev. Rul. 60-43, 1960-1 C.B. 687.

HINCKS, Circuit Judge.

This is a petition to review an order of the Tax Court, which upheld the Commissioner's deficiency assessment of $2,101,823.39 in income and excess profits tax against the petitioner, Jordan Marsh Company. There is no dispute as to the facts, which were stipulated before the Tax Court and which are set forth in substance below.

The transactions giving rise to the dispute were conveyances by the petitioner in 1944 of the fee of two parcels of property in the city of Boston where the petitioner, then as now, operated a department store. In return for its conveyances the petitioner received $2,300,000 in cash which, concededly, represented the fair market value of the properties. The conveyances were unconditional, without provision of any option to repurchase. At the same time, the petitioner received back from the vendees leases of the same properties for terms of 30 years and 3 days, with options to renew for another 30 years if the petitioner-lessee should erect new buildings thereon. The vendees were in no way connected with the petitioner. The rentals to be paid under the leases concededly were full and normal rentals so that the leasehold interests which devolved upon the petitioner were of no capital value.

In its return for 1944, the petitioner, claiming the transaction was a sale under [§1002], sought to deduct from income the difference [$2,500,000] between the adjusted basis of the property [$4,800,000] and the cash received [$2,300,000]. The Commissioner disallowed the deduction, taking the position that the transaction represented an exchange of property for other property of like kind. Under [§1031(a)] such exchanges are not occasions for the recognition of gain or loss; and even the receipt of cash or other property in the exchange of the properties of like kind is not enough to permit the taxpayer to recognize loss [§1031(c)]. Thus the Commissioner viewed the transaction, in substance, as an exchange of a fee interest for a long term lease, justifying his position by [Regs. §1.1031(a)-1(c)], which provides that leasehold of more than 30 years is the equivalent of a fee interest. . . .

Upon this appeal, we must decide whether the transaction in question here was a sale or an exchange of property for other property of like kind within the meaning of [§1031(a) and (c)]. If we should find that it is an exchange, we would then have to decide whether the Commissioner's regulation, declaring that a leasehold of property of 30 years or more is property "of like kind" to the fee in the same property, is a reasonable gloss to put upon the words of the statute. The judge in the Tax Court felt that Century Electric Co. v. Commissioner, 8 Cir., 192 F.2d 155, certiorari denied 342 U.S. 954, was dispositive of both questions. In the view which we take of the first question, we do not have to pass upon the second question. For we hold that the transaction here was a sale and not an exchange.

The controversy centers around the purposes of Congress in enacting [§1031(a)], dealing with non-taxable exchanges. The section represents an exception to the general rule, stated in [§1002], that upon the sale or exchange of property the entire amount of gain or loss is to be recognized by the taxpayer. The first Congressional attempt to make certain exchanges of this kind non-taxable occurred in Section 202(c), Revenue Act of 1921. Under this section, no gain or loss was recognized from an exchange of property unless the property received in exchange had a "readily realizable market value." In 1924, this section was amended to the form in which it is applicable here. Discussing the old section the House Committee observed:

> The provision is so indefinite that it cannot be applied with accuracy or with consistency. It appears best to provide generally that gain or loss is recognized from all ex-

changes, and then except specifically and in definite terms those cases of exchanges in which it is not desired to tax the gain or allow the loss. This results in definiteness and accuracy and enables a taxpayer to determine prior to the consummation of a given transaction the tax liability that will result. [Committee Reports on Rev. Act of 1924, reprinted in 1939-1 C.B. (Part 2) 250.]

Thus the "readily realizable market value" test disappeared from the statute. A later report, reviewing the section, expressed its purpose as follows:

The law has provided for 12 years that gain or loss is recognized on exchanges of property having a fair market value, such as stocks, bonds, and negotiable instruments; on exchanges of property held primarily for sale; or on exchanges of one kind of property for another kind of property; but not on other exchanges of property solely for property of like kind. In other words, profit or loss is recognized in the case of exchanges of notes or securities, which are essentially like money; or in the case of stock in trade; or in case the taxpayer exchanges the property comprising his original investment for a different kind of property; *but if the taxpayer's money is still tied up in the same kind of property* as that in which it was originally invested, he is not allowed to compute and deduct his theoretical loss on the exchange, nor is he charged with a tax upon his theoretical profit. The calculation of the profit or loss is deferred until it is realized in cash, marketable securities, or other property not of the same kind having a fair market value. [House Ways and Means Committee Report, reprinted in 1939-1 C.B. (Part 2) 564 (emphasis supplied).]

These passages lead us to accept as correct the petitioner's position with respect to the purposes of the section. Congress was primarily concerned with the inequity, in the case of an exchange, of forcing a taxpayer to recognize a paper gain which was still tied up in a continuing investment of the same sort. If such gains were not to be recognized, however, upon the ground that they were theoretical, neither should equally theoretical losses. And as to both gains and losses the taxpayer should not have it within his power to avoid the operation of the section by stipulating for the addition of cash, or boot, to the property received in exchange. These considerations, rather than concern for the difficulty of the administrative task of making the valuations necessary to compute gains and losses, were at the root of the Congressional purpose in enacting [§1031(a) and (c)]. Indeed, if these sections had been intended to obviate the necessity of making difficult valuations, one would have expected them to provide for nonrecognition of gains and losses in all exchanges, whether the property received in exchanges were "of a like kind" or not of a like kind. And if such had been the legislative objective [§1031(b)], providing for the recognition of gain from exchanges not wholly in kind, would never have been enacted.

That such indeed was the legislative objective is supported by Portland Oil Co. v. Commissioner, 1 Cir., 109 F.2d 479. There Judge Magruder, in speaking of a cognate provision [§351(a), providing for the non-recognition of gain or loss on the transfer of property to a corporation controlled by the transferor] said:

It is the purpose of [§351(a)] to save the taxpayer from an immediate recognition of a gain, or to intermit the claim of a loss, in certain transactions where gain or loss may have accrued in a constitutional sense, but where in a popular and economic sense there has been a mere change in the form of ownership and the taxpayer has not really "cashed in" on the theoretical gain, or closed out a losing venture.

In conformity with this reading of the statute, we think the petitioner here, by its unconditional conveyances to a stranger, had done more than make a change in the *form of ownership:* it was a change as to the *quantum* of ownership whereby, in the words just quoted, it had "closed out a losing venture." By the transaction its capital invested in the real estate involved had been completely liquidated for cash to an amount fully equal to the value of the fee. This, we hold, was a sale — not an exchange within the purview of [§1031].

The Tax Court apparently thought it of controlling importance that the transaction in question involved no change in the petitioner's possession of the premises: it felt that the decision in Century Electric Co. v. Commissioner, supra, controlled the situation here. We think, however, that that case was distinguishable on the facts. For notwithstanding the lengthy findings made with meticulous care by the Tax Court in that case, 15 T.C. 581, there was no finding that the cash received by the taxpayer was the full equivalent of the value of the fee which the taxpayer had conveyed to the vendee-lessor, and no finding that the lease-back called for a rent which was fully equal to the rental value of the premises. Indeed, in its opinion the Court of Appeals pointed to evidence that the fee which the taxpayer had "exchanged" may have had a value substantially in excess of the cash received. And in the *Century Electric* case, the findings showed, 15 T.C. at 585, that the taxpayer-lessee, unlike the taxpayer here, was not required to pay "general state, city and school taxes" because its lessor was an educational institution which under its charter was exempt from such taxes. Thus the leasehold interest in *Century Electric* on this account may well have had a premium value. In the absence of findings as to the values of the properties allegedly "exchanged," necessarily there could be no finding of a loss. And without proof of a loss, of course, the taxpayer could not prevail. Indeed, in the Tax Court six of the judges expressly based their concurrences on that limited ground. . . .

In ordinary usage, an "exchange" means the giving of one piece of property in return for another — not, as the Commissioner urges here, the return of a lesser interest in a property received from another. It seems unlikely that Congress intended that an "exchange" should have the strained meaning for which the Commissioner contends. For the legislative history states expressly an intent to correct the indefiniteness of prior versions of the Act by excepting from the general rule "specifically and in definite terms those cases of exchanges in which it is not desired to tax the gain or allow the loss."

But even if under certain circumstances the return of a part of the property conveyed may constitute an exchange for purposes of [§1031], we think that in this case, in which cash was received for the full value of the property conveyed, the transaction must be classified as a sale. Standard Envelope Manufacturing Co. v. C.I.R., 15 T.C. 41; May Department Stores Co. v. C.I.R., 16 T.C. 547.

Reversed.

NOTE

1. *Exchanges for property of a "like kind."* If the taxpayer had received substantially less (or more) than $2,300,000 in cash, and the business bargain had been equalized by a lower (or higher) annual rent, would the court have found that the transaction was an "exchange" within the meaning of §1031 (a)? If so, would the exchange have been for property of a "like kind"? See Regs. §1.1031(a)-1(c) (leasehold for 30 years exchanged for fee; held, qualified); Century Electric Co. v. Commissioner, cited supra in *Jordan Marsh* (exchange of fee for 95-year leasehold plus cash qualifies); Standard Envelope Manufacturing Co. v. Commissioner, 15 T.C. 41 (1950) (fee for 25-year leasehold; held, not qualified).

Would the result in *Jordan Marsh* have been the same if the taxpayer had received less cash on the exchange but had been allowed to occupy the premises rent-free for an extended term?

What is the impact of the *Jordan Marsh Co.* case on a "trade-in" of used equipment for new equipment of a like kind? Does the applicability of §1031(a) depend on whether the taxpayer receives a check from the dealer and pays cash for the new equipment, or receives a credit against the price and pays only the difference?

Section 1031(a) applies to exchanges of property held "for productive use in trade or business" or "for investment" (excluding property held for sale, corporate securities, etc.);

and it has been held that the "like kind" test is satisfied even though productive property is exchanged for investment property, or vice versa. Regs. §1.1031(a)-1(a); Braley v. Commissioner, 14 B.T.A. 1153 (1929) (investment real estate exchanged for working ranch).

2. *Three-party transactions.* If Jones wants to trade his appreciated real estate for property of a like kind owned by Smith, but Smith is interested in a sale rather than an exchange, will §1031 be satisfied (as to Jones) if he transfers the property to Adams on the strength of Adams' promise to acquire the Smith property and transfer it to Jones as soon as he is able to sell the Jones property? Such three-party substitutes for two-party exchanges may take a variety of forms; on the whole, the courts have found them to qualify under §1031. See Alderson v. Commissioner, 317 F.2d 790 (9th Cir. 1963); Coastal Terminals, Inc. v. United States, 320 F.2d 333 (4th Cir. 1963); Baird Publishing Co. v. Commissioner, 39 T.C. 608 (1962).

What if the agreement provides (a) that the taxpayer will transfer his property to Adams; (b) that within one year Adams will either pay $1,000,000 in cash or, at the taxpayer's option, acquire and transfer to the taxpayer such property as the taxpayer may designate, with any difference between the cost of the designated property and $1,000,000 being paid by or to the taxpayer, as the case may be; and (c) that Adams will lease the original property to the taxpayer until the option is exercised or expires?

3. *Effect of "boot."* If property with an adjusted basis of $100,000 is transferred for property of a like kind with a fair market value of $125,000 plus cash or other non-qualifying property of $25,000, the taxpayer "realizes" gain of $50,000. If §1031(a) and (b) are applicable, however, the realized gain is "recognized" only to the extent of $25,000 — the amount of cash or non-qualifying property received. (The cash or non-qualified property is usually called "boot," because in the exchange the taxpayer received qualified property plus cash or other property "to boot.") What would be the recognized gain if the property had been worth $150,000 and had been exchanged for qualified property worth $75,000 plus $75,000 in cash?

Although the receipt of "boot" requires the taxpayer's realized gain to be recognized pro tanto, it will not permit a realized loss to be recognized, by virtue of §1031(c) (on which the government relied in the *Jordan Marsh Co.* case). Why does "boot" operate differently for a realized loss than for a realized gain?

4. *Carryover of basis under §1031(d).* If property is exchanged solely for property of a like kind in an exchange that qualifies under §1031(a), the taxpayer's adjusted basis for the transferred property becomes his basis for the acquired property under §1031(d). Such a provision for a "carryover" of basis — referred to as a "substituted basis" by §1016(b) — is customary in the non-recognition provisions, and explains why they are sometimes referred to as "postponement" provisions. On the theory that the taxpayer did not "close out" his investment when he disposed of the old property, computation of his gain or loss is postponed until he disposes of the new property. (If the new property is depreciable, the taxpayer's deductions under §167(a) will be tied to his basis for the old property.) There may be a series of non-recognition exchanges, of course, in which event the day of reckoning may be postponed repeatedly. Finally, if the taxpayer holds the new property until his death, the postponed gain or loss goes totally unrecognized by virtue of §1014 (basis to heirs of inherited property is fair market value at death). This result is not uncommon in the case of investment real estate which was exchanged under §1031(a), and it is also a frequent occurrence in the case of corporate securities, since exchanges by merger, consolidation, etc. are usually non-recognition transactions.

Note how the basis of the new property is computed if the taxpayer acquires it for old property plus cash, or if he receives "boot" on the exchange. If the *Jordan Marsh Co.* exchange had been held to qualify under §1031(a), how would the taxpayer have taken its adjusted basis for the old property (about $4.8 million) into account?

5. *References.* Molloy, Tax-free Exchanges of Property of Like Kind Under Section 112(b)(1), 37 Va. L. Rev. 555 (1951); for sale-and-leaseback transactions, see Cary, Corporate Financing Through the Sale and Lease-Back of Property: Business, Tax, and Policy Considerations, 62 Harv. L. Rev. 1 (1948), and Current Tax Problems in Sale, or Gift, and Lease-Back Transactions, 9 N.Y.U. Inst. on Fed. Taxation 959 (1951).

LIANT RECORD, INC. v. COMMISSIONER

303 F.2d 326 (2d Cir. 1962)

Before LUMBARD, Chief Judge, and SWAN and WATERMAN, Circuit Judges.

LUMBARD, Chief Judge.

The sole question presented is whether the proceeds from the condemnation of an office building were reinvested in property which was "similar or related in service or use" within the meaning of §1033 of the Internal Revenue Code of 1954 when the taxpayers purchased three apartment buildings. The Tax Court held that they were not, since the tenants of the office building used the property for a different purpose than the tenants of the apartment buildings. We reverse and remand.

The taxpayers and Norman Einstein owned a 25-story, steel-frame office building located at 1819 Broadway, Manhattan, New York. The building, which had been erected about 1913 was, on November 17, 1953, rented to 82 commercial tenants, including accountants, attorneys, real estate firms, a doctor, a dentist, and a bank, all of whom used it exclusively to conduct business. On November 17, 1953 the City of New York instituted condemnation proceedings against the taxpayers' office building and acquired title on the same date. Each of the taxpayers received payments in settlement for the condemned property during 1954 and 1955 which substantially exceeded their respective tax bases in the property.

Between July 12, 1955 and November 1, 1956 the taxpayers acquired three pieces of real estate each containing an apartment building. Each taxpayer's contribution to the total purchase prices of the three parcels exceeded his share of the proceeds from the condemnation. The 9-story building located at 55 West 11th Street, New York City, contained 77 apartments used for residential purposes and commercial tenants. The 6-story brick building at 400 East 80th Street, New York City, contained 47 residential apartments and 4 stores. The 11-story, steel-frame building located at 35 East 84th Street, New York City, contained 40 residential apartments and 6 commercial tenants. The taxpayers held the properties for rental income and did not occupy any of the properties.

The taxpayers, contending that their gain on the involuntary conversion was nontaxable under §1033 of the Internal Revenue Code of 1954, did not report any income from the disposition of the condemned office building. The Commissioner, on the other hand, took the view that the three apartment buildings were not "similar or related in service or use" to the condemned office building, and that therefore the taxpayers should have reported an aggregate capital gain on their 1955 income tax returns of $427,012.61. Consequently, the Commissioner asserted an aggregate deficiency of $107,716.51 against the taxpayers. The Tax Court upheld the deficiency on the ground that the actual physical end use of the original property by the lessees as offices, differed from the end use of the replacement properties by the lessees as apartments. 36 T.C. 224 (1961). The taxpayers appeal.

When a taxpayer's property is involuntarily converted into cash which the taxpayer immediately expends in replacing the converted property, Congress thought it fair to postpone any tax on the gain. Winter Realty & Constr. Co. v. Commissioner, 149 F.2d 567 (2 Cir.), cert. denied, 326 U.S. 754 (1945). However, the fortuity of an involuntary conversion should not afford the taxpayer an opportunity to alter the nature of his investment tax-free. Therefore, under §1033 and its predecessors, tax postponement turns on whether the replacement property is "similar or related in service or use" to the converted property.

Most of the early cases interpreting this phrase involved owners of property

who themselves used the property in their businesses. In these cases the Tax Court adopted a so-called "functional test" to determine whether the replacement property was similar or related in service or use to the converted property, i.e., the Tax Court compared the actual physical uses of both properties. In those cases where an owner of property, instead of being a user, held the property for rental to others and replaced it with rental property, the Commissioner, the Third Circuit and the Tax Court literally applied this "functional test" by holding that the tenants' actual physical use of the converted and replacement properties must be similar or related. Some courts, however, refusing to apply the "functional test" so strictly, have held that if the owner of rental property replaces it with rental property of "the same general class," he has maintained sufficient continuity of interest to deserve tax postponement.

Since in enacting this section Congress intended the taxpayer-owner to maintain continuity of interest and not to alter the nature of his investment tax-free, it is the service or use which the properties have to the taxpayer-owner that is relevant. Thus when the taxpayer-owner himself uses the converted property, the Tax Court is correct in comparing the actual physical service or use which the end user makes of the converted and the replacement properties. However, if the taxpayer-owner is an investor rather than a user, it is not the lessees' actual physical use but the nature of the lessor's relation to the land which must be examined. For example, if the taxpayer-owner himself operated a retail grocery business on the original land and operated an automobile sales room on the replacement land, it would be obvious that by changing his own end use he had so changed the nature of his relationship to the property as to be outside the nonrecognition provision. However, where the taxpayer is a lessor, renting the original land and building for a retail grocery store and renting the replacement land and building for an automobile sales room, the nature of the taxpayer-owner's service or use of the property remains similar although that of the end user changes. There is, therefore, a single test to be applied to both users and investors, i.e., a comparison of the services or uses of the original and replacement properties *to the taxpayer-owner*. In applying such a test to a lessor, a court must compare, inter alia, the extent and type of the lessor's management activity, the amount and kind of services rendered by him to the tenants, and the nature of his business risks connected with the properties.

Section 1031 of the 1954 Code has many similarities to §1033, the provision here in question. While §1033 postpones the taxation of gain on the involuntary conversion of any property into money which is then reinvested in property which is "similar or related in service or use," §1031 postpones the taxation of gain when a narrower category, "property held for productive use in trade or business or for investment," is voluntarily exchanged directly for other property "of a like kind." "Like kind" has been interpreted as being much broader than "similar or related in service or use." In 1958 Congress, disapproving of the narrow manner in which the §1033 standard had been applied, S. Rept. No. 1983, 85th Cong., 2d Sess. [reprinted in 1958-3 C.B. 922, 993], amended §1033 and made the "like kind" standard applicable to the condemnation of real estate "held for productive use in trade or business or for investment." [See §1033(g).] The government argues that because this amendment is specifically made prospective only, Congress meant to tax the gain on condemnations of real estate held for investment in transactions which ante-dated the amendment such as in the present case. However, the mere fact office buildings and apartment buildings are clearly of "like kind" does not mean that they are not also "similar or related in service or use."

Since the Tax Court examined only the actual physical end use of the properties in this case rather than comparing the properties' service or use to the

taxpayer-lessor, we reverse and remand for further consideration in the light of this opinion.

NOTE

1. *The "taxpayer's use" test.* On remand, the Tax Court found that the differences "in the petitioners' management activity, the services rendered by them to tenants, and their business risks with respect to the apartment buildings as compared with the office building" were not substantial. ¶63,053 P-H Memo T.C. Compare Clifton Investment Co. v. Commissioner, 312 F.2d 719 (6th Cir. 1963), accepting the "taxpayer's use" test as promulgated in the *Liant Record* case, and holding that replacement of a commercial office building held for rental with a hotel to be operated by the taxpayer did not qualify under §1033. What if the hotel had been leased on a long-term lease to a hotel operator? Would the answer depend upon whether (a) the lessee was owned by or affiliated with the taxpayer, or (b) the taxpayer was entitled to receive a percentage of the operating profits? For an extended review of the cases in this area, see Loco Realty Co. v. Commissioner, 306 F.2d 207 (8th Cir. 1962).

Many of the litigated rental property cases under §1033 would have qualified under §1033(g), described in the *Liant Record* case, had it been in effect for the taxable years in question. Note, however, that §1033(g) is by no means co-extensive with §1033, so that the "similar or related in service or use" requirement continues in effect for a variety of transactions that otherwise meet the requirements of §1033.

2. *Meaning of "involuntary conversion."* It has been held that the taxpayer's unwillingness to dispose of property does not necessarily mean that it has been "compulsorily or involuntarily converted"; the involuntary transaction must be caused by one of the events specified in §1033(a). See Behr-Manning Corp. v. United States, 196 F. Supp. 129 (D. Mass. 1961) (sale under anti-trust decree does not qualify). On the other hand, a sale under threat of condemnation qualifies even if the purchaser is a private person rather than the condemning authority. Creative Solutions, Inc. v. United States, 320 F.2d 809 (5th Cir. 1963); see also Rev. Rul. 63-221, 1963-2 C.B. — ("threat" or "imminence" of condemnation exists when public agency states or confirms its decision to acquire the property and taxpayer has reasonable grounds to believe that condemnation will be instituted if he does not sell voluntarily).

By virtue of §1033(d), (e), and (f), the term "involuntary conversion" is made applicable to property sold in order to comply with federal reclamation laws relating to irrigation projects, to livestock sold or destroyed because of disease, and to certain livestock sold because of drought.

3. *Sale and repurchase of taxpayer's principal residence.* By virtue of §1034, gain on a sale of the taxpayer's principal residence is not recognized if the taxpayer purchases and uses other property as his principal residence within a year (before or after) the sale of the old residence, provided the new residence costs at least as much as the "adjusted sales price" of the old residence. If the new residence is less costly, so that the taxpayer in effect receives "boot" in the transaction, his realized gain is recognized pro tanto. Any gain that goes unrecognized under §1034 is deducted from the cost of the new residence in computing its basis. The provision contains a number of refinements, including an extension of the time limit to eighteen months if the new residence is constructed by the taxpayer rather than purchased, a longer extension of time if the taxpayer is a member of the armed forces, a special definition of the "adjusted sales price" of the old residence to allow the taxpayer the benefit of "fixing-up" expenses, and a provision permitting cooperative apartments to qualify.

Section 1034 entered the Code in 1951, its purpose being explained by the House Committee on Ways and Means as follows:

> [The proposed provision] amends the present provisions relating to a gain on the sale of a taxpayer's principal residence so as to eliminate a hardship under existing law which provides that when a personal residence is sold at a gain the difference between its adjusted basis and the sale price is taxed as a capital gain. The hardship is accentuated when the transactions are necessitated by such facts as an increase in

the size of the family or a change in the place of the taxpayer's employment. In these situations the transaction partakes of the nature of an involuntary conversion. Cases of this type are particularly numerous in periods of rapid change such as mobilization or reconversion. For this reason the need for remedial action at the present time is urgent. . . .

This special treatment is not limited to the "involuntary conversion" type of case, where the taxpayer is forced to sell his home because the place of his employment is changed. While the need for relief is especially clear in such cases, an attempt to confine the provision to them would increase the task of administration very much. [H.R. Rept. No. 586, reprinted in 1951-2 C.B. 357, 377.]

Section 1034 permits non-recognition of gain as often as the taxpayer qualifies, so that upward financial mobility may permit a series of non-taxable sales as he moves from residence to residence, with a final forgiveness of the unrecognized gain by virtue of the heir's stepped-up basis on the taxpayer's death. Moreover, by virtue of the enactment of §121 in 1964, the gain realized by a person aged 65 or more on selling his residence will not be recognized (if the adjusted sales price is $20,000 or less) or will be recognized only in part (sales price over $20,000), subject to certain limitations.

For some of the problems in applying §1034 — what is a "principal residence"? when is it "used"? — see United States v. Sheahan, 323 F.2d 383 (5th Cir. 1963), and cases there cited.

4. *Other non-recognition provisions.* The Code contains a number of other non-recognition provisions, most notably those applicable to exchanges of stock and securities in corporate reorganizations. These provisions (infra p. 722) rest to some extent on the assumption that the exchange does not substantially alter the taxpayer's economic position; this assumption — which is often contrary to fact — is sometimes buttressed by the theory that the transaction is involuntary, a theory that in turn may, or may not, correspond to the facts. Often, however, these non-recognition provisions are defended on a broader ground: that they facilitate desirable corporate readjustments that would be seriously hampered if the taxpayer's gain were recognized on the exchange.

5. *Variations among the non-recognition provisions.* There are many variations among the non-recognition provisions: §1031 applies to both gain and loss and is mandatory, while §1033 applies only to gain and is elective with the taxpayer; §1031 applies only to exchanges, while §1033 applies to sales and some other transactions in which the taxpayer receives cash, provided he reinvests the proceeds within a specified period of time; §1031 does not apply to the acquisition of stock, while §1033 permits the taxpayer to acquire stock in a corporation owning the replacement property; and there are other differences between §1031 and §1033 as well as between these provisions and such other non-recognition provisions as §1034. Focusing only on §1031, §1033, and §1034, why do they differ (a) in requiring gain and loss, or only gain, to go unrecognized; (b) in being mandatory or elective; (c) as to the time permitted for replacing the old property; and (d) in the degree of similarity required between the old property and its replacement?

CHAPTER 6

Capital Gains and Losses

Section A. Introductory

SELTZER, THE NATURE AND TAX TREATMENT OF CAPITAL GAINS AND LOSSES

*3-5, 8-12 (National Bureau of Economic Research, 1951)**

Capital gains vs. ordinary profits

In both law and common speech, capital gains are generally regarded as the profits realized from increases in the market value of any assets that are not a part of the owner's stock-in-trade or that he does not regularly offer for sale; and capital losses, as the losses realized from declines in the market value of such assets. *Ordinary* profits and losses, in contrast, are realized on the sale of goods and services that *are* a part of the seller's stock-in-trade or that he regularly offers for sale. The profit earned by a manufacturing company through the operation of its plants and machinery may be contrasted with the gain it would make if it sold some of its investment securities for more than they had cost it. The former is an ordinary business profit,† the latter a capital gain.

Ordinary profits are commonly the result of buying goods in one market and selling them in another, that is, in a different form, in different quantities, at a different season, or in a different place. The manufacturer earns ordinary profits by converting raw materials and semifinished goods into new forms, which he sells to other manufacturers, wholesalers, retailers, or consumers. The wholesaler buys in large quantities from the manufacturer and relieves the latter of the task of finding and supplying scores of retail outlets. The retailer earns ordinary income by buying his wares from wholesalers, jobbers, and manufacturers, and selling them to his customers in much smaller unit-quantities, together with packaging, and perhaps delivery and credit services. Capital gains or losses, on the other hand, are most commonly the result of changes in prices in the same market. They are realized most characteristically when one investor or speculator sells his holdings to another. The profit made by a real estate company that buys raw acreage, subdivides it into streets and building lots, and sells plots, is regarded as an ordinary business profit; but the gain made by the farmer or long term speculator who sells the acreage to the real estate company, or by the factory worker who purchases a single lot and subsequently resells it, is regarded as a capital gain. . . .

Distinction between capital gains and ordinary income often blurred

While the broad distinction we have made between capital gains and ordinary profits is useful in a general way, it cannot be pressed far for purposes of either

* Reprinted by permission.

† As will be seen (infra p. 552), the manufacturer's plant and machinery are not "capital assets" as that term is defined by §1221, but gain on a sale of such property is ordinarily taxed as capital gain as a result of special legislation (§1231) that was enacted during World War II. — Ed.

economic analysis or law. As we shall find upon further examination, ordinary business profits often contain large amounts of what are essentially capital gains, while large amounts of so-called capital gains are little or no different from ordinary profits, or arise indirectly from the accumulation of ordinary income.

Moreover, although the general distinction offers a rough guide to the legal concept of capital gains and losses, the effective legal definition has varied from time to time in the United States and in other countries. The profits and losses arising from short term transactions in capital assets, for example, have frequently been excluded from the legal category of capital gains and losses. In addition, the dividing line between short and long term transactions has at different times been 24, 18, 12, and 6 months in the United States. In Sweden the dividing line is 10 years for real estate and 5 years for other capital assets. The point at which the owner of any kind of capital assets ceases to be merely an investor and becomes, in the eyes of the law, engaged in buying and selling them (and his capital gains become, for tax purposes, ordinary profits), is by no means always clear and has been the subject of much litigation. . . .

3. Are Capital Gains Income?

Whether capital gains should be taxed as ordinary income, taxed at lower rates, or excluded from taxable income has been the subject of more or less continuous controversy in the United States. In favor of taxing capital gains like ordinary income it has been argued that they produce an equal increase in an individual's economic power: the ability to command economic resources and direct them into channels of his own choosing. Like ordinary income, realized capital gains may be spent or saved. Used for consumption, they enhance the ability of a man to build or buy a bigger house, to give his family more expensive clothes, food, and amusements, and to provide his children with superior educational opportunities. As savings, capital gains can be converted into bank balances, bonds, stocks, and other titles to wealth in precisely the same manner and degree as wages and salaries, interest, rent, and ordinary profits. Even when capital gains have not yet been "realized" by sale — while they are still in the form of paper profits, so-called — they constitute additions to the economic resources of those who enjoy them. For even in this form they supply approximately the same increase in economic power, excluding the effects of taxes, as an equal amount of wealth obtained by accumulating and investing ordinary income. In analogous ways, capital losses may be said to reduce the economic power of those who suffer them and, therefore, to be valid deductions from ordinary income.

But no less positive have been the protests of those who hold that capital gains and losses should be completely excluded from income tax on the ground that they are not true elements of income. Unlike most kinds of ordinary income, capital gains occur irregularly in the lives of most individuals. A prudent man does not consider them available for ordinary consumption purposes both because they cannot confidently be expected to recur and because they may well be followed by sporadic losses. A capital gain, therefore, is commonly regarded as a direct addition or accretion to a man's capital, not a part of his disposable income.

Moreover, capital assets derive their value from the incomes that are expected from them, and these incomes are subject to tax when received. A rise in the value of a capital asset often reflects merely a rise in the income expected from it. To tax both the increase in income when it is received and the rise in the market value which merely reflects this expected increase in income is really to tax the same thing twice, it is argued. Of course, the owner gives up the enlarged prospective income from the capital asset when he sells it to "realize" his gain; but he will presumably reinvest the entire proceeds, minus taxes, at the going rate of

return and will therefore continue to obtain and pay taxes on the enlarged income reflected by his capital gain.

Also, if we tax the seller's capital gain as income, are we not treating him unfairly as compared with the owner who does not sell but who equally enjoys the enlarged income?

Further, most capital gains arise over periods longer than 1 year, often many years. To treat them as the income of the single year in which they are realized subjects the recipient to a higher tax than would be payable on an equal amount spread over the number of years in which the gain developed.

Finally, to mention only one of several other aspects in which capital gains differ from ordinary income . . . , it is contended that capital gains do not represent as much taxpaying capacity as an equal amount of ordinary income because they are sporadic, as compared with the recurring character of most types of ordinary income.

The last two points can be illustrated by a comparison. The annual income of James Peters of Cleveland, Ohio hovered about $3,000 for many years. In 1951, besides his ordinary income of $3,000, he realizes a capital gain of $15,000 by selling the house he bought 30 years before to a company that plans to erect an automobile service station on the land. Should Mr. Peters be taxed in 1951 as if his income were $18,000? Does his taxpaying capacity equal that of his sister whose 1951 income of $18,000 was derived wholly from $720,000 par value of 2½ percent Treasury bonds bequeathed her by her husband?

Powerfully supporting the view that capital gains and losses are not true elements of income has been the example of Great Britain, Canada, Australia, and most European countries with respect to capital gains realized by individuals outside the course of their ordinary business activities.* A long tradition in European thought and law has excluded most casual and irregular gains, particularly from the sale of capital assets, from the prevailing concept of personal income and, therefore, from the taxable income of individuals. Besides the force of example, some of the same historical influences and logical considerations that produced this attitude in Europe have been influential in the United States.

But some capital gains are different only in form from ordinary income. An investor who buys a 30-year 3 percent corporation bond at 90 is actually getting an interest return of about 3.55 percent annually; but his return will take the *form* of an interest income of 3 percent a year and a capital gain of about $100 per $1,000 bond at maturity.†

Reinvested corporate profits

Capital gains that appear to reflect the direct reinvestment of profits by corporations have raised an especially troublesome question. Because the law conceives a business corporation as an entity separate and distinct from its stockholders, corporate profits are not regarded as the income of the latter unless and until they receive them in dividends. Consequently, stockholders can postpone or avoid the ordinary personal income taxes upon their proportionate shares of retained corporate earnings. But if these retained earnings are profitably employed by the corporation, stockholders can reasonably expect to obtain some proportion of them — though often only a surprisingly small proportion — in the

---

* For the British practice, under which capital gains (defined more narrowly than in the United States) are in general exempt from income tax, see Brudno and Hollman, The Taxation of Capital Gains in the United States and the United Kingdom, 1958 Brit. Tax Rev. 26 and 134. — Ed.

† The possibility of reporting profit of this type as capital gain has been much reduced by subsequently enacted legislation. Infra page 520. — Ed.

form of a capital gain taxable at a preferentially low rate when they sell the stock. Meanwhile, they can expect to enjoy a rise in the earning power and market value of their holdings. Even the capital gains tax will be avoided and the share of these stockholders in the accumulated earnings of the corporation will never be subjected to personal income taxes if they never sell the stock but leave it to their heirs or give it away during their lifetimes to charitable or other tax-exempt institutions or to persons who leave it to *their* heirs. . . .

On the other hand, some reinvestment of earnings may be essential to enable an enterprise merely to maintain its competitive position and its earning power. Accounting charges for obsolescence are often absent or insufficient, with the consequence that the reported earnings often overstate what later are seen to have been the true earnings. Most individual shareholders in large corporations cannot expect to influence dividend policies greatly. They seldom regard their pro rata share in the undistributed earnings of their corporations as a part of their individual incomes. They cannot confidently expect their holdings to increase in market value by the exact amount of earnings reinvested on their behalf. Even if such an increase occurs, the stockholder may find it impracticable to convert it into disposable income by selling one or a few shares and regarding the enhanced market value of the remainder as a measure of the maintenance of the principal of his investment. The scale of brokers' commission charges makes the sale of a few shares of stock relatively expensive, and the market value of a single share may greatly exceed the amount of corporate earnings being reinvested on behalf of the remainder of the investor's holdings. For these and other reasons, the market is likely in many cases to appraise reinvested corporate earnings at less than face value. The question of the proper tax treatment of capital gains comes into contact at this point with the whole question of the tax treatment of corporate profits.

TAX ADVISORY STAFF, TREASURY DEPARTMENT, FEDERAL INCOME TAX TREATMENT OF CAPITAL GAINS AND LOSSES

9-10, 12-14, 21-22 (1951)

The capital gain and loss provisions of the Federal taxes on individual and corporate income have been controversial since their enactment. Opinion concerning these provisions has ranged from one extreme, that capital gains and losses should be completely excluded from the bases for income taxation, to the other, that these gains and losses should be treated for tax purposes precisely like any other positive or negative elements of ordinary income.

Prior discussion regarding taxation of capital gains has devoted considerable attention to the question whether these gains are capital or income. Opponents of the tax state that capital gains are not income and therefore should not be subject to income tax. Proponents of capital gains taxation believe these gains are sufficiently indicative of taxpaying ability, at least when realized, to be properly subject to income tax.

Since 1922, Congress, while consistently upholding the general principle that capital gains are proper objects of income taxation, has followed an intermediate course in determining the rates of tax to be applied. Although varying in detail, this has included the following main characteristics: (1) Inclusion of capital gains and losses for tax purposes only when realized by sale or exchange; (2) application of special low tax rates to capital gains accrued over more than a minimum period prior to realization; and (3) limitations on deductibility of capital losses from ordinary income. . . .

Basically, the problem of capital-gains taxation is difficult because of the realization criterion of taxability. Under this rule, the taxpayer himself determines when

his gains and losses shall be brought to account. Thus taxpayers have the option to postpone tax liability simply by holding gains unrealized, i.e., by not selling or exchanging their appreciated property. Conversely, they can obtain immediate tax reduction (subject to the limitations already described) by the sale or exchange of capital assets on which losses have accrued. Tax considerations, therefore, reinforce the normal tendency of investors to take losses promptly while letting gains accumulate.

The aggregate of capital gains realized by sale or exchange in any given year will have accrued over a broad range of holding periods — from a few days to many years. There has been widespread acceptance of the general principle that it is unfair to tax at progressive rates, in a single year, capital gains which have accrued over a number of previous years. Concentration of such long accrued capital gains for tax purposes in the year of realization tends to push some taxpayers into higher rate brackets and to make effective tax rates on some gains higher than would have been the case had the taxpayer been allowed to apportion his gains back, either to the actual years of accrual or to some arbitrary period, such as 5 years. Preferential tax treatment for long-term capital gains has always been justified in part by this effect. However, the amount of tax preference given long-term gains has generally been substantially greater than the amount of tax rate adjustment required by this equity consideration.

In addition to the averaging objective in preferential treatment of long-term capital gains, a low rate of tax is often deemed necessary to encourage prompter realization of these gains. The desire to avoid income tax strengthens the natural tendency to hold on to investments. If existing provisions for capital gains taxation have the effect of unduly retarding realization, this may be due as much to defects in the capital gains tax structure, for example, to the fact that capital gains may be transferred free of income tax at death, as to the mere existence of the tax.

The holder of an appreciated capital asset who would like to switch to some other investment must find an alternative that he considers sufficiently preferable to his present holding to offset the tax and other costs (brokerage, etc.) of the exchange. The tax cost is dependent on the rates of capital gains taxation; these in turn vary with the amount of accumulated gain and with the size of the taxpayer's ordinary income. Any significant tax on capital gains levied at the time of realization will undoubtedly tend somewhat to discourage sales of appreciated property. The higher the tax rate, the stronger this effect will be. However, the tax factor is only one among a number of considerations influencing investment decisions. It may be much less important to a given investor than his forecast of future price and other economic trends.

The question of the proper levels of preferential rates to apply to long-term gains is complicated by the conflicting considerations involved. In general and unless capital gains are very large relative to ordinary income, only moderately preferential rates are usually needed for the majority of long-term capital gains in order to make appropriately equitable adjustments for the greater lumpiness and more sporadic nature of these gains compared with ordinary income. On the other hand, if minimum interference with markets for capital assets rather than tax equity is the standard, a relatively low set of tax rates for long-term capital gains may be indicated. If maximum revenue from capital gains taxation is the standard, an intermediate schedule of rates, which does not too greatly restrict transactions and at the same time does not encourage an excessive amount of conversion of ordinary income into preferentially taxed long-term capital gains, may be desirable. Moreover, intermediate rates may be held to effect a reasonable compromise between the conflicting equity and market considerations.

Finally, any generally acceptable solution of the capital-gains tax problem might

require complex tax provisions. It is important for administration and compliance that these complications be kept to a minimum. In the past, Congress has sought as much simplicity as was consistent with prevailing views concerning the objectives of capital-gains taxation. . . .

Preferential treatment of capital gains has been justified on several grounds, namely, equity, incentive, and revenue yield.

With respect to equity, it has been pointed out that it is unfair to include with other income and to tax at progressive rates in the year of realization capital gains which have accrued over a number of previous years. It has become more or less generally accepted that an equitable principle of taxation for capital appreciation under an annual income tax would be one under which the tax on capital gains levied upon realization would approximate that which would have been paid if the gain or loss, treated as ordinary income or loss, had been realized as it accrued annually.

One of the earliest proposals for special treatment of capital gains which received the serious consideration of Congress provided for prorating realized capital gains, together with certain other types of income, over the years during which the capital asset had been held or the other income earned. This method was rejected, however, as too complicated for administration.

Consideration has also been given at various times to such proposals as (1) the inclusion in taxable income of annually accrued though unrealized gains and losses, and (2) proration or averaging of realized capital gains, either separately or with other income, over several years — not necessarily the number of years the capital assets have been held. These methods were likewise rejected largely because of administrative and compliance complexities, but also in part because of constitutional questions and fear of causing taxpayer hardship.

Throughout the history of capital-gains taxation, continuous concern about the effects of the tax on (a) sales and exchanges, (b) security and other property prices, and (c) revenue yield has been apparent. It was the belief that a moderate tax rate would encourage the sale of much appreciated property which otherwise would not be sold that provided the main foundation of the case for the introduction of preferential treatment in 1921.

Congress has tried time and again to find a method, both practicable and equitable, of taxing capital gains. Such a method has been conceived to be one which would interfere as little as possible with realization of gains and at the same time would not stimulate loss realization too much.

But finding satisfactory formulas for achieving the divergent equity and incentive objectives that are entwined in the philosophy of capital-gains taxation and at the same time protecting the revenue has been a difficult problem. Consequently, the history of the legal provisions has been a record of compromise and change without satisfactory solution.

NEW YORK STOCK EXCHANGE, TAXES — EQUITY CAPITAL — AND OUR ECONOMIC CHALLENGES

38-40 (1953)

Tax treatment of capital gains and losses has changed from time to time in an effort to reconcile various unresolved conflicts between equity considerations, revenue requirements, and the desire to avoid reducing investment incentives and the marketability of capital assets.

Taxation of capital gains provides the federal government with only a small portion of its total tax revenue. . . . The depressive effects of the present capital gains tax on investment incentives alone far outweigh, in their economic implications, the amount of revenue this tax provides.

Several special factors peculiar to capital gains taxation are pertinent to a precise understanding of its important economic implications:

1. *Tax Liability is Matter of Choice.* To incur capital gains tax liability is a voluntary act undertaken at the discretion of the taxpayer. Therefore, even modest tax rates have the general effect of inducing many investors not to sell or exchange their capital holdings, which, in turn, means reduced tax revenue, restricted market activity, and impaired mobility in capital movement.

2. *Periodic Fluctuations in Security Values.* One of the fundamental characteristics of a free securities market is its sensitivity to the diverse factors which influence investors' evaluations of their future interest and future price movements. Changes in the economic climate, both in this country and abroad, changes in our political or economic relations with other countries, new discoveries, sudden increases in product popularity, and many other factors, can substantially affect security prices in a period as brief as a few days or as long as several months. Many instances of this sensitivity are observable in the price movements of individual and industry-wide stock issues, even when overall market averages are steady. But today's capital gains tax law (with a six-month holding period) unfortunately prevents many security transactions of a non-speculative nature which would otherwise be made if the holding period were less than six months.

In a study of public stock transactions made by the New York Stock Exchange, it was found that 806,000 shares were sold at a gain by "public" individuals (that is, persons other than members or allied partners of the New York Stock Exchange), on the two days surveyed. The following percentages of the shares sold had been held for the indicated periods of time: under 30 days, 3 per cent; 30 days to 6 months, 20 per cent; 6 months to one year, 26 per cent; over one year, 48 per cent; no indication, 3 per cent. From these data it seems fair to conclude that a substantial number of the delayed transactions — certainly a large part of the 26 per cent held for 6 months to one year — were deferred for the express purpose of meeting the holding period provisions of the capital gains tax law.

It was not the intent of Congress when it set up the holding period that it should act as a barrier against sound investment transactions. It was rather an arbitrary device designed to help distinguish between capital gains deserving special tax treatment and gains which are so close to being ordinary income that they should be taxed as such. As such, however, the six-month holding period is too long, and has proven unnecessarily restrictive. A period of three months would be a more desirable dividing line because:

1. It would differentiate as well as the present six months period between those capital transactions deserving of special treatment and those which should be taxed as ordinary income.
2. It would be as workable administratively.
3. By permitting the freer exercise of investment judgment, it would result in thousands of additional transactions in capital assets, and result in substantial additional government revenues.
4. It would increase the liquidity of the securities markets, thus providing needed encouragement to equity investment.

3. *Price Level Changes and "Locked-In" Capital.* The substantial increase in the general price level in the last two decades has resulted in much capital appreciation. Because of this general increase in price levels the proceeds of the realization of such gains are largely "illusory" in terms of real value. Nevertheless any realized gains, whether real or not, are subject to tax liability. But, since the tax is self-imposed, an investor who regards his gains as fictitious can avoid it by not shifting his investment. The result is a "freezing" or "locking-in" of large sums of capital which otherwise could be of more productive use if put into newer, or different industries.

4. *Taxing Transfers of Permanently-Invested Equity Capital.* An established principle of tax policy has been to permit the tax-free transfer of certain assets similar in kind, such as farms, real estate, livestock, etc. The tax laws, in the Revenue Act of 1950, extended this principle by permitting the tax-free shifting of personal residences.

The above principle of taxation would be even more valuable to the national economy if it were applied to equity funds as long as they remained invested in productive enterprise. It would eliminate a major cause of investment-fund stagnation since, at present, the transfer of investments are undertaken, in a great many cases, only when the asset purchased yields a substantially higher return than did the one being liquidated.

5. *"Roll-Over" Proposal.* One suggestion, which has been considered from time-to-time, would apply this principle of tax-free transfers of assets similar in value and in kind to all forms of capital reinvestment.* This suggestion, sometimes termed the "roll-over" proposal, would have the effect of deferring the capital gains tax until *final* "realization" of the capital asset. Thus, for example, an investor would *not* be taxed if he sold one security for the purpose of purchasing another within a given period of time, or sold a farm, timberland, etc., for similar reinvestment of the proceeds.

A tax liability would be incurred only on that portion of capital *not* reinvested in productive enterprise, or *not* reinvested in similar types of capital assets.

Although this proposal would provide more equitable treatment for certain types of capital transactions, it would not be a complete solution and would also involve tremendous administrative complexities. The more practical immediate solution would appear to be a substantial lowering of the rate and a shortening of the holding period to permit such transfers to be made without today's excessive tax impact.

6. *Inflationary Effect of Capital Gains Tax on Security Prices.* The effect of the present capital gains tax in keeping large quantities of stock off the market can be an additional inflationary factor of considerable significance in a period of high or rising prices. Moreover, the impact of the tax under such conditions becomes even greater as prices continue to rise — which is when, in the interest of price stability, stockholders should be encouraged to liquidate holdings rather than retain them.

NOTE

The following is from an article entitled "Capital Gains Tax 'Freezes In' Few," by Burton Crane, in the New York Times, Feb. 5, 1956, §3, p. 1, col. 4:

> No financial subject has caused more regrettable misunderstanding than the capital gains tax. Investors who should know better will report with every show of sincerity that the tax "freezes" them into their holdings.
>
> Actually, only investors who expect to die in the near future are "frozen in." Death provides a new capital gains basis, the market price at the time. A man about to die would be foolish to pay a 25 per cent long-term capital gains tax this week and have his estate pay perhaps 30 per cent more in inheritance tax.
>
> But nobody else is "frozen in."
>
> This is probably a case in which propaganda has been believed by the wrong persons. Wall Street intended it for Congress, hoping to get rid of the tax or to have it reduced. Instead, it was believed by Wall Street's customers. There is no doubt that the feeling of being "frozen in," false though it is, has kept many an investor from realizing his gains.

* For one such proposal, see Clark, An Alternative to Capital Gains Taxation: A "Roll-Over" Account for Investment Assets, 4 How. L.J. 157. — Ed.

SIMONS, FEDERAL TAX REFORM *

70-71 (1950)

The capital-gains problem has now three important aspects. First, accrued gains on property held until one's death are never reached as taxable income at all. Second, gains realized by sale are only partially taxable and, besides, are subject to a maximum rate far lower than the maximum rate on other income. Third, deductions for capital losses are limited and segregated, so that, while those who have net capital gains are grossly undertaxed, those who have net capital losses are often grossly overtaxed. Limited deduction for losses is actually inseparable politically from limited inclusion of gains; but to regard the two limitations as offsetting is to repudiate the primary purpose of income taxation, namely, fairness among persons. It is indeed a shabby apology for present practice that, if it obviously undertaxes some persons, it obviously overtaxes others.

Even if one overlooks the major flaw, namely, failure to reach gains on property transferred by gift or at death, the limited taxation of realized capital gains is obviously inconsistent with our whole scheme of progression. *It is inherently unjust to impose any bracket rate in excess of the maximum rate applicable to capital gains.* In the long view, we must either abandon progression or abandon special treatment of capital gains and losses. This should be too obvious for argument, now that even the huge salaries and bonuses of corporation executives are often converted into a capital-gain form, by the device of the option to purchase the corporation's stock. The logical conclusion of recent trends in legislation is a blanket option for every taxpayer to treat any income as capital gain, if and as he so desires. This option would give us an effective maximum rate about equal to the minimum or basic rate; and Congress could then manipulate the rest of the surtax scale as it pleased and without any effect on anybody! But the scheme would have the great merit of imposing similar taxes on people in similar circumstances.

NOTE

1. *What are "capital gains"?* In speaking of "capital gains," the authors of the foregoing materials are primarily referring to gains on the sale of corporate stock and securities. But do they mean to include only the casual investor or would they grant the same special treatment to the transactions of one who makes his entire living by "playing the market"? Would they include even the dealer who maintains a regular office, with a large clientele, for the purchase and sale of securities? What other kinds of property should get special treatment? Real estate? Used machinery and equipment? Patents? Contract rights? Merchants' inventories? Should the special treatment be restricted to property that has been sold? What if the property has been stolen or destroyed?

These questions, and a host of others like them, must be answered, once it has been decided to grant special treatment to "capital" gains and losses. Occasionally the statute answers the question clearly, but more frequently the lawyer must be called in. The cases that follow focus on the statute, of course, but the student should also ask himself in each case whether the income or loss *ought* to be treated specially.

2. *Some statistics.* During the period 1948-1960, the tax on capital gains and losses accounted for 2.4 to 5.8 per cent of the total federal income taxes paid by individuals and fiduciaries and for 1.4 to 3.2 per cent of the total paid by corporations. If these figures suggest that the special treatment of capital gains and losses is of minor importance, a necessary corrective is supplied by the fact that in 1959 long-term capital gain represented 31.5 per cent of the total income realized by individual taxpayers with

$100,000 to $150,000 of income, 50 per cent of total income for taxpayers in the $200,000-500,000 bracket, and 63 per cent for those above $500,000.

For these and other relevant statistics, see Treasury Department, Statistics of Income, Sales of Capital Assets Reported on Individual Income Tax Returns, 1959; Exhibit 10 of Treasury Statement, Hearings on H.R. 8363 (proposed Revenue Act of 1963), Senate Finance Committee, 88th Cong., 1st Sess. 193 et seq. STATEMENT OF SECRETARY OF THE TREASURY DILLON, RE: PRESIDENT KENNEDY'S 1963 TAX MESSAGE

Hearings on H.R. 8363 (Proposed Revenue Act of 1963)
House Committee on Ways and Means, 88th Cong., 1st Sess. 47-51 (1963)

One of the most important phases of the tax law in which the President has recommended changes designed to release the forces of growth is the treatment of capital gains and losses.

This part of the tax system has not undergone needed basic revision since 1942. The present provisions are both inequitable in essential respects and detrimental to the mobility of investment funds and liquidity in capital markets. The broad definition of capital gains permits certain types of ordinary income to be taxed at capital gains rates, thus making it more difficult to set an appropriate rate of taxation for true capital gains.

An overhaul of these provisions can make an important contribution to a stronger economy and a fairer tax system. Reduction of tax barriers to the free flow of investment and risk capital will not only add to the strength and buoyancy of the economy but will also produce several hundred million dollars of additional revenue annually. . . .

Percentage inclusion

The President has recommended that the percentage of long-term capital gains included in taxable income of individuals be reduced from the present 50 percent of the gain to 30 percent. In combination with the proposed individual income tax rate [reductions], this will result in capital gains tax rates ranging from 4.2 percent to a maximum of 19.5 percent, compared with an existing range of 10 to

25 percent. It will result in more equal treatment of individuals in various income groups. Unlike the present arrangement, the relative differential between capital gains tax rates and ordinary income tax rates would be the same at all levels of income.

While this would provide a reduction of 22 percent in the capital gains tax for those in the highest bracket, the reductions would be substantially greater for all other taxpayers. For instance under present law the 25 percent rate applies whenever ordinary taxable income plus capital gains exceeds $16,000 for a single individual and $32,000 for a married couple. At this same level the effective rate under the President's proposals would be only 12 percent. . . .

Independent outside surveys, our own studies, and letters and comments which are received daily from taxpayers throughout the country indicate clearly that these substantial reductions will increase taxpayers' willingness to realize capital gains and stimulate a larger turnover of capital assets.

Thus the recommended 30 percent inclusion ratio would stimulate a freer flow of investment funds and at the same time provide a more even-handed treatment of taxpayers in all income brackets.

Capital gains of corporations

Corporations should share in the reduction in capital gains tax rates. In line with the reduction of general corporate tax rates, the President has recommended that the present basic structure of capital gains taxation for corporations be retained but that the alternative rate be reduced from the present 25 percent to 22 percent. The 22 percent rate corresponds to the proposed reduced corporate normal tax rate. This will simplify tax accounting for capital gains for almost half a million corporations subject only to the normal tax.

Holding period

The present preferential treatment of assets disposed of within a period of less than a year is difficult to justify either on economic or equity grounds. The 6-month holding period frequently qualifies purely speculative profits. It also makes it less risky to carry out various maneuvers designed to convert ordinary income into capital gains.

A longer holding period makes it possible to provide more liberal treatment for bona fide investment gains without applying unjustified reductions to income from short-term trading in securities. Moreover, the substantial reduction in ordinary income tax rates must be taken into account in considering the proper holding period, as even short-term gains will be taxed at lower rates.

It is for these reasons that the President has recommended that the holding period be lengthened from 6 months to 1 year.

Capital loss carryover

Under existing law, net capital losses of up to $1,000 incurred in any one year may be charged against ordinary income in that year. Any remaining loss may then be carried forward for 5 years as a short-term capital loss, applicable first against capital gains and then available as an offset to ordinary income to the extent of $1,000 in each of the 5 years.

Large investors with diversified portfolios are generally in a position to balance out gains and losses within the 5-year period. The 5-year limitation, however, frequently works a hardship on the smaller investor who sustains a considerable loss and cannot fully match it either with capital gains or the $1,000 annual income offset. Permitting unabsorbed capital losses to be carried forward for an indefinite period, as recommended by the President, would improve the equity

of the capital gains tax, provide greater assurance to the small investor that capital losses he may sustain will eventually be absorbed by capital gains or other taxable income, improve investment odds for the risk-taker, and increase the effective supply of investment funds for growth.

Equal treatment of gains accrued on capital assets at time of transfer by gift or at death

Present law permits the exemption from income tax of capital gains accrued when the appreciated assets are transferred at death. The prospect of eventual tax-free transfer of accrued gains with a stepped-up basis equal to the new market value in the hands of heirs distorts investment choices and frequently results in complete immobility of investments of older persons.

The President has recommended that the proposed reduction in the capital gains tax be accompanied by the taxation at long-term capital gain rates of net gains accrued on capital assets at the time of transfer at death or by gift. This would not apply to assets transferred as charitable gifts or bequests.

This recommendation is an essential element of the overall program of substantial reduction in capital gains tax rates. The reduction in capital gains tax rates alone would not effectively deal with the "lock-in" problem. Without this broader, more equal capital gains tax base, there would be no justification for lowering capital gains tax rates.

This proposal would be accompanied by several features that would effectively eliminate hardships that might otherwise arise. Let me outline these features.

First, the capital gains tax would reduce the base of the estate tax, so that for the largest estates the incremental tax on accrued gains would be only 4½ percent.

Second, all ordinary personal and household effects such as clothing, appliances, and furniture would be exempt.

Third, I have already mentioned the continued exemption for property passing to charity.

Fourth, a marital deduction would be provided similar to related provisions of the estate and gift taxes so as to assure uniformity in the treatment of residents of community property and common law States. It would be necessary in case of the marital deduction to provide for a carryover of the original basis so that the tax could eventually be collected.

Fifth, an additional blanket exemption of $15,000 of gain would apply to every taxpayer.

Sixth, special provisions would integrate the exemption of a principal residence with the marital deduction and the $15,000 exemption. These would insure that no one would have to pay tax on the transfer of a home to a surviving wife or husband, or if there were none, to children or other heirs.

The foregoing exceptions and exemptions would limit any impact whatsoever of the proposal to fewer than 3 percent of those who die each year. A number of other provisions set forth relief and transition rules. These rules when combined with the reduced rates of tax on capital gains and integration with the estate tax, will in most cases mean that taxpayers with capital gains will pay much lower aggregate taxes on those gains over their lifetimes than under present law. These rules are:

First, a 5-year averaging provision would be applicable to limit the tax on gain at death to five times the tax on the first one-fifth of the gain.

Second, accrued losses at death would be fully utilized through a special carryback provision.

Third, to help those estates with liquidity problems certain provisions of present law, permitting installment payment of estate taxes and redemptions of cor-

porate stock without dividend consequences, would apply to the capital gains tax on transfers at death. These provisions should also be liberalized both for estate tax and capital gains purposes, so as to more adequately accomplish the purpose for which they were designed.

Fourth, provision should be made to enable taxpayers to accommodate their estate plans to the new rules through an appropriate transition device. One way in which this might be accomplished would be to set a 3- or 5-year transition period. If a 5-year period were used, the estate of a person dying in 1964 would pay tax on one-fifth of the gains on transfer at death, that of a person dying in 1965 on two-fifths, and so on, with full taxation applying in 1968. A 3-year period would operate in similar fashion, providing full taxation by 1966.

More complete details of how these proposals would operate are set forth in the technical explanation [Hearings, pp. 128 et seq.]. This explanation also illustrates its impact on the estates of representative decedents. It shows that a decedent with an estate of $105,000, with $30,000 of appreciation, would pay neither estate nor income tax. A decedent with an estate of $350,000 and $210,000 of appreciation, almost two-thirds of his estate, would pay additional taxes on account of the $210,000 appreciation of $5,452 — 1.6 percent of his gross estate. A decedent with a $5 million estate and $2 million of appreciation would pay additional taxes of $76,580 — the $2 million of appreciation being taxed at an effective rate of 3.8 percent.

In each of these illustrations, however, the additional taxes, if any, at death would be more than offset by the new lower capital gains rates, if any significant amount of gains were realized during lifetime.

Thus the new treatment of capital gains will result in seriously heavier taxation for none, lower taxation for most, and more equitable treatment for all. At the same time, through the effect of lower rates coupled with the removal of the "lock-in" effect of the present law, it will add substantially to revenues both directly and indirectly by encouraging far greater mobility and turnover of appreciated assets.

Definitional changes

The President's recommendations in this area call for tightening of the definition of capital gains designed to reverse the trend, inspired by wartime increases in tax rates, toward the progressive extension of capital gains treatment to a variety of ordinary income sources.

Proposed reductions in ordinary income tax rates make the redefinition of capital gains desirable and feasible. It is made imperative by the substantial reduction in the tax rates applicable to true capital gains.

The existing scope of the capital gain area has led to widespread economic distortions and tax avoidance techniques. In the absence of corrective action these would tend to be intensified by the lower capital gains rates.

[The proposed definitional changes would have restricted or eliminated capital gain treatment for employee stock options, real estate transactions, mineral interests, timber income, lump sum distributions by pension and profit-sharing plans, livestock, citrus groves and similar farm property, patents, royalties, installment sales, and life estates.]

Overall effects

Enactment of the President's recommendations for reduction and reform in the capital gains area would substantially reduce the amount of tax paid per dollar of capital gain realized. At the same time, the improved definition of capital gains, the extension of the holding period, and the taxation of capital gains at

death will result in a net increase in revenue from this source of $100 million. In addition, a substantial increase in revenue, estimated at $650 million, will be realized as a consequence of the unlocking effects of the proposals and the greater volume of capital transactions that can be confidently anticipated. The total increase in revenue from the capital gains proposal is, therefore, about $750 million per year.

NOTE

The legislative recommendations set out above encountered stormy weather on Capitol Hill. As enacted by the House of Representatives, the bill (which became the Revenue Act of 1964) did not alter the capital gain rate for corporations, but for individuals the maximum rate was reduced to 21 per cent (from 25 per cent) for capital assets held for more than 2 years. The realization-at-death provision recommended by President Kennedy was rejected, along with a last minute alternative proposal for a carryover of basis under which the heirs of a decedent would sometimes be required to use the decedent's basis, rather than the value at date of death. The administration then announced that the proposed rate reduction was unacceptable unless accompanied by either realization at death or a carryover of basis; and the Senate responded by eliminating the rate reduction.

As to the other 1963 recommendations in this area, the proposed unlimited carryover of unused net capital loss was enacted for individual taxpayers, but not for corporations, and definitional changes — less sweeping than recommended — were enacted that affect employee stock options, depreciable real estate, and imputed interest on deferred payments for capital assets.

SECTION B. CAPITAL GAINS AND LOSSES: THE MECHANICS OF CURRENT LAW

Although the details have varied from time to time, the persistent themes in the income tax treatment of capital gains and losses have been (a) a favorable tax rate (achieved in various fashions) on capital gains, and (b) restrictions on the deductibility of capital losses. The first step under current law (1964) is to aggregate the taxpayer's long-term capital gains and losses in order to determine his "net long-term capital gain" (or loss), and similarly to aggregate his short-term capital gains and losses to arrive at his net "short-term capital gain" (or loss). See §1222. In general, long-term gains and losses are those involving assets held by the taxpayer for more than six months, while short-term gains and losses involve assets held for six months or less. In a few instances, however, the Code arbitrarily assigns a transaction to one category or the other regardless of the taxpayer's holding period (e.g., a loss incurred by an individual when a "nonbusiness debt" becomes worthless is treated by §166(d)(1)(B) as a short-term capital loss). In the explanation that follows, the tax treatment of individuals and other non-corporate taxpayers will be described first; and in the interest of simplicity, it will be initially assumed that the taxpayer's transactions were all either long-term or short-term transactions.

1. *Net long-term capital gain only.* Assuming a net long-term capital gain only, the taxpayer is entitled to deduct 50 per cent thereof from gross income. (Section 1202 authorizes this deduction if "the net long-term capital gain exceeds the net short-term capital loss," but this includes cases in which the taxpayer did not realize any short-term capital losses.) Having ascertained his taxable income with the benefit of this deduction (along with the other deductions to which he is entitled), the taxpayer computes his tax by reference to the regular rate schedule of §1 of the Code. An "alternative tax" is then computed under §1201(b), which

is the sum of (a) a "partial tax" computed at the §1 rates on taxable income reduced by 50 per cent of the taxpayer's net long-term capital gain,* and (b) 25 per cent of the net long-term capital gain. The taxpayer pays either the regular tax or the "alternative tax," whichever is lower. The "alternative tax" computation of §1201(b) cannot be advantageous if the taxpayer's marginal rate of tax under §1 is 50 per cent or less, so single persons with 1964 taxable income of $20,000 or less, heads of households with taxable income of $32,000 or less, and married persons with taxable income of $40,000 or less need not make the alternative computation but can console themselves with the 50 per cent deduction of §1202 in computing their tax under §1. (For 1965, the corresponding critical points are $26,000, $38,000, and $52,000.)

The full amount of the taxpayer's capital gains (not merely the *net* long-term or short-term capital gain) is included in *gross income,* which affects such matters as the filing requirements, the eligibility of certain dependents, the extended statute of limitations of §6501(e), etc.; but his capital losses and the §1202 deduction of 50 per cent of net long-term capital gain are taken into account by §62 in determining *adjusted gross income* (which affects the medical expense and charitable contribution deductions).

2. *Net short-term capital gain only.* The taxpayer's net short-term capital gain is included with his other income in computing gross income, adjusted gross income, and taxable income; and it qualifies for no concession in computing the tax itself. As will be seen, however, net short-term capital gain differs from ordinary income in that it can be offset without limitation by net long-term capital loss.

3. *Net long-term capital loss or net short-term capital loss only.* If the taxpayer has either a net long-term capital loss only or a net short-term capital loss only, it is applied against $1,000 of ordinary income under §1211(b); any excess becomes a capital loss carryover under §1212(b). Before 1964, such a carryover could be used for only five years following the year in which the loss arose, and was to be treated as a short-term capital loss in the years to which it was carried whether it arose from long-term or short-term transactions; and these limitations are still in effect for corporations. As to other taxpayers, however, the Revenue Act of 1964 introduced an unlimited carryover of capital losses, and provided that the long-term or short-term character of the original loss would be preserved in the later years to which the loss is carried.

Turning now to the tax effect of a combination of long-term and short-term transactions when incurred by non-corporate taxpayers, there are the following possibilities:

4. *Net long-term capital gain and net short-term capital gain.* With this combination, the taxpayer's net long-term capital gain and the net short-term capital gain are treated as described in 1 and 2 above, respectively.

5. *Net long-term capital loss and net short-term capital loss.* The net long-term capital loss is combined with the net short-term capital loss for application against $1,000 of ordinary income. The excess, if any, is carried forward under §1212 (b); but the two types of losses revert to their long-term and short-term natures in the later years, and in computing the carryovers, it is assumed that the net short-term capital loss was used to the extent available to effect the $1,000 offset against ordinary income in the year the losses arose. Thus, if in 1964 the taxpayer incurred a net long-term capital loss of $5,000 and a net short-term capital loss of $2,000,

* Since 50 per cent of the net long-term capital gain was deducted under §1202 in arriving at taxable income, the reduction of taxable income by a like amount in computing the "partial tax" means that the "partial tax" is based solely on the ordinary income component of the taxpayer's taxable income.

he would be entitled to deduct $1,000 of the combined loss from ordinary income, and would carry forward a long-term capital loss of $5,000 and a short-term capital loss of $1,000 under §1212(b). If the net short-term capital loss had been $800 (instead of $2,000), the carryover under §1212(b) would be $4,800, to be treated as a long-term capital loss in the succeeding years.

6. *Net long-term capital gain and net short-term capital loss.* If the net long-term capital gain exceeds the net short-term capital loss, the taxpayer follows the procedure described in 1 above, except that instead of the net long-term capital gain he would use the *excess* of net long-term capital gain over net short-term capital loss in computing the §1202 deduction and the "alternative tax."

If the net short-term capital loss exceeds the net long-term capital gain, the gain is wiped out, the remaining loss is applied against $1,000 of ordinary income under §1211(b), and any excess becomes a short-term capital loss in later years under §1212(b).

7. *Net long-term capital loss and net short-term capital gain.* If the long-term loss exceeds the short-term gain, the gain is wiped out, the remaining loss is applied against $1000 of ordinary income under §1211(b), and any excess becomes a long-term capital loss in later years under §1212(b).

If the short-term gain exceeds the long-term loss, the excess is taxed with ordinary income at the regular rates prescribed by §1.

Corporations. Corporations are not entitled to the special deduction of §1202 (50 percent of excess of net long-term capital gain over net short-term capital loss), but are entitled to the "alternative tax" computation of §1201(a). Corporations with taxable income of $25,000 or under thus derive no benefit from the capital gain provisions, since their marginal rate under the regular tax schedule of §11(b) is 22 per cent. (Before 1964, when the corporate normal tax rate was 30 per cent, all corporations benefitted from the 25 per cent rate provided by the alternative tax for the excess of net long-term capital gain over net short-term capital loss.) As to capital losses, they may be applied by corporations only against capital gains; the $1,000 of ordinary income concession of §1211(b) is not granted to corporate taxpayers. Finally, as mentioned above, the carryover of capital losses is limited by §1212(a) to five years if the taxpayer is a corporation, and the amount carried forward is treated as a short-term capital loss in the later years.

* * *

Current law, as outlined above, differs in certain respects from the earlier statutes; and some of the cases must be read with this in mind. The most confusing difference is that during the period 1942-1950, long-term gains and losses were "taken into account" by non-corporate taxpayers only to the extent of 50 per cent, while short-term gains and losses were "taken into account" in full. Thus, a short-term loss of $1,000 would cancel out a long-term gain of $2,000. This system of computing capital gains and losses gave rise to manipulative devices, which in turn evoked legislative counter-measures that are still to be found in the Code. See infra, page 590.

SECTION C. THE "COMMON LAW" OF CAPITAL GAINS AND LOSSES

Section 1222 defines the terms "capital gain" and "capital loss" (long-term or short-term, as the case may be) to mean gains and losses on the "sale or exchange" of a "capital asset." The term "sale or exchange" is not defined, but the Code provides that a number of borderline transactions (e.g., certain redemptions of corporate stock) shall be treated as sales or exchanges (infra p. 584). The term "capital asset" is defined at some length by §1221: it means "property held by the

taxpayer" that does not fall into certain excluded categories (e.g., property held for sale to customers in the ordinary course of the taxpayer's business; certain accounts receivable; etc.). Before turning to the details of this definition, however, we shall examine a number of recent cases in which the courts have held that a transaction produced ordinary income or loss — despite the fact that the taxpayer engaged in a "sale or exchange" of a "capital asset" and thus met the technical statutory requirements for capital gain or loss treatment — because the character of the transaction disqualified it for the "special" treatment accorded to capital gains and losses by Congress. The way in which the courts have recently been groping beyond the letter of the Code in an effort to apply its spirit in this area is reminiscent of the pioneering income-splitting cases that are examined in Chapter IV, although in the capital gain and loss area the courts are working with more detailed statutory provisions that leave less room for judicial free-wheeling. See generally Comment, The Troubled Distinction Between Capital Gain and Ordinary Income, 73 Yale L. J. 693 (1964).

1. *Transactions Related to Taxpayer's Regular Business*

CORN PRODUCTS REFINING CO. v. COMMISSIONER

350 U.S. 46 (1955)

MR. JUSTICE CLARK delivered the opinion of the Court.

This case concerns the tax treatment to be accorded certain transactions in commodity futures.[1] In the Tax Court, petitioner Corn Products Refining Company contended that its purchases and sales of corn futures in 1940 and 1942 were capital-asset transactions under [§1221]. . . .

Petitioner is a nationally known manufacturer of products made from grain corn. It manufactures starch, syrup, sugar, and their byproducts, feeds and oil. Its average yearly grind of raw corn during the period 1937 through 1942 varied from thirty-five to sixty million bushels. Most of its products were sold under contracts requiring shipment in thirty days at a set price or at market price on the date of delivery, whichever was lower. It permitted cancellation of such contracts, but from experience it could calculate with some accuracy future orders that would remain firm. While it also sold to a few customers on long-term contracts involving substantial orders, these had little effect on the transactions here involved.

In 1934 and again in 1936 droughts in the corn belt caused a sharp increase in the price of spot corn. With a storage capacity of only 2,300,000 bushels of corn, a bare three weeks' supply, Corn Products found itself unable to buy at a price which would permit its refined corn sugar, cerealose, to compete successfully with cane and beet sugar. To avoid a recurrence of this situation, petitioner, in 1937, began to establish a long position in corn futures "as a part of its corn buying program" and "as the most economical method of obtaining an adequate supply of raw corn" without entailing the expenditure of large sums for additional storage facilities. At harvest time each year it would buy futures when the price appeared favorable. It would take delivery on such contracts as it found necessary to its manufacturing operations and sell the remainder in early summer if no shortage was imminent. If shortages appeared, however, it sold

[1] A commodity future is a contract to purchase some fixed amount of a commodity at a future date for a fixed price. Corn futures, involved in the present case, are in terms of some multiple of five thousand bushels to be delivered eleven months or less after the contract. Cf. Hoffman, Future Trading (1932), 118.

futures only as it bought spot corn for grinding.[2] In this manner it reached a balanced position with reference to any increase in spot corn prices. It made no effort to protect itself against a decline in prices.

In 1940 it netted a profit of $680,587.39 in corn futures, but in 1942 it suffered a loss of $109,969.38. In computing its tax liability Corn Products reported these figures as ordinary profit and loss from its manufacturing operations for the respective years. It now contends that its futures were "capital assets" under [§1221] and that gains and losses therefrom should have been treated as arising from the sale of a capital asset. In support of this position it claims that its futures trading was separate and apart from its manufacturing operations and that in its futures transactions it was acting as a "legitimate capitalist." United States v. New York Coffee & Sugar Exchange, 263 U.S. 611, 619. It denies that its future transactions were "hedges" or "speculative" dealings as covered by the ruling of General Counsel's Memorandum 17322, XV-2 Cum. Bull. 151, and claims that it is in truth "the forgotten man" of that administrative interpretation.

Both the Tax Court and the Court of Appeals found petitioner's futures transactions to be an integral part of its business designed to protect its manufacturing operations against a price increase in its principal raw material and to assure a ready supply for future manufacturing requirements. Corn Products does not level a direct attack on these two-court findings but insists that its futures were "property" entitled to capital-asset treatment under [§1221] and as such were distinct from its manufacturing business. We cannot agree.

We find nothing in this record to support the contention that Corn Products' futures activity was separate and apart from its manufacturing operation. On the contrary, it appears that the transactions were vitally important to the company's business as a form of insurance against increases in the price of raw corn. Not only were the purchases initiated for just this reason, but the petitioner's sales policy, selling in the future at a fixed price or less, continued to leave it exceedingly vulnerable to rises in the price of corn. Further, the purchase of corn futures assured the company a source of supply which was admittedly cheaper than constructing additional storage facilities for raw corn. Under these facts it is difficult to imagine a program more closely geared to a company's manufacturing enterprise or more important to its successful operation.

Likewise the claim of Corn Products that it was dealing in the market as a "legitimate capitalist" lacks support in the record. There can be no quarrel with a manufacturer's desire to protect itself against increasing costs of raw materials. Transactions which provide such protection are considered a legitimate form of insurance. United States v. New York Coffee & Sugar Exchange, 263 U.S., at 619; Browne v. Thorn, 260 U.S. 137, 139-140. However, in labeling its activity as that of a "legitimate capitalist" exercising "good judgment" in the futures market, petitioner ignores the testimony of its own officers that in entering that market the company was "trying to protect a part of [its] manufacturing costs"; that its entry was not for the purpose of "speculating and buying and selling corn futures" but to fill an actual "need for the quantity of corn [bought] . . . in order to

---

2 The dispositions of the corn futures during the period in dispute were as follows:

	Sales of futures thousand bushels	Delivery under futures thousand bushels
1938	17,400	4,975
1939	14,180	2,865
1940	14,595	250
1941	2,545	2,175
1942	5,695	4,460

cover . . . what [products] we expected to market over a period of fifteen or eighteen months." It matters not whether the label be that of "legitimate capitalist" or "speculator"; this is not the talk of the capital investor but of the far-sighted manufacturer. For tax purposes petitioner's purchases have been found to "constitute an integral part of its manufacturing business" by both the Tax Court and the Court of Appeals, and on essentially factual questions the findings of two courts should not ordinarily be disturbed. Comstock v. Group of Investors, 335 U.S. 211, 214.

Petitioner also makes much of the conclusion by both the Tax Court and the Court of Appeals that its transactions did not constitute "true hedging." It is true that Corn Products did not secure complete protection from its market operations. Under its sales policy petitioner could not guard against a fall in prices. It is clear, however, that petitioner feared the possibility of a price rise more than that of a price decline. It therefore purchased partial insurance against its principal risk, and hoped to retain sufficient flexibility to avoid serious losses on a declining market.

Nor can we find support for petitioner's contention that hedging is not within the exclusions of [§1221]. Admittedly, petitioner's corn futures do not come within the literal language of the exclusions set out in that section. They were not stock in trade, actual inventory, property held for sale to customers or depreciable property used in a trade or business. But the capital-asset provision of [§1221] must not be so broadly applied as to defeat rather than further the purpose of Congress. Burnet v. Harmel, 287 U.S. 103, 108. Congress intended that profits and losses arising from the everyday operation of a business be considered as ordinary income or loss rather than capital gain or loss. The preferential treatment provided by [§1221] applies to transactions in property which are not the normal source of business income. It was intended "to relieve the taxpayer from . . . excessive tax burdens on gains resulting from a conversion of capital investments, and to remove the deterrent effect of those burdens on such conversions." Burnet v. Harmel, 287 U.S., at 106. Since this section is an exception from the normal tax requirements of the Internal Revenue Code, the definition of a capital asset must be narrowly applied and its exclusions interpreted broadly. This is necessary to effectuate the basic congressional purpose. This Court has always construed narrowly the term "capital assets" in [§1221]. See Hort v. Commissioner, 313 U.S. 28, 31; Kieselbach v. Commissioner, 317 U.S. 399, 403.

The problem of the appropriate tax treatment of hedging transactions first arose under the 1934 Tax Code revision. Thereafter the Treasury issued G.C.M. 17322, supra, distinguishing speculative transactions in commodity futures from hedging transactions. It held that hedging transactions were essentially to be regarded as insurance rather than a dealing in capital assets and that gains and losses therefrom were ordinary business gains and losses. The interpretation outlined in this memorandum has been consistently followed by the courts as well as by the Commissioner. While it is true that this Court has not passed on its validity, it has been well recognized for 20 years; and Congress has made no change in it though the Code has been re-enacted on three subsequent occasions. This bespeaks congressional approval. Helvering v. Winmill, 305 U.S. 79, 83. Furthermore, Congress has since specifically recognized the hedging exception here under consideration in the short-sale rule of §1233(a) of the 1954 Code.[3]

---

[3] Section 1233(a) provides that gain or loss from "the short sale of property, other than a hedging transaction in commodity futures," shall be treated as gain or loss from the sale of a capital asset to the extent "that the property, including a commodity future, used to close the short sale constitutes a capital asset in the hands of a taxpayer." The legislative history recognizes explicitly the hedging exception. H.R. Rep. No. 1337, 83d Cong., 2d Sess., p. A278; S. Rep. No

We believe that the statute clearly refutes the contention of Corn Products. Moreover, it is significant to note that practical considerations lead to the same conclusion. To hold otherwise would permit those engaged in hedging transactions to transmute ordinary income into capital gain at will. The hedger may either sell the future and purchase in the spot market or take delivery under the future contract itself. But if a sale of the future created a capital transaction while delivery of the commodity under the same future did not, a loophole in the statute would be created and the purpose of Congress frustrated.

The judgment is affirmed.

MR. JUSTICE HARLAN took no part in the consideration or decision of this case.

NOTE

1. *Scope of Corn Products doctrine.* In United States v. Rogers, 286 F.2d 277 (6th Cir. 1961), a taxpayer who was in the livestock business on a large scale claimed an ordinary loss on his transactions in commodity futures on the ground that he purchased commodity futures in an effort to protect himself against losses in the livestock business, rather than for investment or speculation. The court held that the transactions produced capital losses, however, because there was not a close enough link between price movements in his regular business and those of the commodities on which the losses were incurred. One judge dissented, arguing that the taxpayer's practice of selling commodity futures short would produce a gain in the event of an economic decline, and that this gain would offset credit losses that might result from the impact of the same economic decline on his livestock customers. See also Staple Gin Co. v. United States, 164 F. Supp. 919 (S.D. Tex. 1958), another case in which the court thought that the taxpayer had failed to establish a sufficient link between price fluctuations in commodity futures and the fortunes of his business to bring the *Corn Products* doctrine into play.

If an American manufacturer of textiles fears the competition of foreign-made goods and buys the stock of a foreign competitor in the hope that a loss incurred in his domestic business operations will be offset by an increase in the value of the foreign stock, will his profit on a sale of the stock be taxable as ordinary income under the *Corn Products* doctrine? Does *Corn Products* require the profit realized on the sale of the stock of a subsidiary corporation to be reported as ordinary income by the parent, if the subsidiary's business is related to the parent's (e.g., if the subsidiary is a sales or export agency of the parent)? If a taxpayer buys some of his employer's stock or bonds to strengthen his position as an employee, would his profit or loss on a sale of the securities be treated as ordinary income or loss? See Trent v. Commissioner, 291 F.2d 669 (2d Cir. 1961), and consider the relevance of the *Whipple* case, supra page 285.

The taxpayer in duPont & Co. v. United States, 288 F.2d 904 (Ct. Cl. 1961), sold compressed gas in heavy steel cylinders, requiring its customers to make a deposit in excess of the container's cost in order to insure their return. When customers failed to return the containers at the end of a three-year period, the taxpayer reported the profit on the forfeited deposits as income. The court held that the profit was capital gain, despite the *Corn Products* case:

> The determining factor is the purpose for which the property was held at the time of its acquisition and during its period of use; the nature of the commodity, its weight, its practically indestructible quality and the circumstances surrounding its use and disposition. In the light of these undisputed facts, the proceeds from the disposition of the unreturned cylinders should be treated as capital gains rather than as ordinary income. [288 F.2d at 909.]

2. *Gambling transactions.* In United States v. New York Coffee & Sugar Exchange, an antitrust case cited in *Corn Products,* the Supreme Court said that traders in com-

1622, 83d Cong., 2d Sess., p. 437: "Under existing law bona fide hedging transactions do not result in capital gains or losses. This result is based upon case law and regulations. To continue this result hedging transactions in commodity futures have been specifically excepted from the operation of this subsection."

modity futures fall into three classes: businessmen who are hedging against loss in their regular businesses; "legitimate capitalists," purchasing or selling with a view to profit based "on the law of supply and demand"; and "gamblers or irresponsible speculators who buy or sell as upon the turn of a card." If a taxpayer plays the commodity or stock market as he would the ponies, should the term "capital assets" be construed narrowly as to him on the ground that Congress could not have wished to encourage such transactions? If so, are the gambler's gains and losses to be treated as ordinary — or should this depend on whether he has more gains than losses — or is he an outlaw whose gains are taxable as ordinary income but whose losses are deductible only as capital losses? Does §165(d), permitting losses from wagering transactions to be deducted only to the extent of gains from such transactions, have any relevance in this connection?

COMMISSIONER v. BAGLEY & SEWALL CO.

221 F.2d 944 (2d Cir. 1955)

Before FRANK and MEDINA, Circuit Judges, and BRENNAN, District Judge.

BRENNAN, District Judge.

Whether or not the loss incurred in the posting of U.S. Government bonds as security for the performance of a contract is a capital loss or a business expense is the question posed on this appeal.

A background of essential facts were submitted by stipulation to the Tax Court. The Bagley & Sewall Co. (hereinafter referred to as the taxpayer), is a New York corporation engaged in the manufacture and sale of paper making machinery. In 1946 the taxpayer entered into a contract with a corporation acting in behalf of the Government of Finland for the manufacture and delivery of two paper making machines at a cost of approximately $1,800,000. Payments were to be made periodically during the progress of manufacture. The Government of Finland required that U.S. 2½% Government bonds be deposited with a New York financial institution as security for the performance of the contract and in accordance with an agreement which provided for the return of the bonds to Bagley & Sewall upon receipt of the last payment due under the contract. The above provisions were incorporated in and made a part of the contract. The taxpayer did not have or own the required bonds and in order to carry out the provisions of the contract, U.S. Government bonds in a total face value of $800,000 were purchased by the taxpayer with moneys borrowed for that purpose and same were deposited as required by the contract, the total cost of same being $820,062.50. The interest earned upon the bonds during the period that they were held in escrow was reported as income received by the taxpayer. In accordance with the terms of the contract, the bonds were released in two lots, one of $400,000 face value on Sept. 7, 1948 and one of $400,000 face value on Sept. 22, 1948. The bonds were sold by the taxpayer in each instance a few days after their release, resulting in a loss of approximately $15,000 which the taxpayer claimed, in its tax return for 1948, as an ordinary and necessary business expense. During the period that the bonds were held in escrow and until they were sold, they were carried in the general ledger of the taxpayer in an account entitled "U.S. Gov't. Bonds" and on its balance sheet of Dec. 31, 1946 and Dec. 31, 1947, the bonds were shown under the caption "U.S. Gov't. Bonds."

Upon re-audit, the Commissioner of Internal Revenue determined a deficiency in the taxpayer's 1948 return on the ground that the above loss was a capital loss under [§1221]. The matter came on before the Tax Court and after making minor adjustments, which are not here in dispute, the Tax Court found in effect

in accordance with the claim of the taxpayer that the sale of the bonds was of assets held for sale in the ordinary course of petitioner's business and the loss was deductible as an ordinary and reasonable business expense.

The findings made are substantially as outlined above with the following additions . . . that the taxpayer was not in the business of buying and selling securities, that its available cash reserve was necessary for working capital, that it is clear that no investment in U.S. bonds was intended by the petitioner, they were acquired solely to carry out a condition imposed by the contract. It was concluded that the purchase and sale of these bonds was merely an incident in the carrying on by the petitioner of its regular business of manufacturing and selling paper making machines. The Tax Court relied upon the decisions in Western Wine & Liquor Co., 18 T.C. 1090 and Charles A. Clark, 19 T.C. 48 and distinguished the case of Exposition Souvenir Corp. v. Commissioner, 2 Cir., 163 F.2d 283. This appeal followed.

Concisely stated, the contention by the Commissioner is that the bonds constituted capital assets, as the term is defined in [§1221]. . . .

The difficulty with the Commissioner's contention is that in effect he urges that the bond transaction should be considered independently of the contract of which it is a definite part. . . .

In Exposition Souvenir Corp. v. Commissioner, 2 Cir., 163 F.2d 283, the taxpayer was required to make an investment, related to, but not a part of the concession contract. This is not the situation here. The contract represents a complete business transaction, security of performance alone, not investment was required. The cost of procuring that security cannot be distinguished from ordinary premium expense of a surety company bond which is a usual item of contractor's costs. The *Exposition* case may be further distinguished by the fact that the debentures were treated as investments in the taxpayer's books and tax returns and in that case the Tax Court made a finding that the debentures were not held for sale in the ordinary course of business. There is no such treatment of this transaction in this taxpayer's tax return and no such finding. It is implicit that the Tax Court found that the bonds here were held for sale to purchasers as soon as released from escrow and available for sale. In the *Exposition* case, an investment was intended and the taxpayer relied upon the motive for the investment for relief. Here there is a clear finding that no investment was intended. The taxpayer's lack of surplus capital, the interest return of the bonds, the interest obligation of the loan and the almost immediate sale of the bonds when available make such a finding imperative. The finding here in this respect is similar to that made in Gilbert v. Commissioner, 1 Cir., 56 F.2d 361.

In brief, it is urged that the all inclusive language of [§1221] requires that, since the bonds are "property," they must be treated as capital assets unless exempted by the specific language of the Section. The argument carries with it the necessary conclusion that the circumstances of the transaction, its factual background, the necessities of the business involved and the intentions of taxpayer are of no importance except in determining whether the bonds are exempted under the Section. We are not persuaded that [§162(a)] is so completely subordinate to [§1221] and we find no authority which goes so far.

"Whether an expenditure is directly related to a business and whether it is ordinary and necessary are doubtless pure questions of fact in most instances." Commissioner v. Heininger, 320 U.S. 467, at 475. The purchase of stock in order to terminate an agency contract was held to be business expense. Helvering v. Community Bond & Mortgage Corporation, 2 Cir., 74 F.2d 727. The purchase of stock in a non-profit corporation to aid business was held to be a business expense. Commissioner v. The Hub, 4 Cir., 68 F.2d 349. The purchase of stock

of a liquor corporation in order to purchase liquor therefrom was held to be business expense. Hogg v. Allen, D.C., 105 F. Supp. 12, affirmed, Edwards v. Hogg, 5 Cir., 214 F.2d 640, 644. We find similar holdings by the Tax Court especially the two cases [*Western Wine* and *Clark*] relied upon by that Court and referred to above. The above authorities are cited here not to show that we necesarily agree with the conclusions therein but as an indication that business expense, [§162(a)], has been many times determined by business necessity without a specific consideration of [§1221]. . . .

The decision is affirmed.

FRANK, Circuit Judge (dissenting).
